WILD TRAIN'S LONG RUN

Locomotive Goes Five Miles Without Her Engineer.

Queer Accident on the Lackawanna Railroad Near Hackensack, N. J.--Fireman Averts All Accidents.

...ood, N. J.—One of the most extra... ...ary accidents in the history of ... ...ing in the United States happ... ...ed when Patrick Fortin, the engi... ...neer of a heavily laden westbound ... milk train, was blown out ... ...of his cab into a ditch, and the train ... sped on, gathering speed every minute, without any hand at the throttle for five miles.

The ...ine which is known as No. 43, ... was drawn by one of the big camel-... ...backs, left the engineer and his ... ...fireman out from all personal ... ...control by the bump that sep... ...arated the lever from the ... the throttle box. The fog was ... ...so dense that No. 43 was running, or ... ...going, contrary to orders, but at ... ...a speed of about 25 miles an hour. Just after passing ... ...Hackensack, the engineer, leading from ... ...his cab, crept to the engineer's ... ...cab window and the conductor, Horton was ... ...in the caboose of a car of giant ... ...Dane dynamite, tossed ... ...and tossed. He ... ...also the ... ...fireman, climbed over the coal and ... ...ice on the tender and ... ...the cab of the locomotive. ... ...Both men shouted to the engineer, ...but the train, instead of ... ...slowing down, ran faster.

... ...conductor clambered back and ... ...tried the throttle. No answer came and he ... ...knew that the cab was vacant. ... ...Fortin was in the engineer's ... ...cab with his hand on the throttle. ... ...He could not stop the train to a stand-still ... ...without killing the milk that was in the cans ... ...in the caboose that sent the milk ... ...rushing. He didn't know what ... ...had happened, but he did know that ... ...the train was plunging through the ... ...night without a guiding hand or an eye ... ...on the track.

Conductor Fortin, five miles back, ...knew as well as he was, realized ... ...that something was wrong with the train. His groans at... ...tracted the attention of a yardman.

"Quick," he cried. "Be quick. I'm ... ...afraid I've ... ...Run for your life ... ...to the next station and tell him '43' is run... ...ning wild. He must stop her or she ... ...will ... ...Hoboken!"

Without ... ...to aid the injured ... ...man, who ... ...them away, the man ... ...did as ... ...The operator broke in on ... ...the wire he was sending with ... ...the ... ...Newark, the emergency cry on ... ...the telegraph line.

... ...Hoboken" the Hoboken dispatcher, ...as fast as fingers could tap, he clicked ... ...out a brief message. The dispatcher, ...improvising a cure for the trouble on ... ...the spur of the moment, called Hack... ...ettstown, ten miles beyond Port Mor... ...ris. In two minutes a crew had ... ...manned a heavy but fast engine with ... ...orders to run out ahead of the wild... ...it, slow down as it approached, let it ... ...catch up and then send a man crawling over the boiler into the cab and ... ...take control.

The crew decided for this desperate ... ...expedient waited nervously for the ... ...runaway. Many minutes passed, but ... ...there was not a sound from up the ... ...track. Then some one bethought him... ...self of a freight train that was between ... ...'43' and Hackettstown. The railroad ... ...men at once surmised that "43" had ... ...smashed into the freight, and after a ... ...longer wait for safety's sake, the ... ...'light' engine was sent carefully back ... ...to find the wreck. As it happened, ...however, this freight had been run off ... ...on a siding, and the old camelback had ... ...a clear track. When the "light" en... ...gine backed down the crew found the ... ...fireman at the throttle, bewildered by ... ...the sudden disappearance of his engi... ...neer. A brakeman was at the firebox, ...and the others of the crew were out ... ...looking for the missing man. The fire... ...man thought he had fallen out only a ... ...few yards back.

Patrick Fortin was taken to St. Joseph's ... ...Hospital in Paterson. He would not ... ...be satisfied until they told him old ... ...'43' was under control.

"That's good," he said, as he sank ... ...back in the cot. "If Bill hadn't ... ...stopped her she'd a' ripped the hinges ... ...off everything in her path."

RIHLUNG HILL FORT TAKEN

General Nogi Captures One of Port Arthur's Inner Works.

ONE THOUSAND JAPS KILLED

Severe Engagement Lasting Several Days Results in the Fall of One of Stoessel's Principal Fortifications—Russians Retreat in Safety—Two Steamers Run the Port Arthur Blockade.

Nogi's Headquarters Before Port Arthur.—After months of sapping and mining, after desperate fighting, Rihlung Fort, on Rihlung Mountain, one of the inner circle of forts around Port Arthur, was captured by assault at 3 o'clock in the morning.

A thousand Japanese were killed or wounded in the battle. The casualties among officers leading the men were heavy. Forty-nine from the rank of colonel down were killed, and fifty-eight wounded. The Russian garrison, numbering 500 men, escaped.

For a day and a half the fighting was mostly at a range of two-thirds of a mile, the Japanese fearing countermines. The Russians retired from the outermost trenches only when the Japanese got an enfilading position.

At 10 o'clock in the morning seven Japanese dynamite mines were exploded, and more great breaches in the main parapet of Rihlung Fort. A large force, the left centre column of Nogi's army, charged under cover of a tremendous fire from the heavy guns, occupied the parapet and constructed defensive works despite the fierce Russian fire.

At 4 o'clock that afternoon the Japanese occupation of the fort was practically assured. They charged again in force, dislodged the remnant of the enemy's force, which still stubbornly held the gorge fort, and, after a fierce fight occupied all the defensive works on Rihlung Mountain early the following morning.

The mountain is less than two miles due southeast from the outskirts of the town of Port Arthur. The fort is about a mile and a half southeast of the East Keekwan Fort lately captured.

Recent fighting resulted in the capture of Yangthuban Hill. In this operation the number of casualties was large because in the intense darkness the attacking force became confused and sections of it fought each other. The mistake was discovered when the moon arose, and the attack was renewed even more fiercely. The taking of Yangthuban Hill enables the Japanese to seriously harass land communication with the Liaoti forts and with the forts on Erhlungshan and Antse Mountains.

Two steamers recently ran the blockade at Port Arthur. One was captured when departing.

MUCH BOGUS MINERAL WATER.

Bureau of Chemistry of Agricultural Department Starts Investigation.

Washington, D. C.—A new chapter in the work of purifying the foods used by Americans has been begun by the Bureau of Chemistry of the Department of Agriculture. The bureau will examine all sorts of well known mineral waters now being sold, most of them domestic in origin, and some of them imported.

The Geological Survey experts will co-operate with the chemists in the work, and a complete report will be made on the character and wholesomeness of the various waters.

Dr. Wiley believes from the progress thus far made that many waters have no medicinal value whatever and some are positive frauds. The health-giving qualities of some exist, he says, only in the imagination of those who use them. Many waters have been found to be properly labeled and to pass for just what they are. Many others are falsely labeled and are an imposition on the public.

The Geological Survey has undertaken to obtain genuine samples of water from every known medicinal spring in the country, and these samples will be used as a standard of comparison by which to test the spurious waters sold in drug stores in large quantities.

There are a number of waters sold that are plainly labeled as being simply pure water from granite rock and possessing no medicinal properties whatever. They are bought by people who are unwilling to trust city water. These waters, however, are in a very small minority.

RIOTING IN POLAND.

Outbreaks Reported in Many Places—One Policeman Killed.

Vienna, Austria.—Telegrams from Warsaw report disturbances in many parts of Poland. A policeman was shot and killed during a procession of workmen at Lodz. An orthodox church was destroyed and grogshops were plundered in the Kalisz district. Riots and pistol shooting have taken place at Kielce and Konsk, and machine works were destroyed at Konsk.

Greek Band Surrenders.

The Greek band surrounded in the village of Bedrelli, near Salonica, surrendered to Turkish troops, said a special Salonica dispatch.

Captain Howze at the Academy.

Captain Howze, acquitted of cruelty in the Philippines, was appointed commandant at West Point by President Roosevelt.

COTTON BURNED IN SOUTH

Georgia Growers Start Movement to Destroy 2,000,000 Bales.

Bad Break in the Market Follows the Government Report That 11,848,113 Bales Had Been Ginned.

Atlanta, Ga.—Fearing bankruptcy because of the tremendous slump in cotton, the farmers and merchants began taking a heroic measure to prevent a further fall and to advance the price. This measure is no less than the burning of a portion of the cotton which has not been marketed. It was proposed that 2,000,000 bales be destroyed, each State to burn its proper proportion.

The burning began in Georgia, and it was estimated that several thousand bales of cotton were ablaze in the southern section of the State. At Fort Gaines alone over 3000 bales were burned and other towns report similar bonfires.

Much ceremony was observed in burning the cotton. At Fort Gaines farmers came from all over Clay County to join with the merchants. The cotton was rolled into the Court House Square, and after the merchants and farmers had marched around it in procession the torch was applied.

In several other towns scenes similar to those in Fort Gaines were enacted. It is estimated that more than $100,000 worth of cotton was destroyed.

It is said that the example set by Georgia will be generally followed throughout the cotton-producing States. The farmers and merchants have decided to set the pace and began moving determinedly.

Fear of a decline in the price of cotton that will put it below the cost of production has caused the movement to burn the surplus of about 2,000,000 bales above any crop heretofore grown in the South. Even at the low prices prevailing the realization of this plan would result in the destruction of upward of $80,000,000 worth of the staple. January cotton sold in New Orleans at 6.40 cents, which, with the average bale weighing over 500 pounds, would make each bale worth upward of $32.

Those who have worked up the cotton-burning plan do not propose that all the burning be done in a few days. They proposed to have the cotton destroyed gradually in order to show the world that they are in earnest.

The planters and many of the merchants in the smaller towns of Georgia and the other cotton-growing States have been rendered well nigh desperate by the slump, and they felt that they must resort to desperate measures to cause an advance.

Dispatches from Fort Gaines and other places where the cotton was burned lay stress on the seriousness with which the deed was done.

Those taking part went about it as solemnly as if engaged in a religious ceremony. At Fort Gaines hymns were sung and prayers said. There was nothing riotous about the proceedings. The farmers and merchants seemed to feel that they had been driven to the wall and were making a last effort to save themselves from ruin.

James B. Harrison, one of Georgia's leading cotton buyers, killed himself at Bannesville. Harrison had 1200 bales of cotton which he purchased during the season. He frequently said that he expected to hold the cotton until he got twenty cents. When he learned of the break in New York he purchased a pistol, went to his room, and shot himself through the head.

FOUR SHOT DEAD AT DANCE.

Trouble Started When One Man Tried to Take Away Another's Girl.

Grafgers, W. Va.—As a result of a man dancing with another man's girl without asking his permission, four men are dead and two are seriously injured here. The victims are John and Marvin Hart, twenty-three and twenty-six years old, respectively; Martin Johnson and Luther Bascom. William Riley and Henry Turbeville are injured.

The tragedy occurred at a dance which began about 9 o'clock after an entertainment in the church in that place. Martin Johnson, without observing the usual custom, asked Lucy Atkins, whom Turbeville had taken, to dance with him, but said nothing to her escort. As the music ceased Turbeville called Martin Johnson's friends. A general shooting followed, in which more than twenty shots were fired.

RESCUED BY LIFE SAVERS

After Three Days of Suspense the Drumelzier's Crew Go Ashore.

THE STEAMER'S BACK BROKEN

Steamship Strikes Fire Island Bar Off Long Island and Sticks Fast—Her Captain and Crew Stand by Her Until the Last—Sandy Hook and Oak Island Life Savers Called Upon.

New York City.—Leaving their stranded ship, a battered, rudderless derelict, with a broken back, to contend alone with winter's storms and giant breakers on the Fire Island Bar, Captain Nicholson and his crew of twenty-nine men were rescued from the British freighter Drumelzier by the life savers of the Sandy Hook and Oak Island stations, after three trips which are likely to go down in the annals of such deeds as among the most perilous on record.

It was not until late in the afternoon that Captain Nicholson showed any disposition to give up the valiant battle with gales and ocean he had been waging for three days for the mastery of his ill-fated vessel. By that time he had been deserted by nearly all his crew with the exception of the officers and a small apprentice, who, with the determination of a man, vowed that he would stick with his Captain to the end, and resisted all the pleadings of the life savers and his superiors, including Captain Nicholson, who asked him to leave.

By the time Captain Nicholson, who was the last man on board his ship, decided that he had enough, it had become plain to every man on board the Drumelzier that the ship was doomed. At daybreak on the second day, while laboring heavily among the breakers that ran mountain high and pounded the bed of sand under her hull, the crew heard a cannon-like report way down in the depths.

The next moment there was a sudden bulging up of her decks amidships, as though a volcanic eruption had occurred in her hold. The engine was torn from its fastenings and slid six feet aft. The boiler slid forward a like distance. The stern buried itself deep in the sand, with the result that rudder and propeller were both ground to pieces. Captain Nicholson needed no further evidence to tell him that the Drumelzier had broken her back and that his fight with the ocean had been lost.

There were six feet of water in the forward hold of the vessel and eight feet aft. The storeroom, where the ship's provisions were kept, had been flooded, and there was hardly anything on board for the crew to eat. Nevertheless, when a string of bunting was discovered fluttering from the signal halyards of the Drumelzier, the signal was not for life savers, but for boilermakers.

The rescue of the crew was effected in three relays. Captain Nicholson was not taken off until after nightfall. Even then, though the ship seemed to be on the verge of breaking up, he seemed to find it difficult to part from her. For three days, while he and his crew had stood by the wreck, it has been swept by mountainous seas. Through the long nights the only ray of hope for the ship's company shone out from the anchor lights of the wrecking tug that has borne her company.

The first batch of the crew to leave the stranded vessel consisted of fifteen sailors and firemen and two boys. They were taken off by the life savers from the Sandy Hook Station under the command of Captain Patterson, and were brought to New York Harbor on the ocean going tug Catherine Moran, of the Moran Towing Line, which landed them at the Atlantic Dock in Brooklyn at 7 o'clock in the evening.

It is now conceded that the Drumelzier will be a complete wreck.

It will, in the opinion of the life savers and surfmen, take weeks to remove the cargo, as it will be possible to work only between the oft-recurring storms which sweep the Atlantic coast at this season of the year.

Do It Now.

This life's a garden full o' weeds—
  We've got to pull 'em all
Before they fill the field with seeds
  When they are dry an' tall.
While we complain the field gets full—
  Don't sit with frownin' brow
An' fret because you've got to pull—
  It's best to "Do it now."

The job a fellow soldiers on
  Is one that's never through;
Each day's another chance that's gone
  An' left us more to do.
Nobody else can do your work
  Like you can, anyhow.
The task grows bigger while you shirk—
  It's best to "Do it now."

There's always lots o' time to spare
  To tell your woes, my son;
The hardest work of all to bear
  Is that that's never done.
The "put off" man, he does things twice
  In spite of all his row.
Don't wait to ask or give advice—
  Get out and "Do it now."
—W. D. Nesbitt.

Paper Parachute.

This is not quite as exciting sport as shooting the chutes, but it is good fun. Of course you know what a parachute is—a thing like an umbrella, with or without the stick, which, when properly weighted and dropped from a balloon or a high tower, will fall to the ground very slowly and gently because its broad surface offers a great deal of resistance to the air.

Parachutes used by balloonists are generally very large and have no stick, but some daring persons have jumped from housetops with common umbrellas and escaped without serious injury.

It would be rather interesting to drop a small parachute from the roof or a window and watch it sail gracefully to earth, but the fun would hardly pay for the work, as you would have to carry it upstairs for each flight, unless it was destroyed or captured by some other boy on its first descent, which would probably be the case. What you want, clearly, is some means by which you can shoot

About to Be Discharged.

the parachute up into the air from the ground.

Such a parachute gun is easy to make. You need only a tube large enough to contain the parachute easily and a stout rubber band.

The parachute may be made of tissue paper or other thin, tough paper, or of thin muslin or silk. It needs neither the stiff ribs of an umbrella nor any mechanism for opening and shutting; its weight and the resistance of the air attend to that.

It does need a stick, however, and this should be very thin and light, and at least twice as long as the closed parachute—that is, as long as the diameter of the open parachute. The stick is simply poked through the parachute, and a thread tied around the top of the paper and the stick will make all secure.

The ribs, if they may be called such, are merely six or eight threads or fine cords pasted to the outside of the parachute from the top or center to the edge. The upper ends of the cords may be tied round the stick; the lower ends should project far beyond the edge of the parachute, and be fastened to a metal ring, through which the stick passes. The lower end of the stick has a knob too big to go through the ring, and on the bottom of the knob is a groove for the rubber band. The shooting tube, which may be of paper, should be as long as the stick and large enough to let the closed parachute slip through easily. The rubber band is attached across the bottom of the tube, one end being tacked to each side.

Put the folded parachute into the tube, see that the rubber band lies in the groove, hold the tube firmly with the left hand, and, with the right, pull down the knob and the ring together several inches and let go.

The stretched band contracts and shoots the parachute up into the air like a pea from a pea shooter. When the parachute has reached its highest point it begins to fall, but immediately opens out, fills with air, and descends very slowly. If there is much wind it will sail quite a distance before it reaches the ground, especially if you stand with your back to the wind and incline the gun forward.

GOOD GAMES AND TRICKS.

Japs and Russians.

Japs and Russians is a game played by two persons with slate and pencil. About a quarter of the slate is marked off by a line at each end, and in each of the compartments so marked off are made a number of dots about the size of a pinhead, those at one end representing Japs and the others Russians. The number of Japs and Russians may be large or small, as agreed on, but must be equal. At one end of each compartment is a small square which serves as a battery. Each player in turn places the point of his pencil in his own battery and then draws a line quickly in the direction of his enemy's men. The line must have no angles in it, but must be straight or curved. Those dots through which the line passes are considered dead men, and he who first kills all of the enemy's men is the winner. Sometimes the players are required to shut their eyes or turn away their heads when drawing their lines.

Literary Characters.

Furnish each guest with paper and pencil. Slowly read a list of familiar characters in literature, numbering each. The players must write opposite the number the name of the book from which the character is taken. A prize may be given to the owner of the list most nearly correct.

Dry Land Crab Race.

A dry land crab race is a very amusing game for the little ones, and is played in this manner: A starter and an umpire are needed for the crab race, which should be run on soft green turf. Ten yards or thirty feet is quite long enough for it. The racers kneel down on all fours and form in line at the starting point, with their backs toward the winning post. At the signal off they go, each one crawling backward. The race is not always to the swift. It is not at all easy to keep in a straight line, and every time a racer turns to look over his shoulder he loses time and ground. There will be collisions, bumps, and all sorts of little mishaps, which will thoroughly amuse the spectators, and the children, too.

Some Games for the Season.

A good game, just suitable for this season, is the game of the "Whalers of New Bedford." Some particular spot of the playground is selected to represent the harbor of New Bedford. All the players, except two, scatter and pretend to be whales. The two who remain must join hands and "put to sea" from New Bedford to go a-whaling. They must select a particular "whale" and go after him, but under no circumstances must they let go of each other in doing it.

The "whale" must be carried successfully into port, and he may resist his captors all he pleases, with the exception, of course, of punching or otherwise making a rough fight. Naturally the whalers try to catch the smallest "whale" first.

Arrived in port, the "whale" becomes a whaler, and takes his turn at going out, hand-in-hand, with one of the first whalers, to catch another "whale," and so on till the sea is fished out.

Clay Pipe Water Mill.

This water mill belongs to the class of "reaction" mills which are turned one way in the effort to throw a stream of water in the opposite direction, and it is made of a clay pipe.

Cut away one side of the mouth end of the stem with a knife (not your best one), or rub it away with a file or on a grindstone until it is like Fig. A—that is to say, until you have laid bare, so to speak, the bore of the stem for half an inch or so. Then stop the hole, both at the end and at the side, with sealing wax, leaving only a small round hole at the point farthest from the end, as shown in Fig. B.

Now all you have to do is to fasten a fine cord with sealing wax to the edge of the bowl, at the precise point that comes nearest to the smoker's mouth. Tie the other end of the cord to the chandelier or other convenient object, and pour water gently into the bowl.

A fine jet of water will shoot out sidewise from the little hole in the stem and the pipe will begin turning in the direction indicated by the arrow. I twill keep on turning as long as there is any water in the bowl, and, indeed, a good deal longer, by the effect of the momentum.

What makes it turn is this: At any

Water Mill in Action.

point of the pipe except near the little hole the water presses with equal force in every direction on the pipe. At the point of the stem opposite the little hole there is a certain pressure on the pipe from the inside, and this pressure is not balanced, because on the opposite side—that is, the hole—there is nothing for the water to press against except itself. Hence the water is driven out in one direction and the pipe is spun around in the other.

The Little Green Man.

A pretty trick may be shown by fashioning a little man or a pillar out of clayey mud mixed with sand.

While the figure is still soft press into it seed of watercress which has been soaked for some hours in soft lukewarm water.

When the figure is well covered with seed set it into a plate which is filled with soft lukewarm water mixed with a bit of unslaked lime. Before long the figure will be covered with a beautiful, velvety green cloak.

Would Tax Horse Racing.

Lord Newton, who is president of a British horse show society, suggests that the country's revenue might be increased properly by a tax on horse racing.

THE ODD CORNER

The Little Waves of Breffny.

The grand road from the mountain goes
  shining to the sea,
And there is traffic in it and many a
  horse and cart.
But the little roads of Cloonagh are dearer far to me,
  And the little roads of Cloonagh go
  rambling through my heart.

A great storm from the ocean goes
  shouting o'er the hill,
And there is glory in it and terror on
  the wind.
But the little roads of Cloonagh are
  dearer far and still,
  And the little winds of twilight are
  dearer to my mind.

The great waves of the Atlantic sweep
  storming on their way,
  Shining green and silver with the hidden herring shoal.
But the Little Waves of Breffny have
  drenched my heart in spray,
And the Little Waves of Breffny go
  stumbling through my soul.
—Eva Gore-Booth.

Ancient Stenography.

Shorthand was known to the ancients, though it is impossible to trace the system to its source.

Ennius, the Roman poet, is said to have improved upon an already existing system. He was a friend of Scipio, and was born B. C. 239. Seneca also made it a hobby.

Origen, the Greek Father and Mystic, who was born about 186, and was a voluminous writer, says, in the course of his commentary on St. John: "The absence of my shorthand writers prevents me from dictating my meditations." We are told, too, that he allowed shorthand writers to take down his extempore homilies.

In the tenth century Greek and Roman stenography gradually died out, and the art did not revive until the beginning of the seventeenth century. During this long interval several systems of quick writing were evolved, such as that of Dr. Timothy Bright in 1588, who had a separate sign for every word, and some of these almost rivaled shorthand in rapidity.

Remarkable Lightning Holes.

It is generally known that lightning striking the ground sometimes forms tubes lined with fused minerals, but comparatively few persons have ever seen these phenomena. Not long ago during a thunder storm in Essex, England, a ball of fire, which seemed to cast darts in all directions, was seen to descend from the clouds. There was a crashing explosion, and afterward, in an out-field, three distinct sets of holes, ranging from nine inches down to one inch in diameter, were found in the ground. They were perfectly circular, diminishing in size as they went deeper, and were cut through the yellow clay as clear as auger holes.

Burmah Has Old Sacred Tree.

The oldest sacred tree in the world that has any authentic history is reputed to be the great Bhoo tree in Burmah. It has for the past twenty centuries been sacred to Buddha, the image that nearly all the Burmese worship, and no one is allowed to touch the trunk of this sacred tree. In the fall, when the leaves begin falling, pilgrims and curio hunters gather and carry away the leaves as relics.

A Natural Death Trap.

In a remote corner of the Yellowstone park, out of the way of tourists, and rarely visited, there is a little vale, known as Death gulch, which, when the weather is calm, asphyxiates wild animals unlucky enough to wander there. Fissures in the rock emit fumes of bioxide of carbon, and sulphuretted hydrogen, which collect in the bottom. The dead carcasses of bears and other denizens of the surrounding wilderness killed in this way have been observed in it by several travelers and scientists.—Montreal Herald.

Piece of the First Monitor.

In the public library at Lowell, Mass., is a huge piece of iron, about 12x24 in size and an inch in thickness. It has a history, as the following inscription relates: "Piece of the first Monitor, removed after the battle with the rebel steamer Merrimack in Hampton Roads, March 9, 1862. Presented to the City of Lowell by G. V. Fox, Assistant Secretary of the Navy, 1866."

Students Too Fond of Cider.

A farmer living in the vicinity of Waterville, Maine, drove onto the campus at Colby with several barrels of russet cider for sale. While he was delivering a small quantity in one of the students' rooms somebody made off with a full barrel from his stock. Search failed to reveal the plunder and the vender drove away in haste in order to save the remainder of his load.

Whole Family in Holy Orders.

The family of the lord bishop of Carlisle, England, is a noted one as a clerical family. The bishop's father, now deceased, was the Rev. James Bardsley. His two brothers and seven sons were clergymen, and the ten were all living and in orders at the same time. He had also nine nephews who were clergymen.

Her Own Dentist.

A lady living near Campton Village, N. H., recently pulled two of her own teeth, one of which was not loose at all. She had to cut around the tooth with her penknife, after sharpening it for that purpose, and with old-fashioned forceps which slipped off three times, she conquered at last.

THE WITHERED PEACH.

It was a tattered city child
  With haggard face and brave
Who found a little withered peach
  A-lying on the pave.

I saw him clasp it swift and close
  Beyond my greedy reach,
As though earth's richest treasure lay
  Within that withered peach.

"Oh, see," I said, "that humble prize
  How eagerly he thumbs;
Perhaps 't will give him strength again
  To battle with the slums.

"Perhaps a father's drunken curse
  Has cast him on the street,
Without a roof to call his home,
  Without a crust to eat.

"Perhaps a mother's lying ill
  In need of nourishment
And he will take the peach to her
  In yonder tenement.

"Perhaps a little sister kind
  Is fading, pining fast
And he will save the peach for her,
  His one poor gift—his last.

"Perhaps"—just then an auto car
  Came tearing round the bend
And brought my mellow reverie
  Abruptly to an end.

A window opened: someone yelled,
  "Hi! Chimmy, soak 'em good!"
The urchin poised the peach in air—
  And then I understood.
Wallace Irwin in Puck

JUST FOR FUN

"How did you find the folks in New York?" "Easy. They met me at the station."—Cleveland Plain Dealer.

"But she's so homely!" "Well, that's her privilege, I suppose." "Yes, I know; but some persons abuse their privilege so!"—Judge.

"Here is an item that says storks are very seldom seen on the American continent. They get there just the same."—Houston Post.

Mrs. Hobbs—Isn't that Henry practising on his cornet? Mr. Hobbs—Partly on his cornet, but principally upon my nerve centres.

Dusty—Was that your dog I saw following you t' other day? Weary—No, but I was his meat. He caught up to me just after I got around the corner.

"What makes you look so jolly, old fellow?" "I have just bought something for my wife that I didn't have to take back and exchange."—Chicago Journal.

Fuddy—Speaking of Gimlet, would you call him a distinguished actor? Duddy—Considering the quality of his equipment, I should say "courageous" would be a better word.

Burroughs—I don't see why he wouldn't lend me the five dollars I wanted. Newitt—No, he certainly could not ask for a more permanent investment.—Philadephia Press.

Percy—Molly, for your sake, I'd shed the last drop of my blood! Molly—Yes, all young men say that. But somehow they seem very careful never to shed the first drop.—New Yorker.

"You have to pay some attention to internal law, do you not?" "Yes," answered the man in charge of a Russian warship. "But I like to be original and make up my international law as I go along."—Washington Star.

The Daughter—No, mother, dear, I could not marry Mr. Smith; he squints. The Mother—My dear girl, a man who has $100,000 a year may be affected with a slight optical indecision—but a squint, never.—Tatler.

Lady (calling on new vicar's wife)—Have you see the library at the hall? Sir George is quite a bibliophile, you know. Vicar's Wife (warmly)—Oh, I'm so glad to hear that! So many wealthy men have no religion!"—Punch.

"My good woman, do I understand your husband is active in church work?" asked the clerical-looking man. "Yes sir," replied the woman, picking up her basket; "he's doin' some repairin' on the steeple now, sir."—Yonkers Statesman.

Holden—When you asked her to marry you did she hide her face on your shoulder and whisper "yes?" Tilden—On the contrary, she looked me square in the face, and remarked, "No on your life!" Somehow I got the impression that she wouldn't have me.

"I suppose a statesman must give a great deal of attention to looks," said the novice. "Well," answered Senator Sorghum, "he has to keep a check book. Bupt it is just as well for him to be a little careful about whathe puts down in his ledger."—Washington Star.

Yeast—What is your wife so pleased about this morning? Crimsonbek—Why, burglars got into the houselast night. "I can't understand whythat should please her." Well I can; they took some of the preserves she's never been able to get anybody to take."—Yonkers Statesman.

Mother—Have you informed Mr. Huggins of my decision that the gas in the parlor must be turned out promptly at ten o'clock? Pretty Daughter—Oh, yes! Mother—How did he receive the information? Pretty Daughter—Oh, he thanked me, and said he'd be here at exactly three minutes to ten hereafter."—Harper's Bazar.

TERMS ARE GIVEN

Officers and Officials to be Paroled, Rank and File to be Prisoners.

DETAILS NOW BEING ARRANGED.

Feeling of Relief Dominant Among All Who Have Participated in Relentless Siege.

Tokio.—The Japanese took possession of a number of forts of Port Arthur Monday.

The Russian officers and officials will be permitted to return to Russia upon parole, the officers retaining their side arms.

The capitulation terms indicate that the Russian rank and file of the garrison of Port Arthur will come to Japan as prisoners.

Stoessel's Decision.

Chefoo.—The fort where the negotiations for the surrender of Port Arthur were held is called the Big Eagle's Nest, and it is near Rihlung mountain.

According to the reports of the negotiations received General Stoessel proposed that the Russian sick and wounded should remain under Russian medical supervision and that the Japanese transfer the non-combatants was acceptable to General Nogi, but the Russian proposal that the Russians should march out under arms caused some controversy.

Warships Blown Up.

Midshipman Klisorich, commanding a launch, which left Port Arthur at 8 o'clock Monday night, said: "No shot has been fired at Port Arthur for two days. That which the Chinese heard last night was the Russians blowing up forts, ships, magazines, warehouses, docks and everything valuable. When I left Port Arthur the fortress and town was almost completely wrecked. The warships died hard. Severe explosions were necessary to complete the wrecking of them. The Sevastopol, after catching fire, exploded and turned turtle. The harbor entrance is blocked with sunken ships. The only navigable craft now at Port Arthur are the hospital ships Kassan and Mongolia.

"You need expect no more ships from Port Arthur, as these are unable to leave on account of the blocking of the harbor.

"Colonel Reiss represented General Stoessel in the negotiations for surrender. A table was spread with wine and food at the Eagle's Nest and the envoys treated each other with great courtesy. Each complimented the other on the bravery of their forces.

Feeling of Relief.

"The statement that there remained 5,000 fighting men at Port Arthur is misleading because a majority of these are sick or slightly wounded. There has been for some time no proper bandages and wounds have been dressed with hemp," said Midshipman Klisorich. "The news that General Stoessel was prepared to treat for surrender was received by the soldiers with feelings of utmost relief. For the past month severe wounds have been gladly received by the soldiers, because they were allowed to rest.

"The bombardment of the last day or two was terrific. Everybody remarked that even General Stoessel must see the futility of further resistance when our guns were unable to reply.

"We might have surrendered a month ago with honor. That resistance has continued effectively since is scarcely less than a miracle.

"It is a mere handful of broken men who surrendered and a debris strewn fort which the Japanese gain. Not of Port Arthur's magnificent public works remains.

"The feeling created when General Stoessel took the unwelcome step was generally one of relief.

"The soldiers for whom one month's service has counted as one year are rejoicing that they will soon see their families."

Has No Effect on Americans.

Washington.—Whatever effect the fall of Port Arthur may have on the ultimate issue of the war the attitude of this government toward the belligerents has not undergone the slightest change. More than once the American government has let St. Petersburg and Tokio know that it stands ready at any time to render neighborly assistance whenever both belligerents are prepared to welcome it. Further than this the government has not gone.

Surrender Surprises Che Foo Officers.

Che Foo.—Two more torpedo boat destroyers having left, only one Japanese destroyer now remains in port.

Hardware Company Sold.

Gadsden, Ala.—C. W. and T. G. Ewing have purchased the entire Paden interest in the Paden-Ewing Hardware Company and will continue the business under the name of the Ewing Hardware Company. The capital stock of the new company will be placed at $60,000. T. G. Ewing will be president, with C. W. Ewing as treasurer.

Andrew Carnegie has donated twenty-five thousand dollars for a public library at San Rafael.

The news that General Stoessel accepted General Nogi's terms has surprised the Russian officers here, who had not heard the report to that effect when leaving Port Arthur last night.

Street Railway Receiver.

New Orleans.—The New York Securities Company has sued for receivers for the Street Railways Company of New Orleans, bring suit simultaneously in New Jersey, New York and federal courts here. President E. C. Foster, of the railway company, and Pearl Wright, local merchant, were appointed receivers.

The state recently sued to annul the corporation which sought to consolidate eleven local lines of street railways and capitalize the concern at $80,000,000, C. Fairchild and other Eastern capitalists being interested. A compromise was finally proposed to reduce the capitalization to $80,000,000. This was presented to the New York bondholders who proposed a reorganization plan assessing the preferred and common stock. This has not yet been acted upon, but the securities company took the matter to court to forestall outside action and protect itself. The bonds were due yesterday and no payment was made so as to furnish a basis for the receivership suit.

Suit Against Government.

Washington.—M. T. Lewman & Co., the well-known contractors of Louisville, Ky., have filed suit in the court of claims at Washington against the United States government for alleged damages said to have been caused through the continued interference of Major W. E. Graighill, who was the engineer in charge of the Tombigbee and Warrior river work in which they had contracts.

The cause of the dispute is said to have arisen out of the construction of locks and dams on the Warrior and Tombigbee rivers near Demopolis. This work has been going on for some time, but the plaintiff company avers that the engineer in charge of the work has put them to such inconvenience that they are unable to make anything out of the work. They claim as damages the sum of $50,000.

Rifled Mail Bags Found.

Nashville, Tenn.—Two United States mail bags were found near the express office at Union City, Tenn., by a Western Union messenger boy, where they had lain in the weather since the 14th and 18th of December. All the letters had been opened and examined and all valuables extracted. The mail was thrown off here on the northbound Mobile and Ohio road at 1 o'clock on the night of the 14th ultimo, but the negro porter whose business it is to carry the mail to the office reported the following morning that only paper mail came. The same thing occurred on the 18th.

Six Buildings Burned.

Indianola, Miss.—A devastating fire in the center of the town early Tuesday destroyed six buildings, entailing a loss of about $80,000, with about $30,000 insurance. The fire broke out in a negro lodge hall at the end of a dance and spread rapidly. William Kimbrough, a prominent citizen, and proprietor of a large hardware store, which was destroyed, was caught under a falling wall and probably fatally hurt.

Big Timber Company.

Jackson, Miss.—The largest lumber concern that has been organized in Mississippi for some time is now being launched at Shaw, Tallahatchie county, and will shortly apply to the governor for the approval of its charter. The concern will be known as the Delta Land and Lumber Company, and will have a capital stock of a half million dollars. Mr. F. E. Hanks has been elected president, and the board of directors is composed of Illinois and Wisconsin capitalists.

President's Old Promise.

New York.—To fulfill a six-year-old promise when he was governor of New York state, President Roosevelt will be, it is announced, the principal guest February 14 at the annual dinner of the Hungarian Republican Club. It is said the promise to attend another dinner of the club when he should have been elected president was obtained from Governor Roosevelt six years ago in a jest by the president of the club.

Big Lumber Export.

Jackson, Miss.—Captain J. T. Jones, president of the Gulf and Ship Island road, estimates that the lumber exports from Gulfport for the month of December will amount to over 25,000,000 feet. The actual figures will be made public within a few days. The harbor was crowded with vessels throughout the month, and a large number of ocean-going steamers and sailing vessels are now at anchor awaiting cargo.

Railroad Commission Rules.

Montgomery, Ala.—At the regular monthly meeting of the railroad commission the most important work that came before the commissioners was the adoption of rules 18 and 19, so as to conform with the acts of the legislature of 1903.

Fire in Palace.

Berlin.—Fire broke out in the royal palace Tuesday, caused by a faulty chimney. No great damage was done.

PRESIDENT'S NEW YEAR

With Social Greetings the Capitol Hails the New Year—Splendor Abounds.

MUSIC RENDERED BY MARINE BAND.

Occasion Characterized by True Democracy.—Thousands Meet the President at the Reception.

Washington.—Official and resident Washington extended New Year's greetings to the president and Mrs. Roosevelt at the white house. The event—brilliant and spectacular as the president's New Year's receptions always are—marked the formal opening of the social season of 1905.

The reception was characterized by true democracy. The portals of the white house swung wide for all the world. All were welcomed to the historical mansion and afforded the opportunity to greet both the president and Mrs. Roosevelt. Thousands embraced this opportunity. By the president's direction no absolute limit of time was placed on the reception. The reception of guests began shortly after 11 o'clock. An hour or more before that time the line of callers began to form.

Burst of Melody.

As the callers entered the white house they were greeted by a burst of melody from the marine band, sixty pieces strong, stationed in the great vestibule under the baton of Lieutenant Santleman; a blaze of color and a breath of perfume from beautiful floral decorations; and a scene of splendor, the brilliance of which was enhanced by the soft glow from myriads of shaded electric lights.

The floral decorations, while not elaborate, were more profuse than what have characterized recent white house receptions. Rare varieties of palms were disposed effectively about the vestibule and main corridor, while in the great rectangular basins between the vestibule and the corridor palms and ferns formed a striking background for the scarlet uniforms of the band. In the state dining room, in the east room and in the red, blue and green parlors, rare cut-flowers were arranged with consummate art and effectiveness, the delicate colors of lilies and orchids being accentuated here and there by a blaze of flaming red or a splash of vivid green.

Reception Begins.

The beginning of the reception was announced by a flourish sounded by trumpeters of the marine band, stationed near the foot of the main staircase. The fanfare signalized the approach of the president. Preceded by his military aide, Col. Charles S. Bromwell, and his naval aide, Commander Cameron McR. Winslow, President Roosevelt, escorting Mrs. Roosevelt, descended the stairs, followed by the members of the cabinet and their ladies, constituting the immediate receiving party. The distinguished party crossed the corridor, and passing through the green parlor, entered the blue parlor, where the president and Mrs. Roosevelt received their guests. The guests invited to be "behind the line" already had assembled in the blue parlor.

Whiskey for Cotton.

Louisville, Ky.—A firm well known and responsible, owning six distilleries in Kentucky and Maryland, and among the largest distributors of straight whiskies in the United States, has advertised for one hundred thousand bales of cotton at nearly one cent above the market price, to be paid for in Kentucky whiskey. The notice, which is issued in perfect good faith, reads:

"Do not burn your cotton. We will take 100,000 bales of cotton, delivered in proper public storage warehouses at any point in the cotton states, at 7 1-2 cents per pound for 'middling cotton,' and pay for it in Kentucky and Maryland whiskies of our distillation at contract prices in bond."

American Iron in England.

London.—The pig iron merchants of Great Britain have concluded an agreement whereby in their contracts certain specified brands of American pig iron will be tenderable against speculative contracts in the United Kingdom. Fourteen American brands are listed, of which ten are from Alabama and four are from Tennessee.

Mail Robbery in France.

Paris—A mail robbery is reported by the postal authorities to have occurred between Chanteuges and Prades. The contents of seven sacks are missing. They are believed to have contained considerable quantity of important New York mail.

Four Children Burned.

By the burning of the house of a farmer named Lafreniere, at Calendar, Ont., four children lost their lives.

Von Sternburg to Return.

Baron Speck von Sternburg, German Ambassador, will return to Washington, D. C., late in January.

Honduras Will Pay.

Honduras finally agreed to pay an indemnity for the murder of Charles W. Renton, an American planter, in 1895.

FIVE CONVICTS SHOT DEAD

Over a Hundred Prisoners Attempt Escape at Sacramento, Cal.

Six Desperadoes at Georgetown, Del., Gain Freedom—Third Attempt Made by Others in Alabama.

Sacramento, Cal.—One hundred and fifty convicts at the Folsom State Prison made a break for liberty while they were being brought from work at a rock crusher in the afternoon, and in the fight which followed five prisoners were shot dead and one was wounded. Guard Jolly was shot through the cheek. Jolly is believed to have been shot by one of the guards by mistake, as none of the prisoners had a firearm.

All the convicts were armed with dirks, and they drew them on Captain Murphy and Guard Jolly, throwing them to the ground. They then tried to force the captain and guard to conduct them through the guard lines. The officers refused, and the guards on the outlying posts commenced to fire. All of the prisoners were secured.

Wilmington, Del.—By striking down Deputy Sheriff Charles T. Purnell when he went to lock them up for the night six prisoners escaped from the county jail at Georgetown in the evening. Purnell was seriously injured, and it was feared that he would lose the sight of one eye.

The men who escaped were Delaney Maddox, who was doing a life sentence for murder; Nathaniel Lingle, doing two years for larceny; Irving Wiitbank, doing five years for assault, and Cless Purnell, William Barton and Lee Ackwood, who were awaiting trial of petty offenses. A vigilant search was begun for the escaped prisoners.

Birmingham, Ala.—While a train carrying 130 convicts in the employ of the Tennessee Coal and Iron Railroad Comroad Company was going from Mine No. 3 to the prison, Will Filler, a negro convict, exploded a stick of dynamite in one of the coaches with a view to effecting a wholesale release. J. Dawkins, a convict from Henry County, was killed. Guard Pickett lost a leg and an arm. George Delaney, one of the trainmen, was hurt, and several convicts were slightly injured. During the stampede guards from all the other cars rushed forward and prevented the escape of any of the convicts.

BOSTON HARBOR TUNNEL OPENS

Mile and a Quarter Long, Built in Four Years For $3,300,000.

Boston, Mass.—The tunnel under Boston Harbor, a mile and a quarter long, connecting the subway with surface car lines in East Boston, was officially opened at noon, when a train of five cars was run through it and back again. Governor Bates, State and city officials, the Transit Commission, under whose direction the tunnel was built; officials of the Boston Elevated Railway Company, who will operate it, and visiting railroad men made up the party of inspection.

Everything went smoothly, and the tunnel was pronounced a success by all.

The trip, which is made in four and one-half minutes, means a saving of from fifteen to twenty minutes in reaching East Boston from Scollay Square, heretofore accomplished by means of electric cars to the water front and then by ferry across the harbor.

The construction work has taken more than four years. The tunnel section, which is built entirely of twisted steel rods and concrete, is considered by experts as one of the greatest submarine tubes in the world.

Construction work was begun on May 5, 1900. The approximate cost was $3,300,000.

REBATES BY THE SANTA FE.

Testimony That May Subject the Road to a Fine of $1,000,000.

Chicago, Ill.—Testimony of fraudulent discrimination in rates by the Stanta Fe Railroad system in favor of the Colorado Fuel and Iron Company was given before the Interstate Commerce Commission by W. B. Biddle, freight traffic manager of the Santa Fe.

The testimony given, with that secured recently by the commission at El Paso and Albuquerque, will be presented to the Attorney-General. Upon his decision depends whether suit is brought in the Federal Court against the Santa Fe system for violating the Interstate Commerce law by the payment of rebates.

If convicted of every offense alleged the Santa Fe company would be forced to pay fines exceeding $1,000,000.

The Caledonian Coal Company, of Gallup, N. M., has also brought suit in the Colorado courts against the Santa Fe, asking damages in $400,000 for the destruction of its business as a result of discrimination in rates.

Parsons Makes Suggestions.

William B. Parsons, retiring chief engineer, laid before the New York City Rapid Transit Commission a comprehensive plan of city subways. Routes for twenty-seven miles of subway, to cost $49,000,000, were recommended to the Rapid Transit Commission.

For Chicago Terminal.

It was reported in Chicago, Ill., that the Pennsylvania Railroad was prepared to spend $30,000,000 in the construction of a new station there.

Policeman Indicted.

Frank McLaughlin, the New York City rubber-policeman, was indicted for the murder of John Patterson, a watchman.

Urge Close of War.

Hundreds of representative men at Moscow met and passed resolutions urging the closing of the war and a national assembly.

Steamer Strands.

A big steamship was stranded off Cape Hatteras.

MINOR EVENTS OF THE WEEK

WASHINGTON.

President Roosevelt decided upon vigorous coercive measures against Venezuela.

Commissioner of Immigration Sargent has planned to head off a scheme to pass hundreds of Chinamen into this country through Canada.

Christmas at the White House was solely a family celebration.

Changes in gun positions on the next battle ships authorized by Congress are contemplated by the General Board.

OUR ADOPTED ISLANDS.

Governor Wright cabled that a monsoon prevented his reinforcing scouts in Samar, who afterward were massacred.

The Pulajanes ambushed and killed at Dolores, on the Island of Samar, a Lieutenant and thirty-seven enlisted men of the Thirty-eighth Company of Native Scouts. Two thousand Pulajanes threaten the town of Dolores, and the situation was said to be critical. Lieutenant Abbott, in command of the scouts, has requested that aid be sent him.

The luxuries of American civilization extended to him through the solicitude of the American Government have not tended to increase the usefulness of the Filipino as a soldier, according to the annual report of General Wood, commanding the Department of Mindanao, just made public by the War Department.

DOMESTIC.

A fire that destroyed the laundry building on Blackwell's Island, New York City, imperilled the lives of many men and women, some of them hospital patients.

Seven men were suffocated by smoke which was drawn into a mine at Bolivar, Pa.

The $250,000 rolling mill at Onyahoga Falls, Ohio, has been purchased by men at Columbus and will be moved to the latter city.

William R. Wilcox took the oath as postmaster of New York City.

On a ferryboat bound from New York to Jersey City, Emanuel Siegel, of Baltimore, Md., fell dead after a hard run to catch the boat.

Congressman J. J. Esch, of Lacrosse, Wis., announced his candidacy for the seat of United States Senator Quarles.

Two indictments were returned at Chicago, Ill., against Isaac N. Perry, former President of the National Bank of North America, arson being the charge.

An unidentified young woman, found unconscious in Riverside Drive, New York City, died in a hospital ambulance.

Plans were adopted by the New York Central for the improvement of its New York City terminal at an expense of $25,000,000.

Captain Kaempff, of the Deutschland, of the Hamburg-American Line, completed his 150th round trip across the Atlantic in the service of the company.

The Rev. John Bacon, the aeronaut, is dead at the age of fifty-eight.

"Tom" Sharkey, pugilist, was the latest subject used by a little Japanese to illustrate the art of jiu-jitsu to Police Commissioner McAdoo and his men, of New York City.

In an investigation into the Glen Island accident it was brought out that the mate of the steamboat had no mate's license.

The will of Miss Bertha M. Dolboer, who was killed by a fall at the Waldorf-Astoria, New York City, was sustained in San Francisco, Cal.

Charles Summerfield, a riveter, fell from the Williamsburg Bridge (New York City) into the river and lives.

After eight days' incessant labor at the pumps to keep afloat the rescued crew of the schooner Clara Goodwin reached New York Harbor.

In collision with the floating derrick Hercules, in the New York Navy Yard, a section of plate of the battle ship Texas was ripped up.

George Laird Shoup, first Governor of Idaho and for many years United States Senator, died in Boise.

The Edith L. Allen, disabled by a sunken wreck off Hatteras, was towed into New York Harbor by the Sabine, of the Mallory Line.

Without opposition the New York City Rapid Transit Commission approved the franchise for a subway under Sixth avenue and also Ninth street.

Dr. Chadwick was indicted jointly with his wife, Cassie L. Chadwick, by a Cleveland (Ohio) court, on a charge of forging and uttering the $5,000,000 Carnegie notes.

With several city blocks, each worth, in buildings and contents, $25,000,000, New York was declared by the Insurance Press to lead American cities in concentration of wealth.

Ten thousand unmarried men employed by the Pittsburg Coal Company have been laid off on account of the closing of mines by the severe drought.

FOREIGN.

Prince Inayat Ullah, son of the Ameer of Afghanistan, is at Calcutta and will visit Lord Curzon.

Bulgaria has notified the Powers that she will not accept responsibility for reprisals made because of excesses committed by Turkish troops.

The French Foreign Office considers the situation in Morocco extremely grave.

Diplomatic relations between France and Morocco, a special cable dispatch from Tangier states have been broken off.

The French Government is to present a bust of Lafayette to the University of Virginia, at Charlottesville, Va.

Since the reduction of England's naval force in American waters it has been suggested that Canada build a navy of her own.

Several former Ministers of Hayti and officials of the National Bank have been sentenced to long terms of imprisonment for the fraudulent issue of bonds.

Admiral Kaynakoff, whose health is given way, will be succeeded by Admiral Denbassoff in the commission to inquire into the Dogger Bank incident.

It was stated in Vienna that the resignation of Premier Von Korber was forced by his failure to secure sanction for extraordinary Austrian credits.

Lord Roberts, in an article in a London monthly, declared that Great Britain urgently needed a great reserve of trained soldiers.

Warships showing Japanese colors were sighted in the Sunda Strait, through which the Baltic fleet seemed likely to pass.

The continued shipment of troops to Southwest Africa has caused a belief in Berlin that preparations are being made to meet a rising of the Ovambos.

Count Tisza defended his action in Hungary by saying a change in the rules of the House was necessary in order to do any business.

The United States gunboat Wasp ran aground on a mudbank in the harbor of Kingston, Jamaica.

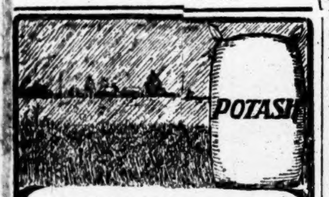
The crisis in Morocco grew more serious, and a special Tangier dispatch said the town of Alcazar was again besieged by tribesmen, who demanded a large sum, or, if refused, the sundering to them of several foreign residents.

The French Foreign Office considers the situation in Morocco extremely grave.

Prince Inayat Ullah, son of the Ameer of Afghanistan, is at Calcutta and will visit Lord Curzon.

To be a successful wife, to retain the love and admiration of her husband should be a woman's constant study. If she would be all that she may, she must guard well against the signs of ill health. Mrs. Brown tells her story for the benefit of all wives and mothers.

"DEAR MRS. PINKHAM:—Lydia E. Pinkham's Vegetable Compound did make every mother well, strong, healthy and happy. I dragged through nine years of miserable existence, worn out with pain and weariness. I then noticed a statement of a woman troubled as I was; and the wonderful results she had had from your Vegetable Compound, and decided to try what it would do for me, and used it for three months. At the end of that time, I was a different woman, the neighbors remarked it, and my husband fell in love with me all over again. It seemed like a new existence. I had been suffering with inflammation and falling of the womb, but your medicine cured that, and built up my entire system, till I was indeed like a new woman.—Sincerely yours, MRS. CHAS. F. BROWN, 21 Cedar Terrace, Hot Springs, Ark., Vice President Mothers Club.—$5000 forfeit if original of above letter proving genuineness cannot be produced.



Potash as Necessary as Rain

The quality and quantity of the crops depend on a sufficiency of

Potash

in the soil. Fertilizers which are low in Potash will never produce satisfactory results.

Every farmer should be familiar with the proper proportions of ingredients that go to make the best fertilizers for every kind of crop. We have published a series of books, containing the latest researches on this all-important subject, which we will send free if you ask. Write now while you think of it to the

The Horse's Secret.

Berlin—Dr. Carl Stumpf, professor of psychology at the University of Berlin and a member of the Royal Academy of Science, and two colleagues, Dr. C. von Hornbostel and Dr. O. Plungst, have ended months of experiments with von Osten's horse, "Hans." They find that the secret of the animal's replies is in his powers of observation which enable him to perceive while he looks at his questioner the instant he has reached a correct answer.

Thus they found the horse was unable to tap out accurate answers to a question when the person putting it did not know the answer, for example: "How many persons are in the group behind me?" The questioner, not looking, did not know the number and Hans was unable to give a correct reply, nor was he able when wearing blinkers to calculate, or to perform the simplest counting. Stumpf does not doubt the good faith of von Osteen, but he concluded that the horse's long training had enabled him to detect the eyesight changes in the bearing of his questioner and thereby he reached the right number of hoof beats in spelling or in using the counting apparatus.

Success.

Victor Smith in New York Press.

Charles Midas Schwab was a poor, bare-footed boy in the mountains of Pennsylvania. Today he is able to drop $10,000,000 in a deal and look pleasant; wears shoes costing $50 a pair, lives in an apartment for which he pays $50,000 a year; build a $3,000,000 palace, and pay $5 for a one-cent newspaper. That is the very essence of material success.

Psycho'ogy of the Setting Hen.

The hen patiently "sets" only through the overpowering pressure of a mysterious creative impulse that masters her restless impulses to be outside scratching and cackling, instead of working for posterity.—Boston Herald.

$100 Reward. $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials. Address

WORTH WINNING.

"Did you win anything on the election?"

"Yes. The gratitude of a man who wanted to bet me $50 it wouldn't come out as it did."—Chicago Record-Herald.

SYMPATHETIC.

"You look awfully tried, young man," said the benevolent-looking woman to the young man with the books under his arm.

"Yes, ma'am," replied the student, "I'm studying for a doctor."

"It's a shame! Why don't you let the doctor study for himself?"—Yonkers Statesman.

SUFFICIENT TO HIMSELF.

"If I do say it myself," remarked Bragg, "she's crazy for me."

"What a work of supererogation!" exclaimed Miss Kostique. "You don't need any assistance in that direction."—Philadelphia Public Ledger.

SOUNDED THAT WAY.

Mrs. Snappy—Was that the piano in your house I heard yesterday?

Mrs. Naybor—Yes, my daughter is taking lessons by the quarter now.

Mrs. Snappy—Indeed? I thought it was by the pound.—Philadelphia Public Ledger.

AN ENCOURAGING PHRASE.

"Did she really tell you that she loved you?"

"Not in so many words. But when I rocked over backwards in a confounded little rocker that isn't fit for any self-respecting fellow to sit in, she laughed and said: "This is so sudden!"—Cleveland Plain Dealer.

FAR-FETCHED REASONING.

"Why do you say that Gambley is no good simply because he wears a suit with large checks?"

"Well, do you like the checks?"

"No."

"Do you know anybody who does?"

"No."

"Well, don't you call a man 'no good' if no one will endorse his checks?"—Cleveland Plain Dealer.

THE FASHIONABLE WOMAN.

Dr. Frank—There! I guess I've mortally offended Mrs. Woodby.

His Wife—Why?

Dr. Frank—I told her she had nothing but a "common" cold. She was very indignant.—Philadelphia Public Ledger.

MAKES QUITE A DIFFERENCE.

Crawford—Did the coming of the stork make much difference in his home life?

Crabshaw—Yes. His wife changed her love for him to the baby and he transferred his to the nurse.—Town Topics.

WISE PAPA.

Dorothy—Papa, the piano must be tuned in time for the reception tonight.

Father—Nonsense. Play something from Wagner, and they won't know the difference.—Philadelphia Bulletin.

AMONG THE GUNS.

The Shotgun—Here! You can't vote here. Get out.

The Rifle—Why can't I vote here, hey?

The Shotgun—Because you're a repeater! Git!

THE LAST REFUGE.

Margie—If you don't quit teasing me I'll tell mamma and she'll tell papa, then papa will whip you.

Harry—Then I'll cry and grandma will give me some candy, and I won't give you any.—Chicago News.

NOT AT THE FRONT.

She—In case of war, would you go to the front?

He—Well, no. I think I'd sooner be a war correspondent.—Judge.

ALL DEPENDS.

Nordy—Say, they wouldn't let my friend, Sadkins, register. An outrage, wasn't it?

Butts—I don't know whether it was an outrage or not. What ticket did he want to vote?

THE FEMININE INTELLIGENCE.

"Why don't you insist on being the head of the house?"

"I am the head of the house," answered Mr. Meekton resolutely. "But, as Henrietta says, a head is no good without brains."—Washington Star.

ANXIOUS.

"I hear that your wife has run away from you."

"Yes. I've offered a reward for her capture, dead or alive."

"How much?"

"Ten dollars alive and a thousand dollars dead."—Judge.

TAKING CARE OF THE PENNIES.

Pincher—I believe in that old saying about taking care of the pennies. You know it, don't you?

Spenders—Oh, yes. "Take care of the pennies and the dollars will take care of your heirs."—Philadelphia Press.

SISTERS OF CHARITY

Uses Pe-ru-na for Coughs, Colds, Grip and Catarrh—A Congressman's Letter.

In every country of the civilized world Sisters of Charity are known. Not only do they minister to the spiritual and intellectual needs of the charges committed to their care, but they also minister to their bodily needs.

With so many children to take care of and to protect from climate and disease, these wise and prudent Sisters have found Peruna a never failing safeguard.

Dr. Hartman receives many letters from Catholic Sisters from all over the United States. A recommend recently received from a Catholic institution in Detroit, Mich., reads as follows:

Dr. S. B. Hartman, Columbus, Ohio; Dear Sir: "The young girl who used the Peruna was suffering from laryngitis and loss of voice. The result of the treatment was most satisfactory. She found great relief, and after further use of the medicine we hope to be able to say she is entirely cured."—Sisters of Charity.

The young girl was under the care of the Sisters of Charity and used Peruna for catarrh of the throat with good results as the above letter testifies.

Send to The Peruna Medicine Co., Columbus, Ohio, for a free book written by Dr. Hartman.

David Meekison.

The following letter is from Congressman Meekison, of Napoleon, Ohio:

The Peruna Medicine Co., Columbus, O.:

Gentlemen: "I have used several bottles of Peruna and feel greatly benefited thereby from my catarrh of the head, and feel encouraged to believe that its continued use will fully eradicate a disease of thirty years' standing."—David Meekison

Dr. Hartman, one of the best known physicians and surgeons in the United States, was the first man to formulate Peruna. It was through his genius and perseverance that it was introduced to the medical profession of this country.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, O.

There are now 4000 newspapers in Japan.

RAILROAD TIES OF LEATHER.

Made From Scraps Picked Up in Shoe Factories.

One of the most curious recent uses of waste material is the making of railroad ties from scrap leather such as is found in great quantities in shoe factories. F. W. Dunnell, of West Warren, Mass., has worked out a process by which ties can be made which he thinks will stand much more wear than any wooden ties. He claims 35 years of usefulness for leather ties used in ordinary railroad traffic, and tests of more than two years in yards where the wear is unusually heavy seem to support his belief in the durability of the ties he has made.

The United States navy has cost $1,029,465,276 in the past 22 years.

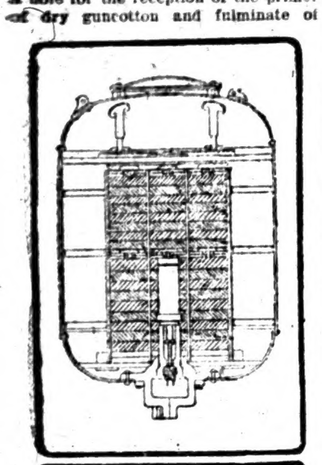
MINE OF DEADLY QUALITY.

Bursting Charge of from 500 to 1,000 Pounds of Guncotton.

The observation mine is a large structure of cylindrical shape, and carries a bursting charge of from 500 to 1,000 pounds of guncotton—the quantity varying in accordance with the depth of water in which it is to work. As shown in the cut, the guncotton is jacked in layers in copper tanks or cases having holes in them to permit the admission of water for wetting. The lower central case has a hole for the reception of the primer of dry guncotton and fulminate of



OBSERVATION MINE

mercury. The rest of the mine space is left for the sake of buoyancy, the sum of which is equal to a tendency to rise of 10 pounds' pressure. This 500-pound mine has an effective or destructive area equal to a circle 60 feet in diameter. These mines are generally planted in series of from six to ten, again, radiating like the ribs of a palm-leaf fan, each with a separate cable about 180 feet long.—Boston Herald.

Model Made by Convicts.

There is a remarkable model at South Kensington, England. Made to a scale of twenty feet to the inch, it shows a part of the additions to the dockyard at Chatham—a great feat of engineering skill accomplished by convict labor. In fourteen years the penal prisoners excavated the docks, made 102,000,000 bricks for the retaining walls, and did an enormous amount of masonry and other work. Altogether the enlargement is one of the greatest feats that can be put to the credit of convicts. In the model which commemorates it there are the figures of 295 prisoners, forty superintendents and other officers and fourteen free men.

Turkey Hatches Chickens.

Hert Crum, who resides northeast of Sulphur Springs, Ohio, has a turkey gobbler which has succeeded in hatching a dozen chickens. Not being satisfied with the work already accomplished, the gobbler has undertaken to raise the chicks and is doing as well as a mother hen could. This is the second attempt of the gobbler to hatch a lot of eggs, the first attempt being a failure. Seventy-nine years ago Crum's great-grandfather possessed a gobbler of equal distinction, the ancient gobbler having hatched a lot of eggs.

Centipede, Banana, Death.

Elsie Swan, 21 years old, died in convulsions at Minonk, Ill., a few days ago, after eating a part of a banana. Local physicians assert the banana was poisoned by a centipede. The fruit came from Chicago. A telegram to the wholesale dealer brought the reply that centipedes often came as passengers in bunches of bananas.—San Francisco Call.

Rare Relics of Early History.

George W. Bennett of Abbott, Maine, is the possessor of a silk badge worn by his grandfather, who was a captain in the revolutionary war, at the dedication of Bunker Hill; also a piece of the dress worn by his grandmother, given her by Lafayette during his second visit to the United States.

FLOWERS THAT TELL TIME.

Punctual to the Minute in Closing Their Petals.

There are flowers that act as timekeepers for those who have by observation studied their ways and habits, and so punctual are they that laboring men in some countries tell from them when the hour for dinner and leaving work has come; while in certain districts the school children are said to be dismissed when the goat's-beard closes, which it does punctually at the same time every day. The gardener to a millionaire has provided a flower-clock in the shape of a circular flower bed, with twelve divisions. Each of the divisions, from one to twelve, contains flowers which open or close at the corresponding hour. Thus the two space is occupied by a fl, made of hawkseed, which closes at 2 p. m., precisely, and so on. He had no difficulty in finding flowers to suit the several hours, and in some cases the figure has been made of more than one flower. Amongst the flowers used are the snow thistle, blue chicory, pimpernel, marigold, Star of Bethlehem, and evening Primrose. The Yellowstone park contains the most unique greenhouse for flower cultivation in the world, the heat being obtained from one of the natural hot springs, or geysers, the water of which issues from the earth at a temperature near boiling point. The shortest-lived flowers are the dew flowers of the Death Valley in California. Heavy dews are wafted by the winds from the mountains over the parched plain, and an hour or two before sunrise the moist sand, with its under-current of warmth, gives life to the dew flower. When the light begins to glow in the east, myriads of tiny pink flowers burst into bloom, hugging the sand for the few minutes they are destined to live. The sun's rays come slanting across the surface, and, as thought a touch of fire had passed over them, the dew flowers wither and disappear.—Montreal Herald.

A Rubber Neck.

The effect of opium in reducing the body to a mere skeleton has many illustrations among the Chinese of

American cities. A striking example of the effects of the drug is illustrated herewith. The Chinaman in question weighs only eighty-seven pounds, although he is over five feet in height and was originally a man of normal size. The skin of the face, it will be seen, is stretched tightly over the skull, while the cones of the neck are painfully prominent. The proportions of the neck add a curious mixture of comedy to this tragic figure.—New York Herald.

World's Typewriting Record.

The world's typewriting record on actual work has been broken by Mrs. Margaret Cunningham, a court stenographer at Trenton, N. J. She wrote 21,089 words of a legal decision requiring the utmost care, in six and one-half hours actual time, and not a single correction had to be made on the 57 pages covered.

Productive Pumpkin Seed.

From a single seed Jerome Jordan of Webster, Mass., has produced just 466 pounds of pumpkin. From a single seed of the ordinary garden pumpkin variety he has this season produced twenty-three pumpkins on the vine, the largest individual vegetable weighing twenty-seven pounds.

Lobster Would Make Many Meals.

A fourteen-pound lobster was recently secured by G. B. Hunt of Eastport, Me. The lobster measured nineteen inches from head to tail, the two feelers from the head measuring eighteen inches and the claws each seventeen inches in length, and the largest six inches in width.

He Was Too Late.

An Ozark county man who went to Louisville, Ky., last week to attend the funeral of his uncle drifted out to a picnic instead, and was later arrested for drunkenness. When he was released from jail the next morning the funeral was all over.

High Price for Shorthorn.

At the sale of the famous herd of Shorthorn cattle which belonged to the late Mr. W. S. Marr, farmer, Uppermill, Aberdeenshire, one bull, Bapton Favorite, realized 1,200 guineas, and two bull calves 600 guineas respectively.

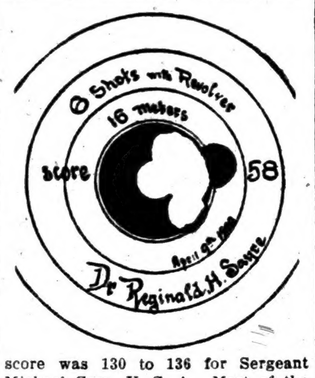
CRACK SHOT WITH REVOLVER.

Dr. Sayre Has Held Championship Many Years.

The revolver championship which Dr. Sayre has held so long is shot at ranges of twenty-five, fifty and seventy-five yards. Twenty-five shots are fired at each range, fifteen seconds being allowed for each string of fives. The contest is open to all comers, whether military or civilian marksmen, the only restriction being that the arm shall be a military weapon.

In the contests at Fort Riley, Kan., Dr. Sayre was second among fifty contestants in the revolver match. His



score was 130 to 136 for Sergeant Michael Cary, U. S. A. Most of the competitors were army men. The range was new to Dr. Sayre, and his score is considered excellent. Returning from Fort Riley he went to Sea Girt, with which range he is familiar, and promptly won the squadded revolver match, with a score of 130 at fifty yards. Fourteen national guard organizations took part in this contest.

Offer to Wed Cures.

William Harper and Miss Peni Durham, living near Center Cross, Virginia, were married recently, the Rev. Mr. Kerford of the Baptist church officiating.

Miss Durham had been bedridden about fifteen years and for most of the time was unable to walk. Harper was a widower, having married a sister of Miss Durham. He felt a deep interest in his sister-in-law and was frequently a visitor to her house. A short time ago Harper told Miss Durham that if she would get up and walk he would marry her. Thereupon she made an effort and succeeded, taking her first step in years. She gained strength and Mr. Harper led her to the altar.

The bride is about 35 years of age and the groom 45.

Amazing Pigeon Story.

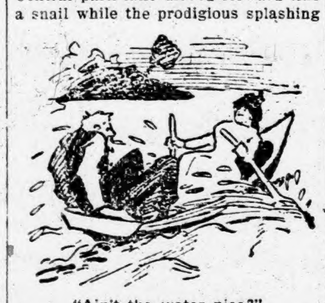
When you do a thing do it well. When you do a friend do him well also, and when you tell a story let it be the best of its kind. F. H. S. Morrison tells the most amazing pigeon yarn ever heard. "During the Franco-Prussian war the French caught a homing pigeon which was being sent to transmit information into the besieged city of Paris. The bird was made a prisoner of war and kept in confinement for ten years. When given its liberty it at once returned to its old home." That bird must have been tortured daily in prison to make it hate the place and long always for its cote in Germany.—New York Press.

Real Pleasure.

Her hair of some hue forgotten but beautiful through thickness of its polished coils, a countenance chiseled for a sculptor's ideal.

She was clothed in purple.

The skiff which she propelled in the Central park lake moved forward like a snail while the prodigious splashing



"Ain't the water nice?"

from her oars drenched the young man who held the tiller ropes.

He dodged what he could and endured the rest cheerfully. He leaned forward eagerly when she spoke.

"Ain't the water nice?" she suggested, chopping off a bucketful, perhaps as a sample. "I do so love to row a boat, don't you?"—New York Telegraph.

Unique London Church.

The church of St. Ethelburga, Bishopsgate street, London, is quite a novelty in the way of ecclesiastical architecture. In the forefront of the church is an optician's shop and also a cutlery establishment, both belonging to one firm. This is probably the only church in England which has two shop fronts built into it.

Squirrels Preempt Maine House.

Squirrels have literally taken possession of the attic of a Bowdoinham, Maine, house. Entering by means of the water gutters, these lively guests remain over night in their cozy quarters, eating seed corn, and playing tag for amusement. Disappearing at daybreak, they return every evening.

Pigeon Chums with Cat.

The story comes from Newcastle, England, that a pigeon became a great friend of a cat, and since the cat has had a kitten has transferred its affections to the kitten and spends most of its time sitting on it and playing with it.

THE KAFFIR AND HIS SNUFF.

Etiquette That Had Origin in Self-Protection.

In South Africa, amongst the Kaffirs snuff taking is universal, and it is a grave breach of manners to ask your host for a pinch when you are standing up.

The reason for this is found in the treacherous practices of former times. When one man wished to kill another a favorite device was to ask him for a pinch of snuff, and then, while the unsuspecting victim was fumbling for his snuff box the murderer had a splendid opportunity. As this trick for taking a man at a disadvantage became familiar, it naturally grew to be a point of good manners to make your request when squatting on the ground, when clearly you were intending no evil.

The Kaffir snuff is made from crude tobacco, grown at every kraal, which is powered up and mixed with the ash of the aloe, carefully ground on a stone and damped. It is always etiquette to ask for snuff, and the donor grants your request grudgingly, lest he should be suspected of pressing upon you bewitching medicine with it.

ORIGIN OF MODERN CARTOON.

Began with the Publication of Punch in 1841.

The birth of Punch in 1841 was the beginning of the modern caricature, although these cartoons, now so famous, did not start until 1843. Punch, it is alleged, did far more than merely to change the terminology of caricature; he revolutionized its spirit; he made it possible for Gladstone to say of it that "in his early days when an artist was engaged to produce political satires he nearly always descended to

"GENERAL FEVRIER" TURNED TRAITOR
- from Punch -

gross personal caricature, and sometimes indecency." To-day the humorous press showed a total absence of vulgarity and a fairer treatment, which made this department of warfare always pleasing. The history of Punch is practically the story of cartooning in modern England. Punch is to England what La Caricature is to France, and something more, for it has the flavor at least of authority.

The death of the Czar Nicholas, who had boasted of his Generals January and February being the officers he most depended upon, which occurred in February, 1855, called forth one of Punch's historical cartoons, entitled "General Fevrier Turned Traitor." As a matter of fact, but not of history, the Czar committed suicide, and his death was not due to pneumonia, as was then stated.

"Leaven" of the Ancients.

The yeast employed by the ancients in making bread was probably of the same kind as the Israelites of the days of the great Pharoah the oppressor used, calling it "leaven." This was what is known nowadays as a wild yeast, its germs or spores being afloat everywhere in the air. A bit of dough was preserved out of each batch prepared for the ovens, and when this was added to the next dough the yeast contained in it quickly spread through the whole, only a little being required to "leaven the whole lump."

Two Towns Claim Taxes.

A novel tax case has arisen between the adjoining towns of Winthrop and Readfield, in Maine. A. T. Knowlton lives on the line between the two towns. The main part of his house is in Winthrop, the line running through the dining room and kitchen in the ell. The barn is in Readfield. It is claimed by Winthrop that for twenty-eight years up to two years ago the owner of the farm was taxed in that town, paying his taxes there. Readfield has brought an action to determine to which town he shall pay his taxes.

4,000 Years Old.

This picture of Queen Semiramis was taken from an Assyrian document. Perhaps one should not expect even a queen to live up to a reputation for beauty for 4,000 years.

Freak Turnip.

A Saco, Me., man found a freak turnip in his garden the other day. It had four distinct tops, yet it was one turnip and was grown from a single seed. It weighed seven pounds and thirteen ounces.

Crane Was a Monster.

A crane was recently shot in Colrain, Mass., which was five feet tall and measured six feet from tip to tip of wing.

CUSTOMS OF THE LASCARS.

Have Many Peculiarities, but Make Good Sailors.

Some of the peculiar customs of the East Indian coolies, called Lascars, are very amusing to us. For instance they always eat their food in the open air, with their faces toward the west; and the greatest insult a white man or "Giaour" can offer them is to walk between them and the sun while they are eating, causing his shadow to fall on their food, which immediately becomes unclean.

Their appearance is rendered peculiar by their habit of shaving their heads, leaving but one tuft at the side for "the prophet" to drag them into paradise by.

When married they wear a ring on their big toe. They stand the cold remarkably well, and make good sailors, being as active as monkeys. In running aloft they ignore the ratlins, and use the backstays, a perpendicular wire rope, which they literally walk up.

BRACELET WAITS ON OWNER.

Found by French Woman in Belly of Codfish.

A Havre fisherman's wife drying codfish caught by her husband on the coast of France noticed that one fish had a hard substance inside. On investigation she found in the fish a golden bracelet. How the ornament came into its strange receptacle is, of course, not known; but it is conjectured that it must have slipped from the wrist of some fair passenger leaning over the bulwarks of a transatlantic liner, and been seized by the cod on reaching the water. As the shoals of codfish have only recently left the Newfoundland Banks, and are just beginning to make their appearance in French waters, it is probable that the bracelet has traversed the Atlantic in the fish's interior. Perhaps its owner will come forward to claim it!

Strong Bird-Sight.

Birds have very acute vision, perhaps the most acute of any creature, and the sense is also more widely diffused over the retina than is the case with man. Consequently a bird can see sideways. A bird sees a hawk long before it is visible to man. So, too, fowls and pigeons find minute scraps of food, distinguishing them from what appear to us similar pieces of earth or gravel. Young chickens are also able to find their own food, knowing its position and how distant it is as soon as they are hatched, whereas a child only very gradually learns either to see or to understand the distance of objects. Several birds, apparently the young of all those that nest on the ground, can see quite well as soon as they come out of the shell, but the young birds that nest in trees or on rocks are born blind and have to be fed.

Perambulating Barber.

A perambulating barber, shaving customers on the street, is no unusual sight in the side streets of Manila.

Vermont's Record Black Bear.

Probably the largest black bear killed in Vermont in the past twenty years was the one shot by David Semor of Warren on Granby mountain. The carcass weighed 423 pounds. Mr. Semor refused an offer of $55 for the skin and there is talk of introducing a bill into the legislature authorizing the purchase of the hide with a view to mounting it as a permanent exhibit at the state house.

Electricity and Windmills.

In Germany electricity, among other curious results, has rehabilitated the discarded windmill. At Neresheim a windmill supplies power for thirty-six incandescent lamps that light a large paint factory. Another in Schleswig-Holstein keeps a steady current of thirty volts. At Dusseldorf a windmill winds up a heavy weight, of which the descent works a powerful dynamo.

Birds' Wonderful Sight.

The sight of birds is extraordinary, and the simple fact that the eye of a hawk or pigeon is larger than their whole brain gives some idea of what their powers of sight must be, and of how easily they can fly hundreds of miles if they have marks to guide them.

A Marvelous Tunnel.

The Swiam tunnel on the Transcaucasian railroad is located at an altitude of nearly 4,000 feet and is two and a half miles in length. It has been completed in four years. The average advance in twenty-four hours was about eighteen feet.

Crippled in Removing Boot.

Andred J. Curtiss of Bristol, Conn., has been a cripple since last June. Mr. Curtiss wears boots, and while pulling one of them on he dislocated his hip joint.

...ER GRAVE OF STANLEY.

In...to Monolith Marks Resting Place of Great Explorer.

...e is something rough, primitive and elemental about the monolith which has been placed over Stanley's grave in Pirbright churchyard, Wales. It was Lady Stanley's idea that it should be a great unhewn stone, and as to the inscription she wrote: "I desire simply his name, Henry Morton Stanley; beneath it his great African name, Bula Matari—the Rock Breaker. For epitaph, the single word 'Africa,' and, above all, the emblem and assurance of life ever-

Grave of Stanley.

lasting—the Cross of Christ." After many days had been spent in a fruitless search on Dartmoor, a large granite monolith was discovered on Frenchbeer farm. It formed part of a fence on the road side. Three faces had been fully exposed for many years and the owner, Mr Robert Stark, and the tenant, Mr. George Mortimer, only stipulated that a brass plate should be fixed to a smaller stone stating that from the spot was removed the stone which now stands at the head of Stanley's grave.

Girl Hides for Seven Days.

After remaining hiden from view for seven days, Daisy Ness of Dallastown, Pa., was found in the sitting room of her parents' home, crouched behind an organ. The girl was in an emaciated condition from the want of food.

She is about 17 years old. Having become dissatisfied with her home life she took this means of ascertaining the feling of her family concerning her.

When found the girl was so weak that she was unable to give any information as to her whereabouts or whether she had remained in the one position all the time. She admitted drinking a can of milk that had been put down for the cat.

Effective Fish Lure.

Nick Ogelvie, a Rangeley guide, and Hall Grant were at Suptic Pond, Me., fishing the other day and when they got ready to cast they found that they were not so well supplied with flies as they ought to have been. A bright thought struck Nick and he took off his artificial fly watch charm, broke the glass, tied the fly on and began casting. The trout came in swarms and he had great sport.

Sermon from the Heart.

A sermon written by a Newark pastor while awaiting an important operation in a hospital showed so much self-control, so much judgment and discretion that it has been made public. It was read to the congregation of which he was the pastor. The subject was "Is Life Worth the Living?" and it taught the lessons of resignation, philosophy and faith in a highly effective manner.

Hid Money in Queer Places.

Since the death of Henry A. Edgecomb, a blacksmith of Biddeford, Me., relatives who have been at the house putting things in order have found hidden away in different parts of the place boxes and bales containing money to the amount of $1,000. A large amount of gold and silver coins were found wrapped in tissue paper and placed in lard pails.

Punk Punishment.

In Japanese schools a mischievous boy is made to stand and hold a slender stick of lighted punk till it burns out. If he is caught breaking off the lower end of the stick a second punishment is added.

Economical Missourian.

A man at Castleville, Mo., has made a big fight to prevent the authorities laying a brick sidewalk in front of his house. He says that it will cause his shoes to wear out too quickly.—Boston Globe.

Blue Laws Enforced.

A Torrington, Conn., man and her son were arrested for gathering chestnuts on Sunday and fined $1 and costs.

Going to Plant

Fruit Trees of any kind this season? write me a postal for my new manual "How to Plant and Cultivate an Orchard" and price list, now ready and free to all.
P. C. Smith. Thorsby, Ala.

NOTICE.

I retire from the mercantile business December 31, 1904. All persons owing me who do not settle their account by January 10, 1905, will find their matter in a lawyer's hands for collection. Respectfully,
P. D. WILSON.

CLANTON COTTON MARKET.

Total receipts to Jan. 4, '05, 6,147.
Price on same date, 6 1-2c.
Total receipts same week, '04, 6,450.
Price same date, 12 3-4c.

LOCAL AND PERSONAL.

J. M. Cox and family were in Clanton Thursday.

Henry Gentry was a pleasant visitor Thursday.

W.P. Smitherman was a welcome caller Thursday.

Wiley Gore was in Clanton Thursday.

J. M. Parker and Green Burnett were in town Friday.

A. D. Massey was a visitor Friday. He is looking well and hearty for his years, and says his son, J. P., who is at Newnan, Ga., attending college, is doing well.

W. A. Littlejohn was a pleasant visitor Friday.

W. R. Robinson was a welcome caller Friday.

'Squire J. J. McDowell was in town Friday. The 'squire married G. E. Brown and Miss Juliema Giles on December 28th at his residence. The happy pair will live at Bessemer, where Mr. Brown is in business. The bride is a daughter of John Giles.

If you need corn, oats or hay, go to Downs'. tf

Rev. J. H. Thomas was in Clanton Friday.

P. F. Mims spent Friday in town.

M. C. Williams was in Clanton Saturday.

H. B. Rodgers was a pleasant visitor Saturday.

J. W. Kicker was in town Saturday.

Bachelor's livery barn caught fire Friday night, but one of our many dances having just broken up, there were enough hands to put the fire out before any great damage was done. It is claimed that a lantern exploded and started the blaze.

P. D. Wilson is now out of the mercantile business and is a full-fledged lumber man. He owns and runs the Liberty Mill and Lumber Co. and is ready to furnish lumber of all kinds.

Rev. A. C. Swindall held his first Sunday services at the Baptist church to good congregations morning and evening.

Monday, the 9th, is the day for Clanton's municipal election, but it seems to be a still hunt on somebody's part.

Hosea Downs left Monday for Nashville to continue his studies at the medical college.

Downs has 1,000 pair of shoes at your own price. Come and get them. tf

Mrs. L. H. Reynolds and children were in Clanton Saturday looking over the repairs on their new home and incidentally taking in the street fair shows.

J. E. McDowell was a pleasant visitor Monday.

J. A. Skaggs was in Clanton Wednesday.

D. M. Apperson was a pleasant visitor Wednesday, but we regret to learn that his wife is indisposed. We trust she will soon be enjoying good health again.

Commissioner R. P. Kendrick was in town Wednesday.

Don't forget the cotton meeting in Clanton on Tuesday, the 10th.

Chancellor Whiteside is hearing the habeas corpus application for Johnson and McCullough. All the witnesses at the preliminary trial before Judge Reynolds were in attendance as well as many new ones.

P. D. Wilson has turned over his laundry business to W. M. Wilson, who will be pleased to attend to your orders in that line and give you, as in the past, the best laundry work in Clanton.

J. S. Rollins, a son of our esteemed fellow citizen, E. G. Rollins, left for Chattanooga Wednesday to continue his studies in the medical college at that city. We wish the young man success.

NOTICE.

All parties indebted to me by past due notes, are requested to settle same by January 20, 1905.
E. A. MATTHEWS.

MARRIAGE LICENSES.

Cary Headley and Miss Ethel Johnson. Terry Aycock and Miss Belle Davis. G. E. Brown and Miss Juliema Giles. J. N. Goss and Miss Lenora V. Rollins. L. H. Culver and Miss Adeline McKinney. Elijah Headley and Miss Alice Gore.

COLORED.

Ed Cooper and Gertrude Washington. Jones Hatcher and Rebecca Campbell.

Please publish the following and oblige the undersigned:

Any person wishing to attend the COUNTY ALLIANCE to be held with UNION ALLIANCE on January 18th and 19th, will please notify SECRETARY of said ALLIANCE, and they will be met with CONVEYANCES to carry them to place of meeting. With success and happy new year to THE UNION, I am respectfully,
C. H. ROBINSON,
tf Secretary Union Alliance.

NOTICE.

The CHILTON COUNTY FARMERS' ALLIANCE will meet with UNION ALLIANCE Wednesday and Thursday January 18th and 19th, 1905.
ALEX G. DAKE,
tf Sec. & Treas. C. C. F. A.

COUNTY COURT.

Judge L. H. Reynolds held the regular term of the county court on Monday and disposed of the several cases on the docket as follows:

Arch Gibbons, colored, charged with "shooting across public road," found guilty, fined $25 and costs. The same party was also charged with "carrying concealed weapons," to which he pleaded guilty, fined $50 and costs. Hunter Nixon, colored, charge "shooting across public road," $10 and costs. On motion of Solicitor J. O. Middleton, the cases of Nattie Jones and Clint Nix, colored, were "nol prossed."

PROGRAM OF TEACHERS' INSTITUTE,

To Be Held at Concord January 20-21, 1905.

FRIDAY.

10 a. m.—Music by teachers of institute.
Devotional Exercises—Rev. T. F. Davis.

FEMININE FACTS.

The Queen of Greece is a yachtswoman.

Queen Alexandra is greatly interested in photography.

The Queen of Italy has chosen shooting and motoring as her principal hobbies.

There is a boat in a canal north of London which is entirely "manned" by women.

The Empress of Russia has a passion for caricaturing and the collection of caricatures.

Mrs. Louise G. Smith, whose mother was a sister of Thomas Jefferson, is dead at Louisville.

The Queen of Norway and Sweden, outside of her family and public life, is devoted to religion.

When an unmarried woman dies in Brazil the coffin, hearse and livery of the coachman are all scarlet.

Although eighty-five years old, Mrs. Sarah McLaughlin, of Lynn, Mass., does a good day's work binding shoes.

The hobbies of Queen Wilhelmina, the "girl Queen" of Holland, are skating and riding, but from childhood she has devoted herself to raising poultry.

Women of the Spanish aristocracy have given jewels valued at £15,000 to make a new crown for the reputedly wonder-working silver image of the Virgin in Seville's cathedral.

Louise Michel, the famous French Anarchist, has almost entirely recovered from the severe attack of pleuro-pneumonia which nearly ended her stormy career recently. She is seventy-four years old.

Therese Humbert, who is confined in the prison at Rennes, has developed such a mania for writing abusive, incoherent letters to officials concerning the supposed dissipation of the Crawford millions, that the authorities are considering her transference to an asylum for the insane.

SPORTING BREVITIES.

A. H. Liese, of California, put up his ranch for raffle.

Five out of six races at New Orleans were won by outsiders.

Alfred Wilmarth was elected president of the Long Island Automobile Club.

"Phil" Kearney, N. Y. A. C., won the scratch half-mile skating race at Verona Lake.

Dr. S. P. Hopkins won the Christmas Day Cup at the holiday shoot of the Crescent Athletic Club.

Irving School, of Manhattan, defeated St. Paul's School, of Garden City, at hockey three to nothing.

Sixteen English foxhounds arrived in New York City from the Deep Run Hunt Club, of Richmond, Va.

The Wanderers' Hockey Club, champions, defeated the New York A. C. by a score of three goals to one.

Barnard schoolboy athletes held their Christmas sports in the Eighth Regiment armory, New York City.

In the annual basketball game between the Columbia sophomores and freshmen the latter won by a score of thirteen to eleven.

Packing Company Incorporated.

Montgomery, Ala.—The Birmingham Packing Company of Birmingham filed notice of incorporation at the capitol today, the capital stock being $100,000, with J. P. Phillips, C. H. Ungerman and A. C. Howze as incorporators.

Dutch Ship for East India.

The Hague.—The Netherlands battleship DeRuyter has been ordered to be placed in readiness to sail for the Dutch East Indian ports during war between Russia and Ja...

Russia's Plight

An Empire of Graft in High Places—Bursting of the Bubble of its Terrible Greatness.

By John Foster Carr.

GREAT fear of Russia has hung over the world for more than a quarter of a century, but today, after a nine months' war with Japan, its dreaded power has become almost a laughing-stock. Russia has great size joined with great weakness. Some of the causes of its lethargy are incurable. Others are due to a backward civilization. The roads are mere military routes. The postoffice handles one piece of mail for fifteen that pass through our own. For every two miles of telegraph in Russia, we have five; and for each mile of her telephone wires, we have fifty-three.

Russian industry tells the same story. For each inhabitant, Russia invests in industrial enterprise four dollars; the United States, one hundred and twenty-five. Our factories out-number hers twenty-three to one. The value of her cotton spinnings is but two-thirds of ours. She manufactures somewhat more than half as much tobacco; and only in sugar does she surpass us.

Ignorance leads misery by the hand. Three-fourths of the children never see the inside of a school-room. Of those who go to school, few are taught more than their alphabet, the catechism, and the elements of arithmetic. In Russia proper, ninety-four people out of every hundred cannot write their names, or spell out easy words. Technical education is even more neglected; and, for every 11,000 people, there is but a single physician.

The bureaucracy and the merchants in collusion have built up a perfectly organized system of graft. It is openly recognized, treated with tolerance, even thought of with respect. Not only do admirals buying coal in foreign ports procure receipts for much larger sums than they have paid, pocketing the ence and dividing it with their under-officers, but no contract ... which does not allow a liberal margin for a "rake-off." has paid for her railroads two and a half times the ... of Finance estimates as their value—and by Am... 50 percent higher than the necessary cost ... the large Red Cross Fund which was ... stolen. The magnificently equip... the East was looted betw... was left in it.

To sum up... racy is ...

THE UNION.

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?

POLL TAX.

Now, every one of our people be sure to call on the tax collector and pay their back poll taxes, pay up and get into shape so that you can vote on stock law or school tax when they come up, as they surely will the coming year. In paying your poll tax it is only taking it out of one pocket and putting it into the other. The money stays right in your own community and goes to the school. tf

In America, exclusive of the excrescence of the thin international upper stratum of society, marriage is seldom contracted for mere monetary reasons, and marriage for love is the rule.

And now Great Britain asks a Tibetan indemnity of nearly $4,000,000. To pay a friendly visit to a neighbor and then send him a bill for traveling expenses is rare insular thrift, comments the New York World.

In a lecture to the young women who have entered the London School of Medicine for Women, Miss Murdock, L. R. C. P., said: "Most women wear too much. Three layers, including the dress, seem to me all that is necessary, though I have counted as many as twelve. Then I should advise you not to wear jewelry. Rings, bangles and chains are so many germ traps. Tight-lacing or lacing at all should be avoided."

"The automobile craze has not hurt the carriage manufacturing business in the least," said J. I. Baker, of Newark, N. J., in the Wilwaukee Sentinel, who was attending the carriage makers' convention, at the Kirby House, "and it will never hurt it. There are more carriages being manufactured than ever before and more will The automobile is the bicycle and may get any

LOMAX.

We are thankful for the good health in our community. Mrs. Lottie Hill, who has been quite sick, is now up and about again. Mr. Bob Hardy went to Birmingham Monday to look out a location for the coming year. We wish him success, but we regret the loss of a good neighbor and citizen. Our public roads are in bad shape. Have we no remedy for bad roads? We see a lot of farms with very poor fences, which would be the best remedy, split rails and fence against everybody's stock, or have a stock law and just fence against your own own stock? The low price of cotton is the talk just now.

"OBSERVER."

MARS HILL.

Our community is healthy. The Sunday school is prospering. Most of our people who held their cotton say that they are not compelled to sell at the present price and will still hold it, if it takes another year. I believe that the farmers should reduce their acreage for 1905 at least 25 per cent, and then we will get a good price for what we do raise. Marion Scott and Miss Mary Edwards were happily united in the bonds of matrimony on December 25th at the home of Mrs. J. F. Clark, the ceremony being performed by Rev. J. M. Gothard. We all wish the young couple a long, happy and successful life together. As it is about time for us farmers to make arrangements about fertilizer, let us co-operate in the buying; by that way we get a better fertilizer for less money. We can get our fertilizer without so much filling, or in other words "dirt," so let us buy only plant food. We already have the "dirt." Wishing success to the Chilton county farmers and THE UNION.

MARS HILLIAN.

RANDOLPH.

The holidays are gone, and we would be pleased to think everybody would enter the new year happy. Adieu, 1904, with your joys and sorrows. We will begin the new year trusting in a kind Providence to lead us safely over the untried way. Several Chilton boys are residents of this town, viz., Prof. John T. Martin, Walter Elam, Harvey Nix and M. C. Crumpton. Lafayette Crim, of Mulberry, has located here. Glad to have him with us. People are pleased to have Rev. Mr. Harrison returned to this place for next year. Major Howison is fattening a large lot of cattle for the market. It takes Jack Smitherman a half day to give them one feed. Mr. and Mrs. F. J. Fitts, of Hubbard, were in town, Miss Fitts taking the train for Stanton to visit relatives there. V. L. Hubbard was in town recently. He is telegraph operator at Ashby. Last week Mr. Hightower, of Birmingham, and Miss Sophia Hayes were married at the Randolph hotel, Rev. J. C. Harrison officiating. The happy couple took the evening train for Birmingham. Miss Hayes has resided at the hotel for a long time, and her many friends regret to part with her. G. W. Hodgens and W. R. Latham were in town last week en route to visit relatives in Bibb. It was pleasant recently to hear a gentleman from Montevallo praising Chilton county for her nice land, etc. Wishing the UNION success, we will ring off for the present.

"ONE OF THE BOYS."

Clanton, January 1, 1905.

Mr. Editor:

Well, I thought the first time I wrote 1905 that I'd write a letter to THE UNION, so here she goes. The old year has passed away with all its bitter and sweet, and it is every good citizen's duty to resolve to do better and accomplish more good in the new year than they have in the past year. I saw your editorial in last week's paper, and it put me to thinking over matters. We all realize that we are in rather a peculiar condition in Chilton. We are nearly all republicans, and yet, as I heard a prominent party leader say the other day, if there were a primary or mass meeting called by the present republican county committee that not over twenty-five men would attend the call. Say about twelve postmasters and twelve that want to be would be the lot. Now everybody that is interested in the future welfare of our county, I've told you that I'm going to run for office next time sure, and I don't want to make any mistake. But don't you think the best thing that could be done politically would be for Mr. Secar Harris to call a mass meeting of all republican voters in Chilton county for the purpose of reorganizing and "getting together" as THE UNION calls it? I ask all fair-minded men to think this over. We all know that this two party business came pretty near defeating our county ticket last election. Now is the time to get rid of this danger while there isn't any campaign on hand. All this is not original with me, for I've stood around and heard some of our best men in the county talk this way, and I tell you something must be done, and it will be the brightest day in the political history of Chilton. Do it now. Don't wait till the campaign is on and candidates springing up all round to contend with. Consider this matter carefully and see if you all don't with me. Say, if this meeting do you reckon the democ in? You know there said about getand as the is Mr. Roosevelt now, and all their papers speak well of him, and beg him to come south. I expect a lot of democrats would be glad for him to stop at Clanton. Yes, these times when I read the papers, I think it must be a different Roosevelt. Surely he is not the same man they abused so before election. But men are peculiar. I heard a man say the other day that he had endorsed a certain man for a federal office, but he knew he was a democrat and did not deserve it, but still he had signed for him. Boys, don't forget to pay your POLL TAX. Don't wait till next year. Now, all study over what I've said. Let's all get together and build up a strong party here, doing away with all factions and work in the future for all the people. What do you say?

JUST A VOTER.

Jemison, Ala., Jan. 2, '05.

Editor Union:

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union, both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer. tf.

COMMISSIONER'S SALE.

Under and by virtue of an order and decree of the Hon. L. H. Reynolds, Judge of the Probate Court of Chilton county, rendered on Monday, the 12th day of December, 1904, I, Lee Hayes, was appointed and directed to sell at public outcry to the highest bidder for cash, in front of the Court house door of Chilton county, Alabama, on

SATURDAY, THE 7TH DAY OF JANUARY, 1905.

during the hours of legal sale, the following described land, to-wit: S. W. 1-4 of N. W. 1-4; N. W. 1-4 of S. W. 1-4, section 32; S. E. 1-4 of N. E. 1-4, N. E. 1-4 of S. E. 1-4, section 33; W. 1-2 of N. W. 1-4, section 34; S. W. 1-4 of S. E. 1-4, S. E. 1-4 of S. W. 1-4, section 27,—all in township 21, range 13, Chilton county, Alabama, for the purpose of an equitable division among the following named joint owners thereof: Mary A. Robuck, Daniel Dunivan, R. N. Robuck, Bluford Dunivan, James Dunivan, Victoria Sims, Dennis Dunivan, Beula Matthews, John O. Dunnivan, Claud B. Dunivan, and Robert Dunivan.

LEE HAYES,
Commissioner.

PARLS OF THOUGHT.

Many a shaft at random sent
Finds mark the archer little meant.
—Sir Walter Scott.

Be valiant, but not too venturous.—John Lyly.

Be wisely worldly, be not worldly wise.—Francis Quarles.

Remembered joys are never past.—James Montgomery.

He who serves well his country has no need of ancestors.—Voltaire.

It is more easy to get a favor from Fortune than to keep it.—Publius Syrus.

To love one soul for its beauty and grace and truth is to open the way to appreciate all beautiful, true and gracious souls, and to recognize spiritual beauty wherever it is seen.

The earth shall drink of the heat before she knows her nature or her strength. Then shall she bring forth to the uttermost the treasures of her bosom. For there are things hidden far down, and the deep things of life, till the fire reveals them.—H. W. Beecher.

Every individual will be happier the more clearly he understands that his vocation consists, not in exacting service from others, but in ministering to others, in giving his life the ransom of many. A man who does this will be worthy of his food and not fail to have it.—Tolstoi.

MAGIC IN ZUNI TRIBE.

Priest Apparently Lifted a Jug of Water with a Feather.

"The most startling feat I ever saw," said a guest at the Diller last night, who has made a study of Indians in various parts of the United States for his own edification, "was performed by the priests of the Zuni tribe in Arizona, or as they were called, 'The Ancients of Creation.' They seat themselves in a circle on the clay floor, around a jar of that will hold perhaps a gallon, an ancient and sacred earthen vessel, which is filled with water. The chief priest carries in his hand two ordinary eagle feathers, which are tied together at the quill ends so that they make a fork. Behind the circle of the priest are other members of the tribe and the musicians with their drums and gourds, who join in the chants with emotion.

"The incantations continue for several hours, and when the participants and spectators are brought up to a proper pitch of excitement the priest dips the feather tips into the water, lifts the jar with them and holds it suspended for a minute or two at a height level with his face or breast. Then he lowers it slowly to the ground. This feat is repeated several times during the performance. Apparently there is nothing in the hands of the priest but the feathers, and they appear to be inserted into the mouth of the jar only two or three inches. Of course, there is some trick about it, but I was never able to discover it."—Seattle Post Intelligencer.

Field for Explorers.

"There is a popular notion that every bit of the earth's surface has been explored except its poles," said Dr. Cranch B. Young of Boston, at the New Willard. "Nothing could be further from the truth. Why, at our very doors there are lands as much a mystery as was the interior of Patagonia half a century ago. The waters of the Gulf of St. Lawrence, the gateway to the ocean for a large part of the continent of North America, wash the southern shores of Labrador, about the interior of which almost absolutely nothing is known.

"The fishermen of the Northern Banks know every inlet and headland of its bleak sea coast, but fishermen are not explorers, and they do not penetrate to its interior. I have heard of white men who went 15 or 20 miles from the coast in search of game, and nearly every one of them told the same story; a story of oppressive wastes and barrenness that inspired a nameless dread and terror. I don't believe there has ever been a scientific exploration into the interior of Labrador. Who knows what treasures are hidden away in those bleak and rocky mountains? Isn't the prospect one to stir the blood of youth? If I were a young man I should like to undertake such a venture. There is danger and hardship enough to tempt the most strenuous, and the glamour of a new land ought to furnish sufficiency of incentive. Why should not gold fields be found in Labrador? They would be easier to reach than California was in the early days or the Klondye is today."—Washington Post.

Right to the Claim.

The enthusiastic lover is going over in detail the incomparable points of his lady love.

"She is perfect; she is divine! She is the most wonderful woman imaginable!" he exclaims. She is one in a thousand— aye, ten thousand!"

"Come, come!" we reply; "you must not be too extravagant. You know such claims——"

"But," he interrupts, smiling a smile of superiority and raising his voice in triumph, "you have not heard all. She gets off a street car the right way!" And we have nothing more to say against his claims.—Judge.

A Secret.

"Miss Topley has dyed her hair black."

"Is that so?"

"Yes, but don't tell anybody."

"A secret?"

"Yes, she wants to keep it dark."—Cleveland Plain Dealer.

Weaving.

Yes, I'm a weaver, and each day
The threads of life I spin,
And be the colors what they may,
I still must weave them in.
With morning light there comes the thought,
As my task I begin,
My part is to make new threads has brought,
And bids me "weave them in."

Sometimes He gives me threads of gold
To mingle in the day;
Then, ofttimes, life is so bleak and cold,
That all things turn to gray.
And as my shuttle swiftly flies,
With threads both gold and gray;
And as I sing, twilight dies
And angels sing right away.

Oh, when my day of toil is o'er,
And I shall cease to spin,
He'll open wide my Father's door,
And bid me rest within.
For safe at home in heavenly light,
How clearly I shall see
The threads, the dark, the bright—
Remembered to me.

THAT BALL DRESS

BY ROSE ROYANT GERRY

Leoline Harper was just 21, a bright, ambitious, high-spirited girl, who earned her livelihood by teaching in a grammar school. But her prosy profession left her plenty of time to dream of a larger and brighter future, and she erected some very stately edifices in Spain.

"For I don't want to drudge all my life so," said Leoline. "I am pretty enough," with a conscious laughing glance at the mirror, "and clever enough, I hope, to make my own future."

"Yes, dear," said Aunt Josepha, who admired her niece exceedingly, "you are pretty enough and I believe you are smart enough; but still I don't understand how you are going to do it."

"You'll see," said Leoline, with a bright smile and a nod.

And when Kitty Copplefield, who taught in the primary department of the same school, told Aunt Josey about Mr. Maurice, the new trustee, who was so handsome and had such superb diamond studs, and admired Leoline's method of imparting instruction so enthusiastically, she began to comprehend what her niece meant.

"Leo," said she, when she had the rare chance of being alone with her niece, "do you like this Mr. Maurice?"

The blood flushed into Leoline's face.

"Of course I like him, Aunt Josey," said she.

"Do you love him?"

"I—I don't know whether I might or not," said Leo, coloring still deeper. "That is, if I knew him better. He is a society man, and I have so few opportunities! If I was only in a fashionable circle like Georgie Fitzalan!"

Now Miss Georgie Fitzalan was a pretty, dashing young lady, the daughter of a rich importing merchant, who had been in the same class as Leoline Harper at school, and Leoline had always secretly envied her luxurious, butterfly sort of life that seemed to have so few of the elements of shadow about it.

"And," added Leoline, "he is to be at Georgie's birthday party, and Georgie has asked me to come—and—and I can't, because I haven't anything fit to wear. And I do believe, Aunt Josey, if I could only go"—

"Yes, yes, I understand, my dear," said Aunt Josey, regretfully. "But, really, I do not see how you can go."

"Nor I, either," said Leo, gulping down a little suffocating lump that somehow would keep rising in her throat. "So I must just be contented to give it up!"

But half an hour afterward she came to her aunt with deepened color and eager, shining eyes, the newspaper in her hands.

"Look, Aunt Josey!" cried she.

"La, child," said the old lady, "you know I can't see a thing without my spectacles."

"Then I'll read it to you"; and Leoline read as follows:

"For sale, at a bargain, two silk evening dresses, one a blue and the other canary color; worn only once by a lady just returned from Europe.

"I—I don't know whether I might or not."

Price, twenty-five dollars each. Apply to H. C., No. — Rotherward street."

"What do you think of that, aunty? Blue is just my color. And silk, too! Why, I never had a real silk in my life!"

"I don't like the idea of second-hand finery," said Aunt Josepha, shaking her head.

"But when you can't afford anything else," Leoline. "Oh, Aunt [illegible] to go!"

Of the [illegible] member the old fable of the daw with borrowed plumes," warned Aunt Josepha. "If this man is really a man of sense he will think as much of you in your cashmere dress as if you wore the queen's diamonds."

But Leo, believing that her aunt was hopelessly behind the age, persisted.

"I will go to the number and address. I will just look at the silks; of course I needn't buy unless I like 'em."

The house was a magnificent brown stone establishment whose splendor rather abashed our little school teacher.

"H. C." proved to be Mlle. Hortense Chenier, the lady's maid, who occupied an airy fourth-story apartment to which the visitor was conducted by a grumbling footman. Leoline fit altogether out of her element, and most sorry that she had come; but when she saw the superb silks, scarcely worn, her heart leaped within her. The blue one was trimmed with deep, pointed white Spanish zlond, and proved to be the exact color to match Leo's right beauty.

"May I ask, Miss Harper, if you order your dresses from Worth?"

"Madame bestows these upon us," said Hortense, grimacing and twisting herself after the manner of French maids. "Madame is all goodness."

Leo bought the dress and it was sent home that night.

"Yes, it is very pretty; but all the same I don't like you to wear a second-hand dress," said her aunt.

"A great many ladies do the same thing, Aunt Jo."

"A great many ladies do a silly thing, then," retorted the old lady.

But, notwithstanding Aunt Jo's disapproval, Leo felt very proud and happy when she went off that evening dressed in the blue silk, which had required very little alteration to fit her supple figure.

Miss Fizalan's parlors were full, and Leo's heart beat high with anticipatory triumph as she saw Mr. Maurice around the crowd. The next moment she perceived that he was not alone. A tall and beautiful young lady leaned on his arm. With a pang of jealousy Leo would fain have shrunk away, but Mr. Maurice advanced toward her.

"Miss Harper, allow me to present to you my wife; Mrs. Maurice, Miss Harper. Oh I see you're surprised. So am I. She only arrived from Europe four days ago"; this with a smile.

Leo tried to mutter a few congratulatory words, but could hardly make herself audible. Mrs. Maurice put up her eyeglasses.

"How very strange!" she cried. "My blue silk dress that I had made at Worth's. I should know the trimming anywhere. May I ask, Miss Harper, if you order your dresses from Worth?"

Leo turned scarlet, but she clung bravely to the anchor of truth.

"No," she said, blushing with mortification; "I am only a school teacher, and can afford no such extravagance as that. I bought it second-hand of Mlle. Hortense Chenier, No. — Rotherward street."

"My maid," cried Mrs. Maurice. "And she stole it from me—all the time pretending that the packing case that contained it was lost on the voyage, the hypocritical thing."

Mr. Maurice laughed.

"That comes from your foreign French maids," said he.

Leoline Harper felt her face glow with burning scarlet.

"I—I am very sorry. I hope you do not consider it my fault," she said.

"Not at all; perhaps I shouldn't have spoken about it, but you see, I was so taken by surprise. Pray wear the dress; it is so charmingly becoming to you," said the lady.

Leo did not stay long. She felt as if every one in the room must know that she was wearing a second-hand dress, stolen from its owner! And the fact, now for the first time ascertained, that Mr. Maurice was a married man seemed to take all the sparkle out of her life. She went home early and cried herself to sleep. The next morning she sent back the dress to Mrs. Maurice with a note of apology, and she has been a wiser girl ever since.

"If my fortune comes to me, well and good," she said, "but I shall not go a step out of my way to seek it."—Chicago Journal.

How Boys Botanized Teacher's Hat.

Miss Johnson was an excellent teacher, but her taste in dress, especially headdress, was so peculiar that even her adoring pupils could not fail to notice it. The verdure which appeared upon Miss Johnson's hat one season was so gaudy that several wondering comments were made by the boys.

"I'm going to ask her what that green stuff is," said one boy, valiantly, in spite of the vigorous objections of his companions. "She won't mind, and next nature study class I'm going to ask her, and see who's right."

So, red in the face, but stubborn, he rose at the end of a lesson on wayside flowers, in response to Miss Johnson's general request for any questions which might have come up since the last lesson.

"I'd like to know about that green stuff on your hat," he said, bluntly. "John Aken, he says it's beach grass, but I say it's onion sprouts."—Youth's Companion.

Glamour.

I have read so long in the Book of the Brave,
I hear the tramp of their feet
In the quiet village street.
I catch the sound of an echoing cheer,
Blown down the night wind, faintly clear,
And the drums' unfaltering beat.

I have read so long in the Book of the Brave,
Their flags go streaming by,
Sharp comes the sentry's cry;
The shaded light of my study lamp
Seems a low glimmer from some still camp
Where the sleeping soldiers lie.

I have read so long in the Book of the Brave,
I march where the heroes are;
On my breast I feel a scar.
I turn to gaze on the rayless night;
The gloom is cleft by a beacon light,
And behold—the blessed star!
—Lulu Whedon Mitchell in the Century.

Star-Dust.

Mr. Pettus, the "Nestor" of the Senate, is fond of telling stories of darky humor, and among the best he relates is the folowing:

"There's an odd little negro of eight years living in Alababma who is given to the putting of funny questions to his parents. One night he suddenly awakened from a sound sleep. Turning to his father, who chanced to be awake, the little fellow asked:

"'Is it night, pappy?'

"'Yes, my chile,' responded the father, kindly; 'look auter de winder and yo will see de stars. Better go to sleep ag'in, honey, it's twelve o'clock.'

"The little darky gazed reflectively through the window. 'Twelve o'clock, pappy? Den de stars is changin' from yisterday to termorror, ain't dey?'"—Lippincott's.

In Search of Work.

"Well, sir," said the railway superintendent to a forlorn-looking man who had gained admittance to his presence, "what do you want?"

"I would like a situation on your line."

"No place for you, I think."

"But there is. I want to be interpreter."

"Interpreter?"

"Yes, sir; to tell the passengers what the porters say when they call out the names of the stations."

The superintendent studied a few minutes, and then, looking up, pointed to the door.—Birmingham (England) Weekly Post.

New Kind of Giant.

"Manny" Friend approached his old friend Lew Dockstader at the Herald Square theater a few nights ago with a request for an engagement with the show.

"Why, what use could I possibly have for you?" asked the minstrel.

"Advertise me as your newly acquired giant," said the lawyer.

Lew laughed uproariously. "Why, Manny," he exclaimed, "you're only two feet and a half tall. What kind of a giant would you make?"

"The smallest giant in the world," averred the diminutive Friend. "That'll be a brand-new line, too, for the three sheets."—New York Times.

Evidence of Insanity.

When it came to the cross-examination the witness who had testified that he believed the prisoner demented settled himself in anticipation of possible trouble.

"Have you any reason for wishing to send my client to a madhouse?" asked the lawyer.

"None," replied the witness.

"Well, what particular thing has he done that has tended to convince you that he isn't in his right mind?"

"Well," said the witness slowly, "look at the fool he made of himself in selecting a lawyer."

Home Rule in Scotland.

With reference to the growing Scottish demand for home rule for Scotland, the London News remarks: "Having already acquired, by lapse of time, the prescriptive right to manage English affairs for Englishmen, it may be that Scots, young and otherwise, will find their hands almost too full if they begin meddling with their own as well."

JOKE NOT ON BURGLARS.

But the Trap Set for Them Was a Splendid Success.

There had been a number of burglaries in the neighborhood, and the young electrician thought it would be a great thing for him if he could catch the thieves.

"Late to-night when you come in," he said to his father, "you must leave your key in the door. That will be the bait."

The old gentleman nodded.

"I will have a wire strung so that the key may be charged with electricity," the young electrician went on. "That will be the hook."

The old gentleman rubbed his hands and nodded again.

"Between the bait and the hook we will land some of these prowlers tonight," the young electrician asserted.

That night the old gentleman went to his club. The young electrician strung his wire and waited. The policeman on the beat stopped at the basement entrance just to "get a bite" and see that no one had run away with the cook. The young electrician became tired waiting and began experimenting with his wire and the battery.

The old gentleman came from the club in a cab a little before midnight. The cabman had "been there before," and he solicitously inquired if he should find the keyhole for the old gentleman.

The old gentleman thought it would be a good plan.

As the cabman turned a back somersault over the railing of the front porch he kicked the old gentleman in the stomach and knocked him down the steps. He also gave a yell that could be heard eight blocks and landed on the neck of the policeman, who was just backing away from the basement door with a piece of pie in his mouth.

It spoiled the pie. And the old gentleman was arrested and fined for assaulting an officer who was engaged in the discharge of his duty.

The burglars are still busy.—New York Press.

The Old Faith.

"Thus saith the Lord: Stand ye in the ways and see, and look for the old paths, where is the good way, and walk therein, and ye shall find rest for your souls."—Jeremiah vi., 16.

As a man who is travel weary, as a man who is travel worn,
Who carries anew the galling loads he over the road has borne,
Who carries anew each burden when counting them o'er alone,
While trudging his way through bog and fen and stumbling on bruising stone,
As a man who is travel weary remembers the first fair way
So a man goes back to the simple faith that was all his own one day.

The simple faith he cherished; the faith in the grass and sky,
The faith that he held in innocence with never a doubting "Why?"—
When valley and hill and forest and everything that is
Was wondrously rich with a breathing truth; and all of that truth was his;
When twilight and dawn were peaceful, and his were the dreaming stars—
The faith that he held unconsciously ere ever his soul had scars.

As a man who is travel weary, he stands on a lonely height,
And longingly looks at the stretching way that ends in the fading light
And yearns for the pleasant pathways as once he sought out their end—
The faith that he held in an honest hold as one does a faithful friend.
He turns to the unforgotten, the years when he wrought no wrong
And seeks for the faith that once was his—all simple and sweet and strong.
—W. N. D. in Chicago Tribune.

His Cordial Indorsement.

One of the stories attributed to Bishop Potter concerns a young and inexperienced clergyman who had just been called to a city charge. At the end of the first month his salary was paid by a check, and he took it to the bank and passed it in at the paying teller's window. That official looked at it and then passed it back.

"It's perfectly good," he said, "but I will have to ask you to indorse it."

The young clergyman took his pen and wrote across the face of the check, "I respectfully subscribe to the sentiments herein expressed."—New York Times.

How He Spelled It.

A Brooklyn physician whose memory for names is very poor recently had a patient in his office for whom he was asked to fill out an application for some position. Not wishing to betray the fact that he had forgotten the man's name he casually inquired, as he poised his pen above the paper:

"By the way, how do you spell your name?"

The man gave him a curious glance and said: "J-O-N-E-S—Jones."

Mendelssohn a Youthful Prodigy.

Mendelssohn used to conduct the concerts in his father's house when he was so little that he had to be mounted on a high stool to be visible to his orchestra. He played in public when he was 9, and at 11 composed a cantata and produced nearly sixty movements, songs, sonatas; trios for violin, violoncello and piano, and organ pieces.

Tree Causes Headache.

In the far East has recently been discovered a species of the acacia tree which is a wonder of plant life. It grows to a height of about eight feet, and when full grown closes its leaves together in coils each day at sunset, and curls its twigs to the shape of pigtails. After the tree has settled itself thus for a night's sleep, if touched it will flutter as if agitated or impatient at being disturbed. The oftener the foliage is molested the more violent becomes the shaking of the branches, and at length the tree emits a nauseating odor, which, if inhaled for a few moments, causes a violent headache.

Cousins Marry in Germany.

Among the marriages recorded in Berlin last year there were 121 of blood-relations; 100 of these were marriages of cousins.

Sympathy Up to Date

He desired to express his sympathy. That was all. He had always liked the man, and now that he was reported to be near death he felt sorry for both him and the afflicted family.

"Poor fellow!" he said. "They tell me that he already has one foot in the fire."

Trouble followed. The wife of the sick man happened to overhear the remark, and she promptly declared that he was a mean, hateful old thing and then burst into tears.

"But, my dear madam—" he protested.

"Don't speak to me!" she exclaimed. "Poor old Pete always looked upon you as a friend, and I always thought you were one, too."

"But I assure you—"

"Don't you dare say one word to me!"

Then a mutual friend took him by the arm and led him to one side.

"Really, old man," he said, "it was outrageous. I'm almost tempted to think you've been drinking."

"But, hang it all—"

"It was neither the time nor the place for cheap wit," broke in another friend.

"But I didn't intend—"

"Of course, we all know that Pete has been a pretty lively boy in his day," interrupted still another friend, "but you ought to have some regard for the feelings of his wife."

"I tell you I—"

"That's what comes of cultivating one's sense of humor at the expense of one's better feelings," put in the friend who had first taken him aside. "Of course, we know that you did not intend to say anything that would seem harsh and cruel, but—"

"Now, look here!" exclaimed the man who had made the original remark, breaking away from them angrily. "What I said was all right and proper. What would you have me say? That I am sorry to hear that he has one foot in the grave? That would be a nice, sensible thing to do when I happen to know that he is a cremationist and has already bought a silver urn to hold his ashes, wouldn't it? The trouble with you people is that you are not up to date."

Reason for White Race

Gustave Michaud, the ethnologist, writes: "We have now every reason to believe that both the Mediterranean and the Baltic branches of the white race are the result of the natural selection practiced by a cold climate upon northward-migrating African negroes. Whatever be the cause of the amount of pigment existing in the skin of the latter, it seems to me that the decrease of it was unavoidable as soon as the race took to traveling northward. In northern countries, natural selection tends constantly to harmonize with the color of the snow that of every animal which hunts or which is hunted; why should the blondness of the northern man have a different origin?

"Primitive tribes were doubtless frequently decimated by hunger, as the Canadian Indians are to-day. Those hunters who show on the snow a sallow face, black hair and beard, dark eyes, worked at a disadvantage when compared with somewhat lighter complexioned comrades. They were more conspicuous on the white field, and could not so easily approach their prey within striking distance. In time of famine, mortality was the greatest in their families.

"This eliminating process was repeated generation after generation, always leaving the larger posterity. However small may have been the difference in the mortality, we know today that a characteristic against which such a process is at work, always in the same direction, is doomed to disappear."

Japanese a Loving Race

Public demonstration of affection is most repugnant to the good taste of the Japanese, and it is the absence of this which is so generally mistaken for a lack of genuine feeling. I recall one man who was so devoted to his mother (though I doubt whether he could ever have been said to have "talked about" her), that when she died, while he was abroad, his depression was so profound that my husband watched him with anxiety lest he should commit suicide. The stoical training may render more unsympathetic a coarse nature; but repression to the refined soul brings an exquisite capacity for pain scarcely conceivable by those who are free to give utterance to every emotion.

Another man said to me, "I rarely speak of my mother, for a foreigner does not understand that a Japanese mother may be just as dear to her son as his to him and by the Japanese it is not expected that one should utter one's deepest feeling." That same son fainted with grief when his mother died, and when consciousness returned rose to make light of a "little dizziness," without reference to its cause. To this day, whenever he goes home, he carries with him his mother's letters, mounted on a beautiful roll of ivory and brocade, and on the anniversary of her passing beyond his mortal ken quietly devotes a portion of the day to meditation and special thought of her. Even to his wife, despite the closest bond of love, he says not, "This is the day of my mother's death."—The Outlook.

Meaning of Word Doctor

"The signification of the word 'doctor' is quite interesting," said a writer in the New Orleans Times-Democrat. "In its original import it means a person so skilled in his particular art or science as to be qualified to teach it; or one who has taken the highest degree in the faculties of divinity, law, physics or music. There is much difference of opinion as to the time when the title doctor was first created. It seems to have been established for the professors of the Roman law in the University of Bologna, about the middle of the twelfth century. After it was adopted it was conferred with expense and magnificence and solemnity; the time requisite for the degree is from three to eleven years.

"Medical science, however, dates back to the time of Plato's age, B. C. 429, when Aesculapius' knowledge and methods of practice prevailed, and whose remedies were incantations, soothing drinks, external appliances and the knife, bathing, abstinence and tranquillity, assisted by a confident hope of benefit. He was represented sitting, one hand holding a staff, the other resting on a serpent's head; a dog crouched at his feet, accompanied by a cock, sometimes by an owl.

"These animals are meant to typify the qualities which a physician should possess, the owl being emblematic of wisdom, the cock of vigilance, the serpent of sagacity, and, besides, of long life. His course was, evidently, to work chiefly on the imagination, as he relied largely upon the influence of dreams and visions to furnish the patients with the potency of the power of mind over matter, thereby appearing as the first instituter of faith cure efficacy, which is becoming more popular and believed in every day. It is, doubtless, the best remedy for hypochondria."

The Beliefs of Youth

Onct I went a-fishin' with a man what had a reel
An' fancy hooks 'n' catgut 'n' fish pole made of steel.
He never got a single bite from early until late,
Just 'cuz he didn't take no stock in spittin' on th' bait.
Yes, he kin laff an' jeer, but where's his fish I'd like to know?
Oh, I guess lots o' things is true 'at some folks say ain't so!

D'jever drop a horse hair into th' wat'rin-trough
An' leave it there for weeks an' weeks 'thout drainin' of it off?
An', if you use a human hair they say it only takes
Jes' half as long—but anyhow, it turns 'em into snakes!
An' ef a feller don't believe one-half the things he hears
A darnin' needle comes along an' sews up both his ears!

Our cook she's superstishus—she's scared as anythin'
If someone spills a little salt or don't pick up a pin,
An' when I was a kid I'd walk down to th' gate an' back,
An' think that I was poisoned if my foot stepped on a crack!
I know them things is silly—I cross my heart, I do—
But I guess lots o' things is so 'at some folks never knew.
—Burges Johnson, in Everybody's Magazine.

Railway Travel in 1830

In 1830, when the railway was opened between Liverpool and Manchester, the Liverpool terminus was at Wapping, says the Liverpool Post. Lime street tunnel was not completed until about six years later. At first the service consisted of three trains each way on weekdays and two on Sundays, but this was soon found to be insufficient. After Lime street station was opened there were six first-class trains and six second-class trains each way on week days and [illegible] of each description on Sunday.

The journey of thirty [illegible] occupied nearly two [illegible] complaints [illegible] great[illegible]

expectations were indulged in that in course of time the average rates of traveling would be at least double the ordinary speed of the swiftest conveyances drawn by horses.

It was anticipated that the general adoption of railways would lead to a vast decrease in the consumption of oats and hay. [illegible] steam engin[illegible] that port[illegible] been [illegible]

THE UNION.

EQUAL RIGHTS TO ALL; SPECIAL FAVORS TO NONE.

VOL. II. CLANTON, ALA., JANUARY 12, 1905. NO. 42

RMS OF THE SURRENDER

rt Arthur's Defenders Given Honorable Military Consideration.

FICERS TO RETAIN SIDE ARMS

ps of Forts and Mines, With Lists of Officers and Troops, to Be Given the Japs—Privates to Remain Prisoners, But Officers to Be Paroled on Condition of Their Non-Participation in the War

Tokio, Japan.—The agreement on ms of the surrender of Port Arthur, nally signed by the Russian and anese commissioners, comprises ren articles. They became effec- , without ratification, upon being ned.

The agreement provides for the honble surrender of all officers and men the Russian army and navy at Port thur and all government properties, luding the fortifications and muniions, which must be handed over to Japanese in their present condiion.

The fortifications at Etseshan and ntsushan were to be disarmed and livered to the Japanese forces by on as a guarantee of the acceptance the terms. If they were not so deered the Japanese reserved freem of action. It is understood that Japanese troops took possession the time fixed.

Maps of the forts and mines, toether with lists of the officers and ops, the ships, and the properties non-combatants must be prepared the Japanese.

The Russian officers will be allowed retain their side arms and personproperty. They will be permitted return to Russia on their parole not re-enter the service of the Russian vernment while the war lasts.

The Russian troops are to remain soners of war and their medical icers will be retained in service for e prisoners.

A supplementary agreement will be rafted to settle further details of the pitulation.

During the meeting of the commisners, which was held in Big Eagle's st Fort at Shushiying, a table was rend with wine and food, and the ssian and Japanese envoys treated e another with the greatest courtesy. e meeting quickly merged into forl good fellowship.

Washington, D. C.—An official deatch received at the Japanese Letion from Tokio gives the details of e capitulation agreement between nerals Nogi and Stoessel at Port thur. The essential points are as lows:

"The whole fortress, ships, arms, munition, military buildings, maial and other property shall be surndered.

"The Japanese authorities will reve free action when these objects considered destroyed after signthe agreement.

"The plans of the forts, torpedoes, nes, military and naval officers' sts, etc., shall be delivered.

"The army and navy volunteers and her officials shall be all imprisoned. hereof in consideration of the brave fence, the military, naval officers and il officials attached, are to bear ms and keep private property of imdiate necessity to daily life and also return to Russia till the end of the r upon parole, and not to take arms r action in opposition to Japan's inrests.

"The forts Etseshan and Antsushan ll be surrendered to the Japanese ny before noon on the 3d of Janu- , as a guarantee."

The Japanese officials here are well ased with the terms of surrender.

FATAL $200,000 FIRE.

e Life Lost at Berlin, N. H.—Several Hurt.

Berlin, N. H.—Fire that broke out e at night practically destroyed the ement Opera House Block, the C. H. mon Block, the Thorndike Hotel d C. H. Brooks' drug store. The loss estimated at $200,000. Several peoe jumped from the upper floor of the era house block, occupied by lodgs, and were injured. One man was id to have been killed.

One woman who jumped from a winw was said to have been fatally inred. Telephone and electric light es were down and the city was in rkness.

JAPS AT CHEFOO.

atching to See That Neutrality Laws Are Observed.

Washington, D. C.—Consul-General ker, at Chefoo, said in a cable to State Department:

"The Japanese cruisers are now deparing. Inside of the harbor there e now seven Japanese destroyers."

The Japanese were evidently reaining in the harbor to see that neuality was preserved regarding the ven Russian destroyers which had und refuge there. There were also ee Russian launches at Chefoo.

JAPS OFF SUMATRA.

ur Warships Sighted East of the Island.

Batavia, Java.—A Dutch merchantman which arrived here reports that she met four Japanese warships east of the island of Sumatra.

MISER LEAVES FORTUNE

Firman Dubel, of Burlington, N. J. Dies Concealing His Wealth.

Gold, Silver and Currency Found All Over His Late Residence—Had Many Mortgages—Estate of $300,000 Left.

Burlington, N. J.—Denying with almost his last breath that he had any wealth other than the home in which he lived and the spacious grounds that surrounded his residence, Firman Dubel's estate, it is now estimated, will amount to between $300,000 and $500,000.

Since his death relatives have inaugurated a search of the Dubel premises, which has resulted in the finding of more than $9000 in gold, silver and moth eaten paper bills, chiefly of $100 denomination.

Stored in dusky recesses and out of the way nooks, laid between the leaves of books which were carelessly placed in unlocked receptacles, and hidden beneath the carpets which covered the floors in his home, the money has been found, and relatives are confident that they have merely begun their discovery of treasures.

In a peck measure in a room in which there was countless rubbish, there was $1700, and a cigar box held $2500 in gold. A third book, merely a pamphlet, contained between thirty-eight consecutive leaves thirty-eight one hundred dollar bills. Old clothing in various trunks and closets had been receptacles for money.

Living the life of a recluse for a score of years and having as his companion a housekeeper who was his ward, Dubel was known by the residents to have considerable money, despite his vigorous denials. His fortune accumulated greatly during his lifetime, but he received a large estate in line of descent from ancestors, who in the days of the Revolution and prior thereto, received enormous grants of land from the English Crown and later from the State of New Jersey. Search among old papers brought to light scores of mortgages upon property of residents of the town and county for miles around.

For years Dubel had lived on fare that caused one to wonder how he kept body and soul together. Though known as a stingy man, he is said to have been very kind to old friends of his family. He owned, much real estate in this town, and several aged and needy tenants have lived in these buildings for many years without paying rent.

A substantial yearly income was received by Dubel from his estate, and this was mostly reinvested in bonds and mortgages. Holding to the old time ideas of his ancestors, he had no faith in banks and like institutions, and his income, which has been accumulating for years, has presumably all been hidden in his home, which is a building more than one hundred years old.

Dubel's funeral was attended by nearly every able bodied resident of Burlington. Crowds of curious persons visited the home of the deceased, expecting his will would be read before the burial ceremony was held. The will was not mentioned.

STOLEN YEARS AGO.

Man Gets His First Month's Wages Back With Interest.

Williamsport, Pa.—Daniel Kehrer, an Eaglesmere merchant, whose winter home is in South Williamsport, received a conscience fund of $223, which represented his first month's wages, $68, after coming to Williamsport from the country thirty-eight years ago, plus six per cent. interest.

The money was stolen from Mr. Kehrer's trunk at his boarding place. He never learned who the thief was. Principal and interest were returned by a stranger, who exacted a receipt, in which Mr. Kehrer pledged himself to make no effort to learn the name of the person who had wronged him.

The stranger said the sender of the money had never lost sight of Mr. Kehrer, had often passed him on the streets, and now that he was able gladly made restitution.

MOVE IN POWERS CASE.

Kentucky's Attorney-General Wants Court to Declare Him Guilty.

Frankfort, Ky. — Attorney-General Hays filed a petition for a rehearing in the case of Caleb Powers, charged with complicity in the murder of ex-Governor William Goebel.

The Powers case now stands with the last verdict of guilty reversed and a new trial ordered. Attorney-General Hays appealed for a rehearing on the decision by the Court of Appeals. In other words the court is asked to reverse itself, and let the death sentence stand.

MANY EARTHQUAKE SHOCKS.

Nearly Forty Miles of Railroad Damaged in Costa Rica.

New Orleans, La.—The steamer Preston, from Puerto Limon, Costa Rica, brings the news that nearly forty miles of the Costa Rica Railroad, running between Puerto Limon and the capital, San Jose, had been so seriously damaged by a succession of twenty-five earthquake shocks, which began in the latter part of December, as to seriously interfere with business.

A Mysterious Explosion.

A mysterious bomb explosion occurred in a shoe shop in a New York City tenement house.

LYNCHING HAS DECREASED

Records For 1904 Show Mob Violence in Evidence Least Since 1885.

Legal and Illegal Executions in the Several States and Territories For the Year Just Past.

Chicago, Ill.—The lynchings in 1904 were only 86 in number, the smallest of any year since 1885. None was reported in November, the first time in twenty years that a month passed without a lynching. By States the lynchings were: Alabama, 5; Arkansas, 17; California, 2; Florida, 3; Georgia, 17; Idaho, 1; Kentucky, 4; Louisiana, 2; Mississippi, 18; North Carolina, 1; Ohio, 1; South Carolina, 5; Tennessee, 2; Texas, 4; Virginia, 4; Wyoming, 1.

The lynchings were divided as follows: 82 in South, 5 in North; 83 were negroes, 4 whites and 2 women. The causes were: Murder, 36; race prejudice, 19; assaults on women, 20; murderous assault, 4; conspiracy to murder, 2; unknown, 2; insults, 2; threats, 1; robbery, 1.

There were 116 legal executions in 1904, compared with 123 in 1903 and 144 in 1902, divided by States as follows: Alabama, 6; Arkansas, 7; California, 5; Connecticut, 2; Delaware, 1; Florida, 1; Georgia, 2; Idaho, 1; Illinois, 5; Indiana, 2; Kentucky, 1; Minnesota, 1; Mississippi, 3; Missouri, 3; Montana, 2; New Jersey, 2; New York, 8; North Carolina, 7; Ohio, 10; Oregon, 2; Pennsylvania, 19; South Carolina, 2; Tennessee, 3; Texas, 5; Utah, 1; Virginia, 6; West Virginia, 1; Washington, 1; District of Columbia, 1. The executions were divided: 62 in North and 54 in South; 69 were white, 45 negroes, 1 Japanese, 1 Chinese. One hundred and ten executions were for murder.

Embezzlements in 1904 showed a decrease, being $4,742,507, compared with $6,562,165 in 1903. The embezzlements were: Stolen by public officials, $238,794; from banks, $2,424,374; by agents, $758,879; forgeries, $193,490; from loan associations, $311,000; by postal employes, $14,500; miscellaneous stealings, $637,970.

The number of homicides including deaths by violence of every sort was 8482, compared with 8976 in 1903.

COUNTRY'S GIFTS OF A YEAR.

Total For 1904 $46,296,960, the Least Sum Since 1901.

Chicago, Ill.—While the donations of 1904, by actual gift and bequest to charity, religious and educational institutions, libraries, museums, galleries and municipal betterments, show a decrease, being but $46,296,960, as compared with $76,934,978 in 1903, $77,397,167 in 1902, and $128,888,732 in 1901—the record breaking year—still the total amount remains large.

The decrease is partly accounted for by the much smaller amounts contributed by multi-millionaires. The total stated of course does not represent contributions to charity in the general sense, or church contributions, or small sums. It includes only such donations or bequests as have been published.

Of the total amount for the year, the donations are $20,609,807 and the bequests $25,660,173. These sums have been divided as follows: To charities, $16,752,278; to religious enterprises, $5,842,890; to museums and art galleries, $898,000; to libraries, $1,541,360, and to educational institutions, $21,235,452.

LIFE SAVERS SAVE COMRADES.

Oak Island Crew Take Fire Islanders Off Stranded Schooner.

Eastport, L. I.—The Oak Island life saving crew had to go to the rescue of the members of the Fire Island crew when the situation of the Fire Island men was desperate.

A week previously the lumber-laden schooner Frank W. McCullough, bound for Patchogue, grounded on Fire Island bar a short distance from where the steamer Drumelzier grounded. The Fire Island crew went out to the wreck of the McCullough to take off two men who while engaged in salvage work had been caught aboard. While lying alongside the Fire Island boat was dashed against the side of the wreck of the schooner and her sides stove in.

The Fire Island men took to the rigging of the McCullough and signaled for help. The Oak Island men put off at once and brought the Fire Islanders and the two men ashore.

PRESIDENT TO PARIS, TEXAS.

Accepts Confederate Vets' Invitation—Kinsmen on Both Sides.

Paris, Texas.—Replying to an invitation extended by Albert Sidney Johnston Camp U. C. V., extended through its commander, J. W. Hardison, President Roosevelt promises to visit Paris on his Southern trip, if possible. His letter says in part:

"Personally, I had kinsmen on both sides. Two of my mother's brothers fought in the Confederate service—one, by the way, served on the Alabama under Admiral Semmes, the father of the wife of that gallant former Confederate, Luke Wright, whom I have made Governor of the Philippines. It was only the other day that I designated the sole living grandson of Stonewall Jackson a cadet at West Point, and have just made 'Jeb' Stuart, Jr., United States Marshal for the Eastern District of Virginia."

Russian Securities Stand.

Russian securities in the Berlin Boerse stood the shock without loss.

POISONED HER HUSBAND

Mrs. Carrie Joslyn, of Mason, Mich. Accused of Murder.

Gave Her Former Spouse Arsenic For Two Weeks Until Death Claimed Him—Arrested With Her Children.

Mason, Mich.—Murder so coldblooded that it took a woman two weeks to kill her husband was admitted, say the police, in a confession made by Mrs. Carrie Joslyn, who was brought hither from Wheatfield township and placed in the County Jail. Drop by drop, the alleged confession set forth, the wife gave arsenic to William Joslyn, whom she slew that she might become the bride of his farm assistant, Isaac Swan. A large quantity of the poison was found in his stomach. She put the powder first in his coffee, and when it sent him to bed, day by day she hovered about him on the pretense of tending him, only to pour more and more of the deadly drug into his pain-racked body. Through that whole fortnight she watched him as a cat a mouse, noting the progress of the poison's work, with no pity for his hourly agony. She reckoned only on the length of time necessary to cause his death without detection, and when at last the end arrived she turned to the man for whom she had committed the crime and her heart had room only for dreams of him and her future with him.

Mrs. Joslyn told the police, they assert, Swan had conspired with her to murder her husband. The two long had been attached to each other, and at first, apparently, they thought of waiting till chance should break down the barrier between them. But Joslyn was too robust and the prospect of his natural death too remote for their patience. So they calmly, coldly planned his violent taking-off and lost no time in carrying out their resolve. Marry they must they felt. Flight together did not occur to them. Murder was easier of accomplishment, and seemingly there was nothing in the idea to give either a shock. From the moment the twain agreed on death Joslyn's doom was sealed as irrevocably as if his neck was stretched under the guillotine's falling blade.

Swan bought the arsenic and gave it to the woman. It was tied in fair white paper with a neat string. Not a shudder passed over her as she took the packet of death from the hands of her clandestine admirer. Joslyn's coffee next morning contained the first dose. He became ill in the forenoon, but rallied at dinner. There was a brief respite, for it was not until supper that she gave him the second installment. He groaned through the night, but arose in the morning and went about his work. The man's sturdy spirit would not yield to what he regarded as a slight illness. More of the arsenic was given to him at the noon meal. By dusk his strength was gone. He took to his bed, from which he never was to rise. Then an inner smile of satisfaction underspread the one she wore for him. He was at her mercy.

Joslyn's active temperament made him chafe against idleness. He tossed on his bed and begged for cooling drinks. The woman, still with the smile that secretly mocked him, made lemonade and handed to him tempting glasses of the beverage. He might have as much as he liked, she said. It was good for the ailing. Perhaps—but not with dose after dose of arsenic in it. So skillfully did she mete out the poison, so carefully did she calculate the length of time he must live to avert suspicion, that Joslyn never suspected her. He took the lemonade from her hand with grateful glances and drank it eagerly. It soothed him, he fancied, as no medicine could. Had not she prepared it for him?

Swan disappeared when the police became suspicious. A search for him was began and it is now believed he would be caught before he could leave the State. Mrs. Joslyn at night sat in her cell, staring at vacancy with dry eyes, her children from time to time tugging at her skirt with inquiries for their father. But she answered not.

TRAIN BURIED IN SNOW.

New Haven Road Employes Unable to Dig It Out.

Winsted, Conn.—The train on the Central New England road from Goshen, N. Y., due here at 3.24 o'clock, became buried in snow at Copake, N. Y., and for many hours the New York, New Haven and Hartford Railroad employes did not succeed in digging the train out.

The snow had been falling steadily for many hours, being one of the heaviest falls in years in this region. All trains on the western end of the Central New England branch were held up by the storm.

BIG FINE TO TIP A WAITER.

Bill to That Effect in the Missouri Legislature.

Jefferson City, Mo.—Representative Tubbs introduced a bill in the Missouri House of Representatives making it a misdemeanor punishable by fine of not more than $500 to "tip" a waiter, chef or steward at any hotel, cafe or restaurant.

Mr. Tubbs, in discussing his bill later, said that he believed it would pass both houses and receive the Governor's signature.

MINOR EVENTS OF THE WEEK

WASHINGTON.

Some of the important diplomatic appointments President Roosevelt has decided to make were announced.

Two Holland submarines have been contracted for by Secretary of the Navy Morton.

President Roosevelt appointed J. Hampton Moore, of Philadelphia, Pa., Chief of the Bureau of Manufactures in the Department of Commerce and Labor.

Mr. North, Director of the Census, issued a statement defending the bureau's cotton reports against attacks made on them by Southern ginners.

OUR ADOPTED ISLANDS.

Advices from Honolulu, Hawaiian Islands, said that the United States Government is to fortify Midway Island and Guam. The cruiser New Orleans, which has been ordered from Manila to Bremerton, will leave the large guns of her armament at the islands, to be mounted there.

Much comment was heard throughout the Philippine Islands, especially around Manila, over the appointment of Captain Howze, formerly stationed in the islands, as commandant of the West Point Military Academy.

DOMESTIC.

Thomas D. Robinson, of New York City, aged eighty-one, and his wife, seventy, were charged with burglary.

The cruiser Chattanooga was tested for speed off Newport, R. I., exceeding the contract speed on a four hours' run.

The body of Leonard Mandeville, a clerk, nineteen years old, was found in a trench in Newark, N. J.

It was announced that part of the Cathedral of St. John the Divine, in New York City, would be finished in three years.

Governor Frank W. Higgins was inaugurated in the Assembly Chamber at the Capitol at Albany, N. Y., in the presence of a distinguished gathering.

Andrew Carnegie has given $268,000 to the Maryland Institute of Art and Design.

The annual report of F. D. Kilburn, New York State Superintendent of Banking, was made public in Albany. Many changes in the banking laws of the State were recommended.

Agents of the chief Chicago (Ill.) packers were arrested in Montana, charged with conspiracy to fix meat prices.

Dr. Leroy S. Chadwick, husband of the alleged swindler, arrived in Cleveland, Ohio, and had a pathetic conference with his wife in the jail.

The refusal of the village of Leamington, Ont., to furnish water for locomotives on the Pere Marquette road stalled several of them at that place.

After a barroom row at Fall River, Mass., where they had both been on strike twenty-two weeks, Fred. Booth late at night killed John Parkinson in a fist fight.

The body of the girl murdered in Riverside Drive, New York City, was identified as that of Mary Elizabeth Mangan, of the Bronx.

Mayor Mulvihill, of Bridgeport, Conn., rescued from drowning a little girl who nearly perished in a futile attempt to save two little boys who lost their lives under the ice.

Clergymen, judges and officials favored a movement to establish the whipping post for wife beaters in the District of Columbia.

Worshipers in North Plainfield, N. J., tried to lynch negroes who fatally stabbed policemen.

Several wealthy men in Ohio were indicted for arson committed twenty-four years ago.

Wanted at McKeesport, Pa., on a forgery charge, Harry Linn was arrested at New Orleans, La.

The quarterly statement of the New York State banks, published at Albany, showed an increase of over $65,000,000 in the amount due depositors in three months.

The Fall River boat Puritan was disabled by breaking her paddle wheel off Pleasant View, R. I. She was towed to New London, Conn.

Dr. Chadwick, husband of Cassie L. Chadwick, with his daughter arrived in New York City from Europe, and he voluntarily started for Cleveland, Ohio, where he was arrested.

FOREIGN.

Great damage has been done in Geneva by a recent blizzard.

The chief of the Cuban Health Department declared absurd Dr. Nelson's report that information concerning yellow fever at Santiago had been suppressed.

A disaster caused by a bog slide overwhelmed a village in Roscommon, Ireland.

The Duke and Duchess of Connaught, with their daughters, are to make a tour of Spain.

The Australian Minister of Trade is considering the advisability of giving state bonuses to encourage the growing of cotton.

Dispatches to Panama declared that a projected revolution in Colombia had been put down, and the generals who planned it imprisoned.

For the first time in the history of United Italy clerical aldermen attended the reception at the Quirinal.

Kaiser Wilhelm, at the New Year's reception to the American Ambassador, sent greetings to the President and the American people.

Cardinal Langenieux, Archbishop of Rheims, has just died at the age of eighty.

Professional Cards.

Attorneys.

Home Grown Fruit Trees

I have for sale a fine assortment of fruit trees, particularly adapted to this climate. Peaches, Plums and Apples, of the best varieties for this section, and all guaranteed true to name. Prices Reasonable. J. L. Winslow, Pine Hill Nursery, Thorsby, Ala.

PURE GOODS

The following SPECIAL BRANDS always in stock

Big Rock	I. W. Harper
Rose Valley	Upper Crust
Upper Ten	Kentucky Taylor
Joe Gideon	American Malt
Murray Hill	Budweiser Rye
Pleasant Hill	Deep Springs
Green River	AAAA Lincoln County
Jack Daniel No. 7	Wilson
Old Spring	Good Wood
Shaw's Malt	Club House Rye, 10 years old.
Jefferson County Rye	Cascade, 14 years old.

Old Harvest Corn, 5 years old

I carry a Full Line of Barrel Goods which I sell in Jugs from half gallon up. Mail orders promptly filled.

A. STEIN,
Bank Saloon. Calera, Ala.

The dowager empress of China has contributed $130,000 to the formation of a Chinese Red Cross society. After the society is formed, this same old lady will be the first one to give it something to get busy on.

VAGRANT'S EPITAPH.

Change was his mistress, chance his counselor.
Love could not keep him, duty forged no chain.
The wide seas and the mountains called to him,
And gray dawns saw big campfire in the rain!

Sweet hands might tremble! Ay, but he must go.
Revel might hold him for a little space,
But turning past the laughter and the lamps,
His eyes must ever catch the luring face.

Dear eyes might question! Yes, and melt again,
Rare lips, a-quiver, silently implore,
But ever he must turn his furtive head
And hear the other summons at the door.

Change was his mistress, chance his counselor,
The dark firs knew his whistle up the trail.
Why tarries he today?—and yesternight
Adventure light her stars without avail.

—*Scribner's.*

PRECIOUS OLD HOME.

By MARY SWEET POTTER.

Hester and Jacob Cross had a letter from their only son, which caused them both a great deal of anxious thought.

"You see, father," so ran a portion of the letter, "I can seldom leave my business to go out to see you, it is such a long, expensive journey, and I must think of saving the dollars and cents, now that I have a wife and child to provide for; so I agree with my wife that it would be a good idea for you and mother to come out here—just close up the old place and come out here and live with us for good. No use trying to sell anything, for no one would care to buy such a little tumble-down house; and if I remember right, there isn't a piece of furniture in it which is worth above a dollar. Just pack your clothes and a few things you value most and come right along and live with us."

"Don't you think Henry speaks a little too slightingly of the old home, Hester?" asked Jacob of his wife. "It was good enough for me and my father before me, and he had a good comfortable bringing up in it."

"I s'pose he's got so forehanded that he can live in a way that makes the old things seem dreadful old, and he can't help it, Jacob," replied Hester, ready now, as in the time of her son's boyhood, to make excuses for his shortcomings. Yet there were plainly written upon her face lines of pain caused by some of the words in her boy's letter, which not even the seemingly sincere and hearty invitation to come and live with them could smooth out.

Yet her heart swelled with pride at the thought of leaving the old home of comparative poverty for her son's home, filled, as she judged by his letters, with all the luxuries and comforts which money could buy; and she endeavored to bring her husband around to her own state of mind, which was becoming each moment more and more favorable toward the project of breaking up their own housekeeping and going to Glenfield to live with their son.

So it came about that the time for their departure was near at hand, and they were making ready to go.

"Might as well take all the things down and pack them into boxes, so if we should ever happen to want any of them we can send for them and have no bother about anything."

Jacob raised his thoughtful eyes to his wife's flushed face in careful consideration.

"I wouldn't, Hetty; they'll keep better just where they are, I think. Whoever comes for them can pack them. You need your strength for the journey; let everything stay just as it is, I say."

So they merely closed the blinds, curtains and doors, as if retiring for the night or going out to call on a neighbor for an evening, and started with fluttering hearts upon their long overland journey to Glenfield.

All the way Hester Cross dreamed longingly of the meeting so soon to be. She had never seen the dear baby nor indeed its mother, her son's wife, but her great heart was fully prepared to take them both in and enshrine them beside Jacob and Henry, and the nearer she drew to her journey's end the more eagerly she anticipated the pleasure of meeting them.

At length, dusty and travel-worn, Hester and Jacob Cross stood upon the steps of their son's rather pretentious house, waiting for admission.

By some unfortunate mistake or omission, no one had met them at the station, and they had found their way to their son's house as best they could.

And no one met them cordially at the hall door, as would have been the case in their own home if any one they loved had come to visit them. Instead, a servant came at length, and, with eyebrows raised supercilliously, showed them with a doubtful air into a richly furnished parlor.

It seemed a long time to their weary eagerness before their son's wife, a vision of beauty, smiling, and with condescending air, came to meet them. She tried to make them feel at ease and amply apologized for the oversight of failing to meet them at the station, but in spite of all her efforts, something was lacking and the father and mother from the "little old tumble-down house" away back in the country hoped faintly that the meeting with Henry and the baby would be of a character to warm up their chilled spirits, and drive out that spectre which already wore the garb and appearance of homesickness and persistently sat in their inmost souls.

Shown to their room, which was a model of comfort and convenience, they rested and refreshed themselves and waited as they had been requested, till summoned to dinner, where they met their son for the first time in ten years.

They had no real reason to complain of any lack of warmth in their son's greeting, and he was genuinely glad to see them. The mercury of their spirits ran rapidly up; but still they had not seen baby.

Grandma felt that she was being defrauded, and ventured to speak of the desire of her heart.

"Baby? Oh, yes! Nurse shall bring her down for half an hour after dinner," was the smiling reply, and down to zero again dropped the mercury of grandma's hope, and grandpa sympathized with her.

But oh, when that half-hour came! Frail, but fair and sweet as one of her own day lilies at home, grandma thought, and her heart went out to the little girl with a longing to love and care for it in the old-time ways in which she had nurtured her baby, her only one, the father of this one, but as different to it as the ox-eye daisy to the forget-me-not.

Hester Cross clung to the child with loving tenderness, loth, when the limit of time was reached, to give it to the nurse, who waited for her charge.

"We'll see," she said, when she and Jacob were alone again, "we'll see if I am not to have any comfort with Henry's baby. That nurse girl shall not have everything her own way, but there's one thing she may have, and that's a rest."

Jacob looked thoughtfully and said little. He saw further into matters than his wife. She, without being conceited, had more confidence in her own ability to do things for others in her own way satisfactorily to them, as well as herself, and in this case, as once or twice before, he felt that she was going to be disappointed.

Before he had time to speak a word in reply a door opened and closed somewhere near, and they heard the softly modulated tones of their daughter-in-law in conversation with her husband.

"They are dear old people," she said in reply to a question of Henry's, "but I am afraid a difficulty will arise in regard to Lelna. I cannot have nurse interfered with in the care of our child."

"Undoubtedly mother will find her greatest pleasure in devoting herself to the interests of baby; what is the objection, my dear?"

"Oh, Henry! in these days of enlightenement, I wonder you have not learned better than to ask such a question. Without being actually diseased, your mother is old and probably in a weak state of health. If we allowed her to nurse baby and caress her as she did today, to any great extent, we would without doubt be subjecting our delicate baby to almost certain infection that would be seriously, perhaps fatally, injurious to her health; don't you think so?"

"I am afraid, my dear, that this is one of the few subjects upon which we differ slightly. When babies and their grandmothers are separated from each other by the new-fangled notions you are learning at your meetings and clubs, there is a line drawn beyond which my sympathy will not reach."

The door closed sharply and they heard the step of their son pass out along the hall and down the stairs.

The old couple looked at each other and each read in the eyes of the other the same thought. It was left for Hester to give expression to it, however.

"Jacob, our luggage is still at the depot; it shall never be brought into this house by my consent. I want to go home."

His lip quivered, but he smiled acquiescence, and hastened out to intercept his son, who might be going to attend to the matter of having their boxes brought to the house.

To say that Henry Cross was astonished and hurt does not express his state of mind when his father caught his arm as he was turning a corner, and hurriedly informed him of his mother's decision. Hurriedly, because if he had allowed his tongue to hesitate the old man must have weakly broken down.

"But father, I don't understand. You have not been under my roof half a day—not long enough to find whether you like it or not," remonstrated Henry, in tones of perplexed vexation.

Yet his father, searching his face, saw a flash of something like relief pass over it, and having a key to an inner chamber of his son's mind, he did not blame him, but gently persisted.

"It's an old folk's notion, boy, no use to fight it. We're as homesick as dogs, and we will stay all night with you and then start back to the old place. It's a mistake when folks as old as we are think of transplanting themselves to a new place."

"Father, I cannot bring myself to consent to this—this most unreasonable desire of yours and mother's," he carried out, "the distressed young man replied. "Come with me down to the station and we will have your things taken to the house and nicely placed, then you will feel more at home, and so will mother, and all will be right and pleasant."

But no. Henry Cross saw that it was useless to try to persuade his father to alter his decision.

They went to the station, but it was to arrange for shipping their boxes back home, all but one.

"This is filled with country things which your mother and I thought you might like—apples from the old trees you used to like best, and a few extra nice vegetables.

The old man sighed as he thought that having sold all their fruit and vegetables they would be obliged to buy more to keep them through the winter months.

Henry's wife was delighted with the contents of the box, but her husband could never bring himself to relish the vegetables when they were prepared for the table; they seemed to choke him, and the sight of the well-remembered fruit brought tears to his eyes.

The information of the change in the plans of the old people was received by Henry's wife with unfeigned disapprobation.

Not until the old couple were well on their way home did the reason of their sudden return there dawn on the mind of their son. Then he said,—

"Helena, do you care to know why your father and mother-in-law did not make a home with us as they first intended?"

She noted the bitterness in his tone, and said nothing, but waited with questioning eyes for what he had to say.

"They overheard your learned disquisition on the subject of grandmothers—the danger of allowing them to nurse or caress their grandchildren."

Helena Cross blushed a fiery red. she would have given much to recall she would have give nmuch to recall the words which had worked such mischief.

She was not so cruel or hard-hearted as not to realize what she had done and to regret it from the bottom of her heart. She was young and felt the importance of wife and motherhood, and had listened to too many well-meant but false and foolish teachings, and herein lies excuse enough for Henry's wife, whose punishment was quite adequate to her fault, or so her husband decided when a few hours later he saw her eyes swolen and red with weeping.

As for the father and mother who had so suddenly changed their mind, no tongue can tell how blest and sweet, and altogether lovely, the "little old tumble-down house," which had been so calmly deserted by them four days before, appeared now, as, in the golden light of an October sunset, they stopped before it.

"Oh, I'm so glad I didn't tear up or down anything," sighed Hester, softly, wearily, yet delightfully, as she stepped inside the dear old kitchen door. "Jacob, are you too tired to run over to Bennett's and get the cat? They'll give her up—it don't seem quite like home without her—why bless me! there she is. I might have know she'd see us coming. And now we'll unpack the things Henry made us bring, and have supper. Do get out from under foot, puss, till I get a fire built!"

And Jacob, splitting pine kindlings, kept his face turned aside from Hester that she might not see the happy tears in his eyes.

No one to welcome them, only the old cat they had deserted, yet for Hester and Jacob Cross it was a blessed home-coming.

Letters came at regular intervals from Henry during the winter, and each one was filled with news of the little child—all her little ways and wiles—bitter-sweet news to Grandma Hester. But through all ran an interlude of sadness—baby was not strong. She had illness after illness and only partially recovered from each one.

By-and-by there came a missive that filled the two old hearts with mixed emotions. Baby was coming, baby and baby's mother. The letter, sweetly worded, was written by Helena:—

"Will you kindly let us come, ather and mother," it said, "and help me to nurse the baby back to health? I am sure that in the sweet, pure old home that Henry is always telling me about she will grow strong, especially with a grandma to love and pet her."

Hester was struck dumb with joy and amazement. She was in the midst of her spring house cleaning, and in order to be ready to receive them on the date mentioned some extra effort and haste would be necessary.

And it came to pass that one day Helena Cross, weary, but pleased and hopeful, alighted from the old stage and at the gate of her husband's old home met his mother and gladly surrendered into her willing arms the pale, precious baby, which grandma had never expected to see again till it had grown into a cold, stately woman like Helena as she had been before the deadly fear of losing her child had changed and softened her.

Grandma's constant care and the country air soon accomplished the desired result, or well begun it, so that when the autumn frosts began to ripen the nuts the fiat came forth from the busy husband and father in the distant western city that baby and her mamma must come home, and with them the father and mother.

But after much thoughtful and careful consideration, the old folks decided that they weer better off in their own homely old home, and that if they could have their beloved daughter-in-law and her child with them during each summer, the winters would pass by swiftly, mere seasons of joyful anticipation.—Sunday Republican.

NOTES AND COMMENTS.

Paderewski is coming over again to show us the latest style in scrambled hair, says the Washington Post.

A good many men make money not because they have brains, but because others haven't, says the Birmingham News.

One of the first duties of the Texas Legislature is to make ends meet and tie them in a double bow knot, states the Dallas News.

There is entirely too much time taken up every day trying to help those make up their minds who don't know what they want, the Atchison Globe avers.

Secretary Morton says the American navy has the finest enlisted men of any in the world. Some of the officers are pretty good, too, the Washington Evening Star rightly states.

The new style of tight trousers will bring our local charros into fashion again. Also the creased trouser will have a rest, remarks the Mexican Herald.

An English specialist announces that he has discovered a remedy for defective sight that will obviate the necessity for wearing glasses. Call it Anti-paine-in-the-face. Doctor, advises the Newport News Press.

A St. Louis man was struck by two trains before he could collect his thoughts, and if he does not collect damages he doesn't deserve to have any money.

Naval demonstrations must be a terrible bore to the Sublime Porte, thinks the New York Evening Sun. Hardly a month passes but it has to receive a visit from some squadron. Austria is the latest nation threatening to show the Sultan what she can do.

St. Louis World's Fair buildings that cost $15,000,000 have been sold for $880,000, and, strange to say, no one was hurt in the bargain rush, either.

Chase French—who, judging from his name, might be of either Prussian or English descent—has left a bequest of $90,000 to buy medals for Boston public school graduates. Possibly he thought it wise to have them thus tagged as a warning to the world in general.

A writer to the Editor of The New York Times says: Politeness is such a charming thing—why don't we practice it more? Is there any one in this community who has not had an experience with some polite, painstaking official or man of business? Let him contract his feelings after this experience with those which filled his bosom after an encounter with some rude, indifferent Jack in office. Seeing that we all appreciate good manners, it is really most extraordinary that so few of us make an effort to acquire them. Perhaps, being so busy a people, we think it takes times to be polite. But on the contrary politeness is a great timesaver, being, in fact, the best social and business lubricant in the world. New York, pause a moment in your buffola-like career, and consider the matter!

We believe sincerely there are bright days for the farm life—days when the longing of youth will be toward the farm rather than from it, says Up-to-Date Farming. Speaking of the advice so tersely given in the heading of this article, and in an article bearing the same head, one of our local dailies expresses the following very sensible thoughts: "How many men there are who wish they had followed such advice. In the restlessness of their youth and their ignorance of the world they look upon life on the farm as 'cribbed, cabined and confined,' and as a thing from which to escape. They go eagerly away, not necessarily to sorrow and death, to be sure, for many attain wealth and fame, but whether they miss or gain prizes in the big outside world the time comes when they look yearningly back to the farm where boyhood days were spent. The one who is poor regrets the lost independence of the life there and has visions of even yet becoming the possessor of a few acres and of getting back to the soil. If he is rich he buys a farm and equips it to suit his taste and his purse, deriving what pleasure he may from his occasional visits there. Perhaps no one appreciates rural life as much as one who left it, and it may be that absence is needed to prove its advantages and its charms. But it is a pity that when the lesson is learned while one is yet young that the wanderer does not make haste to return and remedy his mistake. The time will yet arrive when farming will be recognized as an art and will be followed as a profession. The things that the young find irksome will be fewer than now. The restless boy will make his journey while his years are few and will return satisfied to his home."

Flood Causes Trouble.

Philadelphia.—The effects of Saturday night's heavy rainfall, which was driven by a 36-mile gale, are in evidence today in all sections of the city and environs. The most serious result is the swollen condition of the Schuylkill river, which is 17 feet above normal at Mamayunk, a suburb. Fourteen mills are closed as a result of the flood and 4,000 hands are idle.

A SERMON FOR SUNDAY

A STRONG DISCOURSE BY THE REV. DR. LYMAN ABBOTT.

Subject: The Ever Present God—The Goal Toward Which in the Transition of Theology Should Lead Us—Inward Aspirations and Longings the Voice of God

BROOKLYN, N. Y.—The Rev. Dr. Lyman Abbott occupied the pulpit in the Church of the Pilgrims Sunday morning in the absence of the pastor, the Rev. Dr. H. P. Dewey. Dr. Lyman Abbott's subject was, "The Ever Present God," and he took for his text, Romans, x:6-7-8: "But the righteousness which is of faith speaketh on this wise: say not in thy heart who shall ascend into heaven? (that is, to bring Christ down from above) or, who shall descend into the deep? (that is, to bring up Christ again from the dead)...but what saith it? The word is nigh thee, it is in thy mouth and in thy heart; that is, the word of faith which we preach." He said:

The "word" in the New Testament means, God speaking. A friend sits by your side in absent-minded meditation, and his speech reveals the soul of man. So the word of God reveals the unknown God to us. We have not to go to the depths to find the manifestation of God is all about us and within us. We are all familiar with the statement that we are passing through a transition in theology. If it were only a transition in theology it would not disturb us much. We could leave the theologians to study the theology of the future for themselves. But it is also a transition in religious experience. I am sure that the older members of this congregation can trace in their lives, more or less, a change, not simply in their intellectual opinions of religion, but in their really vital religious experience. We used to think, in our boyhood, of God as King sitting on the Great White Throne, with the angels gathered about Him and singing to Him. He was far away. We sent our prayers up to Him by a kind of spiritual wireless telegraphy, asking for things, and sometimes He would give us those things and sometimes He would not. But this was our experience of prayer, and that was our notion of the answer to prayer; and this faraway God sitting on the Great White Throne, had revealed Himself to men through the Bible and through the Christ. It was a great historic revelation, and we went back, more or less consciously of that revelation of the faraway God in the faraway historic time, and we went to that Bible to find out what it told us respecting God's law, of what was required of us, and the things with respect to God's grace, what He would do for us, and with many of us that experience has not changed. The picture of the great King has grown dim and indistinct, or disappeared altogether, and remains, if it remains at all, as a recognized picture and not a reality. And that Christ, who seems to us to mediate between God and man, a revelation of the faraway God, has also grown faraway. That is, we have come to recognize that He is a great historic figure, and we are, more or less, perplexed as to what His revelation is of the faraway God, and what His relation to us is, and our prayers have changed and our conception of the Bible has changed, and we can no longer take a text out of the Bible and rest upon it as a final and absolute authority. If we try, perhaps some succeed and some fail.

What I do want this morning is to point out, not what has taken place, but to indicate the goal toward which this transition should lead us; what is the Promised Land toward which we should look; what is the religious experience we may hope for in the future to take the place of this religious experience of the past, that has grown dim and indistinct and which is only half believed. In the first place, I am sure that, while we have been undergoing this change, forces without the church have been bringing to us a larger, if a vaguer, conception of God. God does not work only through the church; He does not speak only through the preacher. Religion is not a spiritual conduit through which the water of life is brought down to man. The grace of God does not come in particular channels of grace alone. The Bible says it falls like a gentle rain. It is universal, and we may look outside the church and among the forces that we have considered forces for skepticism, for the forces which are giving us a more indefinite idea of religion and, I think, a nearer view of God. I am not going to try to state the reason, I am only stating the fact. Herbert Spencer has summed up in a single sentence what he thinks is the result of scientific investigation and experience. "Amid all the mysteries by which we are surrounded nothing is more certain than that we are ever in the presence of Eternal Energy, from which all these things proceed." What science has taught is this: You are not to go back to creative days to find God, though in some period God launched the world and put His children here and intervening now and then in special necessity; you are not to think of God that way; you are to think of God as the eternal energy here. Yes, as ever in the presence of the eternal energy—always creating, always controlling—in the growth of every flower and in the perfume, in the light of every bird.

Science says that God is not remote. He is here, and you can go out into the Present Day this afternoon and find Him in the brown trees, beneath the ground, and in the hidden life that next spring is to burst forth; for God is life, and there is no explanation for any of the phenomena of life except in the indwelling of the Eternal. If we turn from science to literature we find a much closer and more sacred and truer and diviner interpretation of the change that is coming over the thoughts of men. The poets are all prophets. They tell us beforehand what is the fate that is by and by we shall come to. Let me read one such interpretation. It is from Tennyson:

"The sun, the moon, the stars, the sea, the hills and the flowers, are not these, O, soul, the vision of Him who reigns?

"Dark is the world to thee; thyself art the reason why. For is He not all but that which has power to feel, I am I?

"Glory about thee, within thee, and thou fullest thy doom.

"Making Him broken gleams, and a stifled splendor and gloom.

"Speak to Him, thou, for He hears, and spirit with spirit can meet. Closer is He than breathing, and nearer than hands and feet."

The universal presence, universal communion, in the hearts of men, as it was in the heart of Moses; in the hearts of wearied souls, as in the heart of David when he wrote the Twenty-third Psalm; in the hearts of disconsolate souls, as in the heart of Isaiah; in the hearts of men now, as in the hearts of men then—a living presence. We are not to ascend into the heavens to bring Him down from a great white throne, but to look within. In thine heart thou shalt find Him. "This is the gospel of faith," says St. Paul, "that we preach unto you."

And so with prayer. It comes in our experience—just this: Spirit with spirit meeting, spirit with spirit talking. Not the going after something, though it may be that, but the receiving something, preeminent communion, fellowship, companionship. It is this conception, into which some of us have come unwillingly; into which some of us have drifted, we do not know how; into which some have grown gradually and some with a wrench from which we have not recovered—this conception of the universal presence which might perhaps have the effect of a denial of the personality of God were it not for the message of Christianity, and that message we undertake to couch in accurate theological phraseology. Because we do need a personification of the Eternal cause we must have some image that we can see, some conception that we can grasp, some human kind thought, that we make Him of stone, we make Him of our imagination. After all, what is that image hanging on the wall, or pictured in stone, or is simply engraved on our brain, it is still an idol, a something that stands for reality. God says, "I am too great, too infinite, eternal for you to define or grasp. The agnostic is right in saying, 'You do not know Him;' but I will render that you may know Him I will come and dwell among men and fill one's life full of Myself, and through that life you shall interpret Me. You may not obtain your desire for one you can see, by the hand, into whose eyes you can look and whom you can comprehend."

We are to see not only what God has done in the past, but what He is now doing. Always God was in His world. He always is in it, forgiving, purifying, feeding, comforting, strengthening. We do not know it, but He is always in the hearts and lives of men, doing what He did in the past, still saying to Nicodemus, "You need to be born again;" to the Pharisee, "Woe unto you that build widows' houses;" to the weeping one, "Thy brother is not dead. Though dying," to the penitent sinner, "Though the memory of a wasted life, 'God be merciful, thy sins are forgiven thee!" The Christ did not stop at the cross. I do not say that we look at the cross too much, but I will say that we have looked at the resurrection too little. The conscientious life. That is what He means when He says, "I am with you always." We must realize that He is here and now in the lives of men. My conception of the Bible has undergone a great change. I cannot any longer go to it to find a text. "That settles it." Shall I find a text in the Bible up and say it is not a good rule of life? No, it is the revelation of the Divine, the interpretation of God in human experience, not only in the decent life, but in the unclean; not only in the devout life, but in the skeptical. The Bible seems to me like a great orchestra of God's life playing to express the musical life of God in the conductor. It is God speaking through the experiences of men. I believe that God is carrying us through a long time and times are transitional, and taking away the idols upon which we have rested, and which we have enshrined in order that He may carry us higher in Himself; and that, if we take the experience of the past twenty centuries to understand the message it sends, the Bible, history and religious life as we find it all explains these words of Paul: we are not to ascend into heaven to bring God out of the past, nor look into the future, but we are to look about us, to understand that He is still direct the destiny of nations and ourselves. We are to look within us and know that the aspirations, the desires, the dissatisfactions, ourselves, the longing for something higher and better—these are the voices of God. He was always and always will be in the world; and through the church and the Bible and by the revelation of Himself in the Christ. God manifest in the flesh, He is bringing us, not to the church, not to the Bible, not to the mediator, but to Himself. He ever lives, He ever is nearer than breathing, nearer than hands or feet."

Perfect and Not Perfect.

A little calm reflection and careful study of the Bible would relieve many people of needless perplexity in regard to the use of the term perfection as applied to a Christian.

Every true Christian is perfect in the sense of being a real Christian, and possessing all those things which are essential to constitute him a Christian. If any one is lacking he is not a whole—a perfect—Christian. What these parts are and what are necessary to constitute one a perfect Christian it is not now my purpose to consider. It is to the necessity of all these being present in order to the being of a real Christian that I call your attention. Take a young horse for an illustration. If there is a foot missing, an eye injured, or any other part damaged or lacking, we cannot say it is a perfect horse. But though the necessary parts are there, although the animal may be young and untrained, we say it is perfect. But there is a perfection it has not reached. It is to grow, to develop and so go on unto perfection. It may live to reach a point beyond which it cannot grow or develop. It has reached its perfection. It was a perfect horse when it was young and small. It is a perfect horse, now it has reached its maturity in perfection.

The case is somewhat similar with the Christian. When the sinner believes and receives the Holy Ghost into his heart he becomes a Christian. He has all the parts necessary and in this sense was complete or perfect. But he is young, weak, immature and needs to go on unto perfection. This perfection is before him in the life of the man Christ Jesus, and he at once commences to seek to be like Christ. And his life long he may be developing and going on unto this perfection. Indeed no one will reach a time or a place where he can say "I am so much like the Lord that there is no further room for advance. I have reached perfection."

In order to see this matter more plainly it is necessary to remember I am not referring to the holiness of the Christian. Whether he has just begun to be a Christian, or has been serving the Lord faithfully for many years and has made much progress toward perfection, the true Christian is "cleansed from all sin," and is holy in the Spirit of Christ, is holy in his character as God is holy. Holiness—real perfect holiness is an essential attribute of every Christian.

Growing out of the above is also another fact which must be borne in mind, and that is, the true Christian is ready to die at any time, and is just as much entitled to a home among the redeemed in heaven if he die when just converted as was the man if he may become very advanced. His title to fitness rest in the fact of his relation to the atonement. "He that believeth hath life."

Re-read these plain words of Paul and see if they are not clear and full. May the Lord make them a blessing to you!—A. T. Scott.

Withholding Judgment.

Why should we be harder on our fellows than the law is on a suspected prisoner? Are not most of us quick to count a man guilty until he is proved innocent? Is it matters not that our lifetime knowledge has proved one's dependableness, and that and good judgment; if something happens that we do not entirely understand, or silent or outspoken condemnation is quick to be instant, instead of withholding judgment until all the evidence is in. It is humiliating, a few hours or a few days' waiting to learn that, after all, the friend we condemned was innocent of the seeming carelessness, unkindness, or wrong; but this does not prevent the same quick condemnation the next time. He is a rare soul who can keep his poise of trust and love when he does not understand. But it is fairer, and it makes life sweeter, to do so. — Sunday School Times.

The Work That Endures.

If we work upon marble, it will perish; if we work upon brass, time will efface it; if we rear temples, they will crumble into dust, but if we work upon immortal minds, if we imbue them with principles, with the just fear of God and love of our fellow man, we engrave on those tablets something that will brighten all eternity.—Daniel Webster.

Your Response

God holds you responsible for your nurture plus your nurture, your possibilities.—M. D.

KINDNESS WAS REWARDED.

Franz von Vecsey, the boy violinist, shows now that to be kind and oblig pays in more than one way. A boy who wished very much to hear the boy play fell ill on the day of the concert. His disappointment at missing found Franz the idol of the day, of a sum of money if the messenger took back the answer that the young violinist would be glad to come, but that he would not think of accepting money for the service. The kind man was delighted with the bent Franz showed for real music, thanking the lad again and again, and the following day he sent a magnificent Stradivarius violin to the boy.

A HUNTER WITH A HEART.

Polar oxen are not very difficult to shoot. But they are highly valued game by the Arctic explorer. In pursuing a small herd, Otto Sverdrup, author of "New Land: Four Years in the Arctic Regions," noticed the following evidence of maternal affection in a cow for its calf:

As the herd started I noticed that one of them had a newly born calf. The herd went up a steep snowdrift, eight or ten feet in height, and the calf made a brave attempt to follow, but when it had almost reached the top, lost its footing and rolled down to the bottom again. It fell so badly and helplessly that I thought it was killed. But to my surprise it rose to its feet and began to scramble up once more. In its second attempt to scale the drift it was no more successful than the first, and I felt so sorry for it that I was just starting to help it up the drift when suddenly it occurred to me that the old cow might be interpreting my motives, and what then? I might risk a battle with her, and it would be only, perhaps, to have to shoot her in self-defense. I decided to remain where I was, and await the turn of events.

At last the mother heard the cries of distress, and came tearing down the hillside, the snow flying about her. Heaven help the person who had meddled with her calf then! She would have made it hot for him. It was both amusing and touching to see the two together. The mother caressed the calf as if to comfort it, sniffed it all over to see if it was still whole, gave it a push now and again, and then started gently up the drift, but not the way the calf had gone in following the herd. She carefully chose an easier and less steep way.

When she had got across the drift she ran a few steps forward, not very fast, but too quickly at any rate for the calf to follow her. Then she turned back and pushed it from behind with her muzzle, so that it went a little faster. Again she ran a few yards forward, but still the poor little thing could not keep up with her, and she returned to her old pushing methods. So they went on all the way up until they reached the head. Then she took her place in it, the calf crept under her, and was entirely hidden from sight by her long hair.—Youth's Companion.

THE BALTIMORE ORIOLE.

Of all the feathered songsters which are inhabitants of this country, but few surpass the Baltimore oriole (Icterus galbula) for richness of plumage and melodiousness of song, the latter consisting of from four to ten full, loud and mellow notes. The Baltimore bird, or Baltimore oriole, as it is called from its resemblance to the European oriole, is peculiar to this

KINDNESS WAS REWARDED.

Franz von Veesey, the boy violinist,
knows now that to be kind and oblig-
ing pays in more than one way. A
man who wished very much to hear
the boy play fell ill on the day of the
concert. His disappointment at miss-
ing it was so great that his family sent
a note to Franz the idol of the day, of-
fering him a large sum of money if he
would come and play in the sick room.
The messenger took back the answer
that the young violinist would be glad
to come, but that he would not think of
accepting money for the service. The
sick man was delighted with the beau-
tiful music, thanking the lad again and
again, and the following day he sent a
magnificent Stradivarius violin to the
boy.

A HUNTER WITH A HEART.

Polar oxen are not very difficult to
shoot, but they are highly valued game
by the Arctic explorer. In pursuing
a small herd, Otto Sverdrup, author of
"New Land; Four Years in the Arctic
Regions," noticed the following evi-
dence of maternal affection in a cow
for its calf:

As the herd started I noticed that
one of them had a newly born calf.
The herd went up a steep snowdrift,
eight or ten feet in height, and the calf
made a brave attempt to follow, but
when it had almost reached the top,
lost its footing and rolled down to the
bottom again. It fell so badly and
helplessly that I thought it was killed,
but to my surprise it rose to its feet
and began to scramble up once more.
Its second attempt to scale the drift
was no more successful than the first,
and I felt so sorry for it that I was
just starting to help it up the drift
when suddenly it occurred to me that
the old cow might misinterpret my
motives, and what then? I might risk
a battle with her, and it would be a
pity, perhaps, to have to shoot her in
self-defense. I decided to remain
where I was, and await the turn of
events.

At last the mother heard the cries of
distress, and came tearing down the
hillside, the snow flying about her.
Heaven help the person who had med-
dled with her calf then! She would
have made it hot for him. It was both
amusing and touching to see the two
together. The mother caressed the
calf as if to comfort it, sniffed it all
over to see if it was still whole, gave
it a push now and again, and then
started gently up the drift, but not the
way the calf had gone in following
the herd. She carefully chose an eas-
ier and less steep way.

When she had got it across the drift
she ran a few steps forward, not very
fast, but too quickly at any rate for
the calf to follow her. Then she turned
back and pushed it from behind with
her muzzle, so that it went a little
faster. Again she ran a few yards for-
ward, but still the poor little thing
could not keep up with her, and she
returned to her old pushing methods,
so they went on all the way up until
they reached the herd. Then she took
her place in it, the calf crept under
her, and was entirely hidden from
sight by her long hair.—Youth's Com-
panion.

THE BALTIMORE ORIOLE.

Of all the feathered songsters which
are inhabitants of this country, but
few are the Baltimore oriole (Icterus
galbula) for richness of plumage
and melodiousness of song, the latter
consisting of from four to ten full,
loud and mellow notes. The Balti-
more bird, or Baltimore oriole, as it
is called from its resemblance to the
European oriole, is peculiar to this
continent, being found from Canada
to Brazil. It is the most beautiful of
our summer visitors, the plumage be-
ing very brilliant, particularly so in
the male, which has its head, neck,
fore part of back and the tail glossy
black; its quills, excepting the first,
are margined with white; the whole
under part of the wing coverts and
posterior part of back is a happy com-
bination of bright orange and vermil-
lion; the breast, under part of neck
and the end of the tail feathers are
tipped with dull orange. Its bill and
feet are a bright blue color. The above
plumage is when the bird is three
years old, before which time it is
mixed with olive brown. The female
oriole is, as in the case of most birds,
less beautiful than the male, though
it still presents a very charming ap-
pearance, being brownish black mixed
with dull yellow on the neck and fore
part of back, while on the hind part
of back it is covered with brownish
yellow, brightest on the rump. The
Baltimore oriole builds a very curious,
ingenious and wonderfully interesting
nest, it being a pendulous cylindrical
purse shaped pouch of six or seven
inches in depth, and suspended from
the end of a lofty branch. This re-
markable structure is generally made
of long grass, although other material,
such as horsehair and thread, is some-
times used, and is woven with great
nicety. The bottom of the nest is
lined with some soft material, such as
thistle blows and the like. The eggs
of this marvelously beautiful songster
are from five to six in number, about
an inch long, pale brown in color and
spotted and lined with dark brown,
making a very handsome egg. The
orchard oriole, which arrives in May,
is nearly the some in plumage and
general appearance. It lays five eggs,
of a whitish-pink, dotted at the end
with purple spots.—Lyman J. Pendell,
in Amateur Naturalist.

THE PAPER SERPENT.

The animated serpent is one of the
best of heat illusions, being a great
deal more effective than many more
elaborate. The serpent appears to

FIG 1

FIG 2

be tireless and automatic, for though
it has no visible means of motion it
keeps whirling for hours without a
stop— that is if you wish to burn that
much gas or consume a few pounds of
candles.

The serpent is made by drawing a
spiral like Fig. 1 upon a piece of stiff
bristol board. Cut the spiral out with
a sharp penknife so that when you
take hold of the terminal portion
which represents a tail you get a spir-
al of paper with its lower end in the
form of a serpent's head. Stick a pin
through the end of the tail and hold
the serpent over a light candle or gas
jet, sufficiently high, so that there is
no fear of the serpent's burning up,
but also low enough for it to be influ-
enced by the draught which ascends
from the flame.

The pin may be stuck in a wooden
support over the flame and then the
serpent will keep ever on the move.

But what makes it go?

The flame of the candle or gas jet is
in constant need of air to keep it burn-
ing. The air circles around the flame
on all sides. One portion of it (oxy-
gen) is instantly taken into the flame
and the rest of it (nitrogen) ascends
in the direction of the arrows (Fig. 2),
mingling with the heated air (carbon-
ic acid, etc.), which issues from the end
of the flame. Now you probably know
that hot air is lighter than cold air, so
that is the reason it rises in an attempt
to find its own level, just as a cork
floats to the water's surface from the
bottom.

A stream of air, therefore, plays
against the paper serpent and striking
its slanting sides, gives it the twist
which sets it whirling around, and,
also, puzzles the onlookers who will
always be mystified concerning the
source of its hidden power until you
see fit to explain.—New York Evening
Mail.

Official figures show that the Man-
hattan "L" carried 128,000 more pas-
sengers on November 1 and 2 than on
the same dates last year, in spite of
the opening of the subway.

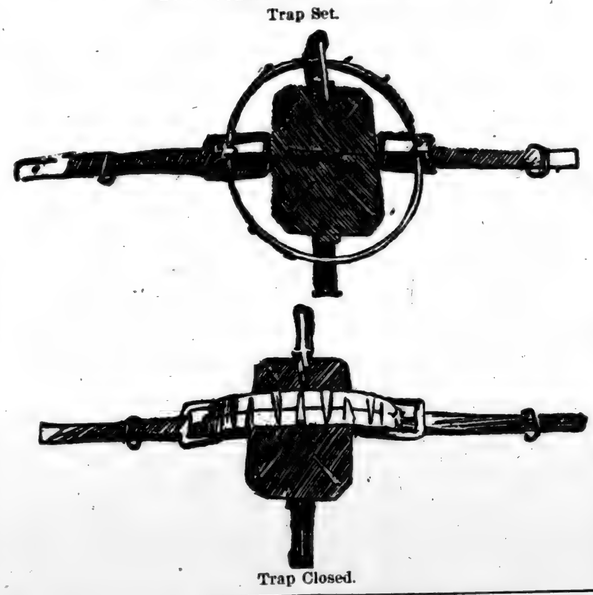
HORRIBLE MAN-TRAPS.

Spikes Which Frequently Maimed Poachers For Life.

Great Britain has passed a law re-
cently against pole-traps, but the ac-
companying illustration, reproduced
from English Country Life, shows an
even more horrible form of trap, which
was employed not so very many years
ago to deter human poachers from in-
terfering with the rights of game pre-
servers. It is true that the law de-
manded that a notice should be posted
at the church door before the traps

TWO VIEWS OF A MAN-TRAP.

Trap Set.



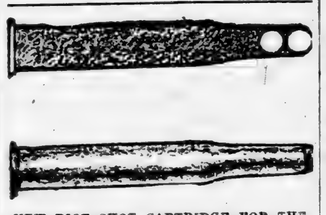
Trap Closed.

were employed; but as these notices
were practically permanent, whether
the traps were set or not, they gave
little or no warning to the miserable
poacher. It is marvelous that anyone
could have been found daring enough
for the sake of a few pheasants or
hares to run the risk of falling into
one of these traps; he was not only
sure of severe punishment after being
caught, but in most cases the cruel
spikes did his leg such an injury that
he was more or less maimed for life.
We have reason to be thankful that
the spirit of humanity has abolished
this horrible invention, though it has
been in use within the memory of
some still living.—Philadelphia Record.

NEW CARTRIDGE TO AWE MOBS.

The new cartridge for riot duty is
nearly ready for the National Guard,
State of New York. It is of the cal-
bre of the Krag-Jorgensen rifle, which
is .30, and will be used by the guards-
men in that rifle. Until a few weeks
ago the State soldiers were equipped
with the Springfield only, except for
fifty Krags, which the expert riflemen
in each regiment were permitted to
use in Creedmoor practice. Now, how-
ever, the Krag is to be issued gener-
ally, and by the opening of the drill
season in a few weeks the entire
militia probably will be using the
weapons of the regulars.

The new riot ammunition is called
the "multiball" cartridge, because in-
stead of having only one bullet it has
two, a trifle larger than buckshot.



NEW RIOT SHOT CARTRIDGE FOR THE NATIONAL GUARD.

When fired they will scatter, and a
volley of them will make a mob think
it is facing shrapnel.

The range of these riot cartridges
is only about 300 yards, as against
2000 yards and more of the regular
bullet. It is practically the range of
the old musket of the Revolutionary
days. The adaptation of this cart-
ridge is entirely in line with the larger
humanity warfare.—New York Press.

The mystery of the Roentgen rays
appears to be deepening. Several in-
stances in which it caused cancer in
operations are now on record, and the
doctors are wondering why it should
in some cases cure that disease and in
others cause it.

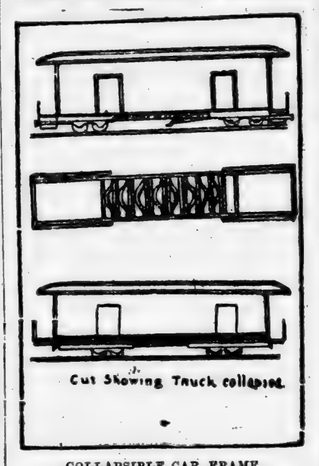
TO RESIST A COLLISION.

Collapsible Car Frame to Take Up Shock.

It is a well-known fact that because
of their positions at the head of the
train the baggage and mail cars are
subjected to the greatest amount of
hard usage. The life of a railway pos-
tal clerk for this reason is regarded
as a most hazardous one. In a col-
lision the baggage car, which is often
also the mail car, is generally smashed
to splinters, and often by consuming
the shock is the means of saving the
remainder of the train from a like
fate.

A car which is designed almost as
especially for collision as for mail and
baggage carrying purposes is the in-
vention of J. D. Barber, of Cleveland,
Ohio, and in a few words consists of a
construction which will consume the
shock of a collision and save not only
the car thus equipped, but also pre-
vent any damage to the other cars of
the train.

In this design the under frame of
the car is combined with a series of
springs and a telescopic framework
which permits the springs to act as a
cushion and absorbent of concussion,



Cut Showing Truck collapsed.

COLLAPSIBLE CAR FRAME.

the severity of collision will be re-
lieved, and other cars in the train
protected against destruction.

The platforms of this car are of es-
pecial construction, which permits of
them sliding under the car in case of
the accident without damage to the
body of the coach.—Philadelphia Rec-
ord.

He'd Seen 'Em.

"What business is papa in, mamma?"
asked little Robbie.

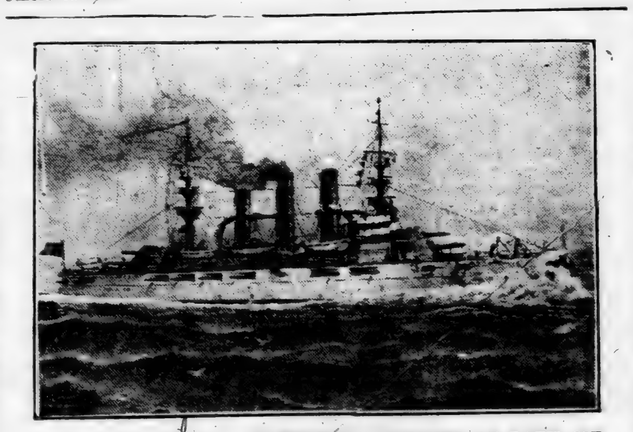
"Why, he's in the hardware business,
my boy."

"And does he sell cockroaches, mam-
ma?"

"Why, Robbie! What a question!
Of course he doesn't."

"Well, he's got a sign on the store
window which reads, 'We sell every-
thing to be found in the kitchen.'"—
Yonkers Statesman.

Two old portraits of Nelson, in good
condition, have, it is announced, been
discovered in Dresden, dating from
the great admiral's visit there in 1801.
The one is a large pastel, the other a
miniature in oil.



BATTLESHIP GEORGIA, RECENTLY LAUNCHED AT BATH, ME.

Displacement, 14,948 tons. Speed, 19 k
mor: Belt, 11 inches to 4 inches; tur
barbettes, 10 inches and 6 inches; d
mament: Four 12-inch 40-caliber B.
6-inch 50-caliber R. F.; twelve 3-inc
pounders; two 3-inch field guns; six
Torpedo tubes, 2 submerged. Com
nots. Bunker capacity, 1704 tons. Ar-
rets, 12 to 8 inches and 6½ to 6 inches;
eck, flat, 1½ inch, slope, 3 inches. Ar-
L.; eight 8-inch 45-caliber B. L.; twelve
h R. F.; twelve 3-pounders; eight 1-

plement, 812.

FINDING OIL WELLS.

IT SEEMS TO BE A MATTER OF GOOD GUESSING.

Methods of the Driller, the Promoter and the "Witch"—A Question That the User of the Divining Rod Dodged.

"And how do you locate an oil well
in wild country?" was asked a driller,
a promoter and the "witch." Each
answered after his profession and his
kind, and each believes himself infalli-
ble. It is comparatively easy in well
developed territory, with producing
wells on all sides, to pitch the site for
a derrick almost anywhere and get the
oil. But in remote districts, where the
drill has never made a hole and where
the derricks are not in sight, it is an-
other story.

"Well," said the driller man after a
pause, "it is like this: You don't
know a thing about it, and the more
you look at the land and the more you
think about it the more muddled you
probably will become. Some rather
take their chances on a hillside and
others in the valleys. Some follow so-
called surface indications and others
follow the advice of the witch. It is
all a guess, however, and when all is
said and done you probably will find it
one place as well as another. I had a
contract not so long ago to drill a hole
for a fellow who wanted it on a ridge.
He had picked out the exact spot and
marked it off, so that all I had to do
was to put up the rig and begin. We
started for the place on a wagon, but
in the river bottom the wagon got
stuck in the mud. We fussed around
for awhile, and then saw we were in
for it. My man got tired and finally
said he believed we would locate the
well as close to the place where we
got stuck as possible. We did it and
got a good oil well. After we got the
well in the river bottom we moved up
on the hillside to the spot he had first
picked out and we got a dry hole. I
knew another fellow who went to a
wild country. When he came to pick
out a site for the first well he shut his
eyes, whirled around two or three
times and threw a rock as far as he
could. Where the rock fell was the
site of the well. He got oil. There
was still another fellow who used to
tell us to drill any old place, and he
sometimes found oil. But these are
merely samples of experience. Every
man to his notion."

"I try," said the promoter, appearing
as dignified and wise as an owl, "first
to find out the nearest well and the
direction the pool seems to take. Then
I take a ruler and measure off the line
of the trend and place my derricks
somewhere along that line. But if I
was distant, say, ten miles, from the
nearest production it would be all a
matter of guess. Especially is that
true of the Kansas field, where the
trends are contrariwise and sometimes
cross each other. In case of doubt I
should let the driller pick the spot and
abide the result. Even the first hold
is no indication of the value of a lease.
I have known of as many as five holes
drilled on a lease in this field and ev-
ery one of them dry when some tender-
foot would come along and get good
oil wells on that same lease. I have
in mind the case of a firm that drilled
some holes around here twelve years
ago and reported the district dry,
when within a stone's throw of these
dry holes are some of the best pro-
ducing wells in the district. I re-
member also a case at Richburg, N. Y.
The men drilled thirteen holes, an un-
lucky number, and did not get the oil.
After that came a man who got oil
in every one of the fifteen holes he
drilled. If the original promoters had
surveyed the ground they could not
have gone around the oil producing
territory nearly so closely as they did
by accident. You have to take your
chances, and that is what I am doing."

"It is easy," said the witch. "All I
have to do is to take my divining rod
and go out into the territory to be de-
veloped and put it on the ground. If
there is oil there the instrument will
show it at once. You cannot fail if you
have the proper kind of an instrument.
The trouble with these people is that
they are not sufficiently posted in met-
allurgy to know that you can discover
the presence of mineral oil in the
ground by the simple device of a di-
vining rod. But you can do it all the
same. I have located dozens of wells
in this district and never failed yet.
And in other districts where no wells
have been drilled I have located good
oil wells which eventually made
money for their owners. With the
rest of the fellows it is guesswork;
with me it is a 'cinch.'"

"And if it is a cinch with you, why
don't you get rich out of it instead of
making the other fellow rich?" the
witch was asked. But he looked out
over the tops of the buildings at this
and said he had an engagement with
a promoter down the street.—Kansas
City Star.

DIAMOND ENGRAVING.

Experts in That Line Can Do Very Artistic Work.

Diamonds can be engraved in artis-
tic manner. This development of the
diamond cutting art brings into exist-
ence a new class of jewelry, for
which a considerable demand is ex-
pected. It was long believed that
the diamond could not be engraved
with safe or satisfactory results. A
few stones roughly engraved were
found in India and a diamond was
exhibited at the Paris Exposition in
1878 on which a portrait of the King
of Holland was scratched. But the
work was imperfect and the stones
were rather depolished than en-
graved.

Some of the finest specimens of en-
graving on diamonds are the work of
M. Bordinet, a Paris jeweler. One is
a scarfpin representing a yataghan,
of which the blade is a slender dia-
mond and the handle a ruby. An-
other is a large circular stone on
which a pansy with its foliage is en-
graved. In another case the design
is a knife made with two diamonds.
An elaborate piece of work is a bi-
cycle, of which the wheels are two
circular diamonds. The spokes are
represented by lines engraved on the
diamonds. A small hole is pierced at
each axle. Another diamond is carv-
ed like a fish. A handsome brooch
is a scarabaeus, surrounded by sap-
phires and brilliants.

The most remarkable is a ring
made of one diamond, the interior sur-
face being polished and the exterior
elaborately engraved. Other exam-
ples are brooches representing flies
of which the wings are thin engraved
diamonds, the two diamonds engrav-
ed with armorial bearings, the im-
perial arms of Russia being used in
one instance on shirt and cuff buttons.

Formerly it was only possible to
produce the polish on flat surfaces,
but M. Bordinet has been able to
do this on concave portions, as, on
the body and tail of a fish and the
interior of a ring. His tools produce
not only straight lines, as in the
wheel, the racquet and the flies'
wings, but a free modelling, as in the
pansy, the Russian arms and the scar-
abaeus. He has invented these tools
himself and intends that his [illegible]
shall have the use of them. They
are exceedingly delicate and difficult
to handle. He has spent thirty-five
years bringing them to perfection.
It is comparatively but few years
since it was possible to pierce holes
in diamonds. This feat made pos-
sible the placing of diamonds on a
string, alternating with pearls. This
work now is done generally in dia-
mond cutting establishments.—Chica-
go Chronicle.

AUTOMOBILES ON RAILWAYS.

This Use of Them Becoming Extensive Both Here and Abroad.

Automobiles are now being used on
railroad tracks to an extent that is
not only unknown to but not dreamed
of by most persons. Ordinarily it is
considered that the noise and smell
of a gasolene motor car are sufficient
to keep persons informed of its
whereabouts and progress, but the gas-
olene automobile has been steadily ex-
tending its sphere from the highway
to the steel track with a subtlety that
has almost completely concealed the
fact.

When, last September, Charles J.
Glidden, of Boston, with his 24-horse
power touring car, completed his run
of 1,800 miles on steel rails from Min-
neapolis to Vancouver, B. C., in sixty
hours, at an average rate of thirty
miles an hour through the mountains,
it was heralded as a feat revealing
the revolutionary possibilities of au-
tomobiles for railroads. It was in
one case predicted that the twenty-
hour trip from New York to Chicago
was thereby shown to be near at hand.
It was known, too, at that time that
President Underwood, of the Erie
Railroad, was experimenting on the
tracks rails with an automobile fitted
with flanged steel wheels, and a few
persons realized that possibly some-
thing might come of these doings in
the future. Yet all the while and be-
fore these feats various automobile
manufacturers were busy supplying
specially constructed cars to rail-
roads.

One American manufacturer alone
has built and delivered [illegible] than
100 cars that are now in [illegible]
roads for various purposes.
neer rails automobile of this k
was a 4 1-2 horse power affair of
Michigan Central road. Now his spec-
ial rail automobiles are in use for
inspection cars for division officials,
for switching purposes and even for
passenger service on a spur line out
in Utah.

In England steam motor coaches
have been in actual passenger service
on the unit basis since 1893. In
France, Austria and Italy there are
gasolene automobiles in regular rail-
way service, and some interesting
statistics concerning them are to be
reported to the French government
next month.

For supplemental passenger ser-
vice there would seem to be a big
field for individual automobile rail
coaches on trolley lines. In some of
the smaller cities where night traffic
is not large the trolley companies
complain that it costs them a dollar
a head to carry passengers after 1
o'clock in the morning, as they have
to keep their enormous power plants
running in order to keep the few cars
in commission. This expense would
be saved by the use of cars that fur-
nished their own power from a gaso-
lene engine.—New York Sun.

Japanese Names for Babes.

According to the Levant Herald,
happy mothers in England and "Amer-
ica" are following the fashion of giv-
ing their children Japanese names,
such as Kuroki, Kamimura, Togo,
Oku, etc. After remorselessly con-
demning this fashion, the Herald
opines that "this sort of outrage al-
most excuses parricide."

The Wisbech Cemetery Company is
unable to pay a dividend this year,
"owing to the lower death rate in the
town." Wisbech is an English town
of 12,000 population.

Perfect and Not Perfect.

A little calm reflection and careful
the Bible would relieve many pe
needless perplexity in regard to th
the term perfection as applied to
Christian.

Every true Christian is perfect i
sense of being a real Christian, and
ing all those things which are essent
constitute him a Christian. If any
lacking he is not a whole—a per
Christian. What these parts are
are necessary to constitute one a
Christian it is not now my purpose t
order. It is to the necessity of all
being present in order to the being
Christian that I call your atte
As a young horse for an illustrati
there is a foal missing, an eye miss
or other part damaged or lacking
can say it is a perfect horse. But
the necessary parts are there, although
the animal may be young and untrain
we say it is perfect. But there is a perf
it has not reached. It is to grow, to
to develop and so go on unto perfe
It may live to reach a point beyond
it cannot grow or develop. It has re
its perfection. It was a perfect horse
it was young and small. It is a p
horse, now it has reached its matur
perfection.

The case is somewhat similar wit
Christian. When the sinner believe
his heart and received the Holy Gho
became a Christian. He had all the
necessary and in this sense was com
or perfect. But he is young, weak,
ture and needs to go on unto perfe
This perfection is before him in the
of the man Christ Jesus, and he a
commences to seek to be like Christ
his life long he may be developin
going on unto this perfection. Inde
one will reach a time or a place wh
can say "I am so much like the Lord
that there is no further room for
advance. I have reached perfection.

In order to see this matter more p
it is necessary to remember I am
tering to the holiness of the Chr
Whether he has just begun to be a
tian, or has been serving the Lord
fully for many years and has made
progress toward perfection, the true
tian is "cleansed from all sin," and
the Spirit of Christ, is holy in his cha
as God is holy. Holiness real per
holiness is an essential attribute
Christian.

Growing out of the above is also a
fact which must be borne in mind
that is the true Christian is ready
at any time, and ready as much
as at any time, among the redeemed in
or at home. "He that believeth
shall not make haste."

Re-read these plain words, kind
and see if they are not clear, and
May the Lord make them a bles
you"—A. T. Scott.

Withholding Judgment.

Your Responsibility.

God holds you responsible for your
ture plus your nurture, yourself
your possibilities.—M. L. [illegible]

THE UNION.

Published every Thursday at Clanton, Chilton county, Alabama.

Wallace C. Edler, Ed. and Pub

Subscription price, in advance, per year, $1.

For advertising rates, call at the office, Seventh street, between First and Second avenues.

Entered April 15, 1903, at Clanton, Ala., as second class matter, under act of congress of March 3, 1879.

NOTICE TO CORRESPONDENTS.

All communications to the Union must be signed by the writer's real name as well as that name which they wish to put in the paper. Letters must reach the editor Tuesday morning to get in the same week. While we will publish any and all communications complying with these requirements that do not contain any improper language, we are not responsible for the opinions expressed. tf

UNION CLUBBING LIST....

The **UNION** *and* Yellow Jacket, **$1.00**

The **UNION** *and* Home and Farm **$1.00**

The **UNION** *and* Weekly Montgomery Advertiser. **$1.25**

The **UNION** *and* Weekly Atlanta Constitution. **$1.50**

The **UNION** *and* Saturday News **$1.25**

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?

POLL TAX.

Now, every one of our people be sure to call on the tax collector and pay their back poll taxes, pay up and get into shape so that you can vote on stock law or school tax when they come up, as they surely will the coming year. In paying your poll tax it is only taking it out of one pocket and putting it into the other. The money stays right in your own community and goes to the school. tf

A CORRECTION.

We wish to say in regard to an editorial we wrote in THE UNION nor intended to be entitled "Remarkable but at the circuit clerk's office plenty of stationery of all kinds for ordinary usage. Clerk Sam Simms says the retiring clerk, Mr. W. A. Foshee, left things in good shape.

CITY ELECTION.

The municipal election Monday resulted in the election of H. T. Chandler as mayor and Messrs. Johnson Potts, Dennis and Curry as Councilmen. The vote was as follows: Chandler, 57; Higgins, 36; Potts, 63; Johnson, 61; Curry, 61; Dennis, 59; Thomas, 50; Mullins, 32; Hopkins, 46. So there you are for another year,

A GREAT MEETING.

The meeting of those interested in the price of cotton on Tuesday was a rouser. About 400 farmers and business men of all classes were present, and they all "meant business." The meeting was greatly aided by Mr. W. T. Hand, of Jemison, who besides being a large cotton grower, is a capitalist also, and has thought out the question as shown by his remarks to the meeting. Lawyer Mullins also made a few remarks, but very much to the point, as he showed that he would help his renters to grow something else besides cotton. The men present seemed to be of one mind, that was to hold their cotton left over from 1904 and to grow less in 1905, even if (as old Dr. Chandler expressed it) they had to "eat dry bread." In our opinion, as soon as the speculators and spinners become convinced of the fact that the cotton raisers will hold what they have raised in 1904, and reduce their acreage and fertilizer for 1905, the price will improve; not a pound of cotton should be sold under 10 cents, that price being the lowest that leaves a DECENT LIVING PROFIT for the producer. Now, we have pledged ourselves to abide by the action of the New Orleans convention, so let us get together by school districts and when the plan is evolved by that meeting be ready to put it in force. A number of counties are heard from as having held meetings on Tuesday, and the least reduction in acreage resolved upon was 25 per cent. The farmer that won't stick to his fellows in this plan, while we can't force him in by law, we can by public sentiment, or hold him up to public view as a traitor to his brothers.

CANE GROWERS' CONVENTION.

The following letter explains itself. Governor Cunningham has appointed W. Y. Nix, of Beat 7; Z. J. Jones, of Beat 3, and J. J. Letcher, of Beat 8, as delegates to this convention, but every one should go that can. The car fare is low, being one fare, plus 25 cents, for the round trip, good to return until January 30th and accommodations at hotels and boarding houses can be had at very moderate rates by addressing L. L. Gilbert, secretary C. and I. Ass'n, Montgomery, Ala. Visitors to the convention can no doubt gather a good deal of information about cotton in the side talk among the delegates:

Louisville, Ky., Jan. 6, 1905.

Clanton Union,
Clanton, Ala.

Gentlemen:

The Interstate Sugar Cane Growers' Convention assembles in Montgomery, Alabama, January 25, 26, 27. It promises to be the greatest agricultural gathering ever assembled in the South. There will be more prominent speakers from very near every section of the United States than have ever addressed any similar gathering. People from every direction should, by the thousands, attend this meeting. Every farmer, or others, who are interested in the agricultural advancement in the south should attend this meeting.

The following are the names of the persons who will address the convention.

Hon. James Wilson, Secretary of Agriculture; Dr. W. H. Wiley, Chief Bureau of Chemistry U. S. Department of Agriculture; Dr. W. C. Stubbs, Director of Louisiana Sugar Experiment Station, New Orleans, La.; Prof. B. B. Ross, State Chemist, Auburn, Ala.; Prof. J. M. McCandless, State Chemist, Atlanta, Georgia; Prof. W. L. Hutchinson, Director of Mississippi Experiment Station; Hon. John Dymond, Editor of Louisiana Planter; Hon. E. J. Watson, Commissioner of Agriculture and Immigration, South Carolina; Mr. W. B. Roddenberry, of Cairo, Ga.; Col. R. R. Poole, Commissioner of Agriculture, Alabama, and other distinguished speakers will be present and address the convention.

I am indebted to Mr. D. G. Purse, the President of the Association, for the following information:

"An important fact for consideration just now is that with Cotton at even 7 cents in the interior, and the highest grade Cane Syrup at 30 cents at Central Mills, one acre of Sugar Cane, is more profitable than 50 acres of Cotton, as it is claimed that it costs 6 1-2 cents, on average, to make Cotton.

"Notwithstanding these facts, no one suggests the displacing of a single acre of Cotton to replace it with Cane. Our sole purpose being to advocate its value as an auxiliary money crop in the South in diversified farming."

I send you a few posters regarding low rates to this convention. I think it would be the greatest thing for your section if you could induce a large number of the farmers and friends of the agricultural advancement of the south to attend, and see what is doing and can be done.

Please see that the low rates and dates are known and let us start for our direction this cane industry that is making Louisiana, Georgia and other sections growers of cane large sums.

Yours truly,
G. A. LARK,
tf. Gen. Im'n & Ind'l Agt.

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, leaves himself liable to arrest and fine, the same as for theft.—Ex. tf

COTTON MEETING.

Pursuant to the call issued by Hon. R. R. Poole, nearly 400 farmers and business men of Chilton county met at the court house in Clanton.

The assemblage was called to order by W. H. Killingsworth, and W. H. Conway was elected chairman and J. N. Dennis secretary; assistant secretaries, W. C. Edler, G. W. Edwards, and A. G. Dake. On motion a committee composed of A. C. Mims, A. G. Dake and W. T. Hand was appointed to call on the business men of Clanton and ask them to attend and assist in the deliberations. Judge L. H. Reynolds made a short talk on the necessity for organization. Moved and carried that the cotton acreage and fertilizer of the county be reduced at least 25 per cent. W. T. Hand, of Jemison, made a short address, telling of his proposed plan which he intends to submit to the convention at New Orleans. Mr. Hand was unanimously elected as a delegate to the New Orleans convention to be held January 24-26. Moved and carried that this organization shall be known as the Cotton Growers' Association of Chilton Co., and the officers shall be a President and Secretary for the county and one chairman from each school District. Moved and passed that this association pledges itself to abide by the action and recommendations of the New Orleans convention. Moved and carried that a convention to consist of three delegates from each school district meet at Clanton court house on February 1st, 1905, to perfect a permanent organization and to carry into effect such plan as shall be adopted by the New Orleans convention. A committee consisting of W. H. Conway, W. T. Hand, Tipton Mullins, W. I. Mullins and E. A. Matthews was appointed to draft plans for permanent organization to report February 1st.

By unanimous vote all parties interested in this movement are invited and urged to attend the meeting on February 1st, merchants and bankers especially. That these proceedings be published in both the county papers. That a vote of thanks be extended to W. T. Hand, W. H. Conway and J. N. Dennis for the interest shown by them in this movement.

That every school district is hereby requested to hold meetings at 2 p. m. on Saturday, January 21st, for the purpose of organizing and electing the delegates to the main convention to be held on February 1st. The convention then adjourned.

W. H. CONWAY, Chairman.
J. N. DENNIS, Secretary.

RANDOLPH.

The new year is here and we trust all have formed good resolutions and will keep them. So let all the correspondents of THE UNION resolve to give us the news. We hope to hear from "Observer" often. Misses Annie and Maggie MacMillan were in town Wednesday. R. M. Hubbard was a welcome visitor Saturday. Rev. S. N. Waldrop was in town Wednesday. W. E. Thomas was a visitor last week. Rev. A. J. Lumpkin from Coleana has located a few miles north of town. J. W. Sewell and family have moved to the Lightsey farm in Chilton. Mr. and Mrs. John Crumpton, of Macedonia, were in town Thursday. John Hatcher and wife, who recently moved to Louisiana, have returned and are at present located here. Rev. S. Smitherman was a welcome visitor last week. Grover Cleveland left last week for Auburn to resume his studies at college. Mrs. H. W. Gibson, of Macedonia, was in town Thursday. Mrs. John T. Martin, who has been visiting relatives near Riderville, has returned home, bringing her father (Mr. Mitchell) with her. Major Howison went to Birmingham Thursday. Boge Rasberry was in town Thursday. Edgar Freeman, of Hubbard, was in town Thursday. T. L. Elam, of Maplesville, was a pleasant visitor Thursday John Helton and Jordan Brown are the boss teamsters in town. It is a sight to see them bringing in logs, driving six mules each. By the way, "Just a Voter" is hard to beat.

"ONE OF THE BOYS."

MARS HILL.

The farmers in this community are beginning to plow, all thinking that early plowing is beneficial; some say they are not going to plant as much cotton as last year, and some about the same or more. J. N. Scott had 17 bales stored in the Montevallo ware house with the intention of holding it for 12 cents, but I guess he got scared of the market and last Wednesday he sold the entire lot for 6 3-4 cents. Now, brother farmers, let's not get scared, whether our cotton is stored in the warehouse or at our homes; it won't eat or drink, and by holding it there is the only chance to realize a better price. Marion Scott went to Montevallo Thursday and bought furniture and other articles for housekeeping. Mr. W. P. Johnson, of Genessee Gap, was buried at this place Friday, services being conducted by Rev. J. H. Thomas. The deceased leaves a wife and five children and a host of relatives and friends to mourn the loss of a good man. He has suffered almost untold agonies with cancer, but among his last words were "I do not fear death in the least." Jim Watson and wife, of Texas, are relatives and mm wife, of Texas, are visiting relatives and friends here. We are all glad to see them back around their old home. Success to THE UNION and its subscribers.

MARS HILLIAN.

WIT AND HUMOR

AN AGRICULTURAL TRUTH.

The youth who sows wild oats, 'tis true,
Must reap as he hath sown;
But then his father ought to do
Some thrashing of his own.
—Philadelphia Press.

THE REAL END.

"Yes, he was killed by a blow from a policeman's club."

"Sort of hard-wood finish, eh?"—Puck.

JUSTIFICATION.

"And you went to that immoral play? I'm shocked."

"But you saw it, too."

"Yes—but I had a free ticket."—Fliegende Blaetter.

THE SIMPLE AND THE ANXIOUS LIFE.

"Are you interested in the simple life?" we inquired.

"No," replied the wild eyed man, "it takes all my time avoiding a simple death."

BENDING THE TWIG.

Cora—She is a better talker than listener.

Merritt—That's the result of education. During the season she attends the opera every night.

TERMINAL FACILITIES ABRIDGED

"What did you cut off your dachshund's tail for?"

"It was an accident. Elevator started up before I had got quite all of him inside the door."—Chicago Tribune.

TOOTH AND NAIL.

Mrs. Stubbs (reading)—John, the late election reports say there was much "scratching" in Colorado.

Mr. Stubbs—H'm! That's where the women vote. Does it say anything about the hair-pulling, too?—Chicago News.

THE GIRL AND THE SECRET.

Clara—We girls are getting up a secret society.

George—What's the object?

Clara—I don't know yet, but I'll tell you after I am initiated.—Jester.

LIKE BETTING ON A SURE THING.

Cholly—Do you think that Miss Oldmayde is really very anxious to get married?

Polly—Well, I think that before a man proposes to her he had better be mighty certain that he loves her.—Somerville Journal.

THE BOY'S WAY.

Senior Partner—Didn't I hear that new office boy call you "Jones" this morning?

Junior Partner—Yes; but he's only been here a week. Give him time; he won't begin to call me "Bill" until next week.—Philadelphia Press.

NOT USING IT.

Mr. Green—Miss Passay says she has the prescription for perpetual youth!

Miss Sarcastic—It's a wonder she wouldn't take it to a drug store and have it put up!—Detroit Free Press.

HOW IT OCCURRED.

"That fisherman appears to be offering us something," said Rojestvensky.

"He is holding up some fish," replied his lieutenant.

"Oh, shoot the fish!" exclaimed the admiral, peevishly.

And that is how it happened.—Houston Post.

THE YONKERS WAY.

She—And what did she say when you attempted to kiss her?

He—She said she thought I was a gentleman.

"Well?"

"Oh, after I got through kissing her she didn't think anything about it; she knew it."—Yonkers Statesman.

KNOWN.

Badger—Are you acquainted with the people who live in the gib house on the other side of your street?

Tolman—In a sort of way. None of the family has ever spoken to me, but their dog always barks at me when I pass the house.—Boston Transcript.

WHEN CONGRESS MEETS.

"Who is that man walking up and down the corridor, with frowning brow and shoulders weighted with the heavy burden of legislation? Some distinguished statesman, no doubt."

"That, my dear sir, is the assistant secretary and stenographic clerk of the new Congressman from Alabama."—Cincinnati Commercial-Tribune.

PROSPERITY PENALTY.

"Of course you are glad your country is so prosperous?"

"Of course. But I don't think there is any necessity for making so much noise about it."

"What's the harm?"

"Why, every time my wife hears the word 'prosperity' she strikes me for more money."—Cleveland Plain Dealer.

The Horse and Man

Animal Conquest Marked One of the Great Turning Points in the History of Civilization.

By Henry Fairfield Osborn.

THE conquest of the horse by man, and its final utilization for all purposes which are discharged by steam and electricity today, marked one of the great turning points in the history of civilization. In the great earth and sand preglacial deposits of Europe the true wild horse is as widespread, though not as varied, as in America. It is not at this stage associated with the remains of man, because no preglacial man except the pithecanthropus or Trinil man of Java has been found. In the interglacial or postglacial period the remains of man and the horse are first found together. The first association occurs in the middle of the palaeolithic, or rough implement, period. The discovery of all the possible uses of the horse came very gradually, however, for there is abundant proof that man first hunted and ate, then drove, and finally rode the animal.

The prevailing drawings of the palaeolithic horse represent him as hog maned, with no forelock to conceal the low-bred Roman nose. A second type in the Mouthe cave, a bearded horse with long bristling mane, long ears and convex forehead, is regarded by M. Riviere as another species. But it is not clear to my mind that these drawings represent more than the summer and winter coats of the same animal. Besides these Roman-nosed types to which Ewart traces the modern cart horse, there are others with small heads and flat noses which Ewart associates with the Celtic pony and possibly with the origin of the thoroughbred. Other cave drawings, reproduced by M. Capitan, leave little doubt that the ass was known in Europe. It is also certain from abundant evidence in the caves of France that there was a larger horse toward the south perhaps, while the smaller breeds may have frequented the colder northern regions.—The Century.

RUSSIA PROTESTS.

Accuses Japanese of Firing on Hospital Ships at Port Arthur.

Paris, France.—The Russian Embassy filed with the French Foreign Office a protest against the violation of The Hague convention by the Japanese in firing upon the Russian hospital ships at Port Arthur.

New York's New Postmaster.

William R. Willcox took office as Postmaster of New York City.

Japs in Port Arthur.

The Japanese found 20,000 sick and 5000 able soldiers in Port Arthur, with large stores of common provisions. It was declared that the Japanese had expected resistance to be prolonged for another month.

Doctor Sued For Error.

Dr. Frederick C. Jones, of Bernardsville, N. J., was sued for causing the death of an infant by administering morphine tablets in mistake for laxatives.

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union, both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer. tf.

PROGRAM OF TEACHERS' INSTITUTE,
To Be Held at Concord January 20-21, 1905.

FRIDAY.

10 a. m.—Music by teachers of institute.
Devotional Exercises—Rev. T. F. Davis.
Welcome Address—E. H. Parrish.
Opening Address—Robert Session.
Enrollment. Short talks by teachers.
Noon, Centralizing County Schools—G. L. Speer.
Give Your Daily Program in Teaching and Your Opinion as to Its Necessity—J. B. Ruffin, H. A. Harris.
The Ideal Teacher—P. G. Maness.
The Ideal Parent—A. E. Davis.

SATURDAY.

9:30 Opening query box
Improvement in and Around School Buildings—J. H. Anderson, Robert Jones.
School Discipline—S. B. Powell, B. R. Richardson.
Educational Address—Prof. W. D. M. Simmons, of Montgomery.
Discussion of rules by institute.
Educational address.
Conveyance will be furnished teachers coming by rail to Clanton.

J. W. MOORE,
Chairman.
W. O. PERRY,
R. A. RASCO,
H. L. DAVIS,
G. L. SPEER, Sec'y.
Board of Education.

Notice No. 25707.

NOTICE FOR PUBLICATION.

Department of the Interior, Land Office at Montgomery, Ala., December 9, 1904.

Notice is hereby given that the following-named settler has filed notice of his intention to make final proof in support of his claim, and that said proof will be made before Clerk of the Circuit Court, at Clanton, Ala., on January 28, 1905, viz: William M. Johnson, Homestead entry, No. 33513, for the Se 1-4 of Section 12, Tp. 22 n of R 15 e.

He names the following witnesses to prove his continuous residence upon and cultivation of said land, viz: William S. Cox, of Clanton, Ala.; Lonzo I. Bates, of Verbena, Ala.; Moses Bates, of Verbena, Ala.; William H. Parish, of Clanton, Ala.

ROBERT BARBER,
tf Register.

Trustees Named.

Montgomery, Ala.—Acting Governor Cunningham has re-appointed the following as members of the board of trustees of the Girls' Industrial School at Montevallo:

M. A. Graham, Prattville; A. J. Dickinson, Birmingham; A. H. Alston, Clayton, and S. W. Johns, Birmingham.

NOTICE.

Mortgage and Crop Liens free at the office of Judge of Probate. Call on me for as many as you need.

L. H. REYNOLDS,
tf. Judge of Probate.

In addition to our Complete Stock of **DRUGS** Etc.
You will find a full line of
SCHOOL BOOKS, STATIONERY, ETC. SEEDS. PAINTS OILS and GLASS.
We have purchased the JUDSON STROCK stock and ask for your trade.

The Cathedral at Burgos

When answered were the martyr's prayers and sighs—
When the rude Goth was touched by throes divine
And moved by Christian grace to build a shrine.
Toward the bending heaven he raised his eyes,
Hoping to see some temple in the skies.
Lo, there a shadowy North inspires design;
The granite bowlder, and the broken line
Of gorge and cliff and arrowy pine arise!

So built the Goth, a distant sire of mine;
And yesterday, within this temple fair,
The strong, sweet savor of the mountain pine,
Descend upon me, as before the shirne
I knelt—and knew my Thor and Odin there!

—S. R. Elliott in Lippincott's.

CHLOE AND THE STILE

By H. B. MARRIOT-WATSON

As we came down the field of waving oats on Lavender hill, Chloe was talking quite heroically of life.

Her hair had been blown a little into admired disorder by the bluff wind on the heath, her cheeks were flushed with health and beauty, and she was mistress and queen of herself and her domain.

For me, my eyes went from her bright and significant face across the gray-green oats in which we walked breast-high, and back again in serene contentment. What did it matter that she was prepared to give battle to the monster—Man? Let him perish.

"I can't really understand a sensible man like you taking up a position like that," said she.

I had taken no position, except the one by her side, but I defended myself weakly.

"Well, you see, we inherit these prepossessions and prejudices from our savage ancestors, I suppose."

"That's just it," said Chloe, eagerly. "You admit it, then? Savage! Of course, they were savages. You've given away your case."

I never really had any case; but I didn't say so. "I suppose I have," I said, ruefully.

"You know it," said Miss Bohun, firmly. "It is quite absurd to pretend that women are one whit inferior to man, except, of course," she added quickly, "in regard to physical strength."

"And even then there were the Amazons," I suggested.

She cast a glance at me. "Yes, there were the Amazons," she said, "which shows—"

"And the women do all the hard work among the aboriginals," I went on.

She gave me another glance. "And that again shows—" she began with less confidence.

"Do you know," I said, stopping in midfield to observe her critically, "I believe that if you only practiced a little you would be more than a match for a man."

She looked away across the corn. "Do—do you think so?" she said, hesitatingly; and added, after a pause, "I—I don't think I'm so—I'm not what you'd call muscular."

"Well, perhaps not," I assented, examing her appraisingly; "but sinewy, say."

"How absurd!" said Chloe, quite snappishly, as she walked on. I followed. The deep, spreading shallows of the bushes at the end of the field enveloped us.

"Another stile," said I, cheerfully.

"Dear me, that's the fourth!" said Chloe, resignedly. "I do wish they'd makes gates between the fields."

"A stile's more picturesque," said I.

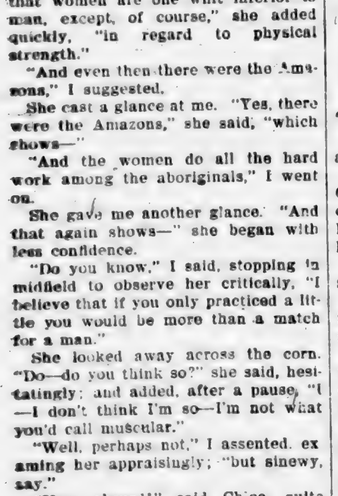
"Very possibly," said Miss Bohun, indifferently. "It's certainly not as convenient."

"Ah," said I, smiling, "there's one thing, at any rate, in which men are superior. They can negotiate a stile."

"Indeed!" said Chloe, loftily. "I should have thought the feat was not impossible for a woman." I pursed up my lips. "Any woman can get over stiles," she said, warmly, seeing my skepticism.

"O, I've no doubt," I said, politely.

"It's nonsense your saying that when I can see you don't believe it."



Queen of herself and her domain.

said Miss Bohun. "You're simply pleased to be sarcastic all along."

I shrugged my shoulders. She marched coldly and confidently toward the stile.

It took off a high ground, which, I suppose, accounted for the absence of a step. But there were two crossbars to assist the climber. I thought Chloe's face fell as she noted it.

"Let me give you a hand," I said.

"Nonsense!" she replied. "I don't want any assistance. It's quite easy." She put the hand which was not encumbered by the sunshade on the top bar and placed one neat foot on the lowest. Then she hesitated.

"Perhaps I'd better take the sunshade," I suggested.

She did not answer at once; then, "if you wish it," she replied nonchalantly, "though it's of no consequence."

"But I don't ride a horse this way," said Chloe, miserably.

I took the sunshade and waited. Chloe's two feet were now on the lowest bar. She peered over. The stile let down beyond in a big drop into a kind of hollow or ditch.

"O!" said she. "I didn't—" I was still waiting.

"I wish you'd go on and not stare in that atrocious way," said she, with asperity.

I begged pardon, vaulted the stile with one hand, and strolled on. Presently I looked back. Miss Bohun was seated astride the top bar, clinging with both hands to it. Her face was deeply flushed.

"Do go on!" she called out, vehemently. I went on, leisurely.

But, somehow, I could not make up my mind to walk briskly. She did not join me, so I flung myself upon the grass and pulled out a cigarette.

Then I heard my name called in a distressful voice. I stood up and looked round. Miss Bohun was still astride the top bar, and she was pinker than ever.

"Please come—don't be so unkind!" she cried, with tears in her voice. I hurried back like the wind.

"Or, just give me your hand!" panted Chloe, nervously, lifting one from the bar. "I can't—it's such a long drop. I can't get my—"

"Wait a bit," said I, considering. "You're half-way over now. You've only got to lift that foot off the bar and—"

"I shall go over. I know I shall go over," she said, pathetically.

"No, you won't," said I. "It only requires confidence. Imagine you're on a horse and—"

"But I don't ride a horse this way," said Chloe, miserably.

"No," said I, "but men do; and women are just as good as—"

"It's cruel of you—it's beastly, when I'm in such peril!" sobbed Miss Bohun.

"Now, just lift that foot," I enjoined. Chloe's weight lay limp on my shoulder.

"I can't get it free. It's stuck," she said, pitifully. I moved closer, still with my burden on my shoulder, and loosened the dainty foot.

"Now," I said. She lifted it gingerly. "Don't mind about your ankles," I said.

"O, but am I—?" Her foot went back. "Shut your eyes, please," she entreated. I shut my eyes. The next instant the weight on me was doubled, and two arms went stranglingly about my neck.

As I have explained, the foothold descended into a hollow. I went down precipitately on my head. I saw several cornfields and two or three stiles; also more than one Chloe. But I seemed content to be there. Miss Bohun extricated herself quickly.

"O, are you hurt? O, how dreadful of me!" she said. "O, please, do speak!"

"I liked it," I said, "and I'm only hurt in one place."

"I—you frightened me," she said, with a serious little laugh. "I'm so sorry. Is it your head."

I shook it, and sat up. "No; luckily I was born thick-headed."

"Your—your knee?" she inquired again, hesitatingly.

"Certainly not my knee," I replied.

"Then—" Chloe turned away. She might have asked further questions, but she didn't. She was busy smoothing her skirt.

"I can't think why they make such horrible things," said she.

"O, but any woman can get over a stile." I told her. She made no reply, but turned right away.

"Please," I called, "won't you help me up?"

Miss Bohun turned back reluctantly. I made a face of pain.

"It's your ankle?" she said, with sudden anxiety. I winced and took her hand, and then I was on my feet, with that hand in mine.

"No, it's here," I said in a lower voice, laying that hand on my heart. "It was here long ago." I drew her to me.

"Do you always do that to people you help over stiles?" asked Chloe, between a smile and a sob.—Sketch.

CURED OF BAD HABIT.

Professor No Longer Expounds While in Rocking Chair.

Dr. Abbott of the English department at Columbia university used to rock back and forth in his swinging desk chair as he talked to his auditors, but he has been cured of that habit," said one who attended his classes last year. "It was this way," said he:

"One member of his class on composition handed in, as his weekly theme, an exposition on 'disagreeable sounds.' In its application his was a vivid description of a man addicted to this rocking habit who once, while addressing an audience, found himself in a chair that squeaked. The distress of the audience was so cleverly pictured in the theme that the doctor singled it out to read to the class.

"Singularly enough the doctor was, while reading, rocking back and forth in a chair the metal parts of which badly needed oil. He had not proceeded far in the reading, however, when it dawned upon him that he himself was the subject of the writer and that he was at that moment very aptly guilty of causing the kind of distress complained of in the writing.

"His comments on the theme were delivered while standing, and now he never rocks while speaking to a class."—New York Times.

Long Names of Persons and Places.

"In my travels," said the sailor, "I have come across some mighty long names—in fact, regular jawbreakers.

"A friend of mine worked on an estate in Madras that was named Arademaravasadeloovaradooyon. That word has thirteen syllables. The estate next to Arademara (as they used to call the place for short) was named Kaminagadeyathooroosoomokanoogonagri a. Kaminaga has sixteen syllables.

"A lady friend of mine was once assistant cook for a family whose house on the Isle of Mull was called Drimtaidhorickhilliechattan. Another lady friend that I met in London was born in the Welsh village of Lanvairpwllgwyngyll.

"Them is all names of places. Ain't they jawbreakers? I know some people's names that are jawbreakers, too. As fine a Spaniard as I ever drank with was old Don Nepomuceno de Burionagonatorecagogeazcoecha of Madrid—Louisville Courier-Journal.

Would Have Lost It, Anyway.

Col. Robert A. Pinkerton was talking about old times in Chicago. "I used to know a man there who was an ardent gambler," he said. "He lost his week's wages regularly in 'Dinner Pail' Hankins' game.

"One Saturday evening the man started home, via the gambling house, as usual. A spasm of reform had struck Chicago, and the place had been pulled. The man tried to enter the door, but failed. He walked out into the street and gazed up inquiringly at the closed windows.

"Then he walked back to the door, tried it again, but it would not open, so he drew his pay envelope from his pocket, shoved it under the door, and walked calmly down the street."—New York Times.

Policeman's Laugh Stops Show.

One Kansas City policeman cannot go to the theaters because he laughs so long and loud at every joke that he stops the performance. He was put on a beat where his duty took him inside a theater for a few minutes every evening, and he asked to be changed, because he said the theater people wouldn't let him stay inside, even when he bought a ticket.

Before he was married he took his sweetheart to a show once, but at the end of the second act the manager touched him on the back and said he would have to get out. He had all the actors laughing.

"But I paid to see this show," protested the policeman. "If you put me out I shall insist on your giving my money back."

"We'll be glad to do that, all right," said the manager.

And they did.—Kansas City Journal.

Self-Sacrifice.

My Uncle Jim he's jes' about
The smartest man on earth.
He knows jes' where the muskrats live
An' what their skins is worth;
He knows jes' when to plant yer oats
And when to cut yer hay,
An' what the Russians ought to do
To hold the Japs at bay.

He's always goin' 'round about
As busy as kin be,
A-givin' all the Yolks he knows
This information free.
An' people kind o' laughs to see
His luck grow wuss an' wuss.
You see that's what a feller gets
Fur bein' generous.

—Washington Star.

WAGNER WAS TOO STRENUOUS.

Threatened to Ruin the Only Piano in Faraway Nome.

One of the characters in Nome, Alaska, was Dick Dawson, who had a saloon, dance hall and gambling hell combined, and had brought his outfit, including an automatic piano, down from Dawson City over an almost impassable route.

One day when things were rather quiet in the place, Oscar, the chief and only musician on the staff, got to work with the automatic piano and pumped at the pedals in ambitious style.

He had ground out a lot of old-fashioned home and mother songs, when suddenly, without the least warning, he struck into the "Ride of the Valkyries."

When the crashing opening chords first sounded, Dawson, who was standing at the end of the bar, started and looked around, to see what was the matter. Then the music took on a lighter tone, and as a delightful thrilling run sounded out in the treble he settled back to enjoy it.

Again came a clash and thump, thump, thump, as the bass chords got to work again. Dawson started over toward the piano on the run.

"Don't bother yourself, Dick," said a bystander. "That's all right, that music. That's Wagner."

"Who the ——'s Wagner?" was the answer. "I'll kill that Oscar for letting him spoil the piano!"—New York Sun.

How He Meant to Reform.

When Dick Wintersmith was Congressman at Washington," said Phil Thompson, "it hapened that a friend of ours fell ill. His name was John Wires.

"He drank considerably, John did, and that last night of his life he had spilt whisky all over his beard.

"He wanted it dark in the room; so when the nurse went out he reached for the candle and attempted to extinguish it.

"His long beard, full of alcohol, caught fire instantly and burned him up.

"There was a great deal of grief among us and consternation.

"'This ought to be a lesson to us,' decided Dick; 'to stop drinking a while.'

"'So it ought,' assented Joe Blackburn. 'What are you going to do about it, for instance?'

"'Me?' said Dick. 'Well, it's come to this pass with me that I have firmly resolved never to blow out another candle.'"—New York Times.

Take Your Pillow Along.

Many people when away from home find it difficult to sleep well in a strange bed, and arise in the morning with a sense of having passed a decidedly unsatisfactory night. Vice-President Knowlton of the Raymond & Whitcomb company, who ought to know, says the trouble is all in the pillow. It's the pillow first, last and always. He has slept in many lands and under all imaginable conditions, and years ago came to the conclusion that with one's own pillow at hand it mattered little about the bed. On an extended tour he always takes his pillow with him, stowing it carefully at the bottom of the trunk for future reference. "If I could start life over again," he says, "I would learn to sleep without a pillow (the only proper way), but the art must be acquired during childhood. The next best thing is your own pillow wherever possible. Try it and be convinced."

Good Explanation.

The Rev. James T. Dougherty, rector of St. Mary's church at Canandaigua, tells this story of his recent visit to the St. Louis exposition: "In one of the buildings I met a voluble Irishman in charge of an exhibition of Irish relics. My attention was especially called to the stump of a tree in which was imbedded so firmly as to be irremovable, the points of a fine set of deer antlers. I was interested. 'How do you suppose the deer had come to get his horns so firmly fastened?' I asked.

"'Surey I don't know, your reverence,' was the reply, 'but I think he must have been "buttin' in."'"—New York Times.

Knew How Freshman Felt.

The inauguration of Dr. Luther to the presidency of Trinity college, Hartford, which took place recently, suggested an incident of a rainy day some years ago. A freshman was walking along in front of Northam hall, when the strap that held his books suddenly parted and they were scattered over the wet pavement. He was just about to punctuate his thoughts with a few well-chosen words, when he heard some one just behind him. Catching himself, he glanced over his shoulder and saw Prof. Luther, who smilingly said: "Say it; go on and say it—I never can, you know."—New York Times.

Knew What Was Proper.

Dr. William H. Tolman, Director of the American Institute of Social Service, tells a story of a "fresh air" youngster who was received at the country house of a friend of his for a two weeks' stay. "He was from the slums," said the narrator, "and supposed to be ignorant of the comforts of life, let alone the amenities. At the dinner table the first day they handed him for dessert a triangle of apple pie fresh, hot and delicious. The New Yorker inspected it and remarked 'Apple pie and no cheese. Hell!'"—New York Times.

The Azure.

'Tis only in the depths of blue
Man finds his dearest dreams fulfilled,
Where careful sorrows pass from view,
And every heart-cry's hushed and stilled.
So would I wing my joyous flight
To azure realms where rapture lies,
But not to yonder mystic height—
I find my heaven in your eyes!

—Ralph E. Fassett in New Orleans Times-Democrat.

HE SAW CUSTER'S FALL.

BUGLER WHO ESCAPED MASSACRE TELLS HIS EXPERIENCES.

John D. Martin Had Been Sent For Aid—Returned Just in Time to Witness the Horrors of the Famous Battle—Description of a Ghastly Scene.

John D. Martin, the bugler with Custer's command, who escaped death in the massacre of the Little Big Horn by being sent back for reinforcements, has been put on the army retired list, says a Baltimore despatch, and is spending the last days of his life in selling refreshments to his former comrades at a little stand just outside the main entrance to Fort McHenry, this city.

He served thirty years in the army and for the last fifteen was the chief musician at Fort McHenry. As a valued relic, his last bugle—not the one he used in Custer's command, for that, he says, is in the Smithsonian Institution—hangs by its red cord upon the wall of his lunchroom, says the San Francisco Chronicle.

John D. Martin, or Giovanni Martin, as he was known in Rome, the city of his birth, owed his escape on that summer day, June 25, 1876, when Custer's command was cut to pieces, to the fact that he had been sent with a despatch to a point three miles away. He returned with the troopers just in time to witness the close of the massacre.

At fourteen he was a drummer with Garibaldi's patriots. When he came to this country, at the age of twenty-three, he enlisted again. He was assigned to Custer's command, and when Custer crept upon the peaceful looking Sioux village on that day in June he selected Martin to carry despatches to Major Marcus A. Reno and Capt. F. W. Benteen, commanding the two other divisions of the troop. The despatches ordered them to join Custer at once. This is Martin's story of the day:

"We came upon the banks of the Little Big Horn at 11.30 o'clock in the morning, and across the waters we saw a village of several hundred tepees. Custer called a halt.

"'Men,' he said, pointing to the village, the streets of which were deserted save for an occasional stray cur, half naked child, or bent old woman, 'we have come upon the Sioux village while the warriors are away hunting buffaloes. We will go down there, take possession of the camp, and fall upon the men when they return tired with hunting.'

"The men all waved their caps, and gave three cheers. Custer had a consultation with his officers. Then calling me he borrowed paper and pencil from Adjt. Cook, and wrote this message: 'Join me at once, bringing the pack trains.' He told me to find Reno and Benteen, and deliver the paper to them.

"It was a hard ride of three miles, and my horse was wounded in the hip by a bullet from an Indian in ambush, but I pushed on until I reached Capt. Benteen. Soon after I got to him Major Reno came dashing up, calling to the captain that he had been ambushed, and had left fifteen men and two officers dead upon the field, beside a number of wounded. When we reached the scene of this engagement the Indians had fled.

"The two divisions joined and pressed on to Custer. We arrived at about 12 o'clock upon a bluff at the head of a narrow ravine down which Custer had gone to see the river bank simply swarming with the naked, painted forms of Sitting Bull's braves. The end was just in our view, and I remember well how close the forces were to each other.

"The Indians had by that time entirely surrounded Custer's men and closed in upon them, fighting hand to hand. I remember the hideous appearance of the braves in their war paint, with the skins of wolves and antelopes in their hands, which they shook in the faces of our troopers' horses, rendering them unmanageable.

"You have often seen the paintings of Custer's last fight. Well, they are not exaggerated in their detail, and with the terrible din the Indians kept up you can well imagine that it was an awful scene.

'I do not remember seeing Custer in the melee, for he was in the centre of his division, which was formed in a square. We also had little time to think, as the enemy pressed upon us immediately. Retreating to higher ground, we formed a square, in the centre of which the supplies were placed. There we waited for the attack. It came, and we got enough of it. For two days and two nights we fought, losing men every hour and constantly seeing in our imagination the time drawing near when we would be burned at the stake or feel that gripping in our hair.

From 2 o'clock on June 25 until early morning of June 27 we remained. Then, when the dawn was just streaking the sky, we heard a great whirring in our rear. At first we thought that the numbers of our besiegers were to be increased, and it did not cheer us very much, you can be sure. But it turned out to be our reinforcements, galloping nearer every minute, and, I'll tell you, it was the sweetest music we ever heard. Gen. Gibbons and Gen. Terry were with our troops, and we were saved.

"We found Custer lying partly covered by two horses, just as if the men had tried to form a breastwork with the animals. There were two bullet holes in his body, but it was not mutilated. The Indians refrained from doing this out of respect for his fighting qualities, but the other men were fearfully mutilated—hacked to pieces with knives—a ghastly scene."

Martin was in several brushes, before and after this. Through thirty years' service and seven enlistments he was never wounded, and to-day is the same compact little Roman that he was when he enlisted in the Hudson street enlisting office in New York in 1874.

After his first enlistment expired he came east and joined the Third Artillery at Fort Schuyler. While there he married Miss Julia Higgins, and they have eight children.

RATS ARE IN DEMAND.

Useful Purpose Has Been Found for American Rodents.

There has been a use discovered for the American rat outside of the forming the basic ingredient of cheap suey. They are being used by the Japanese to keep their ears and necks warm while they are fighting the Russians. The entire rat is not used for this purpose. Only its hide is prepared into service, but the fact that a large number of these hides come from Seattle gives a dignity to the local rat heretofore undiscovered.

According to the best Japanese authorities, the patriotic rat catcher of this town have a method to secure the hides of the rodents peculiarly their own. They first catch the rats in a trap, then gently tap them over the head with a monkeywrench, skin them and hang the hides over a radiator to dry. After this the hides are shipped to the Orient where they are made into earflaps for use by the Japanese soldiers who are fighting Russians in Manchuria. Nearly every Japanese in the city of Seattle has developed into a rat catcher, and if the supply of rats and noses doesn't give out there will not be a rat in town before long.

Probably the cause of the sudden decrease in the rat population would not have been discovered for a long time were it not for Harry Key, porter in the saloon of James Sheehan, and upon whom devolved the duty of freeing the place from rats. A few months ago Harry was particularly anxious to catch rats, but of late it has become a positive mania with him. He would rather catch rats than eat, and that is saying a lot because Mr. Key usually has a rattling good appetite.

It was thought right along in the Sheehan establishment that the rats caught in the large trap kept for the purpose were being disposed of as was any other refuse. The discovery was made recently, however, that this was not so. One of the employees of the place happened to "butt" into Harry as the porter was busily engaged in making wild cracks at imprisoned rats with a moneywrench. The Japanese was so intent on his work that he didn't know anybody was watching him.

When all the rodents in the cage had been killed the Japanese started to skin the biggest one. When the operation was completed the hide was carefully hung over the radiator to dry, and Harry got busy with another rat. Then the employe began to question him.

Every Japanese who has any loyalty at all, Harry said, has developed into a volunteer rat catcher. The rodents are being killed by hundreds of thousands. So fixed has become the habit in the minds of the Japs that if they see a rat on the street they make after it for all they are worth, and several of the little brown men, in their zeal to get one more rat flap for a soldier, have almost dived head first down a sewer after one of the elusive rodents which has endeavored to escape by means of a vile duct. It is only necessary for some one to squeak like a rat these days, Harry said, to have the whole Japanese population of the vicinity rush out of doors and make for the sound, armed with all sorts of weapons.—Seattle

PATRON SAINT OF DENTISTRY

St. Apollonia a Martyr More Than 1,500 Years Ago.

"Many professions and trades have their patron saints, as, of course everybody knows," said Dr. William A. Heckard, the dentist, "but few persons know that the dentists, or rather their patrons, also have a saint. This is Saint Apollonia, and we have it on historical authority that for 1,500 years her intercession has been sought for relief from all pain incident to dental diseases. Relics of this saint have been regarded as possessing great efficacy in the cure of toothache. She is commemorated in the calendar on the ninth day of February.

"The dentists themselves have been among the last to become acquainted with her merit, and she was brought to the notice of our profession a few years ago by Dr. Pierre of Philadelphia. The souvenir used at the international dental congress recently held at St. Louis, was a large bronze medal with St. Apollonia on one side and the continents and on the other side.

"The saint is represented with a pair of pincers in her hand, holding a tooth. A part of her martyrdom consisted in having her teeth drawn out one by one. Portions of her bones and teeth are preserved in various churches in Europe. In Canada, are portions of a [illegible] tooth. It is said that she did not flinch or cry out as her teeth were extracted. And this was many centuries before the use of anaesthetics."—Indianapolis News.

MEDICAL EXA

of the United States Trea
mends Pe-ru-n

Another Prominent Physician Uses and Endorses Pe-ru-na.

DR. LLEWELLYN JORDAN, Medical Examiner of the U. S. Treasury Department, graduate of Columbia College, and who served three years at West Point, has the following to say of Peruna:

"Allow me to express my gratitude for the benefit derived from your wonderful remedy. One short month has brought forth a vast change and I now consider myself a well man after months of suffering. Let the sufferers, Peruna will cure you."

A constantly increasing number of physicians prescribe Peruna in their practice. It has proven its merits so thoroughly that even the doctors have overcome their prejudice against so-called patent medicines and recommend it to their patients.

Peruna occupies a unique position in medical science. It is the only internal systemic catarrh remedy known to the medical profession to-day. Catarrh, as every one will admit, is the cause of one-half the diseases which afflict mankind. Catarrh and catarrhal diseases afflict one-half of the people of the United States.

Robert R. Roberts, M. D., Washington, D. C., writes:

"Through my own experience as well as that of many of my friends and acquaintances who have been cured or relieved of catarrh by the use of Hartman's Peruna, I can confidently recommend it to those suffering from such disorders, and have no hesitation in prescribing it to my patients."—Robert R. Roberts.

Catarrh is a systemic disease curable only by systemic treatment. A remedy that cures catarrh must aim directly at the depressed nerve centres. This is what Peruna does.

Peruna immediately invigorates the nerve-centres which gives vitality to the mucous membranes. Then catarrh disappears. Then catarrh is permanently cured.

John Ruskin says, "Make yourselves nests of pleasant thoughts."

Engineers of the Southern Pacific are studying the advisability of tunnelling the Sierra Nevada ranges in California, to avoid a climb of 7,500 feet into the mountains.

To Cure a Cold in One Day

Take Laxative Bromo Quinine Tablets. All druggists refund money if it fails to cure. E. W. Grove's signature is on box. 25c.

A small, fat sheep will always bring better price than a large, poor one.

Itch cured in 30 minutes by Woolford's Sanitary Lotion. Never fails. Sold by all druggists, $1. Mail orders promptly filled by Dr. E. Detchon, Crawfordsville, Ind.

Dryness is one of the requirements in the production of the finest wool.

Referring to the large cities in the United States, New York covers 209,218 acres, Chicago 122,008 acres, Philadelphia 82,933 acres, Boston 27,251 acres, St. Louis 39,377 acres, Cleveland 22,422 acres, and Cincinnati, 26,880 acres.

A delicious flavor may be given to coffee by rubbing the lump of sugar which sweetens it over orange or lemon rind. People who like the slice of lemon in their tea will appreciate a slice of lime instead, which will give a deliciously piquant flavor.

Right to the Claim.

The enthusiastic lover is going over in detail the incomparable points of his lady love.

"She is perfect; she is divine! She is the most wonderful woman imaginable!" he exclaims. She is one in a thousand— aye, ten thousand!"

"Come, come!" we reply; "you must not be too extravagant. You know such claims——"

"But," he interrupts, smiling a smile of superiority and raising his voice in triumph, "you have not heard all. She gets off a street car the right way!" And we have nothing more to say against his claims.—Judge.

Coal and Railroads.

The total coal production of the United States is now at the rate of 1,000,000 tons per day, and the consumption of coal by railroads is equal to 40 per cent. of this, or $400,000 tons per day. The fuel bill of a railroad contributes about 10 per cent. of the total expense of operation and 30 to 40 per cent. of the total cost of running the locomotive. A locomotive will consume on an average $5,000 worth of coal per annum, and for a road having an equipment of 1,000 locomotives the coal bill is approximately $5,000,000.

A Testament's Long Life.

Mr. A. G. Charsley, of Beaconsfield, Bucks, one of the oldest coroners in England, is resigning appointment. He was chosen deputy to his brother, Mr. Frederick Charsley, in 1851 and he has held the coronership since 1882. Mr. Charsley has in his possession a Testament which has been used at inquests in the division of Bucks for over 100 years.

He Knew Byron.

There is now living at Nish, Servia, a man who was well acquainted with Lord Byron. His name is Stovan Kikitsch, and he is 117 years old. Though probably the oldest man living today, he is wonderfully vigorous, with clear memory, good eyesight and strong, hearty voice.

Lowell Died in House Where He was Born.

Fredericka Bremer once told James Russell Lowell that he was the only American she had seen whose children were born in the same house with herself. What was even more remarkable for an American, however, he died in the house in which he was born, which, moreover, had been his home for the 72 years of his life.

The town of Humble, Tex., has been blown up by an explosion of oil wells.

The way to reach the ideal tomorrow is to make today successful.

December's bills will make many a frenzied financier.

The Chinese still make the best India ink.

A LOVELY COMPLEXION

New York Lady Proves That Every Woman May Have It by Using Cuticura Soap.

Mrs. R. Reichenberg, wife of the well-known jeweller of 146 Fulton St., New York, says: "I had a friend who was justly proud of her complexion. When asked what gave her such a brilliant and lovely complexion, she replied, 'A healthy woman can be sure of a fine skin if she will do as I do, use plenty of Cuticura Soap and water.' She insisted that I follow her example, which I did with speedy conviction. I find that Cuticura Soap keeps the skin soft, white, and clear, and prevents redness and roughness."

DOMESTIC LIMERICKS.

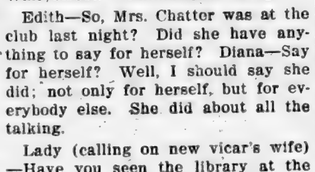
A woman as proud as old Lucifer
Grew tired of her husband's abucifer;
So she called the police,
Who compelled him to cice
By crying, "You villain, let lucifer!"

Then, no longer prouder than Lucifer,
Forgetting her husband's abucifer,
She promptly forgave him,
Swore falsely to save him
Thus woman let's love make a gucifer.

Still the officers, seeing the rucifer,
Refused to take any excucifer;
But she made things so hot
That they fled from the spot—
As a witness they be'er could make ucifer.

Then, once more as proud as old Lucifer,
She thrashed hubby well for abucifer,
And the louder he wailed,
Why the harder she whaled,
Till at length he abjectly begged trucifer.
—*Baltimore American.*

JUST FOR FUN



"I believe that little Chumley is pretty sure to get ahead in time." "Well, he needs one right away."—Cleveland Plain Dealer.

"A fool and his freedom are soon parted," remarked the bachelor, upon hearing of the marriage of another friend.—Yonkers Statesman.

Dickory—There's Quizz, the great puzzle inventor. What has he done lately? Dockery—He is putting plots in comic operas.—Philadelphia Bulletin.

First Dear Girl—I have fully decided never to marry. Second Dear Girl—What is the trouble—has your father lost all his money?—Chicago Daily News.

"Any good things about that burlesque show?" "Yes," answered the man who seldom smiles. "The backer must be a good thing."—Washington Star.

Slowpay—Doctor, I suppose you can recommend your tailor to me? Doctor—Certainly; but you will have to get someone else to recommend you to my tailor.—New Yorker.

"Is this a good place to hunt reedles?" asked the amateur gunner. "Sure," replied the boy; "you could hunt here for a week an' never find none."—Philadelphia Ledger.

Boroughs—I don't see why he wouldn't lend me the five dollars I wanted. Newitt—No, he certainly couldn't ask for a more permanent investment.—Philadelphia Press.

"When a person's wool-gathering that means he's lazy, doesn't it, pa?" "Not necessarily, my son. He may be gathering the wool of the lambs in Wall street."—Philadelphia Ledger.

Edith—So, Mrs. Chatter was at the club last night? Did she have anything to say for herself? Diana—Say for herself? Well, I should say she did; not only for herself, but for everybody else. She did about all the talking.

Lady (calling on new vicar's wife)—Have you seen the library at the hall? Sir George is quite a bibliophile, you know. Vicar's Wife (warmly)—Oh, I'm so glad to hear that! So many wealthy men have no religion!—Punch.

Two old farmers met on the road. "Where you been, Sile?" asked the one in yellow boots. "Been shooting the rapids," drawled the other. "Canoeing?" "No; shooting at those pesky racing automobiles that run over my chickens."—Baltimore Herald.

Uncle George—So, you are studying law, Henry? Henry—'Reading' law, Uncle George, not 'studying.' Uncle George—Oh, yes, of course. By the way, I suppose that is why the working of the law is so uncertain. Lawyers never study it, you know, but only read it.

"Yes; his wife calls him down every day." "But she's such a frail, meek-looking little woman, and he's such a big brute of a fellow." "I know. She calls him down to breakfast, after she's got up and prepared it, while he's deciding whether he'll go to sleep again or not."—Chicago Record-Herald.

Mrs. Greene—I see in the papers that Martha White has married a hostler. Mrs. Brown—My paper says Martha's husband is a Harvard coach. Mrs. Greene—Well, and doesn't that amount to about the same thing? A coach, or coachman, is half the time nothing more than a hostler.

Mrs. Tawker (a visitor)—Such lovely playing! O, I could listen to it all night! How nice it must be to have your husband home of an evening and giving you such beautiful music. Mrs. Snow—Yes; but that isn't Mr. Snow. It's Mr. Hammers, the pianotuner. He is tuning our piano; had to come in the evening, he is so busy just now. Isn't it funny. He tells me he couldn't play a tune to save his life.

Fuddy—Crimmins gave a notable example of deathbed repentance. Duddy—Guess I didn't hear about it. Fuddy—You know he had been borrowing money from all his friends for two or three years? Well, when he found he was going to die, he squared himself with all of them by writing his personal note for the amount owed to each, payable 30 days after death. Duddy—But the paper isn't worth anything. Fuddy—I know; but it satisfied Crimmins's conscience, and of course that was the main thing.

Her Loving Friends.

Maud—Gracie Goldenrod is telling everybody she has refused Jack Billups.

Maybelle—That's only a part of the truth. She refused to give him back his presents.—Chicago Tribune.

An Auction in Japan.

A San Francisco man last night was telling of various customs of the Japanese which had come under his observation.

"One of their peculiarities is shown in their method of conducting an auction. They have auctions in Japan just as we do in America, but they go at it in a little different style.

The auctioneer exhibits the article which he proposes to sell and asks for bids upon it. He does not exhort or cajole, and there is no exciting clamoring of bidders. Lawyer Marks would be impossible to Japan, for each man who desires to make a bid draws from his pocket a slip of paper, writes upon it the highest figure he will pay and deposits his slip in a box. After the bids are all in the autioneer opens the box, glances at the bids and promptly awards the article to the man who has offered the greatest sum."

The Mass of the Stars.

To determine the masses of the stars, situated as they are far off in space, it is generally necessary to know their distance, and this has been determined for only a few stars. In a recent paper submitted at the Cambridge meeting of the British Association for the Advancement of Science, Dr. H. N. Russell, of the Cambridge observatory, called attention to the fact that the masses of the stars could be found by Kapetyn's formula in terms of the star's magnitude and proper motion. Proceeding on this basis, he found that the average mass of fifty-five binary systems was about three times that of the sun, and that many groups of stars were of the same mass, despite the fact that they varied greatly in their brightness and proper motion. The binary stars seemed to be of the same order of mass, though their brightness, motion and spectre varied.

The Danish story of "Andria," the child who endeavors to reconcile her estranged parents, has been translated already into nine languages.

The Real Egotist.

"Father," said the small boy, "what is an egotist?"

"An egotist, my son, is a man who has the impudence to think he knows more than you do, instead of giving you credit for knowing more than he does."—Washington Star.

Knew President Pierce.

Thomas Stone McLellan, the oldest printer in Maine, the friend and companion of President Pierce, Nathaniel Hawthorne and Longfellow, has just celebrated his ninety-third birthday. He lives in Brunswick. For many years he has been a member of United Lodge of Masons and shortly after his ninetieth birthday took some advanced degrees in the ancient craft.

ALL DONE OUT.

Veteran Joshua Heller, of 706 South Walnut street, Urbana, Ill., says: "In the fall of 1899 after taking Doan's Kidney Pills I told the readers of this paper that they had relieved me of kidney trouble, disposed of a lame back with pain across my loins and beneath the shoulder blades. During the interval which has elapsed I have had occasion to resort to Doan's Kidney Pills when I noticed warnings of an attack. On each and every occasion the results obtained were just as satisfactory as when the pills were first brought to my notice. I just as emphatically endorse the preparation to-day as I did over two years ago."

Foster-Milburn Co., Buffalo, N. Y., proprietors. For sale by all druggists, price 50 cents per box.

Mrs. Fairbanks tells how neglect of warning symptoms will soon prostrate a woman. She thinks woman's safeguard is Lydia E. Pinkham's Vegetable Compound.

"DEAR MRS. PINKHAM:—Ignorance and neglect are the cause of untold female suffering, not only with the laws of health but with the chance of a cure. I did not heed the warnings of headaches, organic pains, and general weariness, until I was well nigh prostrated. I knew I had to do something. Happily I did the right thing. I took **Lydia E. Pinkham's Vegetable Compound** faithfully, according to directions, and was rewarded in a few weeks to find that my aches and pains disappeared, and I again felt the glow of health through my body. Since I have been well I have been more careful, I have also advised a number of my sick friends to take **Lydia E. Pinkham's Vegetable Compound**, and they have never had reason to be sorry. Yours very truly, MRS. MAY FAIRBANKS, 216 South 7th St., Minneapolis, Minn." (Mrs. Fairbanks is one of the most successful and highest salaried travelling saleswomen in the West.)

When women are troubled with irregular, suppressed or painful menstruation, weakness, leucorrhœa, displacement or ulceration of the womb, that bearing-down feeling, inflammation of the ovaries, backache, bloating (or flatulence), general debility, indigestion, and nervous prostration, or are beset with such symptoms as dizziness, faintness, lassitude, excitability, irritability, nervousness, sleeplessness, melancholy, "all-gone" and "want-to-be-left-alone" feelings, blues, and hopelessness, they should remember there is one tried and true remedy. **Lydia E. Pinkham's Vegetable Compound** at once removes such troubles. Refuse to buy any other medicine, for you need the best.

"DEAR MRS. PINKHAM:—For over two years I suffered more than tongue can express with kidney and bladder trouble. My physician pronounced my trouble catarrh of the bladder, caused by displacement of the womb. I had a frequent desire to urinate, and it was very painful, and lumps of blood would pass with the urine. Also had backache very often.

"After writing to you, and receiving your reply to my letter, I followed your advice, and feel that you and **Lydia E. Pinkham's Vegetable Compound** have cured me. The medicine drew my womb into its proper place, and then I was well. I never feel any pain now, and can do my housework with ease."—MRS. ALICE LAMON, Kincaid, Miss.

No other medicine for female ills in the world has received such widespread and unqualified endorsement.

Mrs. Pinkham invites all sick women to write her for advice. She has guided thousands to health. Address, Lynn, Mass.

$5000 FORFEIT if we cannot forthwith produce the original letters and signatures of above testimonials, which will prove their absolute genuineness. Lydia E. Pinkham Medicine Co., Lynn, Mass.

AWFUL SHIPWRECK

Only a Few Survivors to Tell of the Ill-fated Vessel's Disaster.

STEAMER GOES TO THE RESCUE.

Marpesia So Battered by Gales That Deadly Fluid Fills the Hold

Spark Causes Explosion.

New York.—Seven survivors of the ill-fated Norwegian ship Marpesia, which was wrecked at sea on Christmas day by an explosion of naphtha, resulting in the death of eleven members of her crew, arrived here on the steamer Trinidad from Bermuda. They had been rescued by the Danish steamer Gallia, which happened by just at the moment when the Marpesia was blown into a shapeless mass and the seven who survived the shock were taken from the sea where they sought the only refuge that remained to them after the explosion. They were landed at Bermuda by the Gallia, which was bound from Hamburg for Savannah.

The Marpesia sailed from New York for Crete, France, on December 9, with a cargo of naphtha and had been out only a day or two when her troubles began. One gale succeeded another, but all were weathered in safety and without much damage until December 17. On that day the ship was battered and knocked about in a merciless manner. Her ventilators were carried away at the decks, her hold began to fill and soon the cargo while the freed naphtha was floating and forth with every movement of the vessel. Soon the cases began to give way under the strain and in a little while the freed naptha was floating around on top of the water in the hold. Gas from the fluid accumulated steadily, and by Christmas day the Marpesia was a loaded bomb needing only the slightest spark to blow the whole structure to atoms.

How the spark reached the highly charged hold never will be known, but suddenly there came a terrific report, the forward deck shot up into the air with a crash and a roar and in a moment the entire ship was wrapped in flames. Those of the eighteen men on board who had not been caught in the first burst threw themselves over the side of the flaming ship into the sea. They were only seven, and the seven would have followed their companions to an early death had not the Gallia, which chanced to be in the vicinity, came down quickly to their aid when she saw the burst of flames.

Bryan Loses Out.

New Haven, Conn.—A decision adverse to the contention of William J. Bryan was given in the superior court Tuesday by Judge Silas A. Robinson, who declared that the famous sealed letter by which the late S. Bennett, Mr. Bryan's personal friend, expressed a wish that Mr. Bryan should have $50,000 from his estate could not be admitted as the evidence in the case before the court. This action was brought by Mr. Bryan as executor against Delia A. Bigelow and other heirs, including himself as an individual and as trustee, for construction of the will. Mr. Bryan desires a construction by which the $50,000 mentioned in the sealed letter should be paid to Mrs. Imogene Bennett, the widow, acting as trustee and then be paid over by her to Mr. Bryan. Mrs. Bennett wants the $50,000 paid over to the residuary legatees with the rest of their inheritance.

The matter will now be taken by Mr. Bryan's attorneys to the Connecticut supreme court on questions of law. Should the decision of that court be favorable to Mr. Bryan the case will be settled on the facts before the superior court. If the supreme court decision be adverse, however, it is said by counsel that the matter will go no further, as it cannot be taken to the United States courts.

Dead Lock in Delaware.

Dover, Del.—Twenty-one ballots in the house of representatives and thirty-nine in the senate, together with the presence of practically all the state republican leaders Monday, failed to break or even indent the deadlock organization of the Delaware legislature. State ticket. T. Coleman Dupont.

One of the leaders on the scene all day was the Wilmingtonian who solidified the republican factions on the state ticket, T. Coleman Dupont. Senator Allee, union, and Senator Ball, regular, wrestled with the problem, but State Senators D. O. Moore and Connor, union republican leaders in the legislature, declared they would hold out until the anti-Addicks or minority faction had yielded to them the right to the first choice of officers. The regulars continue in their determination not to give over the presidency of the senate to the Addicks men.

In Hands of Receiver.

Chicago.—The Chicago Moter Vehicle Co., one of the largest manufacturers of automobiles in the west, was declared bankrupt by Judge Kohlsaat in the United States district court. Liabilities consists of $60,000 worth of merchandise claims, $8,000 labor claims and $150,000 mortgages on the company's plant at Harvey, Ill. The assets are $10,000 in automobiles and the company's factory and machinery.

Premier's Life Threatened.

Washington.—Chief Wilkie, of the secret service, received a telegram from Lebanon, Pa., stating that Ignaz Wenzler, a laborer in one of the iron mills there, had been arrested and held under $3,000 bond for attempting to blackmail and threatening the life of Count Von Tisza, the premier of Hungary.

Some weeks ago, it is said, Wenzler wrote the count, signing three fictitious names to the letter, stating that Wenzler, a distant relation of his, was in great need and demanding a remittance of $2,000, in default of which a representative of the "Black-Hand" would go to Budapest and kill the count before Christmas day.

Russian Prisoners Celebrate.

Headquarters of the Third Japanese Army, via Funsan.—The Russian prisoners while waiting today at Changkingtsu, a railroad station for Dalny, celebrated the approach of the new year. Religious services were held in the morning at 10 o'clock, and the assembling of prisoners was discoursed on by a Russian priest in full canonical dress. After the services there was music and dancing on the open ground in front of the station.

The 8year-old daughter of a Russian officer was among the prisoners.

Fifty per cent of the officers are going to Japan.

Will Install Exchange.

Anniston—The Southern Bell Telephone company through the local office will install an exchange and full outfit for the use of the Western Steel Car and Foundry company at the local plant. The central exchange will be at the local office, while a telephone line will be run so that the office of each department will have a 'phone connected directly with the head office. The specifications are in the hands of Manager J. L. Brown and he will begin the work shortly so as to have it completed when the plant begins operations.

Land Office Men Removed.

Washington.—As the result of the investigation and prosecution of land fraud cases in Oregon the president has signed an order suspending from office James H. Booth and Joseph T. Bridges, respectively register and receiver of the United States land office at Roseburg, Ore. The action is on the recommendation of Secretary Hitchcock, and was based on a telegram from Assistant United States District Attorney Henry, who alleged that the affairs of the Roseburg office were in bad condition.

Haul Made by Robbers.

Decatur, Ala.—Armed with Winchester rifles, a brace of revolvers and with masks covering their faces, two unknown men late Saturday night robbed six men who were engaged in playing poker on a house boat on the Tennessee river thirty miles above here.

About a thousand dollars in diamonds and jewelry and four hundred dollars in cash were secured.

The robbers escaped into Sand Mountain unfollowed. They are believed to be moonshiners.

Fighting in Germany.

Berlin.—Lieut.-Gen. Von Trotha, commander-in-chief of the German forces in German Southwest Africa, cables that Major Meisler had stubborn fights January 2, 3 and 4 with a thousand Witbois and occupied Grossnabas after fifty hours' fighting. The losses have not yet been ascertained.

Probate Judge Short.

Montgomery, Ala.—State Examiner Sedberry, in his report to the governor Monday on the accounts of the officials of Marengo county, finds S. P. Prowell, probate judge, due the state over $3,000. The examiner states the shortage is due to gross carelessness.

Will Take Jap Transport.

Tokio—General Stoessel and the other Russian officers who have been given their parole will be brought to Nagasaki on a Japanese transport. It is probable they will remain at Nagasaki for a few days and will then sail for Russia on a French steamer via the Suez canal.

Chaplain McGrail Dismissed.

Washington—Chaplain Joseph F. McGrail has been dismissed from the navy by order of the president. He was tried by courtmartial on the information and charges of scandalous conduct. A Roman Catholic priest will be appointed in his place.

Mississippi Judge Named.

Jackson, Miss.—Governor Vardaman has announced the appointment of Oliver Catchings as circuit judge of the Ninth district to succeed Judge Anderson. The appointee is a son of former Congressman Catchings.

Snow in Memphis.

Memphis, Tenn.—Six inches of snow fell here throughout the early Monday morning, seriously impeding street car traffic and delaying trains from one to three hours. The storm extended over an area as far west as Little Rock, Ark.

Washington—The Interstate Commerce Commission has set a hearing to be held in this city January 31st on the question of the adoption of a uniform bill of lading throughout the official classification territory of the railroads.

Essen, Rhenish Prussia—The miners of the Hercules works, against the strenuous efforts of their leaders, determined at a meeting held Monday night to strike.

DELEGATES APPOINTED

Com. Poole Believes 1,000,000 Bales Should be Held to Force Better Prices.

FAVORS HOLDING COTTON.

Plan Should Be Devised for Taking a Million Bales Off the Market and Reducing Acreage.

Montgomery, Ala.—Commissioner of Agriculture Robert R. Poole made the appointment of Alabama delegates yesterday to the convention of the Southern Cotton Growers' Association, to to be held in New Orleans January 24, 25 and 26. There are fourteen delegates in all from Alabama.

The names of the delegates are as follows: W. A. Gunter, Jr., and M. P. LeGrande, of Montgomery; William McCurdy, of Lowndesboro; H. M. Burt, of Talladega; James Robinson, Jr., of LaFayette; J. W. Young, of Prattville; Percy Clark, of Birmingham; C. P. Rogers, of Letohatchie; John J. King, of Consul; Ike Greenwald, of Carrollton; E. M. Elliott, of Moundville; G. W. Pratt, of Pell City; Senator John Rogers, of Gainesville, and W. B. Peebles, of Vienna.

Commissioner of Agriculture R. R. Poole is very much stirred up over the question of the low values of cotton and is planning and thinking along every line possible to bring about a betterment of conditions. He is urging large attendance upon the meeting of cotton men called for January 24, 25 and 26 at New Orleans, and will try to have the Association of Cotton States Commissioners of Agriculture meet there at the same time.

Mr. Poole believes that the only hope to meet the situation is to hold 1,000,000 bales of cotton off the market and reduce the acreage of next year at least 25 per cent. Everything that can be done to induce large attendance in all the counties at the meetings called by Mr. Poole for next Tuesday, the 10th, will be, and all the farmers will be asked to lay off that day and get together upon a proposition to reduce the acreage and hold at least a million bales. To this end Mr. Poole issued today the following circular letter:

To the Farmers of Alabama: You have been requested to meet at your country towns on Tuesday, January 10th, for the purpose of discussing the cotton situation, as we find it today. Contrary to all expectations, the 1904 crop has reached the enormous amount of 12,000,000 bales, according to the government report. The size of the crop has given speculators an opportunity to force the price down until it is now below the actual cost of production. Can we afford to produce cotton at a loss, and are we going to allow our property confiscated without a serious and determined protest?

The spinners are yet to be supplied; if our people will not force their holdings on the market, the demand will bring the price up in a reasonable length of time.

I hope that you will discuss plans for holding your surplus, taking the merchants and bankers into your councils. When you have done this, call neighborhood meetings for the purpose of formulating some plan whereby we can decrease our acreage this year. We need and must have the co-operation of all farmers in this reduction of acreage, or it will be fruitless. Public sentiment should be aroused to this important feature, and the man who refuses to decrease his acreage should be considered as an enemy to his neighbor and his country.

Making a binding reduction of your acreage of at least 25 per cent. When the government makes its first report in May, giving the decrease in acreage, you will find that the price will advance, provided, of course, that our people have not forced the surplus of 1,000,000 bales on the market. Put this surplus out of sight, where it can not be sold, and do not be induced to part with it until you can receive a price that will insure you a profit on its production.

I want to urge you to send a strong delegation to the National Cotton convention which meets in New Orleans on January 24, 25 and 26. This convention will discuss and formulate some permanent plan carrying out the above suggestions, and it is important that our state be well represented.

Trusting that much good will be accomplished by these meetings, I am, your obedient servant,

R. R. POOLE,
Commissioner of Agriculture and Industries.

Philadelphia—The total anthracite production in Pennsylvania for the year 1904 was almost two million tons below the output of 1903. The total production for 1904 was 57,492,522 as compared with 59,362,931 during the previous year.

Flood Causes Trouble.

Philadelphia.—The effects of Saturday night's heavy rainfall, which was driven by a 36-mile gale, are in evidence today in all sections of the city and environs. The most serious result is the swollen condition of the Schuylkill river, which is 17 feet above normal at Mamayunk, a suburb. Fourteen mills are closed as a result of the flood and 4,000 hands are idle.

Big Company Organized.

Jasper, Ala.—R. C. Middleton, the well-known New Orleans coal operator, who has been developing coal lands in Walker county for the past ten years, has just completed the formation of the Atlas Coal Company, with a paid up capital stock of $120,000. It is reported that Mr. Middleton has interested eastern capital in the new company, and that extensive mining operations are to begin within a short time.

The company will open mines on its property in the southern portion of the county, and will install a modern mining plant with up-to-date machinery. According to reports the opening of the mine mentioned is to be the beginning of a large mining enterprise in this section, and it is believed that the undertaking will bring thousands of dollars into this district. Mr. Middleton is at present president of the Cane Creek Coal company at Calumet, five miles south of Jasper.

Postoffice Robbed.

Auburn—Saturday night about 1 o'clock the postoffice of this place was entered by a burglar and the safe was blown open and rifled of everything it contained.

The outside doors of the building were all locked as usual this morning and the only violence done in entering was to the money order window through which the robber entered the postoffice. All indications indicate that it was the work of a professional safe blower. Twelve hundred dollars' worth of stamps and about three hundred dollars in money were taken. Some of the money belonged to the postmistress. There is absolutely no clue to the burglary. The noise was heard by only a few who live near by and they thought nothing of it. No suspicious persons have appeared on the streets during the week.

New Corporations.

Montgomery, Ala.—Several new corporations were certified to the Secretary of State today, among them being the following:

West Pratt Coal company, incorporated in Delaware, H. E. McCormick, of Birmingham, agent. This company's property is located in the Birmingham district, where there are large mines.

City Bank of Elba, capital $50,000; John M. Garrett and associates incorporators.

Davis Wilson Commission company, Mobile, capital $30,000, N. G. Wilson and associates incorporators.

Beeland Mercantile company, Greenville, capital $50,000, W. J. Beeland and associates incorporators.

Payne, Willingham & Wood, Montgomery, increase of capital stock to $54,000.

Seaboard Coal and Coke company, Talladega, capital $30,000, George Dunlingson and associates incorporators.

Flaketown Graphite company, Montgomery, capital $50,000, Alva Fitzpatrick and associates incorporators.

Military Inspection.

Montgomery, Ala.—An inspection of the Alabama National Guard will begin about the first of March and continue until the last of April, the itinerary for which Adjutant-General Brandon is now preparing. This will be submitted to the Secretary of War and as soon as he approves it an order will be issued here to have it put into effect. The Secretary of War has notified the adjutant-General that two United States officers will be detailed to conduct the inspection, which will be more rigid and thorough than has ever before been the case. Adjutant-General Brandon will accompany the United States officers and make that part of the inspection assigned to the state. The small attendance at the inspection last year was a subject of remark by the officers who came from the regular army to look the guard over, and the attention of the adjutant-general was called to the fact that there were 632 officers and men absent from inspection last year without excuse, 25.3 per cent of the whole state force. It is contended by the officers of the Alabama National Guard that at least 95 per cent of the force should be at inspections of this grade and the attendance of every man in the organization will be required this year or some one will get into serious trouble.

Improving Mail Service.

Anniston, Ala.—With the beginning of the new year the mail service at the Anniston postoffice was greatly improved. Postmaster Ragan has been rearranging the carriers' schedule and now has it complete and ready to go into effect. The service given by the Anniston postoffice is excelled by no city of its size in the south.

Government Will Continue Work.

Mobile—Information comes from the office of the United States engineer in this city having in charge the supervision of the lock and dam work under construction by Lewman & Co. that the throwing up of the contract will have no effect upon the work, as the government will continue it to completion.

Baltic Fleet Anchors.

Rojestvensky's squadron of five battleships and three cruisers, with transport and smaller craft, anchored in the harbor at Sainte-Marie, Madagascar.

American Japs Hear News.

Dispatches were received by Baron Kaneko and Consul-General Uchida at New York City, telling of the surrender of Port Arthur.

Perjury Charges Dismissed.

The perjury charges against ex-Justice E. L. Fursman were dismissed at Troy, N. Y.

NOGI REFUSES HORSE

The Meeting of the Two Generals Was Cordial. Gen. Stoesel Praises Japs.

PRINCIPAL INCIDENTS TOLD.

Nogi Says Loss of His Sons Was Nothing Compared With Attainment of the Objects Sought.

Headquarters of the Third Japanese Army, in Front of Port Arthur.—The meeting of General Nogi and General Stoessel was as undramatic as the conclusion of the siege. It had been previously arranged to take place at noon in the single undamaged house of the village of Shuishi. This house was a miserable hotel called Plum Tree cottage. Through a misunderstanding General Stoessel rode out of Port Arthur at 10 o'clock, accompanied by Colonel Reiss and two staff officers, to the Japanese lines, and missed the Japanese officer delegated to escort him to the meeting place.

The general rode there without an escort and was received by a junior officer who happened to be on the spot. The latter telephoned to General Nogi, who hurried his departure from headquarters and arrived at 11 o'clock, accompanied by Major-General Iichi, his chief of staff, and Colonels Yasuhara, Matsudaira and Watanabe, staff officers, and M. Kawakarin, secretary of the foreign office at Tokio.

General Stoessel is a large man of heavy appearance and looks like a good fighter.

Generals Shake Hands.

When Nogi, looking care-worn, entered the cottage, the two generals cordially shook hands, and Nogi, through an interpreter, expressed his pleasure at meeting a general who had fought so bravely and gallantly for his emperor and his country.

General Stoessel thanked General Nogi for the pleasure of meeting the hero of the victorious army.

General Nogi explained that he had received a message from his emperor asking that the greatest consideration be shown General Stoessel and his officers in appreciation of their splendid loyalty to their emperor and country. Because of that wish, he added, the Russian officers would be allowed to wear their swords.

General Stoessel expressed his gratitude to the Japanese emperor for thus saving the honor of his (Stoessel's) family and said his descendants would appreciate the thoughtful kindness of the emperor of Japan. The general also expressed the gratitude of his officers and thanked Nogi for sending the message from Stoessel to Emperor Nicholas and transmitting his majesty's reply, which read:

"I allow each officer to profit by the reserve privilege to return to Russia under the obligation not to take further part in the present war or share in the distinctions thereof.

"I hank you and the brave men of the garrison for the gallant defense."

Both generals then mutually praised each other and their officers for their bravery.

The conversation afterwards turned on the explosion of the mine at Sungshu mountain fort. General Stoessel said the entire garrison of the fort was killed or made prisoners.

Stoessel Praises Artillery Fire.

The Russian commander greatly praised the Japanese artillery practice, especially the concentrated fire instantaneous with the explosion of the Sungshui mine. The gallant deeds of the Japanese infantry, General Stoessel added, spoke for themselves. It was impossible to exaggerate their good qualities.

The skillful work of the engineers had also won his admiration.

Continuing, General Stoessel said he had heard that General Nogi had lost both his sons and praised his loyalty in thus sacrificing his sons who had died fighting for their emperor and country.

General Nogi smilingly replied:

"One of my sons gave his life at Nanshan and the other at 203 Metre hill. Both of these positions were of the greatest importance to the Japanese army. I am glad that the sacrifice of my sons had resulted in the capture of such important positions, as I feel the sacrifices were not made in vain. Their lives were nothing compared to the objects sought."

General Stoessel then asked permission to present his charger to General Nogi as a token of his appreciation and admiration.

Could Not Accept Horse.

General Nogi expressed his thanks for the Russian general's kindness, but said that he could not accept the horse, but, he continued, he would accept it for the army, since he considered the Russian horses were the property of Japan and felt he could not make General Stoessel's his private property. General also promised that when the was handed over to him to was treated with the greatest out of respect for the brave general.

Thereupon General Stoessel General Nogi that he admired orous principles and appreci point of view.

The Japanese commander re General Stoessel to continue to his residence at Port Arthur rangements were completed return of himself and family sia.

Referring to the burial of t General Nogi said the Japanes the beginning of the military tions had always buried the dead. Those found later on w interred at a special spot and ble memorial would be erecte tribute to the bravery of the J former foes.

Taken by Photographer.

After luncheon, at which bo erals sat, the group was tak photographer at the cottage a eral Stoessel mounted his cha show the horse's good points a goodby to General Nogi and ro to Port Arthur.

The quiet and even solemn ing of the generals ended at a o'clock. The regular Russian in Port Arthur marched out The only troops now in the the volunteers.

Two fires were started in P thur today, for which General S apologized. He said the volu were unable to control the p and he desired that the Japan ter Port Arthur immediately t order.

The formal entry of the Ja army into Port Arthur has been for Sunday, January 8th.

Army Appropriation Bill.

Washington—The house com on military affairs Saturday pra ly completed the army approp bill. It carries in round numbers 000,000, which is about $3,000,00 than the estimate and $5,500,00 than the appropriation for the c year.

The following are the imp changes compared to the amount propriated last year:

Horses for cavalry and arti $209,000, a reduction of $200,000 racks and quarters, $3,488,350, duction of $261,050; military pos changes, $333,500, a reduction $166,500; barracks and quarters Philippine Islands, $230,000, a re tion of $135,590; transportation o army and its supplies, $12,000,00 reduction of $3,000,000; construc and repair of hospitals, $315,000, duction of $75,000; shooting gall and ranges, $75,000, increase, $30 medical and hospital departm $600,000, an increase of 000; ordnance, stores and sup and rifle target practice, $1,250,0 increase of $100,000; militia mate $516,000, a reduction of $61,000; verting muzzle-loading guns to bre loading, $16,000, a reduction of $24

Adams Declared Governor.

Denver, Col.—Alva Adams was urday night declared by the legisla to be the duly elected governor Colorado. The returns showed Ad 123,078, Peabody 113,304. Plurality Adams, 9,774.

A cheer greeted the announcem of the result of the election w made by Lieutenant-Governor H gott. The republican candidates to the other state offices were decla elected. Under the terms of agreement reached today by the ous factions in the legislature, no tice of contest can be filed by G ernor Peabody until after the inaugu tion of Mr. Adams, which is set for o'clock Tuesday morning. It has yet been definitely decided by G ernor Peabody whether or not he make a contest.

Against Burning Cotton.

New Orleans—President Harvie Jo dan, of the Southern Cotton Growe Protective Association declares he against the burning of cotton and in letter to the New Orleans Progress Union says he is using all endeav to put a stop to the practice.

"I am doing all in my power discourage the idea," said Mr. Jord "It is not necessary and no such tion will even be suggested at New Orleans convention. We hope be able to make arrangements, al business lines, that will solve t present problems and also those the future relative to the price of c ton. There will be a large number bankers and southern cotton man facturers at the meeting. We ne the active co-operation of our banke and also the spinners if we are to ta our cotton out of the hands of spec lators on the New York exchang The New Orleans convention will much more largely attended than first anticipated and the commissi ers of agriculture of all southern sta will be there."

Will Hear Bryan Case.

New Haven, Conn.—The trial of the suit of William J. Bryan, executor of the will of Philos Bennett, against Delia Bigelow and other heirs, was set for next Tuesday in the superior court by Judge Robinson in spite of a protest by Henry G. Newton, counsel for Mr. Bryan. This suit has for its object the construction of the will. The case was in court today on arguments on the admission of certain testi-

Texas Has Been Repaired.

Washington—The navy departme was informed that the battleship Te as, which was injured in a collisi with a large derrick in the basin the New York dry dock about t weeks ago, has had her repairs co pleted at that yard, and she will s for Hampton Roads to take part the review of the combined Atl antic, European and squa fleets by Secretary Morton ral Dewar.

EQUAL RIGHTS TO ALL; SPECIAL FAVORS TO NONE.

VOL. II. CLANTON, ALA., JANUARY 19, 1905. NO. 43

not make General Stoessel's
his private property. General
also promised that when the
was handed over to him to see
was treated with the greatest h
out of respect for the brave
general.

Thereupon General Stoessel
General Nogi that he admired
orous principles and appreciat
point of view.

The Japanese commander re
General Stoessel to continue to
his residence at Port Arthur un
rangements were completed fo
return of himself and family t
sia.

Referring to the burial of the
General Nogi said the Japanese
the beginning of the military
tions had always buried the R
dead. Those found later on wo
interred at a special spot and a
ble memorial would be erected
tribute to the bravery of the Jap
former foes.

Taken by Photographer.

After luncheon, at which both
erals sat, the group was taken
photographer at the cottage and
eral Stoessel mounted his charg
show the horse's good points and
goodby to General Nogi and rode
to Port Arthur.

The quiet and even solemn
ing of the generals ended at ab
o'clock. The regular Russian sol
m Port Arthur marched out t

the volunteers.

Two fires were started in Por
thur today, for which General Sto
apologized. He said the volun
were unable to control the pop
and he desired that the Japanese
ter Port Arthur immediately to
order.

The formal entry of the Japa
army into Port Arthur has been
for Sunday, January 8th.

Army Appropriation Bill.

Washington—The house comm
on military affairs Saturday prac
ly completed the army appropri
bill. It carries in round numbers
000,000, which is about $3,000,000
than the estimate and $5,500,000
than the appropriation for the cu
year.

The following are the impor
changes compared to the amounts
propriated last year:

Horses for cavalry and artil
$209,000, a reduction of $200,009;
racks and quarters, $3,488,950, a
duction of $261,050; military post
changes, $333,500, a reduction
$166,500; barracks and quarters
Philippine islands, $230,000, a re
tion of $135,590; transportation of
army and its supplies, $12,000,00
reduction of $3,000,000; construc
and repair of hospitals, $315,000, a
duction of $75,000; shooting galle
and ranges, $75,000, increase, $30,
medical and hospital departm
$600,000, an increase of
000; ordnance, stores and supp
and rifle target practice, $1,250,00
increase of $100,000; militia materi
$516,000, a reduction of $61,000;
verting muzzle-loading guns to bre
loading, $16,000, a reduction of $24,

Adams Declared Governor.

Denver, Col.—Alva Adams was
urday night declared by the legislat
to be the duly elected governor
Colorado. The returns showed Ad
123,078, Peabody 113,304. Plurality
Adams, 9,774.

A cheer greeted the announcem
of the result of the election wh
made by Lieutenant-Governor H
kott. The republican candidates to
the other state offices were decla
elected. Under the terms of
greement reached today by the v
ous factions in the legislature, no
tice of contest can be filed by G
ernor Peabody until after the inaugu
al of Mr. Adams, which is set for
o'clock Tuesday morning. It has n
yet been definitely decided by G
ernor Peabody whether or not he w
make a contest.

Against Burning Cotton.

New Orleans—President Harvie Jo
dan, of the Southern Cotton Growe
Protective Association declares he
against the burning of cotton and in
letter to the New Orleans Progress
Union says he is using all endeav
to put a stop to the practice.

"I am doing all in my power
discourage the idea," said Mr. Jord
"It is not necessary and no such
tion will even be suggested at t
New Orleans convention. We hope
be able to make arrangements, alo
business lines, that will solve
present problems and also those
the future relative to the price of c
ton. There will be a large number
bankers and southern cotton ma
facturers at the meeting. We ne
the active co-operation of our banke
and also the spinners if we are to ta
our cotton out of the hands of spec
lators on the New York exchang
The New Orleans convention will
much more largely attended than
first anticipated and the commissi
ers of agriculture of all southern sta
will be there."

Texas Has Been Repaired.

Washington—The navy departme
was informed that the battleship T
as, which was injured in a collisi
with a large derrick in the basin
the New York dry dock about t
weeks ago, has had her repairs co
pleted at that yard, and she will s
for Hampton Roads to take part
the review of the combined n
lantic, European and sout
fleets by Secretary Morton
ral Dewey.

S TROOPS MARCH OUT

Line of Officers and Men Leaves Port Arthur.

STOESSEL INTERVIEWED

**He Wants to Return Home and

m Their Long Strain—Japs Treat
em With Great Respect.**

dquarters of the Third Japanese
at Port Arthur (via Yinkow and
sin). Five thousand men of the
n garrison at Port Arthur
ed from the village of Yahutsui,
e shores of Pigeon Bay, for
miles to the railway station at
lingtzu, at 3 o'clock, and the
detachments followed soon after.
detachment was accompanied by
ded transport cars.

Russians in the night were
on special trains of open trucks
ny, and there they immediately
ked for Japan on transports
g in that port.

long procession of the remnants
gallant Russian garrison was a
ic spectacle. The first arrivals
nanglingtzu were four droskies
by sorry looking horses. They
ded the staff officers who had
d to give their parole. All wore
swords as they were allowed to
the terms of the capitulation
t.

w minutes later the first detach-
ergived. The regimental officers
men with their men, their heads
d and their faces seamed with
showing the result of the mental
physical strain they had under-
during the long defense.

the Japanese soldiers crowded
them with evident curiosity the
of the Russian officers were an
esting study. All of them ap-
d to feel their humiliating posi-
keenly, and, though some seemed
resigned to their situation, others
resentful at being regarded with
sity. The men appeared to be
fed, but their faces, like those of
officers, indicated the awful physi-
strain they had undergone. The
rs were clean and well clothed.
he men were clad in dirty looking
skin coats, and appeared to be
ed or glad that the end had come.

aster-General Slated For the
the Administration Can Give.

shington, D. C.—It is stated here
h authority that while a formal
has not been made to him by
ent Roosevelt, Robert J. Wynne,
ostmaster-General, is slated to
ul Clay Evans as United
s Consul-General at London. It
out here that Mr. Wynne's re-
sasty visit to New York City was
fer with the representatives of a
ommercial enterprise. The Post-
General declined the presi-
of the concern at a salary ap-
nating $20,000 a year. He re-
it because it involved looking out
siness with the Government.

POVERTY IN NEW YORK CITY

Misery in the Metropolis Greater Than Ever Before.

Philanthropist Writes Commissioner-General Sargent, of the National Bureau of Charities, About Conditions.

New York City.—Surprising statements concerning increasing proverty in New York City were made in a letter from a New York City philanthropist of national fame to Commissioner-General Sargent, of the Bureau of Immigration at Washington, D. C.

This letter, the name of whose author is withheld by Mr. Sargent, declares that 100,000 men are without work in Greater New York City, that the hospitals are overcrowded, and that 50,000 school children, because of the empty purses of their parents, have to trudge to school without breakfast every morning.

"Fifty thousand children go to school breakfastless, which means idle fathers," writes the philanthropist. So overwhelmed is the Department of Charities with tens of thousands of applications from men out of work that it finds itself unable to cope with the situation. In short, the metropolis this winter is facing a problem with regard to the unemployed such as never has been known in past years.

"The cause of this state of affairs is of less moment now than the immediate problem of how to deal with the multitudes of the unemployed. Nor has the question here to do with the ultimate relief, such as Congress can provide by restricting immigration and scattering immigrants.

"The immediate question, then, is: What can be done with the great army of the unemployed at once? This question eliminates the unwilling and the unable, whom we always have with us, giving only the able and willing—the honest idle—mostly unskilled labor, of course. How are we to give relief to these?"

Mr. Sargent announced that this letter has strengthened his belief that immigration not only should be scattered, but restricted. New York City, he believes, suffers more from immigration, proportionately, than any five cities in the country.

"My principal suggestion in my reply to this letter," said Mr. Sargent, "is that applications coming to this bureau daily for work be published in New York City in some manner, and the influx relieved in that congested and evidently proverty-stricken city. There is a great deal of work to be had in the South if we can draw the labor here from New York City and other embarressed cities."

J. McKee Borden, secretary of Public Charities, said:

"Since I have held this position I can safely say that I have never seen such widespread destitution calling for immediate relief. It has been made more pathetic by the fact that new elements have entered into it—men willing, able, anxious to work and support their families are unable to get work, perhaps because of industrial conditions.

"When the snow storm visited us we managed to engage the interest not only of the city, but of the traction companies and thousands of men were put to work shoveling snow. I do not think there ever were so many deserving applicants. I believe that 50,000 school children are under-fed. Many who should be filling their minds with knowledge, too, are helping to fill the family larder."

COCKRELL ACCEPTS OFFICE.

Will Succeed Yeomans on Interstate Commerce Commission.

Washington, D. C.—Senator Cockrell, of Missouri, has decided to accept the position on the Interstate Commerce Commission offered him some time ago by President Roosevelt. He will succeed Commissioner James D. Yeomans, of Iowa, whose term expired.

Senator Cockrell has indicated his decision to the President, but he expects before assuming his new duties to complete the term for which he was elected to the Senate, which ends March 4.

TRIBUTE TO CHOATE.

English Comment on His Tact and Dignity as Ambassador.

London, Eng.—The Times printed an editorial apropos of President Roosevelt's acceptance of the resignation of Ambassador Choate.

It pays a tribute to the tact and dignity with which Mr. Choate has filled his office, which, with "his sympathetic interest in all that is best in English life, have earned for him a widespread popularity which will hardly fall to the lot of any other foreign representative than the American."

HONORS NOGI AND STOESSEL.

Kaiser Confers the Order of Merit on Both Generals.

Berlin, Germany.—The German Emperor has conferred the order "Pour le Merite" upon General Nogi, who commanded the Japanese at Port Arthur, and General Stoessel, who led the defenders of the fortress.

Currency Bill Amended.

The House of Representatives has amended the Hill currency bill so as to provide that National banks shall pay interest on Government deposits, which shall be awarded to the highest bidder.

Mitchell on Alabama Strike.

Indianapolis, Ind.—In the course of his annual address to the United Mine Workers, President Mitchell had this to say of the Alabama situation:

"A strike of considerable magnitude and of vital importance to the present and future of our organization in the southern states has been in progress in Alabama for the past seven months.

"The cause of this strike was that the furnace operators refused to grant a demand of the miners for a renewal of the scale of 1903 and 1904. This scale had been fixed by arbitration, Judge George Gray, of Delaware, being the umpire in the case, and was agreed upon after a very exhaustive investigation. At the present time fully 8,000 families are dependent upon the national and district organizations for support. The strike has necessitated the expenditure of a large sum of money, approximately, for relief purposes, $10,000 per week.

"During the last three months, and especially during the month of December, thousands of non-unionists have been recruited in the Virginias and through employment agencies in Philadelphia and New York. Assisted by the officers of the Federation of Labor, we have sought to prevent the shipment of men from eastern points, and in this we have succeeded to a marked degree, although many non-unionists are still accepting transportation and employment, notwithstanding the fact that they are fully aware that our members are resisting conditions which, if accepted, would lead to complete demoralization of the standard of living secured through years and years of struggle and self-sacrifice on the part of the union miners of the south."

The city organizations in all the cotton growing districts of the south have been asked to appoint and send similar committees to New Orleans on January 25th, when the "Waco Plan" for the establishing of a southern warehouse system for the storage of cotton will be taken up.

This matter has been talked about for several years, but no definite action has ever been taken. The Waco Business Men's Club decided that the annual conference of the Cotton Growers' Association would be a good time for the matter to be taken up; accordingly circular letters were sent to the various commercial organizations throughout the cotton growing districts and the two committees of bankers and merchants will meet the cotton growers and discuss the matter.

War on Bad Books.

New York.—Public library officials in Brooklyn have determined that neither the morals nor the literary tastes of their people shall be contaminated if they can prevent. Orders have been sent to the branch libraries, nine in number, that all questionable or trashy books shall be withdrawn from circulation and submitted at once to the director.

Those volumes considered positively bad and unfit for perusal in any home will be destroyed excepting one volume in each instance, which will be preserved at the main library.

Other books which the director may consider suitable only for persons of mature ages will be held up for written applications.

Miners Entombed.

Decatur, Ill.—Emil Knorr, August Yagusch, Charles Lachinsky and two other miners are known to be dead and a score or more entombed as a result of a fire Monday in the coal mine shaft near here.

Rescuing parties have gone into the mine but have been unable to do anything on account of the dense smoke. All night hysterical women and men stood about the entrance to the shaft awaiting the abatement of the fire to begin a search for the bodies of the dead.

Will Make New Survey.

Hattiesburg, Miss.—President Peck, of the Mississippi Central railroad, and General Manager Majors, of the Newman Lumber Company, who have just returned from a trip to the end of the road, report that construction of the Brookhaven extension will not commence until Chief Engineer Archibald shall have completed a new survey of the route, the former surveys having been found unsatisfactory. Engineer Archibald has a full corps in the field.

Scenes of Crime Gone.

Rochester, Ind.—The old Gripe homestead, situated three miles out of Rochester and which has been the scene of four murders, three suicides and three accidental deaths, and the home of the Gripe family, several of whom have gone insane, is being torn down and all trace of the house of tragedies has been obliterated. The last tragedy occurred in the house December 6, 1904, when Wilson Burns, crazed by jealousy, murdered his wife, Joseph Gripe and Mrs. Margaret Braham, and then suicided.

Bankers and the Conference.

Waco, Tex.—The following call for a large representation of bankers from the cotton growing states to meet in conference with a committee to be appointed by the cotton convention at New Orleans January 24-26 has been issued:

"To all Bankers of the Cotton States and Territories:

"As presidents of the several bankers' association of the following cotton states and territories, at the special request of Hon. Harvie Jordan, chairman arrangement committee interstate cotton convention, to be held at New Orleans January 24, 25 and 26, 1905, we invite all bankers of these states and territories, whether members of a bankers' association or not, to attend a conference at the St. Charles hotel, New Orleans, January 25, 1905, at 11 a. m., to meet with a committee of cotton growers to be appointed by the convention, and a committee of merchants attending the convention, to devise or adopt a plan for organizing a cotton ware house system throughout these states and territories:

"L. B. Farley, Montgomery, Ala., president Alabama Bankers' Association.

"Charles F. Penzell, Little Rock, president Bankers' Association.

"H. Robinson, Jacksonville, Fla., president Florida Bankers' Association.

"Miller S. Bell, Milledgeville, Ga., president Georgia Bankers' Association.

"D. M. Reynolds, Baton Rouge, La., president Louisiana Bankers' Association.

"F. H. Fries, Winston, N. C., president North Carolina Bankers' Association.

"Frank Craig, South McAlester, I. T., president Oklahoma and Indian Territory Bankers' Association.

"B. F. Maulding, Anderson, S. C., president South Carolina Bankers' Association.

"J. P. Gautt, Knoxville, Tenn., president Tennessee Bankers' Association.

"W. H. Rivers, Elgin, Tex., president Texas Bankers' Association.

"William M. Haliston, Richmond, Va., president Virginia Bankers' Association.

"Hon. Eugene Williams, author of what is known as the "Waco Cotton Ware House Plan," will attend the meeting and advocate his scheme.

This plan, which has attracted wide attention throughout the country, provides for the erection of a ware house at each point where five thousand or more bales are usually marketed, so that the farmer may, if he so desires, store his cotton, and if necessary, borrow money on the ware house receipt.

Mills to Start Soon.

Anniston, Ala.—A deal was closed Saturday for the purchase of a quantity of iron for the rolling mill of the local plant of the Western Steel Car and Foundry company, and when the first delivery of iron is made the rolling mill will be started immediately. This will be joyful news, as it will not require a long time for the delivery of the iron and this part of the large works will begin.

Superintendent Wrenshall says that this department of the work will resume as soon as the material arrives, and in the contract the iron is to be delivered as soon as possible. The rolling mill of the big plant employs about three or four hundred men when run to its full capacity, and the most of these receive very high wages. A large number of the men employed at the mill before it shut down have returned to the city preparatory to taking positions at the works.

Cotton Program Ready.

New Orleans.—Following the preliminary announcement of the program of the Southern Cotton Growers' Protective Association's convention at New Orleans, January 24th, 25th and 26th, President Harvie Jordan has announced the full official program. Mr. Jordan will open the meeting as temporary chairman. Perhaps the most important question at opening will be the permanent chairmanship. Col. E. S. Peters, president of the recently formed National Cotton association, is prominently mentioned; also Congressman John Sharp Williams, of Mississippi, and Hon. Eugene Williams, of Texas. The latter is father of the "Waco plan" to hold and ware house cotton, which will come up for discussion. A committee to formulate and present a report on the "Waco plan" will meet on January 25th.

A contract has lately been made between the Venezuelan government and Manuel V. Fejera, a Venezuelan citizen, for the exclusive manufacture of matches in that country. This monopoly is based on a law promulgated in 1899, which provided that the match industry should be a source of government revenue. By the terms of the contract in question the importation of matches in Venezuela is prohibited.

New Jersey Corporations.

Trenton, N. J.—In his inangural address delivered Tuesday the incoming governor of New Jersey, Edward C. Stokes, counsels the legislature to take cognizance of the existing corporate situation and to revise and modernize the corporation laws, and urges the appointment of a commission to that end. Governor Stokes reviews the financial condition of the state, showing that the surplus at the close of the fiscal year amounted to $2,940,918, and the income of the state for the year was $4,302,370, of which $3,351,543, or nearly 78 per cent., came from corporations domiciled in New Jersey.

He raises the question whether or not this revenue can be maintained in its present volume, and says that other states are competing for incorporation business, and that the rates in these states are cheaper than are New Jersey's. He defines the policy of this state as follows:

"Legislation for revenue only is unsound, and should never be encouraged, but legislation which safeguards the rights of the public and thereby attracts capital and enterprise and produces increased income is New Jersey's aim.

"New Jersey does not compete in any race between states for revenue where the inducement to incorporation is laxity of law."

As to the duty of the state towards corporations, Governor Stokes says: "New Jersey's corporations do not belong to a few wealthy capitalists, but rather to a host of scattered stockholders who, as small investors, own a majority of the shares of these companies. Our legislation affects the interests of more people than merely the citizens of New Jersey. The interests of these non-resident investors, quasi wards of our state, should be carefully guarded."

Discussing the relations of the corporations to the public the governor says:

"Not only should the rights of investing stockholders be protected, but also the obligations of the corporation to the state and people at large should be efficiently enforced."

Committee for New Orleans.

Birmingham, Ala.—The following committees have been appointed by President F. M. Jackson, of the Commercial Club, to go to New Orleans and confer with the bankers and merchants of the south who will meet with the conference of the Cotton Growers' Association:

Bankers—G. B. McCormack, chairman; A. W. Smith, J. H. Frye, E. N. Cullom, Eugene F. Enslen, Leo K. Steiner, J. D. Elliott, and H. H. Mayberry.

Merchants and Other Business Men —. D. Nesbitt, chairman; W. H. Kettig, W. S. Brown, B. B. Comer, D. M. Drennen, F. Caheen, J. E. Morris, R. M. Goodall, George C. Harris, Alex T. London, George Whatley, T. C. Thompson, H. K. Milner, James J. Smith, F. B. Yielding, Ross C. Smith, Samuel E. Earle, Sterling A. Wood, M. H. Burt, L. M. Harris, J. G. Cantrell, M. M. Richey, John W. O'Neill, R. E. Collins, J. A. VanHoose, George G. Thompson, John W. Wade.

Club House Burned.

New Orleans.—The Athenaeum, the handsome club house and hall of the Young Men's Christian Association in St. Charles avenue, the Clio Street Evangelical church and some surrounding property were destroyed by a fierce fire early Tuesday. M. J. Fass, steward of the club, is missing.

Elbert Hubbard lectured in the hall Monday night to a large audience. Some hours after the stage burst in flames. The fire spread rapidly. The loss on the Athenaeum and equipment is stated by President Newman to be $70,000. Other losses bring the aggregate to $100,000.

During the fire Chief Conner, while standing on a shed in the rear of the burning building, was knocked down by flying debris and painfully hurt. Later an examination by physicians of Chief Conner showed that his collarbone was broken and that his injuries were serious.

Landslide Follows Waves.

Christiana, Norway.—Fifty-nine persons perished as the result of an avalanche of rocks at Naesdal, north of Bergen, Sunday.

A mass of rock was suddenly precipitated into Lioenvand Lake from the neighboring hills, causing an immense neighboring shores. Houses, people and cattle were swept away by the rush of water, and it is known fifty-nine persons perished.

Thus far only four bodies have been recovered. A great storm Tuesday stopped the relief work, as the surrounding district is unable to send help.

Robbery the Object.

Chicago, Ill.—A. Sanger, a relative of Mrs. George Pullman, of Chicago, has been slain by Mexican half-breed bandits in the mountain wilds of Sinaloa, Mexico. Robbery was the purpose of the murder.

THE BRAVE OLD WAY.

I say risk all for one warm kiss;
I say 'twere better to risk the fall,
Like Romeo, to venture all,
And boldly climb to deadly bliss.
I like that savage, Sabine way;
What mighty minstrels came of it!
Their songs are ringing to this day,
The bravest ever sung or writ.
Their loves, the love of Juliet,
Of Portia, Desdemona, yea,
The old true loves are living yet;
And we, we love, we weep, we sigh
In love with loves that will not die.
Then take her, lover, sword in hand,
Hot-blooded, and red-handed; clasp
Her sudden, stormy, tall, and grand,
And lift her in your iron grasp,
And kiss her, kiss her till she cries
From keen, sweet, happy, killing pain.
Aye, kiss her till she seeming dies;
Aye, kiss her till she dies, and then,
Why, kiss her back to life again!

—Joaquin Miller, in Smart Set.

Isa, the Haymaker

BY MAE MARTIN

"A regular Amazon!" said Fred Mallandaine, shrugging his shoulders. "On the very top of a load of hay, with a straw that pulled down over her eyes and a pitchfork in her hand!"

"Now, Fred," cried out his sister Nellie, "you are talking arrant nonsense."

"A man must believe his senses," said Mallandaine. "I asked for Miss Fane, and the ancient beldame who was shelling the peas by the kitchen window pointed one skinny forefinger across the fields, and answered, 'There she is, a-gettin' in the hay. They all stirs round lively in these parts when there's a shower comin' up. You'll find her in the hayfield.'"

"And you?' questioned Nellie.

Mr. Mallandaine smiled ironically.

"I?" said he. "You must bear in mind that I was looking for a young lady, not for a farm-boy's assistant; so I just turned around and came home again."

"But there must be some mistake!" cried out impetuous Nellie. "My Florence Fane is a princess among women, tall and slender, and graceful, who plays the harp and writes delicious little essays, and——"

"There was neither harp nor writing desk on the top of that load of hay," said Ted, very decidedly. "And pray, Nell, don't be offended; but I am rather disenchanted with your rustic belles, after my afternoon's experience. Give me a cigar, please, and don't let anyone disturb me for a while, there's a darling."

Nellie obeyed.

But while she found the cigar case, handed the newspaper, and regulated the exact fall of the curtain folds which should be most agreeable to her brother's optical partialities, she puzzled her brain as to how, and why and wherefore this little plan of hers for an instant attachment between Fred and Florence Fane had thus come to an untimely standstill.

"It's the most unaccountable thing in the world," said Nellie to herself. "I think I'll go over and see what it all means."

Low and long, with gabled fronts and bay windows, the Fane's farmhouse stretched itself out under the umbrageous walnut trees, with Florence's easy chair on the porch, and Florence herself, posed like a woodland nymph, all mauve muslin, curls of pallid gold and fleecy folds of Shetland shawl.

"So glad to see you, dear!" said Miss Fane with the princess air which seemed to sit so naturally on her.

"Dear Florence," said Nellie, plunging precipitately into her subject, "where have you been all the morning?"

"Where have I been?"

"Believe me, I am not asking for mere curiosity," pleaded her visitor. "I have a reason. You will answer me, I know."

"Certainly. Why shouldn't I?" said the serene one, lifting her golden brows the sixteenth part of an inch. "Let me see—I was in the glen, sketching the beautiful mossy boulders by the spring until the shower came up, and then I sat in my own room and wrote a few letters."

"Then it couldn't have been you, after all!" bluntly ejaculated Nellie.

"What couldn't have been me?"

"The girl with the pitchfork on the top of the load of hay.

"It must have been Isa," said Florence Fane, with a slight shadow of bother.

And then, laughing heartily at her own blunder, Ellen Mallandaine related the morning adventure of her annoyance upon her smooth brow.

"Isa! The little sister who has just returned from boarding school?" Miss Fane inclined her head.

"There is no end to that child's pranks," said she, impatiently. "And papa indulges her in everything. Dear, dear! I hope your brother wasn't very much shocked?"

"I—I am afraid he was," said truthful Ellen. "He supposed it was you, of course. And he said you were a regular Amazon, and that he didn't care to make the acquaintance of a farm boy's assistant!"

Florence clasped her pink hands together in sylph-like despair.

"It's enough to drive one frantic," said she.

And in the same moment a brown-checked damsel, with chestnut curls tangled around her neck, and a pretty brown cambric dress, burst into the room like a beam of sunshine.

"It isn't true!" said she, defiantly. "I'm not an Amazon, and nobody has any business to call me a farm boy's assistant!"

"Isa!" softly pleaded Florence, lifting her white palms, as if to ward off this sudden gust of breezy defiance.

"And the hay would have been spoiled if I had'nt helped to get it in; and poor old John Knight would have been discharged for forgetting; and, besides, wasn't Maud Muller, in the poem, a haymaker? and did anyone dare to criticise her?"

"I am sure——" mildly commenced Miss Mallandaine.

"Oh, don't make any apologies," said little Isa, with her retrousse nose in the air, and two red spots on her cheeks. "And tell your brother, Miss Nellie, that I am as little anxious to make his acquaintance as he is mine."

And exit Isa, not without some slight emphasis on the closing of the door.

Fred laughed a little when the younger Miss Fane's defiant message was brought to him.

"She need not be alarmed," he said. "There is no sort of probability that we shall be brought into contact with each other."

But "Man proposes and God disposes!" says the sparkling proverb; and the week was not out before Mr. Frederick Mallandaine, strolling among the picturesque woods which surrounded the old house which the paterfamilias had taken for the summer, found himself in a ruined sawmill, where tall, sweet fern bushes grew through the yawning crevices of the moldering floor, and the sunbeams sifted like misty lines of gold between the cracks in the roof above.

"There must be a view from that peak," said Fred to himself; and springing up a slight ladder, which reared itself from beam to beam, he picked his way across the perilous flooring to the window, which looked out over a breezy stretch of vale and upland, where the blue windings of a river flashed in the sunshine, and the undulations of a distant mountain chain seemed to close up the horizon with its purple gateways.

As he stood there, feasting his eyes upon the prospect, a slight noise below attracted his ear; he hurried to the edge of the floor, only in time to discover that the ladder, his sole means of escape, was walking off upon the shoulders of a stout, silver-haired old man, who whistled cheerfully as he went.

"Halloa!" he shouted. "Hold on there, my man! Where are you going with that ladder?"

No answer—no response of any nature.

"Is the man deaf?" cried Fred, in a sort of frenzy.

That was precisely what old John Knight was. As deaf as the proverbial post!

Pretty Isa Fane was waiting for him on the edge of the ruins, holding up one pretty finger.

"Hush, John!" said she. "Don't you hear some one calling?"

"I didn't mind anybody," said old John, whose dull ears could catch Isa's clear, sweet voice, when all the shouting of the farmhands was inaudible to him.

"It must be the owls, or some one shooting squirrels in the glen, may be."

"No,' said Isa, crisply; "it's a voice calling. Stay here, John, until I come back."

John stood still, contentedly, with the ladder on his shoulder, while his young mistress hurried up the steep bank as fast as she could.

"Who is it?" she cried, in a voice sweet and shrill as a thrush's warble.

"It is I!" responded Mr. Fred Mallandaine, plaintively. "I climbed up here, and now someone has taken the ladder away and I can't get back."

Isa stood there, tall, slight, brown-cheeked, with her hands clasped behind her back, and the wind blowing her chestnut curls about, while a mischevious light scintillated under her long, dark eyelashes.

"Oh," said she, "I understand. You are Mr. Mallandaine?"

"And you are Miss Isa Fane?" said he coloring and biting his lip.

"Exactly," responded the girl. "And here is an excellent opportunity for me to be avenged. You have called me an Amazon, a farm-boy's assistant—all manner of names; and you are at my mercy now."

"Yes," confessed Mr. Mallandaine, penitently. "It's all true."

"Don't you think it would serve you right," went on Isa, severely, "if I sent old John home with the ladder, instead of recalling him to your assistance?"

"If course it would," said Mallandaine.

"So do I," said Isa; "but I mean to be magnaminous. John—John."

Clear and flute-like her voice sounded down the glen, and old John's husky accents replied:

"Yes, yes! I'm coming!"

Isa Fane in the meantime stood looking at Mr. Mallandaine as cooly as if he were a sphinx or an obelisk, or some such marvel of the universe.

Mr. Mallandaine regarded her on his part with a sort of meek propitiation; and when at last he had descended, and stood on the green turf beside his fair rescuer, he held out his hand.

"I hope we are friends?" said he.

"Oh, certainly."

Isa forgave him his London prejudices and he began to see things through the medium of clear and brilliant eyes. They had called her a child, but she was such a bright, original sort of child!

And one evening, about a fortnight subsequently, Mr. Mallandaine astonished his sister by saying abruptly:

"Well, Nell"—the name he always used when he was in an especially good humor—"I've a piece of good news for you. I have proposed to Miss Isa Fane and she has been graciously pleased to accept me."—New York News.

GERMANY'S SHIPPING.

Highest Class of Vessels Comes From Foreign Yards.

Germany still finds it more convenient to buy a considerable proportion of her highest class steamships from foreign yards, says American Syren and Shipping. And she is not only increasing the wages of her crews from 20 to 30 per cent. during the past decade. While building new steamers in foreign yards to be placed under her flag forthwith, Germany is also buying old foreign tonnage, deemed out of date by the former owner, and somehow making these second hand ships pay their way.

In 1903 the dividends paid by the four principal Hamburg steamship lines varied from 6 to 8 per cent. What they will be after the losses of the rate war have been fixed up is perhaps wisely hidden from the shareholders in the womb of the future. "Forward, and ever forward," is the motto of the Kaiser, and he is prepared to go far.

It is one thing to compete against a dozen of other firms all under a foreign flag, each of which is eager to come out on top, but it is quite another thing to compete against is German mercantile marine, which is regarded by both Kaiser and people as a national venture and treated accordingly. Who does not remember the Kaiser's stirring speech to his subjects that the future of Germany is upon the ocean?

Brain tells in Germany, because it is not confined solely to the genius class, of whom every nation possesses some and no nation more than America, but is found throughout the length and breadth of the land, owing to the educational training being of such a nature as to insure a due mixture of theory and practice. At times, however, the men of light and leading in Germany seem to be carried away by the success of their undertakings, and act as autocratically as though Germany were without powerful rivals on both sides of the Atlantic.

This over confidence costs Germany dear, and may prove her undoing. Any way, barring Bismarckian bluffness, Germany is a potent object lesson as to the freedom permitted to her capitalists in building up a mercantile marine, and the great impetus given thereto by her statesmen and Kaiser.

KING MACRAE.

The Hardy Scot Who Rules Tierra del Fuego.

In new kilts and plaid and playing a pibroch of triumph on his pipes, John Farquharson Macrae, formerly of Scotland, but now of Tierra del Fuego, strode the gangway of the Oruba at Liverpool yesterday, bound once more for South America. During twenty-two years, spent for the most part among the hostile natives of the Land's End of the Western Continent, John Farquharson Macrae clung to his pipes as he clung to his Scottish accent. When he had no human companion to converse with, his pibroch resounded over the waters of the Magellan Strait.

As a youth he left his native heath for Argentina and reared cattle. After a few years he found himself in possession of over 500 horses and a couple of thousand sheep.

These animals he trekked over two thousand miles, with the aid of a compass and chart, to southern Patagonia. He watered and fed his flocks and herds by the way with only five men to assist him, but at the end of a year of hunger and thirst and fatigue he found himself in possession of a fine stretch of country over 80,000 acres in extent.

After leasing this land for ten years, he sought fresh territory and trekked over into Terra del Fuego.

He was the first Briton to penetrate into the country, and the natives resented the intrusion. The tall Aonas and the stunted Yaghans came in hordes, attacked his little castle, and lay in wait for him with arrows.

An intrepid rider and an unerring shot, however, he would ride away concealed by the horse's body and shooting with deadly effect. For several years he carried his life in his hands, but at last the savages began to regard him with such respect and fear that they christened him "Sorto," the native equivalent for "the devil."

For some years past the Scott's pioneer has been undisputed monarch of Tierra del Fuego, where he has amassed a fortune. It is with the bagpipes that he rules.—London Mail.

Parkman's Deed of Justice.

A story is told about Francis Parkman, the historian, which shows that in spite of impaired eyesight he was not blind to injustice. A friend met him walking along the street, holding two street boys by their coat collars. In reply to his friend's request for an explanation Parkman said: "I found this boy had eaten an apple without dividing with his little brother. Now I'm going to buy one for the little boy and make the big one look on while he eats it."

After reading this incident, we should expect fairness of treatment in Parkman's histories.—St. Nicholas.

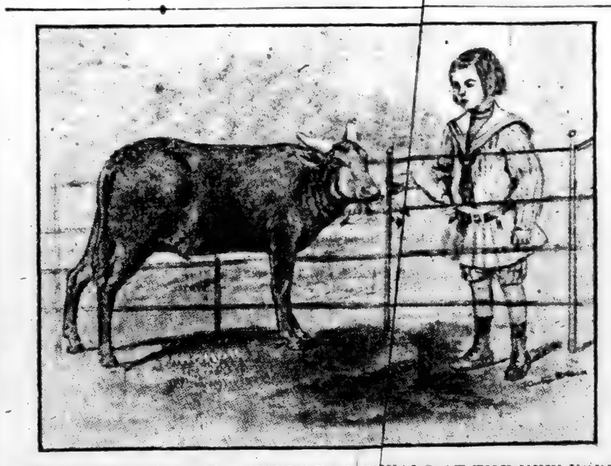
The microphone enables a person to hear a fly walk or a bee sneeze.

NEW ANTELOPES AT THE NEW YORK ZOOLOGICAL PARK

BY J. CARTER BEARD.

It is by no means an easy matter to assign their proper place in the animal kingdom or to determine what really constitutes an antelope. No better opportunity has ever been given in this country to see for one's self the different members of this family, from the pygmy Duykerbok antelope to the ox-like eland, and from our own aberrant type, the American prong-horn antelope, to the still more aberrant giraffe, than is now given by the incomparable collection of antelopes at the New York Zoological Park.

Among the most singular types in some respects are the water antelopes. There are five allied species, of which



LITTLE ANOA BULL OR ANTELOPE BUFFALO AT THE NEW YORK ZOOLOGICAL PARK.

the Sing-sing antelope, a fine specimen of which is to be seen at the park, is a representative.

It scarcely carries out our idea of an antelope, being a rather heavily-built animal, which, instead of presenting the sleek, glossy appearance of other members of its family, is clothed with a coat of long, soft, loose, and flocculent hair, longer upon the neck than elsewhere, but not forming a mane. The color is grayish brown. The males alone carry horns. These in the adult individual are lyre-shaped, and covered almost to the tips with bony rings. The animal exhales an odor, and the flesh is so powerfully scented and of so bad a flavor as to be entirely uneatable, a circumstance which will go far to preserve the species from becoming exterminated, long after its congeners have disappeared forever from the face of the earth. The natives, we are told, tame these antelopes, and allow them to run with their cattle (in much the same way as we keep a goat in the stable) because the animal is supposed to bring good luck and ward off disease.

Sing-sing antelopes abound in marshy districts on the banks of lakes and rivers in central and western Africa. If disturbed, they invariably make for the water at full speed. In this way they escape lions and leopards, who in common with other cats are reluctant to take to the water, but they cannot get away from the natives, who pursue them in boats, which they paddle faster than these antelopes can swim.

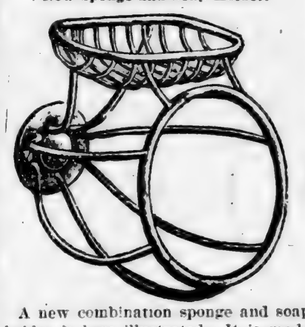
In view of the fact that the curious little anoa has been adopted, along with the other inhabitants of the Philippine Islands, as a citizen of the "Greater United States," the specimens at the New York Zoological Park assume an additional interest.

Although the anoa is ranked among ungulates with the oxen, and more particularly with the buffaloes, it has so many features in common with the antelope that it is sometimes called the antelope buffalo. It is a veritable pygmy, being when full grown, according to Mr. Hornaday, two feet nine inches high at the shoulders. "We have," says the last-mentioned gentleman in writing to me, "three specimens at the park, two full-grown males and a female, the latter immature. These little creatures take kindly to captivity in zoological gardens, and breed with fair regularity. Two of those that we have are quite docile, but the third, a full-grown male, was once so savage that for nearly a year he was bent on killing something or somebody. The creature is quite cow-like in form, but its horns most nearly resemble the horns of the harnessed antelope of Africa, except that they are not twisted. The color is a rich chocolate brown, becoming dark with age. Celebes is the home of the specimens which we have."

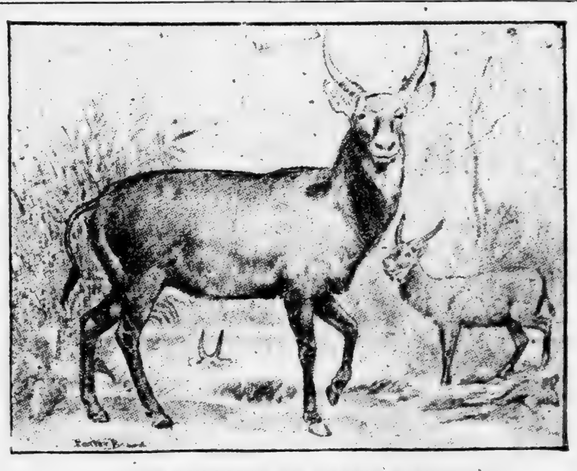
The specimens which inhabit the Philippines (Bos nindorensis) is called tamarao. "It stands," writes Richard Lydekker, "three and a half feet in height. The horns, though massive, are comparatively short and rise upward in the plane of the face with a lyrate curvature; they are distinctly triangular, with the largest face in front, and are somewhat roughened. In its massive form, thick legs, and uniform coloration this species comes nearer to the Indian buffalo than to the anoa."

It may be added that, as far at least as the anoa of Celebes is concerned, the animal seems to occupy a place almost exactly half way between the antelopes and the oxen. "It approximates to the antelopes," writes Lydekker, "in its slender build, the structure of the hinder parts of its skull, the upright direction and the straightness of its horns, the spots on its head, back and limbs, and its small size."—Scientific American.

New Sponge and Soap Holder.



A new combination sponge and soap holder is here illustrated. It is made of brass wire, polished and nickeled, and is designed for use against a wall or wainscoting. The sponge holder is 6 inches deep and 5½ inches in diameter; the soap holder above it, 5½ by 3 inches.—Philadelphia Record.



THE SING-SING OR WATER ANTELOPE.

A Peculiar Fatality.

An engineer named Knorr, a German who has become a naturalized Russian, built four of the great bridges on the Trans-Siberian Railway, including the big Yenisei and Obi bridges, which cost, respectively, $2,250,000 and $2,000,000. They were great engineering feats, and brought him international fame in his profession. But he was pursued by a curious fatality. A writer in "T. A. T." says: He had five daughters who were famous in Russia for their beauty, and whom he loved dearly. Just after his first bridge was completed one of them died; and as each of his three succeeding bridges was built, another died. He would not build a fifth bridge.

A Huge Belt.

A guttapercha and rubber manufacturing company, of Toronto, has made a belt for the grain elevator of the intercolonial railway at St. Johns, which is one of the largest ever produced. It is of rubber, and measures 3239 feet. Its weight is nine tons.

George Ade as a Farmhand.

Judge Saunderson, who is practicing law in Everett, Wash., formerly lived in Kentland, Ind., the boyhood home of George Ade, the humorist.

"Ade was a peculiar character in his younger years," said the Judge. "He made my office a sort of loafing place during the little time he spent in loafing. He was employed on a farm owned by a banker. One day he walked into the office and said to me:

"'That man is the best I ever worked for.'

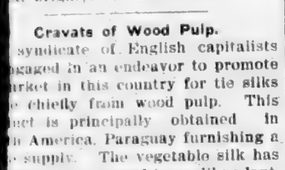
[St.] Augustine, Fla., Has Oldest House in America.

[Old]est [Hou]se in America is in [St.] Augustine, Fla. This building, by [com]mon with the winter resort be[yond] that town, is not a pretentious [affair], but when it was built it [was] undoubtedly one of the principal [hou]ses of the town.

It is built of coquina rock, a mixture [of] sand and shell, which is the same [as] that used in the building of the [Ponce] de Leon hotel and the Alcazar. [It] is not known in what year this [house] was put up, but it was short-



Oldest House in America.

[after] the landing of the Spanish, [which] was on the 8th of September,

[The] building is in a fairly good [state] of preservation. The interior is [beautifully] finished in highly polished

[It was] occupied by the Spanish offi[cials] during the time Florida was a [Spanish] colony, and was later the [home] of the attorney general during [the] English possession. It is not now [inhabited].

The Magic Mirror of Japan.

The "magic mirror" of Japan is a [piece] of bronze, usually from six to [eight] inches in diameter. It is sil[vered] on the front, which is a little [convex], and there is a raised pattern [on the] back which is rather concave. [The] polished pattern is generally a [landscape], flowers, animals, or Chi[nese] characters. It is not visible in [front] of the mirror, but when [strong] sunlight is reflected from the [face] of the mirror to a wall or screen [the] pattern of the back is visible on [the] screen in bright lines on a black [ground]. Prof. W. E. Ayrton, F. R. S., [and] Prof. John Perry, F. R. S., was [the] first to give the true scientific ex[planation] of this magical effect. It [is] that the design on the back [by] the convexity of the front, mak[ing] it flat, in fact, along the lines of [the] pattern. Consequently the light [that] is from the front is not dispersed [at] those points of the design, and they [appear] brighter on the screen.

Cravats of Wood Pulp.

A syndicate of English capitalists [is] engaged in an endeavor to promote [the] market in this country for tie silks [made] chiefly from wood pulp. This [product] is principally obtained in [North] America, Paraguay furnishing a [small] supply. The vegetable silk has [its] origin in trees and is readily adapt[ed] to native looms. The woven [goods] are supercalendered, which [gives] it presents a silky finish resem[bling] mercerized goods. For several [years] past this glossy material has [been] sold in piece lengths to the up[holstery] trade, by which it is utilized [for] filling purposes. The selling test [for] artificial silk for cravats is anxious[ly] awaited by local manufacturers.

A Thanksgiving Serenade.

Collecting Bird Statistics.

The bird club at Bellows Falls, Vt., [has] been divided into two sides with [an] object before them of seeing [each] side should see and name the [great]est number of birds during the [sea]son of 1904. One side saw 89 dif[ferent] varieties and the other 83. Six [varie]ties not seen by the winning side [but] seen by the others makes the total [num]ber of birds named by the club 95.

Cotton Business in 1841.

The first shipment of cotton from [the] port of Galveston to Boston was [made] by the firm of Ennis & Kimball, [in] 1841, on the schooner Brazos, Capt. [Percy] commander. This was a new [depar]ture in business and was noted [with] much interest as promising [many] benefits

King's Valuable Art Treasures.

The value of the art treasures at [Windsor] castle, which have been dis[covered] and rearranged by King Ed[ward] is estimated at about $60,000,[000]. So great is their value that the [king] has been unable to get them in[sured] so far.

Letter Carrier's Faithful Service.

Nat Cummings, a rural delivery car[rier] at Lancaster, N. H., has made a [record] of which he well feels proud. [Last] Wednesday he missed his first [trip] since entering the service, Jan. 1, [1902], or a period of about thirty-four [months]

DEVIL GUARDED THE GOLD.

His Satanic Majesty's Portrait Indicated Treasurer House.

In this instance, as often, His Satanic Majesty proved a good guide to riches. Recently workmen were papering a wall in an old house at Perpignon, in the south of France. On the wall was fixed, as a curious ornament, a very ancient sculptured chair. The workman found it necessary to remove this, and discovered that the back of the chair had hidden a mural painting of the devil, horns, tail, cloven foot, diabolic grin—all.

Sounding the wall with their hammers the workmen easily found there was a hollow space behind it, into which they broke. There lay a big pile of tarnished gold pieces, some French, most of them Spanish.

Of course this wealth amounting to some thousands of francs, reverted to the owner of the house. He rewarded handsomely those who found it, and does not concern himself whether it was accumulated by the aid of the sulphurous personage whose portrait indicated its hiding place.

Newest Style of Lighthouse.

The Ram island ledge (Maine) lighthouse, now practically finished, will, it is claimed, be the best in the world of its class. The appropriation was $166,000.

The tower is of hewn stone, and the exterior is nearly as smooth as marble. It is lined with white enamel tiling, and the interior is finished in quartered oak of the finest quality. The glass is diamond shaped. The lantern is of bronze, cost $10,000, and the salt air will have no effect upon it. The $7,000 lens for the lamp was made in Paris.

The photograph shows the tower as

Ram Island Ledge Lighthouse.

it looked just before the staging was removed.

Seven men are at work on the interior.

The light will be of the third order, and will be a flash. The lighthouse is as firm as the great rock on which it stands. It will be of the greatest possible advantage to all masters of vessels entering or leaving Portland.

Music-Charmed Water.

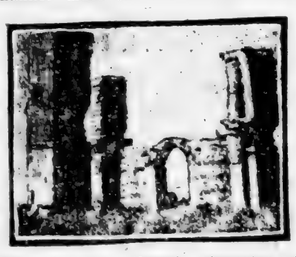
Interesting experiments showing the influence of a tuning-fork on jets of water have recently been made at the Royal College of Science in Dublin. A jet of falling water consists ordinarily of two parts—a clear column and a troubled portion. When the troubled part is photographed, with the aid of the electric spark, it is seen to be composed of a succession of drops following one another too rapidly to be separately perceived by the eye. These drops are irregular in size, shape and distance from one another. But if a vibrating tuning-fork is placed in contact with the stand from which the jet starts, the drops fall into order with beautiful precision, a drop being cast off with each vibration. Many remarkable effects may be produced. A continuous jet may be thrown into a form like that of a vibrating string.

Memorial to a Robber.

In the little town of Forlimpopoli, near Bologna, a memorial tablet is about to be unveiled in the Municipal theater to the memory of a famous robber chieftain named Passatore. The reason why the theater is chosen for the home of his memorial is that in it was performed his most famous exploit. In September, 1854, while one of Rossini's operas was being performed in the presence of all the local beauty and fashion, Passatore and his band "held up" the audience and robbed them of all their valuables to the last penny.

Palace of a King.

The palace of Alexander the Great was an imposing structure in its time, and the wonder is that any vestige of it stands to-day. It was built in a manner much more substantial than

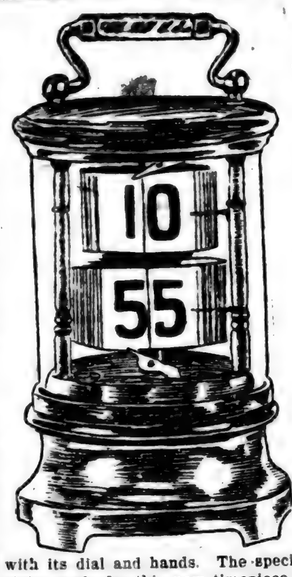


that of to-day, though advocates of steel construction claim that the modern structure will defy time as long as any of those built by the ancients. Time alone will determine how much truth there is in this contention. On the Asiatic plain are the massive remnants of an ancient gateway fringed with weeds, and, vaguely knowing who he was, the natives tell that this is all that is left of the palace of Alexander.

NEITHER DIALS NOR HANDS.

Novelty in the Clock Line That Has Some Advantages.

The latest development in the clock line has resulted in the elimination of dials and hands. The result is a timepiece that serves admirably for certain purposes, but will hardly prove a formidable rival to the familiar clock



with its dial and hands. The special claim made for this new timepiece is that the correct time is always exposed in hours and minutes and in Arabic figures. As a novelty this dialless clock is certain to win a certain amount of favor, but there is an undeniable charm about the old-fashioned timepiece that insures its preservation as an essential adjunct of household decoration and equipment, despite innovations.

Longest Pastorate on Record.

To the Rev. Laban Ainsworth must in all probability be given credit for holding the longest pastorate, over one church and people that ever was known—seventy-six and a half years.

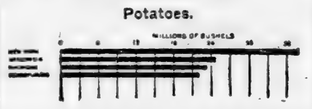
He was born July 15, 1757, in the little town of Woodstock, Connecticut, says a writer in Every Where. When just "of age," he was graduated at Dartmouth college—then the reigning educational institution of America. A year later he was given a license to preach.

His first charge was at Spencerport, N. Y., and in 1871 he went to Jaffrey, N. H., where he commenced a pastorate that for length and continued, steady effort, has never been paralleled in the world.

Colombian "Rain Tree."

A novelty in the vegetable kingdom has recently been reported as native to the United States of Colombia. In the woods adjacent to the city of Moyobamba grows a tree which the natives call "rain tree." It is about fifty feet high when it reaches maturity and about three feet in diameter at its base, and has the property of absorbing an immense quantity of humidity from the atmosphere. This is concentrates and subsequently pours forth from its leaves and branches in a shower and in such abundance that in many cases the ground in its neighborhood is converted into veritable bog. It possesses this curious property in the greatest degree in the summer, when the rivers are at the lowest point and water is scarce. It has been suggested that this tree be planted in the more arid parts of Peru for the benefit of the farmers.

Potatoes.



New York, Wisconsin, Michigan and Pennsylvania lead all states in the production of potatoes. Diagram shows relative production in millions of bushels.

House Building Causes Discord.

Mrs. Martha Goodell, of Hartford, Conn., persists that she is going to build a house. The idea has caused much trouble in the Goodell family which ended in the appearance of the following in the columns of a local paper: "Hartford, Nov. 8, 1904. Notice—To all builders concerned, I shall not be responsible for bills contracted in building by Martha M. Goodell.

"Silas Goodell."

Hard Worker at 94.

Enos Ware of Shelburne Falls, Mass., who celebrated his 94th birthday anniversary last week, is still hale and hearty. He has the past season taken sole care of a large garden and twice hoed three acres of corn. He walks nearly a mile to church pleasant Sundays.

Lunacy on Increase.

Ten years ago in England and Wales there was one insane person to each 324 of the population; now the ratio is one to each 288. The increase in lunacy is attributed to a considerable degree to the intense strain of modern life.

Wood Cut During Coal Strike.

The last of the wood that the city cut several years ago around Woodward pond and hauled into Keene, N. H., at the time of the coal strike, is now being burned at the fire station and at city hall.

Americans Going to Canada.

In 1896, American immigration into Canada amounted to only forty-four persons, and in 1903 it amounted to 47,780 persons.

ODD INCIDENT OF WRECK.

Collision of Such Force That Two Cars Are Made One.

In the recent railroad accident on the Worcester, Nashua & Portland division of the Boston & Maine at East Barrington, N. H., when an extra freight train from Nashua crashed headon into an extra freight from Portland that was waiting there to meet it, a Boston & Maine car on the train standing still disappeared and for hours the efforts of the railroad men to find it were unavailing.

The accident occurred a little after midnight. From that time until daylight the railroad telegraph operators along the line from the scene of the wreck to Portland made the wires hot in their efforts to trace the missing car, as it was thought that it might have got uncoupled and jumped from the train, or had been left at some station.

The mystery of the lost car was solved at dawn, when the car was found driven completely into a car of the Pennsylvania railroad. The cars had been telescoped in such a way that by lantern light they looked like one whole car, and had thus escaped notice.

The telescoping of these cars was regarded as remarkable, inasmuch as they were in the train standing still. So tremendous was the shock that the engine of the stationary train was forced back against the Boston & Maine car powerfully enough to send it through the Pennsylvania car.—Boston Globe.

Reported Meteoric Display.

John M. Skofield, a clerk in the steamship office at Bath, Me., whose duties required him to rise shortly after midnight, reports that at 3 o'clock on a recent morning he was dazzled by a meteoric display in the northeast in the form of an object about the size of a barrel. It was straight up and down and illuminated the entire sky with a brilliant light, lasting several seconds. The same flash was reported by the officers and men on various craft along the coast.

Long Finger Nails.

They belong to a wealthy native of Annam, who prides himself on their length as proof that he doesn't work.

American Flag High in Air.

The coast artillery station at Fort Hunt, Va., on the Potomac, opposite Fort Washington, is to have a flagpole from the top of which the garrison flag can be seen for many miles. The new pole is about 125 feet long. It is in five sections, and is built up of piping held together by steel bands. The pole will stand on a high eminence at the fort, and the flag at its top will wave to the breeze about 300 feet above the level of the river.

Dog No Match for Wildcat.

A dog belonging to a man named Grey of Georgis Corner, Me., went out in search of foxes the other day and ran on to a genuine loupcervier. Mr. Grey heard the tumult in the woods ahead and rushing up to shoot the fox was surprised to see the dog prone on the ground in a very dilapidated shape with the big cat high up among the branches contemplating a fresh assault. He avenged the attack on the dog by slaying the cat.

Frame from Historic Wood.

Capt. C. A. Hoffnagle recently presented the Seth Warner chapter, Daughters of the American Revolution, at Vergennes, Vt., with a frame for its charter. The frame was made by Capt. Hoffnagle from wood taken from one of the boats of Arnold's fleet which was sunk in Arnolds bay, a few miles from Vergennes, Oct. 11, 1776.

Cigar Over Century Old.

A cigar which is 120 years old was discovered this week in the walls of the old Parks mansion at Danville, Pa., by Joseph I. Seechler, who is remodeling it. He found the cigar in a hollow between two large stones in the wall. It was wrapped in oiled paper and was well preserved. It still preserves its odor.

Benjamins Franklin's Courant.

Thomas C. Bradbury of Biddeford, Me., is the owner of a copy of the New England Courant, which is dated "From Feb. 4 to Feb. 11, 1723." The copy, which is devoted for the most part to a speech of the king, states that the Courant "is printed and sold by Benjamin Franklin."

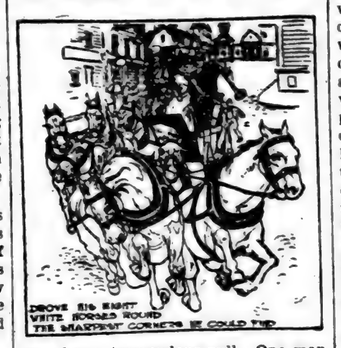
Ignorance in Coal Region.

A student of the population of the anthracite region of Pennsylvania reports that there are 630,000 people inhabiting that section, of which 430,000 are foreign born. Of this number over 50,000 cannot read or write.

CATCH THE POPULAR FANCY.

Queer Methods Indulged in at English Elections.

A general election in England is not a great national campaign in the sense that it is here, but a congeries of local fights. The candidate is chosen by the general committee of the local party, usually called the "Four Hundred." A well-known and popular local man is preferred even to a statesman of national eminence. The candidate who is a good sports-



man has a tremendous pull. One man was recently elected in a sport-loving city of Yorkshire simply because he was one of the best amateur football players in England. The Hon. Philip Stanhope, who used to be called the "Prince Rupert of the Liberals," won a forlorn hope in a rural constituency by the skill and daring with which he drove a coach and eight white horses. He didn't trouble about speech-making or canvassing the electors; he simply sat on the box of the coach, a fine figure of a man, and drove his eight white horses round the sharpest corners he could find, laughing gayly as he faced death and gallantly saluting all the girls he passed along the road.

Fed by Machinery.

An American farmer owns a small tract of land which he has stocked with a few dozen chickens. As he is compelled to be away from his home during the day he studied out a scheme for caring for his chickens during his absence. In each pen he has erected troughs to hold food for the hens, and these troughs are connected by wire with his house. Within the house he has connected the wire with an alarm clock. When he leaves home in the morning he sets the alarm clock at the hour for feeding the chickens, and by an ingenious arrangement when the time arrives the alarm goes off, the connecting wire releases the troughs, and the chickens make a rush for their food, which is spread before them as if their owner did the work in person.—London Tit-Bits.

Street Shaving in China.

The topsy-turvy methods of China are curiously illustrated in the case of the Pekin barber, who, instead of waiting for customers, goes out to seek them. He carries his shaving apparatus and a stool with him, and, rings a bell to attract the attention of likely customers. The man who wishes to be shaved hails the barber, who places his stool on the ground for the customer's use, puts a bowl of water on the little stove he carries, and having lathered his brush sets to work. The charge is not high. For a sum equivalent to a cent he shaves the customer's head and smooths out his eyebrows.

The Yankee Flyer.

"Giddup!" the Simian jockey said,
And gave his steed another stripe,
The zebra to the finish led
And won the contest by a stripe.

The stars he saw were numerous,
And that is why, though filled with gripes,
He murmured, being humorous,
"They ought to call me Stars and Stripes."

Three Brothers in Congress.

Examination of the roll of the Thirty-seventh congress reveals the fact that William Pitt Fessenden, Samuel C. Fessenden and Thomas A. D. Fessenden, three brothers, were all members of that body, the first named being in the senate and the last two in the house. All three were graduates of Bowdoin college.

Record of Missouri Church.

Antioch Presbyterian church, Callaway county, east of Mexico, Mo., has a remarkable record. During the eighty-five years of its existence it has never been without a pastor more than a month at a time, and in all that time it has had only three pastors.—Boston Globe.

Cigars for Russian Soldiers.

A Prussian firm has received an order from the Russian government for 4,000,000 cigars for the army in Manchuria. They are to cost $1.20 per 100.

BIRD LIGHTED STREET LAMP.

Simple Solution of Incident That Puzzled Authorities.

In a suburban town, where the streets are lighted by gas lamps, a curious thing happened. A gentleman noticed that for several nights the gas was not lighted in front of his house and reported the matter to the gas company. The lamp-lighter who had the street in charge was sure that he had lighted it each night. Later the gentleman noticed that the lamp was often lighted through the day and decided that some mischievous boy was responsible for it. Keeping a close watch for the offender, he was astonished to see the light flash up when not a soul was near it. He placed a ladder against the post and climbed up to investigate the matter. He found that the two chains which turned the light on and off moved so easily that the slightest touch was sufficient to send them up or down. But they could not move of their own weight nor by the wind. Still more puzzled, the man returned to his watch at a discreet distance and was soon rewarded by seeing a wren fly to the lamp, perch itself on the ring at the end of the chain, and give it a pull which lighted the gas. He then remembered that a wren had reared a brood in the lamp that year.

An Elephant's Strength.

The elephant is great as a traction power. Experiments have shown that a horse pulls about one-sixth of its own weight, whereas an elephant can pull its entire weight. This might be emphasized by the fact that an elephant is six times as big as a horse. In India for centuries it has been the custom to utilize elephants to push

instead of pull wagons, but now it has been shown that they are unequalled as pullers. Two of them in carefully arranged tests raised 6,500 pounds. One raised a safe weighing more than a tone. That was dead weight, and the feat, as one will see, is different from mere pulling. Recently at Bridgeport there was a tug of war between elephants and a locomotive, in which the huge beasts developed surprising pulling power. The engine was nearly wrecked.

Either a Fake or a Freak.

Considerable money is being risked in Trenton, N. J., on the question whether or not Albert E. Herpin is a sleepless wonder. Herpin contends that he has not slept a wink in ten years and that throughout this ordeal of wakefulness his health has remained unimpaired. About half the population of Trenton and its suburbs are firm in the conviction that Herpin's sleeplessness is a fake. The other half, including a number of physicians who have studied Herpin's case, believe the wakeful Trentonian's story and stand ready to back it with coin. Herpin will give a public test of his strange wakefulness for a purse of $1,000 and will be closely watched for thirty-one days.

Where Centenarians Dwell.

Higher latitude does not seem conducive to long life, as more people over one hundred years old are found in mild climates than in any other. According to the last census of the German empire, of a population of 55,000,000, only 8 have passed the hundredth year. France, with a population of 40,000,000, have 213 centenarians. In Scotland there are 46. Sweden has 10, Norway 23, Belgium 5.

Landowner's Poor Judgment.

The corporation of Liverpool wanted some land to add to the city's watershed, but offered only $2,000,000 for it, whereas the owner wanted $2,285,000. But the parties submitted the matter to arbitration, and the arbitrators fixed the value of the land at $692,555.

Country Noses.

It needs the man with the busted nose
To appreciate the "Grecian."
It needs the man with the Grecian nose
To scent out the "patrician."
It needs a man of patrician beak
To recognize the power
Of sheer brute strength and brawn and force
Of "Champion of the Hour."

Interesting File of Almanacs.

Among the possessions of William S. Boothby of Cornish, Me., is a file of the old Robert B. Thomas almanac from 1811 to the present year.

THE UNION.

Published every Thursday at Clanton, Chilton county, Alabama.

Wallace C. Edler, Ed. and Pub

Subscription price, in advance, per year, $1.

For advertising rates, call at the office, Seventh street, between First and Second avenues.

Entered April 25, 1903, at Clanton, Ala., as second class matter, under act of congress of March 3, 1879.

NOTICE TO CORRESPONDENTS.

All communications to the Union must be signed by the writer's real name as well as that name which they wish to put in the paper. Letters must reach the editor Tuesday morning to get in the same week. While we will publish any and all communications complying with these requirements that do not contain any improper language, we are not responsible for the opinions expressed. tf

UNION CLUBBING LIST....

The **UNION** *and* Yellow Jacket, **$1.00**

The **UNION** *and* Home and Farm **$1.00**

The **UNION** *and* Weekly Montgomery Advertiser. **$1.25**

The **UNION** *and* Weekly Atlanta Constitution. **$1.50**

The **UNION** *and* Semi-Weekly Globe Democrat **$1.50**

The **UNION** *and* Saturday News **$1.25**

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?

POLL TAX.

Now, every one of our people be sure to call on the tax collector and pay their back poll taxes, pay up and get into shape so that you can vote on stock law or school tax when they come up, as they surely will the coming year. In paying your poll tax it is only taking it out of one pocket and putting it into the other. The money stays right in your own community and goes to the school. tf

AN ABSOLUTELY FREE OFFER.

The Union would like for everybody to accept from us a free complimentary gift—a year's subscription (which is 50c per year) to the Dixie Home, one of the largest, brightest and finest illustrated magazines in the world. It is full of good reading and is the very paper to go into every home in the south. Now, if you want to receive this family magazine a whole YEAR FREE, all you have to do is to pay amount you are in arrears, if any, and send us $1 for another year's subscription to the Union. The Dixie Home will come to you absolutely FREE.

This is one of the best and most liberal offers ever made by any publisher. So come on at once, and renew your subscription or become a new subscriber and secure this magazine FREE. tf

Stock of Goods Burned.

Decatur, Ala.—Fire at 1 o'clock Tuesday morning caused a total loss of the stock of the China Hall, about twelve thousand dollars, more than half covered by insurance. W. J. Nesbitt, the proprietor, is already buying new stock, and will reopen at once.

The building, owned by Judge William E. Skeggs, was only slight injured. The origin of the fire is not known.

KILLED BY HUNTERS.

Florence, Ala.—The news has just reached Florence of an accidental killing which occurred Saturday morning, eighteen miles from here on the Huntsville road. The victim was Buford Hale, the 14-year-old son of J. J. Hale, a farmer.

He was returning home from a store in the neighborhood when he saw boys in a field hunting. He joined them, and in a scuffle which followed, a gun in the hands of Robert Heathcote, an eighteen-year-old companion, was discharged, killing him instantly.

CANE GROWERS' CONVENTION.

The following letter explains itself. Governor Cunnigham has appointed W. Y. Nix, of Beat 7; E. J. Jones, of Beat 3, and J. J. Letcher, of Beat 8, as delegates to this convention, but every one should go that can. The car fare is low, being one fare, plus 25 cents, for the round trip, good to return until January 30th and accommodations at hotels and boarding houses can be had at very moderate rates by addressing L. L. Gilbert, secretary C. and I. Ass'n, Montgomery, Ala. Visitors to the convention can no doubt gather a good deal of information about cotton in the side talk among the delegates:

Louisville, Ky., Jan. 6, 1905.

Clanton Union,
Clanton, Ala.

Gentlemen:

The Interstate Sugar Cane Growers' Convention assembles in Montgomery, Alabama, January 25, 26, 27. It promises to be the greatest agricultural gathering ever assembled in the South. There will be more prominent speakers from very near every section of the United States than have ever addressed any similar gathering. People from every direction should, by the thousands, attend this meeting. Every farmer, or others, who are interested in the agricultural advancement in the south should attend this meeting.

The following are the names of the persons who will address the convention.

Hon. James Wilson, Secretary of Agriculture; Dr. W. H. Wiley, Chief Bureau of Chemistry U. S. Department of Agriculture; Dr. W. C. Stubbs, Director of Louisiana Sugar Experiment Station, New Orleans, La.; Prof. S. B. Ross, State Chemist, Auburn, Ala.; Prof. J. M. McCandless, State Chemist, Atlanta, Georgia; Prof. W. L. Hutchinson, Director of Mississippi Experiment Station; Hon. John Dymond, Editor of Louisiana Planter; Hon. E. J. Watson, Commissioner of Agriculture and Immigration, South Carolina; Mr. W. B. Roddenberry, of Cairo, Ga.; Col. R. R. Poole, Commissioner of Agriculture, Alabama, and other distinguished speakers will be present and address the convention.

I am indebted to Mr. D. G. Purse, the President of the Association, for the following information:

"An important fact for consideration just now is that with Cotton at even 7 cents in the interior, and the highest grade Cane Syrup at 30 cents at Central Mills, one acre of Sugar Cane, is more profitable than 50 acres of Cotton, as it is claimed that it costs 6 1-2 cents, on average, to make Cotton.

"Notwithstanding these facts, no one suggests the displacing of a single acre of Cotton to replace it with Cane. Our sole purpose being to advocate its value as an auxiliary money crop in the South in diversified farming."

I send you a few posters regarding low rates to this convention. I think it would be the greatest thing for your section if you could induce a large number of the farmers and friends of the agricultural advancement of the south to attend, and see what is doing and can be done.

Please see that the low rates and dates are known and let us start for our direction this cane industry that is making Louisiana, Georgia and other sections growers of cane large sums.

Yours truly,
G. A. LARK,
tf Gen. Im'n & Ind'l Agt.

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, leaves himself liable to arrest and fine, the same as for theft.—Ex.

tf

WANTED.

Carpenters to meet us at Beth Salem church in Beat 6, near A. T. Hathcock's, on Saturday, January 28, 1905, about noon, and there submit estimates for contract to put up a church house.

THE BUILDING COMMITTEE.
tf By A. T. Hathcock, Ch'm.

RANDOLPH.

The north wind's chilly blast comes rudely against our dwellings, but if there is sunlight within, how happy is that home, and we are pleased to think of the many happy homes where love reigns supreme. Jack Cox left here on Monday for Texas. John Weeks has been on a visit to Jefferson county. Mr. Lavender, of Centerville, was in town Thursday night. Richard Hicks and Murk Smitherman were here Thursday. S. E. Waldrop, of Macedonia, was in town Monday. People here were made sad to hear of the death of Dr. J. B. Adams, at Clanton. This was one of his former homes. His face was familiar on the streets of Randolph, but we will see him no more. We are glad to learn that he died a victor, so all can have the victory in death, but in life over sin and disease. W. E. Thomas was a pleasant visitor Monday. D. Z. Merchant and daughter, Miss Lizzie, were in town Monday. H. G. Thompson has returned from Selma. Major Howison attended the cotton meeting at Centerville on the 10th. Prof. John Martin has charge of the school at this place. Mr. and Mrs. J. D. Hodgens were in town last week.

"ONE OF THE BOYS."

BEAT NINE ITEMS.

Monday morning was the coldest yet, the thermometer showing 16 degrees above zero. Some members of Cedar Grove church met last Sunday and organized a Sunday school with Prof. L. E. Brown as superintendent. We wish them success. W. M. Pierce, one of our most energetic and prosperous farmers, went to Clanton Monday. I. N. Gentry has bought his brother's (Doc) interest in the gin and grist mill formerly run by the Gentry Bros. We learn that "Doc" has bought a farm in the eastern part of the county and will move soon. We regret to lose him. Judging from the piles of lumber we should see some new buildings around J. M. Poole's soon.

Yours with best wishes.
"NIM ROD."

OLD TIME HOME RELIGION.

Rev. Job Reynolds.

There is no greater need today than a quickening in Home Religion. It is sadly true that an irreligious home life is evident in the social, domestic and other crimes that shame us; there is no safe guard of the state or church so strong as that which godly homes furnish. When unbelief or evil gets in the home the floodgates of sin open and all wrong finds an alley. There is no power to undo that wrong except God's power, a man must live in touch with the Savior. The church suffers at the hearth stone of today. It is very difficult to teach children in the Sunday school when it is supplemented by prayers and example at the home, the responsibility of parents is very great. No condition, not even sickness, can excuse us; it is easier to live right than wrong, to trust and obey God rather than the world, the flesh and the devil, and the difference is as between light and darkness. God's word puts a distinct mark upon the Christian home, neither wealth nor earthly comfort can take the place of the family altar. A prayerless home is like unto a house without a roof; it is complete. A family gathered about the altar of prayer in the morning, listening to the word of God and relying upon His care through the day, that is a powerful example and testimony, and the nearest approach to heaven that we can see on earth. God help us all to do our duty.

MARS HILL.

It is about time we made up our minds about how much corn and how much cotton we intend to put in this year. I say more corn, peas, potatoes, oats, etc., and less cotton, and then we will get something for our work. There has been a good deal of wheat sown in this community, and our farmers seem to realize that it is to their best interest to raise something besides cotton. Mr. Cofer is rather sad because business is dull, though I think he should be in good spirit after selling his sons, Will and Thomas, his old home place. School has been stopped a couple of days owing to the bad weather. W. E. Langston has gone to Blocton and Bessemer looking for a railroad job. I hope he will have success. Columbus Scott don't seem to want to swim the Warrior river on his way to Eutaw any more before summer. Rufus Langston went to Eutaw for a railroad job; was gone 5 or 6 days, and then returned home and says he is sure glad to see his folks after his long absence. O. P. Scott is waiting for moderate weather so he can go fox hunting. Success to THE UNION and its subscribers.

"MARSHILLIAN."

IN MEMORIAM.

Last Thursday morning Death took little William Lawrence, son of C. B. and Julia Huett. Despite all care, the little spirit was wafted home to God. Only a few days ago the house was adorned with God's conception of sweetness, now it seems all darkness and desolation. What a contrast, what a loss to the parents. They were so contented and happy and now their much loved little one is gone, and they wonder why it is. But, how consoling to think of the little one's life above, no conflict or strife, but full of love and sweetness in the realm of our heavenly Father. We pray the Holy Spirit to be with the bereaved parents in their lonely hours.

W. Y. K.

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union, both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer. tf.

PROGRAM OF TEACHERS' INSTITUTE,

To Be Held at Concord January 20-21, 1905.

FRIDAY.

Total receipts same week, '04, 6,497.
Price same date, 13 1-8.

LOCAL AND PERSONAL.

J. E. Hart, chancellor of the Louisiana Mutual Protective Association, was in Clanton Monday. This is a new order and Mr. Hart has started a lodge in Thorsby, called Eureka lodge, and is intending to start one in Clanton.

Judge L. H. Reynolds sat as a committing magistrate on Monday in the case of Harrison Gant charged with the killing of Columbus Atchison. Both parties are colored, and the affair seems to have been the result of an accident while the boys were out hunting, so Judge Reynolds turned him loose. These preliminary trials are supposed to be held by a justice of the peace, but from some cause they are put on our probate judge.

If you need corn, oats or hay, go to Downs'. tf

Mr. and Mrs. Dahl, of Thorsby, were in Clanton Thursday.

John L. Winslow, of Pine Hill nursery, killed one of his O. I. C. hogs last week that weighed 610 pounds. The hams and shoulders weighed 100 pounds and he made 8 gallons of sausage meat, and 22 gallons of lard; that's some hog, and the kind to raise.

W. R. Jackson was a pleasant visitor Saturday.

W. H. Goodgame was a welcome caller Saturday.

J. O. Culp was in town Saturday.

C. C. Swint was in town Saturday. He now lives near Liberty Hill.

R. A. Hancock was in Clanton Saturday. See the notice of his auction sale. He intends moving to Hoke's Bluff.

Lee Vickers was in town Saturday.

Painter James M. Moore has done an artistic job in Judge Reynolds' house, and the judge is pleased with it and moved his family in Wednesday.

J. M. Moore, the painter, is now at work on H. B. Oliver's new house at Verbena. He is getting all the jobs that call for first-class work.

Frank Massey was in town Tuesday and reports the arrival of a fine girl baby at his house Monday, and that mother and child are doing well.

J. Aus Baker was in Clanton Saturday.

Downs has 1,000 pair of shoes at your own price. Come and get them. tf

L. A. Calloway was in town Saturday.

W. M. Pierce was in Clanton Monday.

W. H. Wilson visited Clanton Monday.

Fonda Hathcock was in town Tuesday.

Mr. and Mrs. W. M. Wilson, of Evergreen, are in possession of a fine girl baby, which arrived last Thursday. Mother and child both doing well.

J. P. Rushing and son Jim were in Clanton Tuesday.

A freight car broke down at Bice's ovens Sunday and stopped traffic on the L. and N. for several hours.

Supt. Pipes, of the L. and N., who had his arm broke a week or ten days ago, is doing very well. Dr. Matthews is attending him, and he will soon be "about as good as new."

Albert Headley was placed in involuntary bankruptcy Saturday on the petition of Schloss & Kahn and others of Montgomery. Judge A. E. Stratton has appointed W. M. Wilson receiver and Mr. Wilson is now taking an inventory of the stock, etc. The liabilities are said to be about $9,000, assets not known as yet. The slump in cotton done Mr. Headley a job.

The Alabama State Horticultural Society will meet in Montgomery January 24 and 25th. Among the papers to be read will be one by P. C. Smith, of Thorsby, one of the vice presidents of the society, on "Spraying for San Jose scale."

W. I. Mullins is about well after his long siege of illness. It will sure be good to see him out among us once more.

N. A. Kicker spent Sunday and Monday in Birmingham.

Mrs. Oscar Bristow was fatally burned at Dolive on the 16th inst. She was formerly a Miss Dudley. Interment was made at Jemison on Wednesday. The deceased leaves a husband and two months' old child.

Eureka lodge, of Thorsby, L. M. P. A., held the regular meeting January 14th in their hall on Montgomery avenue. Four applications for membership were received and accepted. The next regular meeting will be on January 28th, when work will be done in the degrees of Protection, Charity and Friendship. Visiting brethren are cordially invited.

H. I. Honeycutt and wife spent Sunday at the home of Judge Honeycutt in beat 3.

MARRIAGE LICENSES.

G. B. Williams and Miss Sula Abbott. F. M. Lockhart and Miss Della Culp. W. J. Sewell and Miss Lula J. Walker. Frank L. Broadhead and Miss Fannie M. Wright. E. W. Cooper and Miss Lucy P. Hayes. James Monroe Ramsey and Miss Arie Klinner. Jesse Chambers and Miss Sallie Bridges.

COLORED.

Solomon Davis and Beulah Williams. George Smith and Lizzie Spair.

DEATH OF M. L. SMITH.

Mr. M. L. Smith died at Cooper Sunday morning in the 77th year of his age, and was buried in Clanton cemetery Monday afternoon. The deceased leaves a widow and four children—R. M. Smith, J. Wiley Smith and Attorney A. C. Smith and Mrs. W. M. Kelley, of Sylacauga. The funeral was conducted by Clanton lodge of Masons, assisted by members from Amand, Bozeman, Jemison and Troy lodges. The impressive burial ritual was well rendered by the brethren. There was large attendance considering the cold weather, seventeen grandchildren being among the mourners. Bro. Smith had been a resident of Coosa county for many years, but moved to Chilton in 1899. His death was caused by cholera morbus, which proved fatal owing to his advanced age. Bro. Smith has been a member of the Masonic order for about 50 years, and his death removes another of the sincere supporters of its tenets.

TEACHING OYAMA TO SHOOT.

An American Gave the Japanese General His First Lesson in Shooting.

Horace Fletcher, in the World's Work writes: Twenty-five years ago I was an experienced rifle-shot, and could hit a moving object every time. The 22-calible rifle and machine-made cartridge, which came into general use in the seventies, made extensive rifle practice possible. I wrote and published at the time a pamphlet on how to shoot with a rifle, entitled "The A. B. C. of Snap-Shooting," which came to the attention of regular-army officers attached to the department of the Pacific at San Francisco, and was used for a manual by the Regulars. It happened that copies of the pamphlet reached Japan, where I spent some time soon after. Japan had just begun to make a military organization on the most modern lines, and Marquis Oyama was minister of war. He invited me to visit him in his home at Tokio, and showed great interest in the method of learning to shoot at a moving object with a rifle. He had already seen the pamphlet.

I had a number of American rifles and ample ammunition with me in Japan, and Marquis Oyama, and the then Colonel Murata (inventor of the Japanese military rifle) joined me several afternoons at target-practice. They entered enthusiastically into the spirit, Oyama in particular, showing the enthusiasm of a boy. I shall never forget his keen joy the first time he hit a moving object with a bullet. It was a tea-pot thrown in the air, I believe, and when it came down in dust and pieces he capered about and screamed in his delight like an excited schoolboy.

After several afternoons at practice Marquis Oyama and Colonel Murata became nearly as skilful as I was. They could hit the centre of the target 80 percent of the times tried, and that was only 20 percent less than my own average at that time. They were full of confidence that they could close the gap of difference between us in a few more afternoons of practice in spite of the fact that I told them 20 percent of practice readily brought 80 percent of skill, but that it required 800 percent of habituation to acquire the last 10 percent of absolute sureness. I had expended hundreds of thousands of cartridges to learn this.

But the significant features of the practice on this and other occasions was that Marquis Oyama became fully convinced that a surprisingly high percentage in hits is possible with strict attention to practice in snap-shooting.

The Cable to Alaska.

The Sitka-Seattle cable, 1070 miles long, which was completed and thrown open to public use on Aug. 28, has since been operated most successfully, its electrical conditions exceeding anticipations. The commercial business of one month recently closed up amounted to over $10,000, and the prospects are that the receipts of the next year will exceed $100,000. The tariffs on commercial messages are: From Seattle to Sitka, $1.50; to Skagway, $2; to Valdez, $2.50; to Fort Egbert, $3; to St. Michael, $3.50; to Nome, $4.

The Alaskan telegraph system was first started in 1865. The cable section, starting from Seattle, touches at five other points, the total length being something over 2000 miles. The land system includes more than 40 stations, separated from each other by distances varying from three to 60 miles. Wireless telegraphy is also used at one point for transmitting messages a distance of 107 miles. In running the land lines much difficulty was encountered, both on account of the rough country through which they passed and the severe climate.

There are 1000 American teachers in the Philippines centered in 386 larger towns out of 934 towns in the entire archipelago. Two thousand primary schools are in operation, and they employ the services of 3000 native teachers.

The St. Paul man who turned up his wife's fine clothes in order to break her of the theatre habit came very near to getting a broken head.

Sport and Health Sacrificed for Success

By the Editor of the Chicago Tribune.

SLIP on an overcoat. Wrap a muffler around your throat. Grab a place at the rope along the side of the field. Stamp your feet to keep them warm. Light your cigarette for distraction. Cough. Sneeze. Turn edgeways to the sharp wind. Shout encouragement to the men who are doing the work on the gridiron. Catch pneumonia. But be careful not to enter into the sport on your own account. Remain a spectator. Then you will be a perfect illustration of the way in which football assists the physical development of forty-nine out of every fifty students.

This is not a fact against football as a game. It is a fact against football as an institution.

Football as a game was based on sport and exercise. Football as an institution is based on the desire to win. It was the desire to win that first put professionals on college teams. It is the desire to win that still involves college teams in what President Faunce of Brown University in the World Today calls "systematic prevarication" with regard to the qualifications of their members.

It is the desire to win that causes colleges and universities to send drummers through the preparatory schools to induce young athletes to choose the scene of their future studies for reasons entirely apart from mental or social development. Finally, it is the desire to win that surrenders foot ball exclusively to the few men in each college who stand a chance of winning. No one wants to play football unless he is on the main team or the scrub team. And the men who can make those teams are already the strongest and healthiest men in the college community.

The desire to win is absolutely distinct from the desire to take exercise or to have sport. It brings into the domain of sport and exercise the alien worldly maxim that nothing succeeds like success. If success is not reached, what's the use?

Foot ball is, on the whole, a splendid game. All that it needs is to be kept a game, a game for the average student, played by him for an hour or two in the afternoon for the sake of playing.

A Sea-Lover

She said: "Oh, I long and yearn, this year,
For the sea—my own blue sea!
Where I can roam with no one near,
And dream and muse, and be free.
I long to lie where the billows roll,
And the white gulls skim and dart—
Yes, that alone is life to the soul
And peace to the tired heart!"

She went—and sat in a swaying chair
On a wide veranda's space
And she gazed and gazed at the women there,
And she never once turned her face
From the chic creations and costumes fine—
Then back to her home, with a sigh
Of heart's content: "It was just divine!
Oh, that glorious sea and sky!"

—Puck.

CAUGHT RED HANDED

BY FRANK H. SWEET

(Copyright, 1901, by Daily Story Pub. Co.)

The girl had caught him red-handed, slipping into their horse stable; and during the past week they had lost three of their best animals. But the prisoner was imperturbable, even when in the first excitement of discovery she had fired a bullet across his shoulder as a warning to accept the capture without protest. He had turned calmly, but with an odd look of amazement in his eyes; and as he raised his hat—with his left hand—and tried to say something about wandering into the valley by accident, she had cut him short, with a curt, "Move on ahead there, and don't attempt to touch your weapons."

"If you will excuse me, miss," he observed quietly, after they had covered half the distance to the house, "isn't it rather odd to build such a home as yours in so wild a place? I did not suppose there was even a log cabin within a hundred miles."

"My father likes the location," the girl said coldly, "and so do I. Here we are now—that is my father on the piazza."

As she spoke they passed from behind a hedge of transplanted New England barberry bushes, brilliant with their scarlet clusters of seedy fruit, directly in front of the entrance. Her father had half risen and was looking down at them inquiringly.

"This is a man I caught in our horse stable, father," the girl explained. "He says he was looking in out of curiosity, but I believe he is the thief who has been taking our horses. You can talk with him though, and find out. Watch him closely, for he's armed. I will go round to the kitchen and see if the Chinaman has got dinner about ready."

As she disappeared in the house the stranger turned away to hide a smile. These people were not very experienced in thief-taking.

"You will excuse my not rising, sir," the host was saying courteously, "but unfortunately I am at present a little indisposed. Please step up on the piazza and take that chair. Place the books upon the table."

There were several small tables on the piazza and a number of chairs, and tables and chairs were all occupied by books. The prisoner went to the chair indicated and removed the books to the table at the man's elbow. As he did so he gazed at the thin, smoothly-shaven face with a puzzled look that was half recognition.

But the keen, quizzical eyes were piercing him through and through, and as he sat down he had a feeling that he was back at college and his professor was probing him for the truth of some misdemeanor. Soon, however, the man's face cleared and the searching eyes lost their look of fixed inquiry.

"You are blameless, sir," the incisive voice declared conclusively, "and I apologize for my daughter's suspicion. Perhaps, though, it was natural under the circumstances. Of course you will stay to dinner. May I ask your name?"

"Reynolds Phillips."

All the time the man had been speaking Phillips' gaze had been

"Move on ahead, there."

wandering longingly over the profusion of books. They were a familiar avenue back into his past. Involuntarily he reached out and picked up one, opening at the fly-leaf. As he did so he uttered a surprised exclamation.

"President Elliot! He gave you this?"

"Yes. Do you know him?"

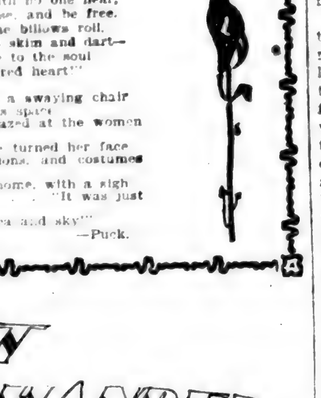
"He was my college president."

"What!" The man half rose in his chair. "I have been a professor in his college a good part of my life. When were you there?"

"I graduated nine years ago."

"Nine years. Let me see—yes I was in Europe a year or two about that that time for my health. But we must both have been in the college during your undergraduate days at some time. Phillips, Phillips—the name seems familiar."

"Yes, we were together nearly three



"It is a perfect combination—with you."

years. I remember you perfectly now. You were my professor of literature. I half recognized you when I first stepped upon the piazza."

The professor's hand was suddenly extended. "Let me shake hands with you, Phillips," he said. "I never expected to see any of my students again. It is delightful. What?" as Phillipps put out his left hand somewhat awkwardly, "is your right arm disabled? What is the matter?"

"Just a little scratch," hastily. "Men hunting in a wild country like this are running into something all the time, you know."

"Recent?"

"This morning."

"Been attended to?"

"N—no, not yet. But it doesn't matter. I will attend to it as soon as I go away. I don't mind a little thing like this."

"Mary shall look after it at once," decisively. "She is a very good surgeon, and included medicine in her curriculum. Mary! Oh, Mary!"

"Really, it doesn't matter in the least," interposed Phillips hastily. "I would much rather not have it looked after just now."

But the professor paid him not the least attention. When his daughter appeared he nodded toward Phillips' right arm.

"Wounded," he said, "and from the looks of that round hole in his coat sleeve I should say it was a bullet. That kind of cloth does not show blood saturation much, or I think we would have noticed it before. To think of him sitting here all this time with an arm too disabled to use, and not alluding to it. Mary, you must cut the sleeve away at once and attend to it."

The girl's face had grown white with sudden comprehension. She went quickly to Phillips, her gaze steady and direct.

"What is it?" she demanded.

But Phillips' was equally steady, and in his eyes was an impervious request for silence. And she understood.

"It is nothing but what is liable to happen at any moment to an adventurer like me," he answered, "and I assure you it is not worth a moment's uneasiness on your part. I would much rather you had not noticed it; but since you have, and to relieve any possible anxiety, I will submit. But please understand it was a mere accident, with no one to blame but myself."

One afternoon, a month later, Phillips and Mary walked down from the piazza, under the trees. The professor was asleep in a reclining chair at the far end of the piazza, a paper over his face. It was the first time Phillipps had left the house after a long, serious fever which had followed his wound. In Mary's eyes was a tender, surprised joy.

"It is good to see you out again, Reynolds," she said. "At one time I was afraid that—that——"

He turned his eyes away, gazing up the valley, conscious of the flush that was coming to her face. It was the first time she had called him by that name. There was joy in his own eyes.

"I shall always keep the bullet as the direct cause of my great happiness, Mary," he said, with a low laugh. "I had counted on spending the rest of my life in this wilderness, for I love freedom. But the prospect was never wholly satisfactory. Sometimes the influence of the East came over me, with a longing for its books, and I had to fight the feeling away. This valley now brings me the East, with cultured people to talk to, and with the freedom of the wilderness at the very door. It is a perfect combination—with you."

FORCED TO BE CLEAN.

Administering Baths in New York Municipal Lodging House.

In "Six Weeks in Beggardom," Everybody's Magazine, Theodore Waters begins an account of his investigation of the beggar problem for that magazine. The following is a partial description of his experiences, disguised as a destitute workingman, in the Municipal Lodging House of New York:

"After the medical examination we filed through the outer office, where we gave over our pedigrees and the envelopes, in which we had been obliged to put our trinkets, to the bookkeeper; and after that we went down a flight of steps to the basement where hundreds of dirty men were being made clean. Every man was instructed to remove his clothing and place it in a net bag given him for the purpose. The garments were then hung in a great oven and subjected to a temperature of 230 degrees F. The men meantime were compelled to take a handful of green soap and rub it upon their heads, and then to stand under a very Niagara of water which descended from taps in the ceiling. There was no escaping this drenching process. A big attendant armed with a mop handle inspected each man as he went under the water, and never failed to object vigorously when any attempted to escape while the slightest particle of grime remained upon him. I saw what I felt sure must be the dirtiest man in New York give up his clothes and go under the shower grudgingly, and after determined urging on the part of the attendant, come out clean. There were many such in the City Lodging House that night, but the majority of them welcomed the bath, the spotless night-gown, the comfortable slippers, and finally the repose on the cleanest of beds."

Up-to-Date Costume.

Mrs. Patrick Campbell, famous for her dramatic art and her pet dog Pinky Panky Poo, a Japanese spaniel of high culture, while in Washington recently went driving one day and incidentally dropped in to see a friend. The air was chilly, in fact cold, and Mrs. Campbell wore a long coat of Russian sable. Pinky or Panky or Poo was in a warm spot underneath the coat, his shaggy little head, his eyes, and white teeth peering out.

"Oh, what a lovely coat that is," exclaimed Mrs. Campbell's hostess as she stroked it; "and what an odd frog you've got there at the button," as she took hold of Pinky's head. Pinky repulsed the gentle squeeze with a snap.

"My heavens!" exclaimed the actress's friend. "What is that?"

"Oh!" exclaimed the actress laughingly. "It's just a little Jap thats got under a Russian's hide."—New York Times.

Poor Croesus.

If I were rich as Croesus—
Dear—not on riches, dear!
For I have you and love to-day,
And just to-day is here!
If I were rich as Croesus—
I pause again and laugh—
The half the joy of you and love—
Wealth could not buy the half!

If I were rich as Croesus—
I wonder if the flame
Of autumn leaves would be as red,
If skies would look the same.
If I were rich as Croesus—
Dear heart, I turn to you,
Would you hold me much dearer then,
Love me more than you do?

If I were rich as Croesus—
Dear heart, there's naught I lack,
And if I lost what now I have,
No wealth could bring it back!
If I were rich as Croesus,
And I were left alone,
Could golden dross bring back thy heart
To beat against my own?

Nay, I am rich as Croesus,
Far richer, too, I ween,
For there are hearts so close to mine
That naught may come between;
Aye, I am rich as Croesus—
I've held your hands in mine!
He never clasped you in his arms,
Nor saw your dear eyes shine.

—J. M. Lewis in Houston Post.

Queer Religion of Japan.

The emperor and the empire, the empire that is the people—these constitute the real religion of Japan, the great idea through the divine virtue of which the Japanese have accounted for themselves before the wondering eyes of a Christian world.

For his imperial majesty, Emperor Mitsuhito, the little brown soldiers of Japan joyously die, and for him do the thousands of bereaved ones suffer in proud silence that dreams in great peace of an afterward. And it is not weak indifference they display, these tearless ones; it is strength, the mightiest ever seen on earth.

By thousands they hear the grim news that robs them of all reason for living, and by thousands they retreat in splendid awe, tempered, bless God! by patriotic pride that has not its equal under the shining sun. Grief invisible racks the soul of Japan while she marches proudly on with a joy note in her war song.—Eleanor Franklin in Leslie's Weekly.

ABOUT THE LONDON "CABBY."

He Works Fourteen Hours a Day and Gets About Five Shillings Pay.

There are in London 2,711 cab proprietors, and of these 2,224 own fewer than five vehicles, says a writer in Outing. As you see, it is a poor man's industry.

The average price for hiring a cab is 12 shillings and 3 pence a day. In addition the cabman has to pay the yard fees. He gets two horses a day and is usually fourteen hours on the box. His license costs him five shillings a year. The tax of £2 on the cab and the 15-shilling wheel duty are paid by the owner. Taking it day in and day out, the cabby makes about 5 shillings a day. In the season he may take in more money, but as the hire is raised on him it comes to the same thing. If he is not content—and there is no reason why he should be—he does not grumble unduly.

Every day in London 120,000 people ride in cabs. Of course there is friction and there is a deal of noisy quarreling over fares, but so far as my experience goes the cabby is usually right in his estimate of the distances he has traveled and the money that is due him.

The cab horses are a good lot. They are worked six hours a day on an average. About three years in a hansom, however, will do up the best of them. Then they drift down to the four-wheelers.

Potato Flour.

While Irish potatoes may be eaten more extensively than any other American vegetable, it may not be generally known that they are capable of reduction to an excellent flour. In Austria, according to a government report, the manufacture of this flour is an important industry. Corn starch is largely unknown in Austria, potato flour being substituted. It is stated to be cheaper than wheat flour and makes a beautifully light cake. The potatoes are machined in such a manner that the starch is separated from the cells that contain it. Water is used freely, carrying away the starch into settling vessels. It is then refined, cleansed and dried. The residue is fed to stock and also used in distilleries, breweries and sugar factories. Potato flour is largely used by the Israelites in this and other countries during the Feast of the Passover, for as wheat flour is a strictly forbidden article during that festival, potato flour is a welcome assistant to the housewife, who, in her preparation of "Pesach" dainties, finds it capable of transformation into delicious cake.—Indiana Farmer.

The Vigil.

I see the window of my sweet—
The trellised window toward the west,
The odor of the marguerite
Beneath my footstep harsly pressed
Is faint and rare. I hear the beat,
It almost seems, within her breast
Of her thrice tender heart, and feel
Its vibrant passion, stir her rest!

And through the open window borne
In subtle tincture on the air,
The perfumes of the roses worn
At last night's ball a message bear
Unto my heart with passion torn!
Light-winged, they wander outward where
I stand, and whisper low unto
The eager ear of my despair!

What if—but vain the thought I fear
The lilac curtains drawn aside,
My sleeping beauty should appear
And I should see her tender-eyed!
Vain phantasy! The white dawn clear
Will touch her lids to waking wide;
Till then she dreams; but never dreams
Who watches in the moonlight here!

—New Orleans Times-Democrat.

Too Good for Him.

The man's unsteady legs and listless eyes were about the only evidence of his previous night's offense when he was arraigned in a police court the other morning.

"Now, if you have anything to say for yourself I'll hear it," said the magistrate.

"'S damn outrage," replied the prisoner, somewhat thickly.

"Ten dollars fine for contempt of court," announced the magistrate. "What have you to say now?"

"'S damn outrage," repeated the man.

"Ten dollars additional fine for contempt," said the judge. "I'll give you just one more chance to defend yourself."

"'S no use, Judge," came the reply, with considerable feeling. "You're too good at repartee for me."

Lock Your Jag in the Bottle.

Large locked corks, original in design, are being shown in the shops for Christmas presents. All of them have about as much silver, or nickel, as cork, but they fit in the average sized whisky bottle all right, and are really a decoration. Small Yale keys, only one for each cork, lock the bottle as tight as an office safe. If a man doesn't happen to leave his bunch of keys lying around loose his whisky is perfectly safe from purloining servants. If he loses his keys he must break the neck of the bottle to get at his tipple. No duplicate key can be made for him.

If a man prefers a certain blend of whisky, Scotch or American, he can leave it on his sideboard at home or take it to his club to be called for when required. Most club men would find this plan a great economy.

A Profitable Flower Bed.

Two hundred and twenty-one dollars and fifty cents' worth of violets were raised and sold by a young girl who employed her leisure time from household duties in flower growing. Her violet patch measured 20x25 feet the first season, and the violets were sold to a near-by florist at fifty cents a hundred blossoms, netting a profit of $92.50. The second season, having transplanted more violet plants in about ten feet more of ground, $129 was realized in the sales.—From How to Make Money.

Drinks Not Well Known

Violet cordial, a liquor beloved of Yorkshiremen, is one of the best of the home-brewed drinks. Made from freshly-plucked sweet violets, it is often kept for years by farmers, who drink it sparingly in tiny glasses, yet it retains all the delicious aroma of the fragrant flower from which it takes its name.

Home-made sloe wine is a drink which takes a lot of beating as a thirst-quencher. It is especially popular in Durham.

Cowslip wine is another prime favorite unknown to the inhabitants of cities. So, too, are a host of "teas," famous in rural parts not only for their refreshing, but also for their curative powers.

Years ago, before the tea from India and China could be bought cheaply, beverages brewed from mint, pennyroyal, dandelion, wild thyme, marjoram, camomile, balm, calamint and similar herbs, were almost universal.

Even to-day their fame is not dead, and they are frequently resorted to by housewives in hot weather, and when any small ailment shows itself in their families.

Leaves plucked from strawberry plants and currant bushes make a fragrant beverage, as do ribwort and thoroughwort, the latter both as a refresher and a curative, being found in very many households.

Strange as it may seem, a drink can be made from sawdust. Here is the recipe:

Two tons of sawdust are boiled with sulphuric acid for three hours, the liquid matter then extracted by pressure, neutralized, left for eighteen hours to cool and clarify, and then fermented for four or five days.

The resulting alcohol is afterward distilled and rectified, but a yield of about nine and one-half quarts of spirit to every hundred-weight of sawdust is obtained. Quantities of this are consumed in France.

Palm wine is made from the sap oozing from the cut-off blossom stem of the oily palm tree, and of the cocoa tree. It is a pleasant, refreshing beverage, and not sufficiently known.

Isitshimiyana is the weirdly named given to a deadly intoxicant made from molasses by the natives of Natal. An analysis of this drink made some time ago by an eminent doctor showed that it was 50 per cent stronger than any known alcohol.—Straw Stories.

Habits of the Flounder

The expression "as flat as a flounder" has become proverbial, but it does not apply to very young flounders, which differ so much from the adult ones that they can hardly be recognized as belonging to the same family as their parents. Most boys and girls are familiar with full-grown flounders, but very few of them, and few older people, know anything about the appearance of young flounders and the wonderful transformations they undergo.

The flounders begin life as do ordinary fishes. When they first emerge from the egg they swim vertically, with the head turned upward. Their bodies are symmetrical and their eyes are on opposite sides of the head. Gradually the position of the body changes from vertical to horizontal, and the fish remains thus for some time, swimming like ordinary fishes; but while still very small there is foreshadowing of the bottom life they are destined for, and they enter upon a series of remarkable changes.

The most striking of these changes is in the position of the eye. In some flounders the eye moves around in front of the head; in others it moves directly through the head. This shifting of the eye's position is accompanied by a change in the position of the body, which ceases to be upright and becomes more and more oblique. The side of the body from which the eye is moving gradually becomes inferior to the other, until by the time the change of the eye is complete the fish swims with its blind side underneath, and this position is ever after maintained. The flounder then ceases its free swimming habit and sinks to the bottom.

Some species of flounders are right sided and others are left-sided. In the right-sided forms the left eye moves to the right side, and the left side becomes undermost. In the left-sided species the opposite conditions prevail. It rarely happens that right-sided species have left-sided individuals and vice versa. In a few species both right-sided and left-sided fish occur in about equal numbers.—St. Nicholas.

Danger in "Big" Shooting

The disturbing element in hunting elephant or seladang or rhino has been always, to me at least, the feeling of uncertainty as to whether or not I could stop the animal if I wounded it and it charged me, as it did on an average of once in three times.

Based on my experience, therefore, I should place the elephant first and the rhino third after the seladang, which is fully as formidable as the Cape buffalo, and is miscalled the bison all over India. Each of these animals is dangerous on different and individual grounds; the elephant, though less likely to charge than any of the others, is terrifying because of his enormous strength, which stops at no obstacle, and the extreme difficulty of reaching a vital spot, especially if, with trunk tightly coiled, he is coming your way.

I know of no sensation more awesome than standing ankle deep in clinging mud in dense cover, with the jungle crashing around you as though the entire forest was toppling, as the elephant you have wounded comes smashing his way in your direction.

The seladang is dangerous, partly because of the thick jungle he seeks when wounded, but more especially because of his tremendous vitality and his usual, though not invariable, habit of awaiting the hunter on his tracks and charging suddenly, swiftly and viciously. It requires close and hard shooting to bring down one of these six-foot specimens of Oriental cattle.

The danger of the tiger and of the lion is in their lightning activity and ferocious strength; but you have the shoulder in addition to the head shot; it broadside; or if coming on, the chest, all sure to stop if well placed. The reason the rhino is so formidable is because its vulnerable spots are so hard to reach.

Its brain is as small in proportion as that of the elephant, and may be reached through the eye, if head on, or about three inches below and just in front of or just behind the base of the ear, according to your position for a shot.—Outing.

The Old Pirate's Dreams

As a man I write of the boyish dreams
Of yesternight by the coastguard's blaze,
When the sea-scarred sailor's war-plowed seams—
Suggesting tales of his lawless days—
Lividly glowed in the log-fire gleams,
As he sang this lay of lays:

The flag was as red as blood,
With a hairy spot o' black,
An' the Spider bared her deadly fangs
As she crawled on the windward tack;

He warmed to his story and clove the air
With his long clay pipe as he led his men
Into the heart of the battle's blare;
And he yelled his "Yo-ho!" once again,
Till he broke his "sword" on the arm of his chair.
With a stifled sob; and then—

The flag was as red as blood,
With a hairy spot o' black,
An' the Spider bared her deadly fangs
As she crawled on the windward tack'

"Why do your eyes ship, boy?" said he,
As he drained his mug and his lips he smacked
Then he told me of Morgan and Kidd
And rattled their deeds, their chains, and bones,
While the wind came moaning up from the sea,
And the tune rose, faint and cracked.

The flag was as red as blood
With a hairy spot o' black,
An' the Spider bared her deadly fangs
As she crawled on the windward tack;

He would chuckle a bit, then sort of choke
"Ah, boy! I could turn 'e sick an' pale
Wi' fright an' fire an' booze an' blood
In the tropic calm an' the reef-born squall
For I ha' trodden the red-stained oak
Under many an' many a queer, queer sail
And then he would hum and croak:

The flag was as red as blood,
With a hairy spot o' black,
An' the Spider bared her deadly fangs
As she crawled on the windward—
Crawled on the windward
Crawled on the windward tack'

—Stephen Chalmers in New York Times.

Bottled Sea Water Good

"I have never understood," said a doctor, "why somebody didn't bottle the Atlantic ocean and sell the water under a fine name as a mineral water.

"The water of the Atlantic contains some of the most wholesome mineral salts and has a decided value medicinally. Some of my patients keep it on hand much of the time, and profess to find it vastly beneficial.

"One of these men gets the sea water several miles off shore and at high tide so as to be reasonably sure that it is free from pollution. He bottles it in good-sized demijohns, and lets it ripen much as the famous juniper water of the Dismal Swamp is ripened for carrying to sea on board vessels making long voyages.

"Did you ever smell any of those Kentucky sulphur waters after they have lain barreled in a cellar for a few weeks? The odor is pretty bad, but it isn't worse than that of ripening sea water.

"When you take out the cork the whole household knows it. After while the sea water loses its offensive smell, and then it is ready for use.

"I thoroughly like it, and if I were in the habit of doing things that lead men to drink mineral waters before breakfast I think I'd prefer plain Atlantic water to a good many that I could name which sell at pretty high prices.

"I don't know whether my patients have ever calculated the cost of bottled Atlantic, but if the bottling was done wholesale instead of retail it ought not to come very high, and it is certainly one thing that no trust could ever monopolize. I've a notion that the fellow who first puts up sea water in an attractive fo[illegible] gets the attention of the public will make a handsome little fortune before his competitors can cut in and undersell or outadvertise him."—New York Sun.

A PLAIN TALK

On a Plain Subject in Plain Language.

The coming winter will cause at least one half of the women to have catarrh, colds, coughs, pneumonia or consumption. Thousands of women will lose their health and tens of thousands will be quite ill from chronic ailment from which they will never recover.

KEEP PERUNA IN THE HOUSE

Unless you take the necessary precautions, chances are that you, reader of this, will be one of the unfortunate ones. Little or no need be run if Peruna is kept in the house and at the first appearance of any symptom of catarrh taken as directed on the bottle.

Peruna is a safeguard, a preventative, a specific, a cure for all cases of catarrh, acute and chronic, coughs, colds, consumption, etc.

For free medical advice address Dr. S. B. Hartman, President of The Hartman Sanatarium, Columbus, Ohio.

The Largest Potato.

What is thought to be the largest potato ever raised in the state of Colorado was grown in 1904 by James Warren, near the city. The tuber weighed 2 3-4 pounds and is composed of several outgrowths, but is in no stem.

An oyster containing pearls of the value of 250 pounds was found by a fisherman at Neumunster, Germany, a few days ago.

Potash

is necessary for cotton to produce high yields and good fiber.

Write for our valuable books on fertilization; they contain information that means dollars to the farmers. Sent free on request. Write now while you think of it to the

2013 PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION

Well Known

plants and currant bushes make a fragrant beverage, as do ribwort and thoroughwort, the latter both as a refresher and a curative, being found in very many households.

Strange as it may seem, a drink can be made from sawdust. Here is the recipe.

Two tons of sawdust are boiled with sulphuric acid for three hours, the liquid matter then extracted by pressure, neutralized, left for eighteen hours to cool and clarify, and then fermented for four or five days.

The resulting alcohol is afterward distilled and rectified, but a yield of about nine and one-half quarts of spirit to every hundred-weight of sawdust is obtained. Quantities of this are consumed in France.

Palm wine is made from the sap oozing from the cut-off blossom stems of the oily palm tree, and of the cocoa tree. It is a pleasant, refreshing beverage, and not sufficiently known.

Issibumba, as the weirdly named wine of a deadly intoxicant made from molasses by the natives of Natal. An analysis of this drink made some time ago by an eminent doctor showed that it was 50 per cent stronger than any known alcohol.—Straw Stories.

he Flounder

is in the position of the eye. In some flounders the eye moves around the front of the head; in others it moves directly through the head. This shifting of the eye's position is accompanied by a change in the position of the body, which ceases to be upright and becomes more and more oblique. The side of the body from which the eye is moving gradually becomes inferior to the other, until by the time the change of the eye is complete the fish swims with its blind side underneath, and this position is ever after maintained. The flounder then ceases its free swimming habit and sinks to the bottom.

Some species of flounders are right-sided and others are left-sided. In the right-sided forms the left eye moves to the right side and the left side becomes uppermost. In the left-sided species the conditions prevail. It rarely happens that right-sided species have left-sided individuals, and vice versa. In a few species both right-sided and left-sided fish occur in about equal numbers.—St. Nicholas.

Big" Shooting

elephant you have wounded comes smashing his way in your direction. The Sedadang is dangerous, partly because of the thick jungle he seeks when wounded, but more especially because of his tremendous vitality and his cunning, though not invariable, habit of awaiting the hunter on his tracks, and charging suddenly, swiftly and viciously. It requires close and hard shooting to bring down one of these six-foot specimens of Oriental cattle.

The danger of the tiger and of the lion is in their lightning activity and ferocious strength, but you have the shoulder in addition to the head shot, a broadside, or if coming on, the chest all sure to stop if well placed. The reason the rhino is so formidable is because its vulnerable spots are so hard to reach.

Its brain is as small in proportion as that of the elephant, and may be reached through the eye, if head on, or about three inches below and just in front of or just behind the base of the ear according to your position for [illegible] Outing.

te's Dreams

As he drained his mug and his lips he smacked
Then he told me of Morgan and Kidd
And he rattled their deeds, their shams and
While the world came moaning up from
And the tune tase, faint and cracked:

The [illegible] was as red as blood,
With a hairy spot of black
An' the Spider shared her deadly fangs
As she crawled on the windward tack.

It would chuckle a bit, then sort of
Ah boy! I could turn 'e sick An' pale
We fright an' the an' booze an' blood
In the [illegible] on the reef born-scud,
For I [illegible] drunken thereof stained oak
[illegible] many a queer, queer

And then he would hum and croak:

The flag was as red as blood,
With a hairy spot of black,
An' the Spider shared her deadly fangs

SUFFERED FROM CATARRH OF LUNGS SO COMMON IN WINTER.

CURED BY PE-RU-NA.

A PLAIN TALK

On a Plain Subject in Plain Language.

The coming winter will cause at least one half of the women to have catarrh, colds, coughs, pneumonia or consumption. Thousands of women will lose their lives and tens of thousands will acquire some chronic ailment from which they will never recover.

KEEP PERUNA IN THE HOUSE

Unless you take the necessary precautions, the chances are that you (who read this) will be one of the unfortunate ones. Little or no risk need be run if Peruna is kept in the house and at the first appearance of any symptom of catarrh taken as directed on the bottle.

Peruna is a safeguard, a preventative, a specific, a cure for all cases of catarrh, acute and chronic, coughs, colds, consumption, etc.

For free medical advice, address Dr. S. B. Hartman, President of The Hartman Sanitarium, Columbus, Ohio.

A COLD ON THE LUNGS THREATENS TO BECOME SERIOUS.

Pe-ru-na Brings Speedy Relief.

Mrs. H. E. Adams, ex-President Palmetto Club, of New Orleans, La., writes from 110 Garfield Court, South Bend, Ind., as follows:

"I am pleased to endorse Peruna, as I took it about a year ago and it soon brought me relief from a cold on my lungs which threatened to be serious.

"The lungs were sore and inflamed, I coughed a couple of hours every night, and I felt that something must be done before my lungs became affected.

"Peruna was suggested by some of my friends who had used it, and acting upon their advice I tried it and found that it was able to bring about a speedy cure. You have my highest endorsement and thanks for the good it did me."

Sounding the Praises of Peruna.

Mrs. Frances Wilson, 32 Nelson St., Clinton, Mass., writes:

"Had you seen me at the time of my illness and now, you would not wonder that I take delight in sounding the praises of Peruna.

"My ailment was a severe cold which attacked the bronchial tubes and lungs.

"I followed your special directions and after using six bottles of Peruna, I was on my feet again. I think Peruna a wonderful medicine."

Railroad Accidents in Russia.

Russian railroad officials are much alarmed over the increase in attempts to wreck trains in that country. The attempts average one in three days, and 11 per cent result in damage. It is proposed to arm all railway officials and give ex-soldiers positions, and in this way put a check to the practice.

He Constructed Port Arthur.

Major Welitscho, under whose supervision Port Arthur was fortified, is regarded as the greatest living military engineer. He is now 48 years of age. It was he who outlined the entire plan for the fortified circle of mountains and hills surrounding the fortress and most of the work was carried on under his eye.

LASTING RELIEF.

J. W. Walls, Superintendent of Streets of Lebanon, Ky., says:

"My nightly rest was broken, owing to irregular action of the kidneys. I was suffering intensely from severe pains in the small of my back and through the kidneys and annoyed by painful passages of abnormal secretions. No amount of doctoring relieved this condition. I took Doan's Kidney Pills and experienced quick and lasting relief. Doan's Kidney Pills will prove a blessing to all sufferers from kidney disorders who will give them a fair trial."

Foster-Milburn Co., Buffalo, N. Y., proprietors. For sale by all druggists, price 50 cents per box.

HOW THE PLANTS GROW.

ARE ABLE TO TAKE FOOD ONLY IN MINERAL FORM.

The Difference Between the Growth of Animals and Plants Is Plainly Described—The Plant Possesses Very Limited Powers of Assimilation.

The Epitomist gives a very good description of the methods of plant growth so far as they are understood. The difference between the growth of animals and plants is plainly described. The article is as follows:

Like all living things, plants grow by the assimilation of food, plant food, therefore, is the raw material from which the growth of new substance is produced, says the Epitomist. The only difference between animals and plants in this respect lies in the fact than animal organs are able to take food in the form of organic matter, which has existed in animals or plants. Plants, on the other hand, are able to use only materials in mineral form. Of the many substances entering into the composition of agricultural plants all, except carbonic acid and water, come directly from the soil, through the roots. One other ingredient of all plants, namely nitrogen, really comes from the air, but it enters the plant through the soil to which it is carried by the rain. Plants are composed of both organic and inorganic materials. Each exerts indispensable influence in the action of the other. The soil material or mineral matter, is the means of changing air materials into organic compounds. These compose much the larger part of all vegetation. In similar manner atmospheric plant materials are indispensable to the changing of soil substances into these important organic materials. Each is essential to the action of the other, and is, therefore, necessary to plant growth. There is an important difference between plant food and mere material fed to plants. This difference is as definite with the plants as it is with animals. The animal feeder never forgets that only a part of the substance fed to his animals is actually utilized or enters the body as a part of the new growth made. Of the total material fed to animals, it is known that only a part is digestible and has actual food value. The feeder has visible evidence that a considerable part of the material consumed by his stock is actually excreted, proving that only a portion has been used. The plant possesses equally limited power of actual assimilation, though is excretes no unused material. From the entire material supplied to the plant as a source of food it is able to take up and use but a comparatively small part. In other words, of the entire soil and air material from which the plant draws its food, or from the material supplied as fertilizer only a camparatively small part is really consumed. Only this small part ever actually becomes a part of the plant itself. Only the part capable of being used is really plant food. Too many farmers act on the supposition that manure, phosphate, potash salts, ashes, nitrate of soda and other forms of fertilizers, are plant food; and that the mass of material thus placed at the disposal of the crop is a guide to the real fertilizing or food value of the article. Of each of these materials only comparatively small part is ever really used by the crop. Phosphate supplies only phosphoric acid. In like manner potash salt supplies actual potash; nitrate of soda contians nitrogen; the real plant food in each case is only a part or ingredient of these materials supplied. The remainder of these substances is simply present as a necessary medium, or conveyor, to make the real plant food economical, convenient for handling, or in some way make the substance required by the plant more practically available. Plant growth takes place by the actual formation of new material. This new material is made from the plant food of the soil and atmosphere, within the plant itself. The real plant food actually becomes a part of the plant itself. The other constituents of the soil, air and fertilizing materials are simply rejected by the plant. These are as distinctly not available for plant growth as is the case with animals in respect to the material excreted by them. The new material or growth of plants consists of two different classes of substances, organic and inorganic, that is animal or vegetable material and mineral matter. No organic matter, as such, is real plant food; it is simply a source of plant food. Manure, blood and cottonseed meal, all organic materials, must become decomposed and changed into mineral matter. Wood in like manner is first reduced to ashes before actual plant food, always in the form of mineral matter. Its own life work, or function, is to convert this mineral matter into organic forms. Phosphoric acid, potash and nitrogen enter the plant in solution through the roots. Carbonic acid enters through the leaves. In the leaves a combining takes place, sunlight being the active agent. By this action new compounds containing both organic and mineral material, are formed. The new material thus produced becomes a part of the plant, is added to the plant, thus the plant grows. The sap or juice of the plant is a moving current containing the materials for this new growth, in solution, which it conveys and deposits. Thus the material for continued growth is supplied.

The largest peanut fields in the world are in Guiana, on the north coast of Africa. Peanuts are grown there by hundreds of tons, but the quality is inferior to those grown in this country. Most of the African peanuts are shipped to France.

To Irrigate 10,000 Acres.

Plans have been completed for the construction of a canal twenty-eight miles long to irrigate 10,000 acres of agricultural land in the vicinity of Hayden and Craig, two growing towns in Routt county, Colorado. Two hundred thousand dollars will be expended on the enterprise.

Telephone Distribution.

In London, according to the latest statistics, there is only one telephone for every 60 families. In New York there is one for 12, in Boston one for 6, in San Francisco one for 4.

Gold Output of Alaska.

The gold production of the entire Alaskan district for the present year is estimated at $26,000,000.

A Well Deserved Tribute.

The awarding of the Grand Prize to the Winchester Repeating Arms Co., New Haven, Conn., at the St. Louis Exposition, confers upon this company the highest mark of distinction attained by any manufacturer of guns or ammunition in the world. Although a great number of medals were given, the only award of a Grand Prize was to the Winchester Repeating Arms Co.; given as it was in competition with the leading manufacturers of all countries, it testifies decidedly to the superiority of Winchester rifles, shotguns and ammunition. The success attained by the Winchester Repeating Arms Co. at this exposition is in line with past honors. At the Paris Exposition they received the Grand Prix, and wherever exhibited have always been given the highest possible prizes. This latest recognition of superiority is the natural result of thirty years of careful and successful endeavor in maintaining the high quality of Winchester rifles, shotguns and ammunition.

It is announced that a hotel costing $1,000,000 will be erected in Cincinnati.

Taylor's Cherokee Remedy of Sweet Gum and Mullen is Nature's great remedy—Cures Coughs, Colds, Croup and Consumption, and all throat and lung troubles. At druggists, 25c., 50c. and $1.00 per bottle.

The Russians estimate that the taking of the fortress has cost Japan $100,000,000.

BABY'S TERRIBLE SORE

Body Raw With Humor—Caused Untold Agony—Doctor Did No Good—Mother Discouraged—Cuticura Cured at Once.

"My child was a very delicate baby. A terrible sore and humor broke out on his body, looking like raw flesh, and causing the child untold agony. My physician prescribed various remedies, none of which helped at all. I became discouraged and took the matter into my own hands, and tried Cuticura Soap and Cuticura Ointment with almost immediate success. Before the second week had passed the soreness was gone, not leaving a trace of anything. Mrs. Jeannette H. Block, 281 Rosedale St., Rochester, N. Y."

Alligator hunters are wanted in Venezuela.

Itch cured in 30 minutes by Woolford's Sanitary Lotion. Never fails. Sold by all druggists, $1. Mail orders promptly filled by Dr. E. Detchon, Crawfordsville, Ind.

Railroading in Japan.

Japan has 4236 miles of railway, of which 210 miles were constructed in 1903. The number of passengers carried on these railways in 1903 was 110,000,000, the freight transported was 16,122,671 metric tons and the cash receipts amounted to about $23,800,000.

Beware of Ointments For Catarrh That Contain Mercury,

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally, and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free.

Sold by Druggists; price, 75c. per bottle.
Take Hall's Family Pills for constipation.

Germ Day.

The State of Utah has established a holiday in honor of germs. It is called General Health Day and is the first Monday in October. On this day all theatres, churches, public halls, hotels, boarding houses, etc., must be thoroughly disinfected.

Another club woman, Mrs. Haule, of Edgerton, Wis., tells how she was cured of irregularities and uterine trouble, terrible pains and backache, by the use of Lydia E. Pinkham's Vegetable Compound.

"DEAR MRS. PINKHAM:—A while ago my health began to fail because of female troubles. The doctor did not help me. I remembered that my mother had used **Lydia E. Pinkham's Vegetable Compound** on many occasions for irregularities and uterine troubles, and I felt sure that it could not harm me at any rate to give it a trial.

"I was certainly glad to find that within a week I felt much better, the terrible pains in the back and side were beginning to cease, and at the time of menstruation I did not have nearly as serious a time as heretofore, so I continued its use for two months, and at the end of that time I was like a new woman. I really have never felt better in my life, have not had a sick headache since, and weigh 20 pounds more than I ever did, so I unhesitatingly recommend your medicine."—MRS. MAY HAULE, Edgerton, Wis., Pres. Household Economics Club.

THE SOUTHERN MFG. CO.
Richmond, Va.

LUCK

COAL AND IRON

In The South. Alabama's Development in the Last Few Years is Phenominal.

THE FUTURE IS VERY BRIGHT.

Comparisons Made with These Products in Pennsylvania and Predictions as to the Future.

Baltimore, Md.—The great activity in the development of the coal and iron interests of the South and the full demonstration of the success of steel making in Alabama is the theme of an interesting comparison in this week's Manufacturers' Record of Pennsylvania's accomplishments on that line and Alabama's possibilities. It says:

"It is an interesting fact that Alabama with a population of about 2,000,000, is making nearly one-half as much pig iron as the United States made with its 50,000,000 population as late as 1879, or twenty-five years ago, and is now mining one-fourth as much bituminous coal as the whole country then mined.

"In 1879 Pennsylvania made nearly 1,000,000 tons of pig iron, or just a little more than Alabama is now making, and in the next 25 years the progress of Alabama in iron and steel making ought to far exceed what Pennsylvania has done in the last 25 years. As Pennsylvania in 1903 made more than 8,200,000 tons of pig iron, the vast possibilities ahead of the Alabama field can be appreciated.

"Based on its coal and iron, Pennsylvania has created an industrial development which, according to the census of 1900 is represented by about $1,500,000,000 of invested capital, or $300,000,000 more than the aggregate capital of all the manufacturing interests of the Southern States, and yet Alabama alone is 6,000 square miles larger than Pennsylvania, has more iron ore by far than Pennsylvania ever had, and has more coking coal than Pennsylvania.

"Moreover, instead of hauling its iron ore a thousand miles, as Pennsylvania must do for the Lake Superior ore which it uses so largely, Alabama has its ore and its coal and its limestone in such close proximity as to enable it to set the price of pig iron for this country and at times for the world. Today the Birmingham quotation on iron makes the price of every ton sold in the United States, and a few years ago, when the production of iron in this country was in excess of the consumption, Alabama exported in one year, largely to England itself, 250,000 tons, and set the price for pig iron throughout the world. The world is now learning to appreciate as never before the growing value of coal and iron ore, and at last the vast store of latent wealth in the coal and iron regions of the south is beginning to be appreciated as destined to dominate the metallurgical industry, not of this country alone, but of the world."

New Brooklyn Bridge.

New York—Fearful lest the strain to which the Brooklyn bridge is being subjected will weaken it to such an extent that a great catastrophe might be possible, engineers of the department of bridges are reported to have determined that the structure must be almost completely rebuilt. To do this, it will require at least two years and meanwhile traffic between New York and Brooklyn will have to be diverted to the Williamsburg bridge, the new Manhattan bridge and to the Brooklyn subway tunnel, now in course of construction. Four or five years may elapse before this can be accomplished, as great traffic problems will have to be solved beforehand.

An inspection of the Brooklyn bridge shows it to be in a safe condition at present, but it is admitted by all the engineers that steel has an age limit, and that this limit is being rapidly approached. The structure is now having to withstand a weight of traffic which it never was intended to bear. But little will remain of the present bridge except the great stone piers.

It is estimated that the cost will be about $5,000,000.

Washington—Postmasters appointed: Mid. Marshall county, Henry E. Traylor, vice J. B. Patterson, deceased; Wilford, Bibb county, Nola Deason, vice Martha Hubbard, resigned.

Fire in Starch Plant.

Oswego, N. Y.—The starch plant of the Corn Products Company was damaged to the extent of $150,000 by fire today, which destroyed the packing department, kiln room and scrapping room. A portion of the granary was also burned. The fire was caused by the explosion of a boiler.

Athens, Ala.—After standing fifty years, the railroad station at this place is being torn down to make room for a more modern structure. The new depot will be of the most improved construction.

Selma, Ala.—This city was cut off for several hours yesterday from telephone and telegraph communication with the outside world on account of the rain and wind storms. The railroads also report heavy damage.

Arrested for Big Robbery.

Columbia, S. C.—Some weeks ago Rudolph Rabens, a German grocer of Charleston, was arrested by the federal authorities charged with complicity in the Kingstree postoffice robbery several months ago. His bond was fixed at $5,000.

Saturday afternoon postoffice inspectors went to Charleston and arrested his brother, Christopher Rabens, on the charge of being implicated in the case, and the latter will be brought at once to Columbia for trial.

It is promised by the United States government officials that the case and the arrests that follow will be the most sensational heard in this state in a long time.

The Rabens formerly lived in Walhalla, going from there to Charleston, where, it is said, they became mixed up in the Old Star exposition, a gang organized for the purpose of robbery.

Work of Bold Burglar.

Columbus, Ga.—Columbus' mysterious burglar continues to get in his work. Saturday night he broke into Yarbrough's saloon, corner of Broad and Thirteenth streets, and stole $4 in money and six or eight bottles of whiskey. The burglary was one of the boldest committed here in a long time. The burglar broke the glass door of the front of the saloon, although this is quite a public place, and crawled through the opening. He made his exit through a side door, after taking down the bar holding the door and returning to the Broad street sidewalk, dropped a big bottle of whisky to the sidewalk, either purposely or accidentally, shattering it. The police have no clue.

Arrested for Smuggling.

Houston, Tex.—The federal grand jury has returned indictments against several prominent citizens of Brownsville, charging them with smuggling. The persons involved are influential citizens of that place. It is alleged smuggling has been carried on upon an extensive scale, the operators using Mexicans to transport their goods and securing enough profit upon the articles to pay the Mexicans' fines when the latter were arrested and jailed. Several special agents of the treasury department, including B. Parker, the chief of the special agents of the United States, have been here giving testimony regarding the alleged violations. The names of the persons indicted will not be made public until after their arrest, which has not yet been effected.

Panamans Angered.

Panama—Representatives of all political parties here have asked American Minister Barrett to withdraw the suggestion he made to the Washington government that the functions of governor of the canal zone and minister to Panama be combined in the person of the governor of the canal zone.

It is argued by the memorialists that the dignity of Panama as an independent nation required a separate legation. The American minister has replied that the suggestion was made in the interests of both Panama and the United States, and that he can not withdraw it.

He said, however, that he will report the request to his government without prejudice to the attitude of Panama.

Demands Annullment.

Port au Prince, Hayti—Mr. Powell, the American minister, has informed the government of Hayti that the United States government refuses to recognize the validity of the sentence in continuancy to fifteen years at hard labor pronounced by the Haytian court against Jaeger Huber, an American citizen, for alleged complicity in bond frauds charged against the administration of former President Simon Sam and officers of the Bank of Hayti.

The United States demands the annullment of the sentence under protection of energetic intervention. The demand has caused much excitement here.

Italian Bark Goes Ashore.

West Palm Beach, Fla.—An Italian bark, the name of which could not be learned, went ashore five miles south of Palm Beach Sunday. The bark carried a crew of fifteen men and a cargo of 500,000 feet of pine lumber. She sailed from Pensacola for Antwerp. All the crew are safe, but the vessel is on the beach and it is feared that the waves will beat her to pieces tonight, leaving a total wreck. The wind is still very high and the sea is rough, and it is feared that other wrecks will be reported tomorrow.

Rice Farms.

Some day large rice farms will be the rule and not the exception along the banks of the Apalachicola river. This is the finest section in the world for rice culture, and those seeking investments along these lines should investigate these claims.

It is easier to return compliments than borrowed umbrellas.

Engineer is Killed.

Leesville, Ala.—In a wreck Sunday on the Nona Mills tram road, caused by spreading rails, Engineer Albert Gisendof was killed. He tried to escape from the cab, but the locomotive was turned completely over, catching the engineer's head and crushing it.

The report of the Alabama Car Service for the month of December shows 59,251 cars handled as against 65,087 for December, 1903.

BADLY TREATED JAPS

According to Reports of Naval Officers as to Port Arthur Conditions.

WELL KEPT ARE HOSPITALS.

Much Fortifying is Found to Have Been Done by Russians After Actual Siege Begun.

Tokio—A naval officer who has returned here from Port Arthur, discussing the conditions at the fortress, says:

"The condition of the warships and the town was much better than I had hoped for. Evidently there was much fortifying done at Port Arthur after the siege commenced. The works on 203 Meter hill were not permanent, and the trenches there were similar to those used by the Boers during the South African war. It seems that the Russians had no general electrical scheme or movable engines or dynamos for searchlights.

"Russian naval officers say that it is impossible yet to ascertain whether the Japanese fire or the opening of sea cocks sank the ships in the harbor. The hospitals are fairly well kept, and are still used for the wounded and for prisoners.

"I understand that up to the time of the capitulation the garrison at Port Arthur received only special allowances, but before the surrender General Stoessel paid off the men. This, together with the constant purchase by the Russians of supplies from junkmen, may explain the report that there was no treasure left at Port Arthur.

"The treatment of the Japanese prisoners at Port Arthur did not compare with that accorded the Russian prisoners in Japan. The Japanese prisoners were given poor food and no fuel, and only once were they permitted to go outside of the prison."

Cossacks in Neutral Territory.

Tokio—Later reports from New Chwang indicate that General Mistchenko's Cossacks, in their recent raiding southwest of Liao-Yang, deliberately invaded neutral territory and broke the limits of the war zone.

The reported Russian note to the powers calling attention to China's non-enforcement of neutrality is regarded here in some quarters as absurd. It is felt that China's weakness and constant failure to enforce neutrality must release Japan from obligation to observe restrictions which Russia openly ignored. While the extension of belligerent territory is to be regarded, it is felt that Japan must take steps to protect herself against the repetition of raiding expeditions whose success depends on the violation of neutral territory.

Huan Shan—There has been no serious fighting for several days, though night shirmishes on both sides continue. The most important recently was that in which Captains Kosinoff and Troitzki, with seventy-five Cossacks, drove the Japanese out of the villages of Mitzi and Tkhangay and captured a large amount of forage at both places. General Linevitch has been inspecting the whole front and finds that the men and supplies are in excellent condition. The Japanese on their side are pushing sapping operations toward the Russian lines at several points, but have not made serious progress.

St. Petersburg—Some of the newspapers here are claiming that the Japanese are using the British island of Tabuan, near Borneo, as a base, and that the British are concealing the fact by preventing communication between Borneo and Singapore, on the ground that the cable is undergoing repairs.

The report from Washington that it is believed the powers will informally protest to Russia against the notice served by her that she will consider herself no longer bound to regard the neutrality of China if Japan continues to violate it, has created astonishment here, where it is held that any protest should be directed against the action of Japan, against which Russia has now thrice warned the powers. Russia's position is that she is bound under the circumstances to take steps for the protection of her own interests.

Lease Brown Ore Fields.

Gadsden, Ala.—The Lacey-Buek Iron company has recently leased a large body of brown iron ore land near Cedartown, Ga., and will at once commence the development of this property, and will also place a large washer. This company owns considerable property in the Gadsden district and mines in the neighborhood of 12,000 tons of ore every month.

Judge Tallman Dies.

Gadsden, Ala.—Judge James A. Tallman, one of the oldest and most highly respected citizens of Gadsden, died at the Printup house Friday morning at half past 5 o'clock.

Judge Tallman was 87 years old and moved to Gadsden in 1868. He was a Mason and a member of the Presbyterian church. He leaves one daughter, Mrs. Harriet Smith, of Eastman, Ga.

Policeman Shot at Calera.

Calera, Ala.—G. N. Harriman, a policeman on the force at Calera, was shot in the back and probably fatally wounded in Abe Stein's bar room at that place Sunday. The shooting was done by one of two men who are under arrest in Shelby county on the charge of assault with intent to murder.

Harriman states that the two men formerly worked on the police force, or were deputies in Calera, and that they were discharged and he was given the position which one of them held. He was standing in the saloon talking to a friend when the two men stepped in.

One of them shot him, he states, but he does not know which it was. Both were immediately arrested, but no information could be obtained from Calera last night concerning the shooting.

Dr. Gunn, a well-known physician of Calera, accompanied the wounded man to Birmingham. An operation will be performed today. Harriman was in too much pain and was too weak to stand an operation last night when he was brought to Birmingham and carried to St. Vincent's hospital in Shaw & Son's ambulance.

The wound is in the back, indicating that the man who shot Harriman was standing behind him. The bullet penetrated the lungs and made a very ugly wound. It is probable that Harriman will live.

Harmony for Stockmen.

Denver, Col.—Negotiations have been opened by the officers of the National Live Stock association with the American Cattle Growers' Association, which was organized in this city last Friday by cattlemen who seceded from the stockmen's convention, with a view to establishing harmonious relations between the two organizations. The National Live Stock association's board of control has decided to meet in this city on May 9th next, on which date the American Cattle Growers' association will hold its convention here.

Meanwhile the executive committees of both organizations will make efforts to harmonize their interests in their by-laws and constitutions. It is proposed to have the new association of cattle growers affiliate with the parent organization, exactly as does the National Wood Growers' association. President F. J. Hagenbarth and several members of the executive committee of the National Live Stock association have applied for membership in the cattle growers' association, believing that it can be made of benefit to the united live stock interests of the country.

Convention Begins Today.

Indianapolis, Ind.—With the arrival Sunday of the last Pennsylvania delegation, practically all the 600 miners who will participate in the convention of the United Mine Workers, which begins Monday in Tomlinson hall, were to be found scattered among the several hotels. It is probable that Monday's session of the convention will, after organization is effected, be entirely consumed by the reports of officers.

President Mitchell has prepared a message convering all the important developments of the year, and it is expected that he will look into the future far enough to make several recommendations seeking the continued welfare of the United Mine Workers. It is thought that he will leave the details of the proposed plan to increase the revenues of the organization to the secretary-treasurer, W. H. Wilson, but in all probability he will comment upon the advisability and the need for such a movement. Mr. Wilson in his report is expected to go into this plan in detail, giving the reasons and making suggestions for its fulfillment.

Jail Delivery.

Decatur, Ala.—A jail delivery took place at the city jail Sunday night about 8 o'clock. There were confined in the jail three white men and a negro. Turnkey Chapman was making his rounds for the night prior to retiring. He missed one white man, but thinking he had retired for the night, paid little attention to the matter. The turnkey stepped into a cell to see that everything was alright, and when he did so the door was shoved too and locked on him by one of the white prisoners. The prisoner then made his escape, leaving the turnkey a prisoner in his stead. The turnkey was released later by a member of his family.

The man who escaped was fined in two cases yesterday and another case against him was set for trial this morning.

Carter is Appointed.

Birmingham, Ala.—J. Rivers Carter has been appointed postmaster of Birmingham according to a telegram which was received in official circles here this afternoon shortly before 3 o'clock Saturday afternoon.

He was endorsed for the office by Messrs. J. O. Thompson and C. H. Scott.

New Bank for Decatur.

Decatur, Ala.—At a meeting of the representative business men of New Decatur held Saturday night the Commercial Savings Bank and Trust Company was organized with a capital stock of $25,000. At the meeting held Saturday night the following board of directors was elected: Dr. W. B. Watson, E. C. Payne Judge W. H. Simpson, E. H. Allison, Dr. J. A. Hill, Sam Blackwell.

PHILIPPINE REPORT

Secretary Taft Says Islands Are in a Prosperous Condition Under Americans.

FILIPINOS LEARN ENGLISH.

Many Applying for Examination As English Clerks.—Industrial Taxes Abolished.

Washington.—Secretary Taft has submitted to the president the annual report of the Philippine commission, together with the separate reports to the commissioner of the civil governor of the islands and of the heads of the four departments, and the president has transmitted them, with the secretary's letter, to congress.

The secretary says in his letter of transmittal to the president that the reports show the great benefits which have been conferred upon the islands by a continued state of tranquility. Except in the wild, mountainous region of the unexplored island of Samar and the Moro region of the Rio Grande and Lake Lanao, in the sparsely settled island of Mindanao, and in the island of Jolo, conditions as to the tranquility and ladronism, he says, continue to improve, and except in the places mentioned agriculture and peace are not at all interfered with by lawlessness or depredations. He says it is quite satisfactory to observe the good effect of a settled policy with respect to the civil service, under a stringent civil service law, the personnel and efficiency of the service.

Learning English.

Many of the Filipinos are learning English and applying for examination as English clerks. The secretary says that the falling off in the government revenues has reduced the funds available for education. From the central government last year the amount expended did not exceed $1,200,000, as against $1,600,000 the previous year. He adds that without wasting money $5,000,000 a year in the maintenance of the public schools of the Philippine Islands could be readily expended. The enrollment has increased from 183,000 to 263,000 in one year, and there is a demand for American teachers and Filipino teachers in each province. The total expenditures for education last year, including those from central provinces and municipal governments, was nearly $2,000,000.

New Coinage.

Regarding the new coinage of the islands the secretary says one of the most satisfactory results of the government's transactions during the year in the islands is the establishment on a firm basis of the new coinage. The Spanish-Philippine coin and the Mexican coin have been practically driven out of the islands, the former by purchase of the government and a recoinage into the new coins, and the latter by legislation hostile to the importation and circulation of the Mexican money, as well as a strong demand for it in other countries. The danger which presents itself now is the rise in the price of silver, which if it continues may make the silver pesos worth more than 50 cents gold, the present standard of value, and thus lead to the melting up of the new silver pesos of the government.

Tax Revision.

During the year the commission has enacted an internal revenue law and abolished the industrial taxes subjected on all kinds of business, even the smallest, to a license tax that was thought to work proportionately harder on the smaller business than upon the large enterprises. The present bill imposes a tax upon the production of liquor and alcohol, upon the manufacture of cigars and cigarettes and also upon banking and corporations.

Internal Revenue.

The internal revenue law has not been in operation a sufficient length of time to justify criticism or praise of it.

A large part of the $3,000,000 voted by congress has been and is being expended in the construction of roads in the islands.

Regarding the tariff on Philippine products in the United States, the secretary says:

"The reports of Governor Wright and of Commissioner Worcester, show what has appeared in the reports from the islands since the American occupation, the necessity for reducing the tariff on Philippine products entering the United States in order that we may give to the islands a market in America."

Of the Moros, Secretary Taft says:

The Moros.

"The report of Major-General Wood on conditions in the Moro province is of much interest. The Moro government act was framed with a view to giving the persons responsible for the Moro government great latitude in dealing with the various Moro tribes and the wisdom of that latitude is shown by events which it was supposed when the Moro act was passed that the Moros were sufficiently advanced in tribal government to have customary laws, which after elimination of such features as were savage or barbarious might be adopted for practical use, but General Wood's report shows that among the customs of the Moros there is particularly nothing which a government under the auspices of the United States can make itself responsible and he recommends that the effort be to make the criminal laws of the islands substantially uniform throughout the archipelago and in this view I fully concur.

"The union of the military arm with the civil arm in the Moro province has proved to be an excellent arrangement and I can see no reason why it should not indefinitely continue. The Moro is so different from the Filipino and so much below him in civil government capacity that while such an union is entirely unfitted for the development of the Christian Filipinos, it seems to be the only kind of a government adapted to the Moros."

Killed and Injured.

Tuskegee, Ala.—As the result of a shooting scrape between 6 and 7 o'clock, two men are dead and two men are badly cut.

The dead men are Bob McBryde, aged 56, shot in the head, and Jim McBryde, brother of Bob, 33 years old, shot in the head and shoulder. The wounded are J. T. Conner, sheriff, severely cut in several places, the worst being a gash in the face, and George Lanier, deputy sheriff, cut in hip.

The McBryde brothers live at Cotton Valley, ten miles from here. They had been drinking, and earlier in the day the sheriff had undertaken to persuade them to go home. About night they were creating disorder in the streets and using loud and profane language. Some one telephoned the sheriff, who, in company with his deputy and Chief of Police Taylor, went to place them under arrest. The McBrydes resisted and assaulted the officers with their knives. The officers fired eight shots at them. Jim McBryde's head was severely beaten, apparently with the butt end of a pistol. The McBrydes were both unmarried. Bob was a clerk in his father's store and Jim was a farmer.

Storage Plant Burns Two Days.

Chicago, Ill.—The fire which started in the beef storage warehouse of Schwarschild & Sulzberger, Forty-first street and Ashland avenue, last night was still burning today, although under control. The firemen cut holes in the sides and roof of the building, a six-story structure, in their efforts to find the fire, and although dense volumes of smoke and ammonia smoke poured out of the apparatus, no flames were visible.

The fire was in the sawdust which was packed between the double walls of the building. Fourteen firemen were overcome by the ammonia, and were carried out by their companions. All will recover. The loss is estimated at $150,000.

Exposition Open on Sunday.

Portland, Ore.—It has been decided to throw open the gates to all the exhibits at the Lewis and Clark exposition on Sundays. The management will endeavor to emphasize the educational features as much as possible. A local organization headed by ministers, educators, philanthropists and students of advanced thought will work in conjunction with the management of the fair in the matter of Sunday congresses and the plan is to have the gathering in the exposition auditorium devoted to discussions and addresses upon education, religion principles of government, charities, corrections, humanitarian laws, etc.

Tried to Rob a Bank.

Lafayette, Ala.—An attempt was made at an early hour Monday morning to rob the Bank of Lafayette. The outer door of the vault was blown off with dynamite and an attempt was made to wreck the safe inside but the robbers evidently became frightened and left before completing their work.

The papers and money in the safe are intact and nothing was taken from the bank. The damage to the vault will amount to about $1,000. A kit of tools stolen from a local blacksmith shop was found in the bank this morning.

County Building Burns.

Chicago, Ill.—Fire broke out Monday on the top floor of the county building here. For a while destruction of the entire building was threatened. The flames, however, were confined to a portion of the two upper floors and the roof. Three painters at work in the county building were seriously burned in an explosion of their material when the fire started.

Burton Gets a New Trial.

Washington.—The case of Senator J. R. Burton was decided by the supreme court of the United States Monday, dismissing the writ of certiorari to the circuit court of appeals for the Eighth circuit, and reversing the verdict of the district court for the eastern district of Missouri on the ground that payments to Burton was made in Washington. The district court was therefore reversed and the case remanded for a new trial.

Mobile's Vegetables Set Back.

Mobile, Ala.—The spring vegetable crop received a severe set back Monday morning through the freeze, the temperature going as low as 24 degrees above zero. Early cabbage, tomatoes, beats, radish, rutabagas, onions and other small vegetables were killed. The area damaged covers more than a thousand acres, and the monetary loss will be in the neighborhood of $50,000.

RED WITH RUS

Snow About The Ca Blood Caused By Revolutionary Sc

INFANTRY REFUSED TO FIRE.

Estimated from 500 to 5,000.

Awful Scenes at St. Petersburg Sunday Amid Martial Law.

St. Petersburg—Sunday was a day unspeakable horror in St. Peters The strikers of Saturday, goad to desperation by a day of violence, and bloodshed, are in a state of insurrection against the govern A condition bordering on civil exists in the terror-stricken Rus capital.

The city is under martial law with Prince Vasiliehikoff as commander of 50,000 of the Emperor's guards troops are bivouacing in the streets Sunday night, and at various places the Nevsky Prospect, the main thoughfare of the city. On the island Vassillostrov and in the industrial tions infuriated men have thrown barricades which they are holding the Empress Dowager has hastily ght safety at Tsarskoe-Selo, where peror Nicholas is living.

ister of the Interior Sviatopolk sky presented to His Majesty Sat day night the invitation of the kmen to appear at the winter pal this afternoon and receive their ition, but the Emperor's advisors ready had taken a decision to show firm and resolute front, and the Em ror's answer to the workmen try to make their way to the palace are today was a solid array of oops who met them with rifle, bayo and sabre. The Priest Gopon leader and idol of the men in his den vestments, holding the cross, marching at the head of thou ds of workmen through the Narva te, miraculously escaped a volley hich laid low half a hundred per s. The figures of the total num killed or wounded here at the cow gate, at various bridges and nds, and at the winter palace ry.

Estimates Place Dead at 5,000.

The best estimate is five hundred though there are exaggerated figures cing the number as high as 5,000 any men were accompanied by their ives and children, and in the confu on which left no time for discrimina n, the latter shared the fate of the en. The troops, with the exception a single regiment, which is report to have thrown away its arms, re ained loyal and obeyed orders. Bu e blood which crimsoned the snow fired the brains and passions o strikers, and turned women a ll as men into wild beasts, and t y of the infuriated populace is fo ngeance.

The sympathy of the middle class with the workmen.

If Father Gopon aimed at open re tion he managed the affair like nius to break the faith of the pe "in the Little Father," who the re convinced and who Father Go had taught them to believe woul pt their wrongs and redress the vances.

Military Have a Firm Grip.

The military authorities had a fir on every artery in the city. A break guards, regiments, cavalr infantry had every bridge acro frozen Neva, the work of cana ich interlace the city, and the gat ding from the industrial sectio lle in the palace square, at th rm center were massed dragoo giments, infantry and cossacks guards. Barred from the bridge d gates, men, women and childre ssed the frozen river and cana the ice by twos and threes, hurr to the palace square, where the re sure the Emperor would ment to hear them. But the stre proaches to the square were cle fined to a single volley and cossack charge by volleys and cossack charge n and women, infuriated to fren the loss of loved ones, cursed t ldiers, while they retreated sorro ly. Men harrangued the crow ling them that the Emperor h ed them, and that the time h e to act. Men began to build b des in the Nevsky Prospect a other points, using any mater at came to hand, and even choppi n telegraph poles.

Fighting meantime continued at places, soldiers volleying a ging the mob. The whole city w a state of panic. Women we ing through the streets seeki members of their families. Se barricades were carried by t ps.

Toward 8 o'clock in the even

giving the persons respo[nsible] for th[e] Moro government great[er] latitude i[n] dealing with the various Moro tribe[s] and the wisdom of that latitude [is] shown by events which it was suppose[d] when the Moro act was passed tha[t] the Moros were sufficiently advance[d] in tribal government to have custom[s] and laws, which after elimination o[f] such features as were savage or bar[ba]rous might be adopted for practi[cal] use, but General Wood's repor[t] shows that among the customs of th[e] Moros there is particularly nothin[g] which a government under the aus[pi]ces of the United States can make itself responsible and he recommend[s] that the effort be to make the crimina[l] laws of the islands substantially uni[form] throughout the archipelago and [in] this view I fully concur.

The figures of the total num-killed or wounded here at the ow gate, at various bridges and ds, and at the winter palace, y.

Estimates Place Dead at 5,000.

The best estimate is five hundred, though there are exaggerated figures giving the number as high as 5,000. ny men were accompanied by their es and children, and in the confu-n which left no time for discrimina-, the latter shared the fate of the n. The troops, with the exception single regiment, which is report-to have thrown away its arms, re-sed loyal and obeyed orders. But blood which crimsoned the snow fired the brains and passions of strikers, and turned women as s men into wild beasts, and the of the infuriated populace is for geance.

The sympathy of the middle classes with the workmen.

Father Gopon aimed at open revo-tion he managed the affair like a ius to break the faith of the peo-in the Little Father," who they e convinced and who Father Go-n had taught them to believe would ht their wrongs and redress their vances.

Military Have a Firm Grip.

The military authorities had a firm p on every artery in the city. At break guards, regiments, cavalry infantry had every bridge across frozen Neva, the work of canals ch interlace the city, and the gates ing from the industrial section, le in the palace square, at the m center, were massed dragoon iments, infantry and cossacks of guards. Barred from the bridges gates, men, women and children ssed the frozen river and canals the ice by twos and threes, hurry-to the palace square, where they e sure the Emperor would be sent to hear them. But the street roaches to the square were clear-by volleys and cossack charges. n and women, infuriated to frenzy the loss of loved ones, cursed the liers, while they retreated sorrow-y. Men harrangued the crowds, ing them that the Emperor had ed them, and that the time had e to act. Men began to build bar-ades in the Nevsky Prospect and other points, using any material could lay hand, and even chopping n telegraph poles.

Fighting meantime continued at va-s places, soldiers volleying and rging the mob. The whole city was a state of panic. Women were ning through the streets seeking members of their families. Sev-barricades were carried by the ops.

Toward 8 o'clock in the evening the crowds, exhausted, began to disperse, leaving the military in possession. As they retreated up the Nevsky Prospect the workmen put out all the lights. The little chapel at the Narva gate was wrecked. On the Kaminostov Island all the lights were extinguished.

Officer Found Alone Mobbed.

Every officer wearing the uniform of the Emperor who was found alone was mobbed. A general was killed on the Nicholas bridge and a dozen officers were seized, stripped of their epaulets and deprived of their swords.

Charged on Unarmed Strikes.

The revolt of the striking workmen in this city resulted Sunday in demonstrations of great strength in various parts of the city, and there were many conflicts between the strikers and troops, in one of which a detachment of Uhlans fired into a crowd, killing or wounding eighty persons. Gopon, the strike leader, was arrested.

One of the most serious developments of the day was as the strikers approached the St. Nicholas bridge. The infantry opposed to them laid down their rifles and refused to fire on the workmen. As the strikers approached from Vallisfostroff, they they stopped by a strong force of infantry, Uhlans and Cossacks. The strike leaders appealed to the soldiers not to fire on their brothers and the infantry then laid down their arms, but the Uhlans and Cossacks, obeying orders, drove the crowd back with their swords, wounding many.

A military band was playing while this conflict was going on. The Emperor remained at Tsarsko-Selo. At 2:22 p. m. the mob and troops were in open conflict around the palace.

At 2:55 p. m. the pressure of the mob around the palace square was becoming irresistable. The troops, at that time, were unable to drive back the dense masses of people. Two volleys were fired into the crowd. There was a gathering this afternoon of ten thousand of the Putiloff strikers, at which speeches were made protesting against dilatory action, declaring it characteristic of the Emperor's attitude toward the people. These sentiments were received with cheers and shouts of: "Down with the monarchy!"

Report at Hospitals.

Returns from only three of the numerous hospitals give 32 dead and 125 wounded.

The rioters broke windows in the palace of Grand Duke Alexis.

Armed with Various Weapons.

The workmen tonight are arming with every conceivable weapon for a renewal of the struggle. They have few firearms, but are improvising trade implements into weapons.

First Trouble Began.

The first trouble began at 11 o'clock, when the military tried to turn back some thousands of the Putiloff strikers at one of the bridges connecting the great industrial quarter with the central portions of the city. The same thing happened almost simultaneously at other bridges. The constant flow of workmen pressing forward refused to be denied access to the common rendezvous at the palace square. The Cossacks at first dispersing groups of too demonstrasabers, and finally fired.

The front ranks of the demonstrators fell on their knees and implored the Cossacks to let them pass, protesting that they had no hostile intentions.

Their pleas, however, were refused and orders were given for the military to load their rifles with ball cartridges. As the mob pressed forward the Cossacks fired.

Public Passion Broke Loose with Fury

Then the public passion broke loose like a bursting dam as the people saw the dead and dying carried away in all directions. The snow on the streets and pavements is soaked with blood, while cries went up for vengeance. A great mass meeting was held at the headquarters of the workmens' union, where speakers denounced the military, inveighed against the government and attacked the Emperor himself, while the crowd responded, "down with monarchy!"

Father Sergius Killed.

St. Petersburg, 6:45 p. m. Sunday at the Neva gate the troops fired on a crowd led by Father Gopon and Father Sergius, the priests carrying a cross and ikon and a portrait of Emperor Nicholas. Father Sergius was killed and the portrait of the Emperor was smashed.

At the Putiloff works the scenes resembled a sham battle. There the workmen faced the troops when the order was given to fire, and threw themselves upon their faces upon the ground. The troops fired on them as they lay prostrate.

Pillaging the Shops.

St. Petersburg, Sunday, 10:30 p. m.—The Vassiliostrov quarter tonight is in darkness, neither gas nor electricity being available. Shops are being pillaged and strikers are burning telegraph poles. Some firing is heard. It is reported that a body of strikers tried to reach Tsarskoe-Selo, but were driven back by the troops after a sanguinary conflict.

Capture Dynamite Works.

St. Petersburg, Sunday (Midnight.) Firing continues on the Vassiliostrov. It is rumored that the workmen there have seized a dynamite factory and also that 30,000 or 40,000 armed strikers from Kolpino, 16 miles distant, are marching on St. Petersburg.

St. Petersburg, Monday, 4:45 a. m. St. Petersburg is sleeping quietly at this hour, worn out by the excitement of a long day. Laborers and spectators have long since left the streets and the military and police have had little to do for hours beyond driving off occasional riotous bands of irresponsible young people bent on window breaking and marauding, and dispersing groups of too demonstrative socialists or liberals, for the most part returning from protracted meetings, where their minds were fired with incendiary speeches.

Since midnight the Russian capital has been as peaceful as it was the preceding night, but in the palace square and in all the principal streets and upon the plazas throughout the town bivouac fires are gleaming and infantrymen sleep near their stacked rifles, or march hither and thither. Cavalrymen on wearied horses are patrolling the long thoroughfares. No more firing has been heard and no more reports of collisions have been received.

Quarantine on Cattle.

Washington, Jan. 19.—The department of agriculture has issued regulations establishing on February 1st next a federal quarantine against a large part of the south and parts of other states to prevent the spread of splenetic or Southern fever among cattle. The quarantine lines are largely the same as last year.

The quarantined territories embrace the eastern part of North Caroline, all of South Carolina, Indian Territory, Alabama, Mississippi and Louisiana; that part of Virginia below the James river and running to the northeast corner of Bedford county; all of Georgia but Uniontown and Rabun counties; all of Arkansas except two northern tiers of counties which are left outside of the quarantine during the rest of the quarantine period; part of Tennessee and Oklahoma; most of Texas except the Panhandle and the lower part of California. The quarantine is declared to be in force until November 1st, but the date is subject to change.

The regulations allow cattle in the quarantined district to be shipped north in placarded cars if shipped for slaughter and placed in quarantined yards on arrival at destination. If the stock is unloaded enroute, it must be at yards reserved solely for Southern cattle and after unloading the cars must be disinfected before sold for native stock.

A Pitch Battle.

Roanoke, Va.—Meagre details of a triple tragedy in Franklin county, twenty miles south of Roanoke, Friday evening, reached here to-day. James Abshire and his son fought a revolver and shotgun duel with L. A. Pradd and a man named Holley, as a result of which the three first named are dead, and Holley, who escaped injury, is said to be in jail.

It is stated that one of the four men is alleged to have offered an insult to the wife of one of the other three and the four men met on the Roanoke and Calloway pike where the shooting took place. After the first round, it is said, the two Abshires and Pradd were on the ground, wounded. One of the Abshires is said to have reloaded his shotgun and deliberately blew Pradd's head off.

Murderer Confesses Crime.

Louisville, Ky.—Jim Pearsall, the negro accused of crimanally assaulting Mrs. Charles Wagner, fatally wounding her aged husband and of attempting criminally to assault Mrs. R. L. Jones, at Lexington, Saturday confessed to a detective at midnight that he had shot Wagner, but denied having attempted assault. He admitted a struggle with Mrs. Jones. The confession was made before a notary public. Pearsall is being closely guarded.

May Get Big Tannery.

Columbus, Ga.—Columbus may get a big tannery, costing $75,000 and employing 100 men. The Board of Trade is now corresponding with a resident of a Georgia town who is thinking of establishing such an enterprise here.

MOSCOW STRIKES TOO

Thousands of Workmen Lay Down Tools and Throng The Streets.

URGES OTHERS TO FOLLOW.

A General Uprising of the Russians Threatens to Shake the Foundation of the Empire.

St. Petersburg—The general strike in Moscow is proceeding on exactly the same lines as the St. Petersburg strike. The proclamation and methods are identical.

Employes of the Bromley Metal Works to the number of 1,000 men at 2:30 p. m. Monday struck and declared their St. Petersburg comrades asked them to strike.

They immediately left the works, formed a procession, marched through the streets and begged their fellow-workmen in all industrial establishments to join in the movement. A majority of those who were requested to quit work complied. Afterwards the strikers visited the Sytin Printing Works, the largest establishment of the kind in Moscow and belonging to the millionaire publisher, Sytin, and induced the men employed there to strike. The works closed at 5 p.m.

Sevastopol (11 a. m.)—The vast admiralty works here are ablaze. The fire broke out immediately after the second signal for beginning work was given at 7 a. m. The flames burst simultaneously from different parts of the works and the whole building was so quickly involved that men in the modeling department barely escaped by jumping out of the windows. Energetic measures prevented the flames extending to the docks. The fire was under control at 1:30 p. m. The cause of the fire is unknown.

Court Suspends Sittings.

St. Petersburg—The fourth civil division of the court of justice has suspended its sittings, owing to the lawyers refusing to practice.

Harmony Predicted.

New Orleans—Progress toward harmonious organization of the cotton convention and to define the scope of its work resulted from preliminary conferences which were held Monday by a number of leading men who are already here, including President Harvie Jordan, of the cotton planters; President Peters, of the cotton growers; Judge Eugene Williams, Lieutenant Governor Jester, of Texas, and John M. Parker, ex-president of the New Orleans cotton exchange and chairman of the local committee on arrangements.

It was decided that Governor Jester should be the temporary chairman and Mr. Jordan the permanent chairman of the convention. The conference held to the opinion that the cardinal features of the convention work ought to be the discussion of the question of the reduction of acreage and the consideration of the wisest plan to enable the farmers to hold surplus cotton.

Williams Presents Plan.

Judge Eugene Williams, of Waco, Tex., presented some views at the conference today of the leading men here in the adoption of immediate steps for the establishment of a system of warehousing which will enable farmers to hold their cotton on low rates of interest, on warehouse receipts as collateral, and low rates on insurance. He is seeing co-operation of the farmers, merchants and bankers in this plan.

Jennings, La.—The doors of the Citizens Bank were closed Friday. There has been a heavy drain on the bank for the past three days. The officers gave out a statement that the assets will exceed the liabilities by about $70,000. Commissioners will liquidate the affairs of the bank.

Officers Under Arrest.

Tuskegee, Ala.—Marshal S. Y. Taylor and Deputy Sheriff George M. Lamar, who together with Sheriff J. T. Conner shot and killed the two McBride brothers in an attempt to arrest them, have been placed in jail. A warrant was issued for Sheriff Conner, but his condition resulting from wounds received at the time of the difficulty prevents its being served. Coroner Green made the arrests.

The men have not been placed in the regular prisoners' room, but are confined in what is known as the sheriff's room. There is much excitement here tonight and a mob is now being organized to go to Hanceville.

Police Have a Clew.

Decatur, Ala.—At last a clue to the murder of Miss Belle Bloodworth is in the possession of the police. Monday night about 9 o'clock bloodhounds were brought here from Lawrenceburg, Tenn. They took the trail at once, following it to East Decatur, where they entered a negro house of questionable character.

Two women were found alone in the house. They denied all knowledge of the crime. After leaving the house the dogs took a zig-zag course to Flint station, seven miles south on the Louisville and Nashville railroad, where they stopped. It is believed that the murderer caught a freight train there. Private detectives are working on the case.

Decatur and New Decatur and Morgan county have offered a reward of $1,000 for the arrest and conviction of the murderers, and Governor Cunningham yesterday afternoon at the request of Solicitor D. C. Almon, offered a reward of $400 for the capturer of the murderer of Miss Bloodworth.

Fatal Automobile Accident.

Ormonde, Fla.—From the effects of a broken arm, broken leg, several broken ribs and the attendant severe shock to his nervous system, received on the racing course while attempting to make too sharp a turn with his car in a vain effort to avoid crashing into a motor cycle, Frank H. Croker died shortly after 6 o'clock Sunday morning. Mrs. Richard Croker, the young man's mother, reached here from Jacksonville and will leave with the body for New York.

The fatal accident, coming at the opening of the big event, has cast a gloom over the other racers. The adoption and enforcement of the most rigid rules to prevent another such accident is being insisted upon. Mr. Croker's chaffeur, Rohl, was a Frenchman, and had not been in this country long. One side of his head was crushed in and death was instantaneous. Mr. Stanley, who was on the motor cycle, was taken to St. Augustine. The extent of his injuries is not known here, but it is not thought they will prove fatal. The car was demolished.

Naval Improvements Going On.

Key West, Fla.—Improvements at the naval station, though to all appearances slow, are going ahead at a very satisfactory pace. One of the new residences of Whitehead street is now nearing completion, and will be occupied by the commandment as soon as it is ready until the spacious quarters to be built for that officer are ready. It is stated that the quarters now occupied by the commandment, will be taken down, and near the site will be erected a large equipment building which is to be built of brick. Work on the concrete wall which is to enclose the reservation will begin next week and will be pushed to completion. This will give employment to a large number of men. The large tank for water pressure on the grounds is about completed, and will be tested next week. A pumping station and an electric light plant will probably be the next improvement made. The latter will have sufficient power to furnish lights for the reservation and power for the wireless station.

Convicted of Crimping.

Mobile, Ala.—In the United States district court Monday Charles Nelson, who has been on trial for the last two or three days on four charges of "crimping," collecting money from sailors as a fee for shipping them on vessels, was convicted on all four charges. The minimum penalty is three years in the penitentiary. The case will go to the supreme court.

Stricken With Epilepsy.

Washington.—Representative Pearre of Maryland was stricken with epilepsy on the floor of the house Monday and was carried to the cloak room and attended by Dr. Godfrey Hunter, a member of the house from Kentucky.

Old Custom Employe Dead.

Mobile, Ala.—Louis O. Townsley, aged 82, a native of New Orleans, died tonight at his home on Spring Hill avenue. He had been a resident of this country since he was 2 years of age and had been for more than half a century an employe in the custom's office.

Accidentally Killed.

Gadsden, Ala.—The news of an accidental shooting at Whitesville, Marshall county, reached Gadsden Saturday, in which Palmer Ribsby was shot and killed by Bruce Stover. Palmer Rigsby, Bruce and Jim Stover were out hunting rabbits and Palmer was standing in front of Bruce when a rabbit suddenly darted out in front of Palmer and Bruce Stover took a quick aim and fired and the load entered the lower part of Rigsby's back, causing almost instant death.

Rome—King Victor Emmanuel Monday signed a decree conferring the Grand Cordon of the Crown of Italy on Whitelaw Reid, of New York.

Home Grown Fruit Trees

I have for sale a fine assortment of fruit trees, particularly adapted to this climate. Peaches, Plums and Apples, of the best varieties for this section, and all guaranteed true to name. Prices Reasonable. J. L. Winslow, Pine Hill Nursery, Thorsby, Ala.

An Ohio burglar remained concealed under a piano while a girl played for one hour. He was punished enough and ought to be turned loose.

The Japanese cry of "Asia for Asiatics" is hardly enthusing to their commercialistic sympathizers in England and the United States.

Upon the Stair

I found a bleeding-heart upon the stair—
Some hand o'er-filled with flowers had lost it there—
Nor knew its absence from the cluster sweet,
Alas it perished 'neath an hundred feet!

I found a fragile human flower one day—
Dropt heedless from a full life's fair bouquet—
He who had plucked it climbed to heights of art,
But, on one step he left a woman's heart!
—Lida Keck Wiggins in Madame.

AS "LANK JIM" TOLD IT

(Copyright, 1904, by Daily Story Pub. Co.)

"Lank" Jim, as they called him, had been driving a hack in Southern Arizona for fifteen years, and when I took my seat beside him he knew I wanted information or entertainment. But we were ten miles on our journey before he even opened his lips.

It was a relief to me when he finally turned towards me, and asked whether I had ever been over the road before. "If you haven't," said he, "just take a squint at that cabin."

As we drew near the structure I observed it closely. "Rather out of proportion, I should say, for a log cabin. In fact it is entirely too high."

"That's it, that's it! Why, I have pointed out that cabin to men with eyes, and yet, when it came to noticing anything unusual about it, they were blind as bats, and to them it's just a pile of logs; but you see things. I'll tell you now that when we round the hill and look back, like as not, you'll see a mighty different looking building standing on that spot. Some see just the cabin, as I said before, but you'll see more. I can't explain it and don't try. Of course I know a mirage belongs to the desert, but I reckon this one strayed and couldn't find the way back. This country's near enough like a desert to deceive a mirage anyhow.

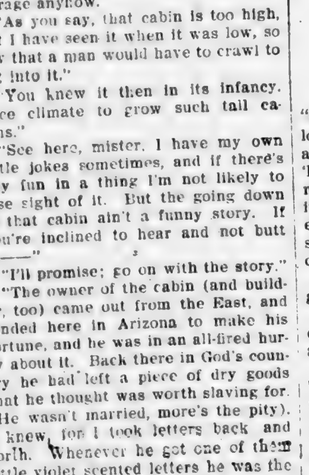
"As you say, that cabin is too high, but I have seen it when it was low, so low that a man would have to crawl to get into it."

"You knew it then in its infancy. Nice climate to grow such tall cabins."

"See here, mister, I have my own little jokes sometimes, and if there's any fun in a thing I'm not likely to lose sight of it. But the going down of that cabin ain't a funny story. If you're inclined to hear and not butt in——"

"I'll promise; go on with the story."

"The owner of the cabin (and builder, too) came out from the East, and landed here in Arizona to make his fortune, and he was in an all-fired hurry about it. Back there in God's country he had left a piece of dry goods that he thought was worth slaving for. (He wasn't married, more's the pity). I knew, for I took letters back and forth. Whenever he got one of them little violet scented letters he was the happiest man alive, and wrote her about three before he got another. If he was expecting one, he walked five miles down the road to meet me. She had corralled him all right, and no mistake. This was a rough country, and I saw he didn't fit in very well; but he took off his gloves and went to work. He learned to use the shovel and pick like the rest of us, and it wasn't long before things were coming his way. He kept saving his pile and it did grow amazingly. Then he began to improve his cabin, like he was getting ready for company. But just then I noticed that them little violet scented letters were getting few and far



"A piece of dry goods that he thought was worth slaving for."

between; but he wrote just the same. Finally none came for weeks, and then one day I brought him another. He read it while I waited; then as usual, he rode with me to the mines.

"Somehow his face looked pinched and white. I said to him, 'Bad news from home, Mr. Lupton?' He knew I meant it kind, for I had showed my hand. 'Yes,' he said slowly, 'and it's rather hard on me.' It seemed like he caught his breath before he added, 'She wants her freedom.'

"'She does, does she? Well, she would get it, and quick.' I was riled. 'A woman that wants to go ain't worth holding.' I saw I wasn't easing the pain much, so I shut up. She must have dealt him a bum hand, for no matter what the trump was he couldn't play. He took to roaming round and didn't work much, and began setting up the drinks. I thought then it was all up with him. He lost interest in the cabin, and drank a lot more than was good for him.

"One day as I was starting on this trip he took the seat beside me, and I said to him, 'Mr. Lupton, you don't seem to have much use for your cabin; you are away so much.' I could see he was feeling bad, and ashamed, too, for naturally he was straight goods enough. When he answered he said, 'No, Jim, I haven't, and I don't deserve a roof to cover me.' Then he looked off over the dry, hot sand, like he was

"So I wrote the whole story out."

looking for a oasis in a desert. It was a long time before he spoke again. 'I'm going to make some changes in my cabin,' he said quietly. 'It's coming down until there is just room enough to crawl in at the door. Why shouldn't it be on a level with its occupant?'

"Going to do penance?" I suggested.

"'Call it what you please, but the cabin is coming down, and it won't get a raise until I elevate myself.'

"Well, he went to work next day. The lowering process continued until that cabin looked like a sheep pen. Folks said he was a little touched in the upper story, but I knew his thinking machine was all right.

"After that he left the boys alone and went back to work. His cabin was terribly inconvenient, but he never complained. After a month or two he put in a log and raised it a little. As the days went by he kept putting in more logs until it got back where it ought to be.

"Some time later he disappeared for a week or so, and then finally I saw him at home getting the logs out, and I knew it had to come down again. Well, that thing went on for nearly two years, going up and coming down. Somehow it got onto his nerves; he was beginning to break, and his eyes had a far-away look like he wasn't long for this country. I decided something had to happen. I knew he was a safe craft, if he could only get the right one to steer, and well worth saving.

"So I wrote the whole story out (I haven't much of a fist for letter writing, either), and sent it off. You see I had mailed too many letters to forget her address. Soon after that I began to watch for one of them violet scented letters to carry to him.

"Did one come, you're asking. Not a bit of it. She came herself. I brought her out this road bound for a little boarding house stuck off in them trees. On the way she made me tell her the whole story over again, and when we got in sight of the cabin, it was one of them times when it was low. She gave a look, and then the tears began to splash down like rain, and I knew she was sure to win. She was a pretty little thing, looked like wax. I told her this was most too rough a country for ladies, but she said he was here and nothing else mattered. It was some time before I passed again, and then I noticed the cabin was going up. It was about ten days later on, as I was driving along here at sunset, I saw a shining fort right where the cabin had always stood. I would swear to it with my last breath. It towered above the trees, and stood out plain against the crimson sky. That was the first time I ever saw it. Hallucination? Not a bit of it. I have seen it many a time since. That night they were walking down the road hand in hand. They didn't seem to mind me much, for they just looked up and smiled, and he drew her a little closer to him.

"It wasn't long before they were married, and she insisted upon living in the cabin, only it must be built high; as high, she said, as their hopes and aspirations.

"So he fixed it up according to her notions.

"She knew there would be no more coming down. I said to him once after, 'Mr. Lupton, your cabin stands high.'

"'Yes, it does, Jim,' he answered, and in his eyes was a great light, 'but it's strong, for it's built of firm resolutions and it stands on a foundation of love.'

"This is a good place to stop," added Lank Jim, "for the story ends here."

As we reached the summit of the hill, with my thoughts still upon the happy termination of the story, I turned for a last glimpse of the cabin. But the cabin as I had seen it was lost to view, and whether hallucination or mirage, it matters not, there through the deepening haze stood the dim outlines of a shining fort.

ABOUT WEARING OLD CLOTHES.

We Can Do This Gracefully if We Know We've Good Ones at Home.

"Now, why is this?" said a pretty girl who likes nice things, but hasn't money enough to buy as many as she would like. "My gloves are all worn out, so that there are holes in all the finger tips, and I'm positvely ashamed to wear them, and I buy a new pair. But when I've got the new pair I keep on wearing the old ones, and I wear them then without being ashamed of them at all.

"Now, why is this? Well, I suppose it's on account of the moral support I get from the new gloves that I'm saving up now at home. The people I meet may think, just as they did before, that the old gloves are the best I've got, but I know better. I could wear just as good as anybody, now, if I wanted to, and so I trot right along without worrying, wearing the old.

"And it's just the same about anything else. If you've got good things you're not ashamed to wear old ones.

"I've worn a skirt until it was so shabby that it was a disgrace to appear on the street in it, and then bought a new one and hung it up in the closet and kept on wearing the old one and feeling just as chipper as could be in it; and I've known other girls to do just the same thing.

"If you haven't got the things, you are miserable; but if you have got them, you can wear what you like."—New York Sun.

Writes Morse on the Doorbell.

The other afternoon a caller in a Harlem apartment house was surprised to hear the doorbell ring long and intermittently, says the New York Press. She was equally surprised when her hostess, instead of complaining about the noise, went to the door-opener and pushed the button for a couple of minutes. Then the ringing began again, with a second response from the button, and the hostess quietly sat down to chat with her friend.

"It was only Harry," she explained. "He wanted to know what I wanted brought in for dinner, and I said a steak. He said he would rather have chops, and I said go ahead and get them."

Then the visitor remembered that Harry had married his wife when she was an operator in the same telegraph office in which he was employed, and understood that the intermittent ringing was really Morse code, employed to save the husband a climb of four flights of stairs.

A Broken Dream.

As she came down the stair
In a cloud of misty tulle,
The heated ballroom air
Seemed swept by an incense cool.
Full many a callous heart,
Weary and world worn there,
To quicker pulse did strat
As she came down the stair!

Down drifting through the air,
Clad in a cloud of white,
I fancied a seraph there,
With pinions plumed for flight.
Haggard and old had grown
Faces I fancied fair,
In the light of that lily unblown,
The vision upon the stair!

Then enchanted in every sense,
Breathing a perfume rare,
The fragrance of innocence
And the happy flowers in her hair,
I tripped on that dreamful dress,
Well, imagine my deep despair!
For we floored a dozen, I guess,
Tobogganing down the stair!
—E. D. Pierson in New York Herald.

One Conductor's Error.

William A. Gonser of Montcalm, insane and in charge of officers while being taken to the Thaverse City asylum, broke both the shutters of the car window and the window itself by butting it with his head in efforts to escape. The conductor came along, saw the wreck of the window and inquired who did it. An officer explained that it was their ward, who was crazy. The man with tinsel on his cap looked at the prisoner and remarked: "He is clean gone, sir." "You are mistaken as to his first name," answered the deputy. "He is William Gonser." The conductor apologized and passed on.—Detroit Times.

Perfectly Congenial.

Naggsby—when a man and his wife think the same thoughts simultaneously, it is a sign that they are exceedingly congenial.

Waggsby—So. Well, then, my wife and I are congenial all right, for the other night when she said that she wondered why I'd ever been such a fool as to marry her, I had been sitting there in silence for half an hour wondering over the same identical thing.—Baltimore American

ABOUT INDIAN DAY SCHOOLS.

They Are Doing Great Work in Civilizing the Red Man.

The Indian day schools are centers of interesting things uplifting to a needy people, says a writer in the Southern Workman. They are home object lessons of cleanliness, industry and thrift. They teach industries suitable to the environment in which the children live.

They strengthen home ties by requiring parents to care for their offspring. They give teachers an opportunity to study the conditions of the Indian home and to better them. They are distributing points for medicine and good counsel. They silently but unobtrusively break down opposition to American dress and customs. Above all, they keep the Indians at home.

Some teacher has said that if the day schools did no more than keep the Indians at home they would be worth all they cost. These schools should have the best and most valuable Christian men and women in the service. They should have a man for teacher with his wife for housekeeper and these must be provided with a good home.

One of my Indian neighbors came to me and asked to be taught how to make light bread. She brought her flour and was shown how to make the sponge. This she took home and the next morning the writer went to her house, showed her how to knead the bread, how to make it into loaves and how to bake it, but after some time the woman brought the dough to the teacher's home, requesting her to bake it for her.

After all was finished she said: "Well, this is all a great deal of trouble and it takes altogether too long. When we want bread we want it right away." Another neighbor remarked: "The light bread is like a sponge, nothing to it."

USE GOLD FISH FOR BAIT.

Two Anglers, in Despair, Buy Them in Place of Minnows.

A pair of Philadelphians who went down to Gibbsboro on a fishing expedition recently, says the Philadelphia Record, discovered when they arrived in the Jersey town that they were shy on bait. As the fishermen were out for bass and pike, live bait was necessary; so a small boy was hired to catch minnows. He scooped in thirty-five, and charged 1 cent apiece for the fish. The anglers paid the price, and then found the minnows too small to swim about after they had been hooked, a circumstance which seemed to knock the bottom out of the fishing trip, as, unless the bait is lively, the bass and pike do not bite.

The pair had about decided to go home when one spied an aquarium filled with goldfish in a store window. He suggested the goldfish as bait, and both men secured a dozen for a comparatively small sum. The experiment was a success. The anglers caught a fair mess and found the goldfish to be very hardy. A pair which had been used as bait, and had escaped the hungry pike and bass seemed none the worse for having been hooked and swam about when returned to the aquarium as if nothing had disturbed their monotonous career.

Rainproof Suits.

The time is coming, and it is not far off, when men and women will wear rainproof suits as well as coats, for the process of waterproofing cloth has become so extensive that any cloth, whether of the best or poorest quality, can be treated without altering its color. Indeed, it has been a long day since fashion gave to men such a boon as the raincoat has proved. The raincoat doesn't show on its surface that it is a raincoat, and it is worn on the sunniest day as well as the wettest with equal facility and good taste. While it is at present a distinctive garment, there are signs which point to a rainproofing hereafter for all styles of overcoats. That in vogue is an easy step to the application of the process to suits of all descriptions. How handy a waterproof full dress suit would be at some banquets! The process is cheap enough. It costs only twenty-five cents a yard. In addition to the rainproofing treatment has been made to include a so-called "moth proof" quality by some firms. Vanish the moth balls!—New York Tribune.

Love Is Blind.

What color are her eyes? What shade?
You ask, but I could never tell.
They're just her eyes, and God ne'er made
Another pair of eyes so well.

Hair gold or brown? Well, this I know,
To think on't is my chief delight—
No sun in summer time doth glow,
Nor moon at night gleam half as bright.

Lips red? What! Seest thou not her kiss?
God knows—my senses cease to be;
If I but dream anon of this
I'd die for the reality.

Each night I vow to stand apart
And learn to name her every charm;
But long before she comes my heart
Is sounding in a wild alarm.

And at a bound I'm by her side,
Ah, far too close to recognize
Aught but the welcome quick implied,
The loving laughter in her eyes.
—G. M. B.

English Man of Letters.

Here is a description of James Bryce, who is visiting this country. It is written by one of the professors at Harvard, where he lectured: "He is a small man, about 65 years old, with a very large head, most of which seems to protrude backward and to slant upward and backward from his high forehead. He is bald on top, with that sort of white hair and beard which sometimes turns yellow. He has very bushy eyebrows of the same color, is round-shouldered, very nicely dressed, and has quite a distinct Irish accent, not at all the broad English accent which I had expected. He is a distinct speaker, though very quiet and absolutely unemotional. He has a high nasal voice."

Sunday Rest Is Gone

Sunday, from being a day of rest for man and beast, has become the busiest day of the week. So many society people live in the suburbs that the English week-end parties have become an established custom in this country, and the guests must be amused. Dinners, at homes and musicales, not only in town but out of town, have become the regulation mode of entertainment for that day. Sunday, too, is the day now selected for repairing streets and altering car tracks in the business sections, which it is impossible to do during the rush and crowding of the week.

The old-fashioned Sunday has disappeared—that slow, easy-going day of rest and family reunion, when church and a good, solid dinner were the only distractions, and Sunday papers were of small import. Simple pleasures, and yet how restful!

The city's growth and the opening of new and convenient routes by the trolleys are in a great measure responsible for the change, and the truthful excuse is given that Sunday is the only day that one is free to visit. But have the majority this excuse, or is it the feverish rush after excitement and novelty

What would the Pilgrim Fathers have to say if they saw the very vanities they had turned from in the Old World becoming daily more established in the New? Think of the austerity of the Puritan Sunday—the long journey to church, the tedious service—and it cannot be wondered at that a reaction should en

Then came the Sundays of the century—the Sundays when the fast was deferred to an hour than on week days. Oh, the luxu that extra hour's sleep! The re tion Sunday breakfast of hot or griddle cakes, and the haste ready in time for church, for church or meeting one must g less able to give some plausibl cuse. The children all went to cl too, in those days, and if the s seemed endless and far beyond comprehension of such youthf teners there was always the co sation of dropping the bright on the collection plate, or wa Poor old Mr. Blank nodding and waking with a start at regul tervals. Sacrilegious amusem without doubt, but compensating measure for the penance of s still, which is so irksome to young! How much the children joyed being allowed to keep o best clothes in honor of th Light literature was tabooed make it mere enjoyable dur week, and there was the knowing that if story books w bidden, lessons, too, were laid Childish and simple this sounds yet how restful that Sunday in modern eare.—Philadelphia ger.

Filipino All Saints' Eve

All Saints' eve is celebrated in the Philippines in a strange fashion, says a writer in Lippincotts. It is gleefully hailed by all the gay young blades of the village as the calinanan or chicken stealing festa, as on that night it is considered perfectly legal to steal every feathered thing you can lay hands on. Young men and boys assemble at midnight, often to the number of 100 or more, and, dividing into bands of eight or ten, each band having a duly appointed captain in command, proceed to take toll of every hen roost in the neighborhood.

The expeditions are attended with plenty of excitement and even danger, as the fowls roost either in the branches of trees or under the elevated floors of the houses, which are usually high enough from the ground to permit a man to pass to and fro under them in a stooping position. To gather the chickens from the trees is an easy task, though one or two youths are often treed by an irate householder with blood in his eye and a bolo in his hand, but the onslaught on the roosts under the houses is the supreme test of coolness and courage.

Dark figures steal quietly to the tack, and the crucial moment when hands are laid on the feath victims. One or more is sure to the alarm, and the awakened comes flying pell-mell to the armed with knives, clubs, stones, guns if it is lucky enough to po them, and the next few minutes filled with enough excitement to fy even the most adventurous Squawks, cries, curses, kicks, sp the sound of rapid blows and run feet fill the night air, while the ers literally fly.

The glory of the raid consist getting away with the chickens usually two or three agile young lows engage the angry owners the rest of the party get away the loot. A party of six young at Binangonan on All Saints' 1902, returned from their midnight cursion with forty-five chickens turkeys, several geese "and m bruises," to quote the leader of band, who proudly exhibited a eye, a sprained wrist, and a seamed and scarred with scratches, all received in the of the hen roosts."

The Old Country Store

I'd know it by the sight of it, I'd know
it by the smell;
I'd know it by the sound of it, and know
it mighty well.
I'd know it if you set me down at midnight, 'mid the scent
Of coffee bags and sugar bins and country butter blent.
With eyes shut, I can smell again the prints upon the shelf
Amid the hickory shirting—you could do the same yourself
If you had lived among them in the days when life was bleak
And all you saw was in the town—say every other week.

On that side is the candy—I can see it now, and on,
How good those striped sticks used to look in days of long ago!
On this side is the muslin, with blue trade marks printed on,
The bleached and unbleached side by side; and here's some slazy lawn
And dimity that wouldn't sell (they'd bought it by mistake);
Some blacking, tans, and currycombs, and hoe and garden rake.
We used to carry in the eggs and butter, and we'd buy
Our sugar, tea, and blueing and the concentrated lye.

We used to wander back into the small room where they kept
The "coal oil" and the axle grease—hardly ever swept.
But there it was we found the scales we weighed ourselves and said
It wasn't like the steelyards out in the wagon shed.
'Twas there that in the spring time we would buy us all straw hats.
The 16-cent kind made out of straw use for making mats.
In fall we got our footgear that last the winter through.
For pa said: "Them's yer winter boots—ye've got t' make 'em do."

I've been in houses mercantile that ered blocks and blocks;
I've seen the clerks that swarmed a in bevies and in flocks;
I've seen the elevators; but I ca make it seem
Like anything substantial, for 'tis n ing but a dream.
To me the real "store" will be, as as life shall last,
That smelly country village place I there in the past,
With just one clerk to sell you thi some fellow that you knew,
Though sometimes on a circus there'd be as high as two.
No fun to "do th' tradin'" like I us any more—
How clear is memory's picture of "gen'ral" country store!
—Strickland W. Gillilan in Lesl Weekly.

Kick Spoiled the Story

There are people who maintain that Mr. Dash, the architect, is grossly untruthful, but I do not hold with them. The gentleman is merely enthusiastic and imaginative, and his geese, not content with being swans, insist on being roes. He went out to supper one night not long ago with his friend George, and a capitalist whom he hoped to have for a friend. It was George's party, and George begged Mr. Dash to confine his talk to yea, yea, and nay, nay, and so not prejudice the desirable capitalist.

"Now, when you begin to exaggerate," said George, "I'm going to kick you, and when you feel the weight of my foot for heaven's sake whittle your story down."

Mr. Dash promised. All went well till, in the mellow time after the supper, the capitalist began to talk of stock farm. This reminded Mr. D of his second cousin's farm in P sylvania.

"Joe has one of the finest barn the county," he said, warming to tale. "Indeed, it's one of the fines the state, or in any state. It's 400 long"—here George delivered a aimed kick—"and—and 6 feet wi

Naturally, next day there were tual recriminations and back talk

"You've killed yourself with man now for keeps," sneered Geo "Four hundred feet long and six wide!"

"It was your pig-headed tomfo ness in kicking me at the wrong t insisted Mr. Dash. "You spoiled i If you'd kept your feet to yourse have made a well proportioned ba it, anyway."—Washington Post.

Learning How to Shoot

I believe practice with the rifle the true way to learn to shoot best with the shotgun. The old idea was that shooting a rifle made you too slow with the shotgun and that the shotgun spoiled your rifle shooting. There is something in the latter, but not much in the former idea. If one were shooting continuously with either and should suddenly change to the other, he might not at once do as good shooting as if he had tried both; it might take a few days' practice to get used to the new conditions. But rifle shooting can injure shotgun shooting only by making one too slow; and my experience is that one cannot be so injured except temporarily.

By beginning with the rifle you eliminate at once most of the trouble from excitement, because you know you can rarely hit a flying bird. makes you slow you will find trouble in becoming quick en The man who begins with quick ing and becomes a good shot after expenditure of barrels of ammu does not become so by virtue of ing a machine of himself. It cause in making a machine of hi he unconsciously acquires the of seeing the gun and game in same quick glance which he not do at first. A quick shot th comes accurate with time, and a shot will become quick with time with far less practice. There reason why one should not lear one season to get sufficient enjoy out of the gun if one will but re ber that the pleasure is not in size of the bag or in the cleanne the score, and never was.—Outin

THE ART OF WEARING A GOWN.

"I wish I knew," said the girl with a chiffon muff. "My stage gowns, the stage love scenes and stage ments, are always so much more beautiful than those in real life.

"They are not. Half the gowns one sees on the street or on the stage are in a dream as to be worn. I've been a dressmaker, a actress but these impossible gowns they do!

"It is not the gown that makes the woman, but the woman the clothes.

"Did you ever see Miss Regan of her chiffon confections? I at Binangonan on All Saints' It was of sky pink with a mantle pink chiffon falling from her shoul and almost completely enveloped her. Well, that was a floating dre and I don't remember once having Miss Regan walk a step with her skirt. She just seemed to float on to the stage like a cloud to float from cl to cloud and float out again. She didn't walk, she didn't stand, she didn't know she moved, and that's all you knew. When she changed to frock for a boat ensemble she looked ten years younger. Her chin had been low, her eyes had grown big and innocent, and she seemed suddenly to have acquired feet and to have lost ten years and gained ten pounds. It was all in the flowing indecision of frocks.

"An actress goes into her frocks as of her own. The moment she steps into she feels her role. If the gown is long and clinging and trailing and sophisticated she simply floats it has yards and yards of train she learns how to manage it, how to sail down so that it will wind itself around her, how to sail across the room as though she were trailing wings after her, how to turn without stepping all over her skirts. She feels every inch of the dignity that a train gives and she puts on her haughty look with her haughty frock. But the w a privat of always looks thoug her train. She acts as though she were not conscious of her train. She acts ly shrunk into insignificance beneath it and survived up under her on ly. She was only a mo the rest of the party get away the loot. A party of six young one of her chiffon confections? I at Binangonan on All Saints' It was of sky pink with a mantle 1902, returned from their midnight pink chiffon falling from her shoul cursion with forty-five chickens and almost completely enveloped turkeys, several geese "and m bruises," to quote the leader of her. Well, that was a floating dre band, who proudly exhibited a and I don't remember once having eye, a sprained wrist, and a Miss Regan walk a step with seamed and scarred with she had to dress in. scratches, all received in the "ba She just seemed to float on to the of the hen roosts." stage like a cloud to float from cl to cloud and float out again. She didn't sit

WOMAN'S WORLD

THE ART OF WEARING A GOWN.

"I wish I knew," said the girl with the chiffon muff, "why stage gowns, like stage love making and stage sentiments, are always so much more beautiful than those in real life."

"They are not," said the other girl. "Half the gowns one sees on the stage one wouldn't wear in a drawing room or on the street for anything in the world. Do you know that lots of actresses buy their imported gowns from the secondhand dealers? Well, they do."

It is not the gown, but the way in which an actress wears it that makes it so attractive. She knows what sort of frocks to buy, just how to put it on and just how to carry it. That is what nine women out of ten in private life don't know. The average woman selects a frock without any reference to her figure whatever. She just buys it because it is pretty and puts it on exactly as it goes. Usually she looks like an animated clothes rack, with her garments hanging on her.

"An actress gets into the 'feeling' of her gown. The moment she slips on what she 'feels' her role. If the gown is long and clinging and filmy and diaphanous she simply 'floats' every minute that she has it on. If it has yards and yards of train she learns how to manage it, how to sit down so that it will wind itself around her, how to sail across the room as though she were trailing wings after her, how to turn without stumbling over her skirts. She feels every inch of the dignity that a train gives, and she puts on her haughty look with her haughty frock. But the woman in private life always looks as though her trailing skirts were just dragged on behind. They are not a part of her. Every bride I have seen looks as though she felt the weight and encumbrance of her train. She actually seems to shrink into insignificance beside it and is overawed up under her enormous veil. She was entirely unused to her clothes.

"Have you ever seen Mme. Rejane in one of her chiffon confections? I did. It was of sky pink with a mantle of chiffon falling from her shoulders that almost completely enveloping her. Well, that was a 'floating' dress, and I don't remember once having seen Mme. Rejane walk a step while she had that dress on.

"She just seemed to float on to the stage like a cloud, to float from chair to chair and to float out again. She didn't sit, she didn't stand, she didn't walk, she just 'moved'; and that was all you knew. When she changed that frock for a short girlish one with a basque waist, you wouldn't have recognized her. She looked ten years younger. Her chin had been lowered, her eyes had grown big and innocent looking, and she seemed suddenly to have acquired feet and to have lost ten years and gained ten pounds. It was all in the 'feeling' induced by the frocks.

"An actress makes her frocks a part of herself. If they are frilly, she flutters and flirts in them; if they are nobby she becomes at once jaunty and boonant; if they are magnificent she takes on a new dignity. She trails them, dangles them, sweeps them, holds them, clutches them, flutters them, or hugs them, just as they seem to need it. She makes them subordinate to herself, while at the same time she brings into relief their most striking feature and displays to advantage their slightest suggestions.

"Every gown has some sort of motif and unless you are able to discover its artistic significance you will appear as badly in it as though you should quote a bit of poetry without knowing what it meant."—Indianapolis News.

VISITING CARDS.

The visiting or calling card, an insignificant but necessary medium of communication on society, should be of the finest quality, and the engraving should be perfect in style and execution, says the Binghamton Press.

The sizes of different cards vary from season to season, but depend largely upon individual taste, the length of name and style of lettering. Names should be spelled in full and residence numbers spelled when space will permit.

The Roman and Old English lettering are considered more fashionable than script, but will never wholly supplant it. One thing is imperative—only one style of letter should be shown on a card.

A woman's card invariably carries the prefix Mrs. or Miss, and if one belongs to a profession that should be indicated thus: Dr. Katherine Burnham Smith, or Katherine Burnham Smith, M. D., for her business card only, the social card carrying the regular prefix.

The married woman's card carries her husband's full name, with reception day in lower left hand corner and address in opposite corner.

The young woman's card does not bear a calling day. The young miss not in society uses a card only among her school friends. For a year or so after entering society she visits exclusively with her mother, and her name appears under her mother's name on a special card bearing reception day and address.

If she is the eldest unmarried daughter her Christian name is omitted, but a younger daughter's name appears in full. When other daughters enter society, the eldest uses a separate card, and the next mother's card.

The title Mr. should always appear on a man's visiting card, unless the name is followed by Jr. A business card, however, should not contain that formality. A clergyman may set aside his formal title and use the plain Mr. if he chooses, as may a doctor, though it is customary to use the title. A physician, clergyman or scholar may have the right to the recognized abbreviations of various titles, honors or degrees conferred upon him, but for the social visiting card it is best to omit all except such as stands for the one title by which he is commonly addressed. For example, a clergyman known as Doctor Newell should have his cards engraved William Dennison Newell, D. D. A club or society membership is indicated in the lower left-hand corner, and the home address in the right-hand corner.

MOTHER-LOVE AMONG JAPS.

Public demonstration of affection is most repugnant to the good taste of the Japanese, and it is the absence of this which is so generally mistaken for a lack of genuine feeling. I recall one man, notes a writer in the Outlook, (though I doubt whether he could ever have been said to have "talked about" her), that when she died, while he was abroad, his depression was so profound that my husband watched him with anxiety lest he should commit suicide. The stoical training may render more unsympathetic a coarse nature; but repression to the refined soul brings an exquisite capacity for pain scarcely conceivable by those who are free to give utterance to every emotion.

Another man said to me: "I rarely speak of my mother, for a foreigner does not understand that a Japanese mother may be just as dear to her son as his to him, and by the Japanese it is not expected that one should utter one's deepest grief when his mother died and when consciousness returned rose to make light of a "little dizziness," with reference to its cause. To this day, whenever he goes from home, he carries with him his mother's letters, mounted on a beautiful roll of ivory and brocade, and on the anniversary of her passing beyond his mortal ken he quietly devotes a portion of the day to meditation and special thought of her. Even to his wife, despite the closest bond of love, he says not, "This is the day of my mother's death."—Washington Times.

STOCK NEWNESS.

There's a new stock. It is a dainty thing, and though novel in shape, it is pretty on the right girl, especially with a white waist.

This particular stock is composed of sheer white mull and Valenciennes lace. There's very little of the mull. On the stock proper it forms an inch-wide band with a strip of Val. insertion above and the Val. edge above that. A narrow bit of boning holds it up on each side.

Now for the new part.

It consist of eight tabs. Each tab of the muslin is bordered with insertion and edge, and all are joined together save at the center, front and back. Though this is not very visible, since these tabs form what appears to be a ruffle about four inches deep. This ruffle is neatly sewed to the base of the stock, and, when the stock is placed around the neck, this ruffle rests flatly around the shoulders.

This stock may be had ready made, but is quite expensive for it really takes quite a bit of lace, and the workmanship is exceptional.

PRETTY HAIR ORNAMENTS.

A medicum of natural oil is necessary for good results in dressing the hair, and this is, besides, supplemented by the hairdresser with a dressing that keeps the hair from scattering, and supplies it with a brilliant burnish.

The low hairdressing which displays a chignonlike arrangement of puffs and braids under a jeweled net is very becoming, as well as a broad-looking, simple braid. This last style of coiffure upon youthful heads is frequently ornamented with artificial flowers, sprinkled with rhinestone dewdrops, which produces a most brilliant picture.

An enormous number of tinsel and flower ornaments are used for evening coiffures, frequently combined with velvet in the same tone or color as the flower or tinsel.

INDIAN EFFECTS ON CUSHIONS.

The Indian craze which struck the country with "Hiawatha" is still with us, and it has extended from music to cushions. One of these, designed to enhance the weird splendors of a den, has a large Indian head painted on a background of leather. The hair of this head is real and very Indian hair, hair, coarse and black, and it is cleverly stitched into place on the head of the painted brave. Not only so, but he is trimmed with numerous gewgaws in the way of beads, and these also are appliqued on slender thongs of leather, on which gayly-colored beads are threaded, form the fringe of the cushion.

There are 300 Porto Ricans in San Francisco.

TALKS WITH OUR BOYS AND GIRLS

DADDY'S DARLING.

She comes to me when I'm at work
And rumples up my hair;
She plays among the papers which
I've just arranged with care;
She chatters, too, yet, all the same,
I love to have her there.

She spoils my pens, upsets the ink,
And makes a dreadful noise;
The table that I write upon
Is covered with her toys;
Yet, all the same, she is to me
The greatest of my joys.

She shows me all her dollies, too,
And when she tumbles down,
'Tis I who always comfort her
And kiss away the frown;
Yet all the same, she is to me
A queen without a crown.

'Tis sweet to hear her baby voice,
That calls me by my name;
She's such a little darling, how
Can anybody blame?
She is a teasing pet, but, still,
I love her all the same.

— New York Globe.

JEAN'S WATERLOO.

Jean and Donald were twins, although Jean was a good deal larger. This was because she had always been healthy, while Donald had found it hard work to live, so many dangers had beset his path. Donald was willing to endure the pain that went with measles and chickenpox and diphtheria, but always to be defeated by Jean was too much for his spirit.

Jean was a regular fly-up-the-creek, flitting from one thing to another—never apparently trying to do a thing, but in some remarkable manner always succeeding. She had talked before Donald was still lisping "Dada;" could read the newspaper while Donald was still struggling with "See the rat."

In spite of Jean's cleverness, Donald and she were most loving to one another. When they wrote their Christmas letter to Santa Claus their lists were found to be exactly alike. Jean's was short and sweet. It read: "Dear Santa—Bring me everything just like Donald's, except a sled. One will do for both, for of course, we'll always coast together."

Down in Jean's heart she felt that she would be first to master the "flexible flyer," and visions of coasting down Simmon's hill steering Donald, rose before her self-satisfied eyes.

Of course, Santa Claus brought the "flexible flyer." In his mind, as in Jean's one seemed enough, for but one splendid sled gladdened the vision of both children on Christmas morning.

How hard it was to wait for the first snow, with a flexible flyer just aching to be tried. Luckily a splendid snowfall did occur a few days after Christmas, and Donald and Jean were wild with excitement. Mother could scarcely keep them still long enough to put on their warm wraps, so eager were they to join their little friends in the delightful sport. What pleasure does equal coasting anyway? When the air is bright and clear, the ground covered with crisp, sparkling snow, the sleds flying down a hill like birds—can any one help being happy?

Jean took the lead, as usual, placing Donald behind her. She thought, of course, she could steer the new sled. At first everything went all right, when suddenly the sled whirled around, and before Jean knew what had happened Donald and she were buried in a snowdrift, while the sled was madly speeding down the hill by itself. Time and time again did Jean try to guide it, but with no better results. No matter how many things this young lady could do, she now had to face the unpleasant fact that she could not steer a "flexible flyer."

Donald pleaded to be allowed to try, but Jean would not even listen to such a thing. "If I can't do it, Donald Keith, how in the world can you? Don't I always beat you at everything?"

Donald admitted that she did, but timidly added: "No one can tell what he can do until he tries; I've never tried steering a flexible flyer!" Jean had to agree that his reasoning was sound. Realizing that she was a failure, and at the same time that the coasting was getting better each moment, Jean finally allowed the timid Donald to try his skill. Whether the instinct that makes boys boys came to Donald just at that moment or whether the fates thought it time for him to show that he was no longer going to be kept in the background by his clever sister, no one can tell, but down went the flyer in the most approved fashion. It never swerved from the path except as Donald's hand bade it. It obeyed him perfectly, and the sensation was so novel that the boy seemed beside himself with joy. At first Jean refused to ride with him, saying she was not ready to be killed, but after Donald had made two or three successful trips the little girl's ugliness gave way, and she jumped on the sled back of Donald. The sensation of being beaten by him was at first unpleasant, but the sport was so delightful, the shouts of the children so cheering, that before Jean knew it she was laughing and shrieking as merrily as any of them.

As for Donald, he was happy beyond words. When he told mother of his success she patted his curly head and looked as pleased as he did. Mother said it was good for all people to meet defeat once in a while, and to make her lesson clearer, told Jean and Donald the story of Napoleon. How this general, after the greatest successes the world had ever known, finally met his defeat on the battlefield of Waterloo. Donald liked the story very much. He declared he would name his new sled Napoleon. Father agreed to paint this name on one side of the sled, but suggested that it would be a good idea to paint Waterloo on the other. As he said this, he looked at Jean, who already had applied mother's story to herself. She was generous enough, however, to forget her own failure in steering the flyer, when Donald became the Napoleon of Simmen's hill. From this time onward no sled nor boy, no matter how big, could hope to win a race when Donald and Napoleon appeared upon the scene.—M. S. Handy in Indianapolis News.

MEADOW MICE.

We can always tell when there are meadow mice in a field by the little foot-paths winding in and out among the grass roots. The paths are usually rather lower than the surrounding grass, and are used chiefly at night, when the mice come out to feed upon wild bulbs, grass roots, berries and insects. The little rodents have many enemies, owls perhaps being the worst of all. Domestic cats get a great many of these mice, and of course hawks capture a great many of those which venture forth in the daytime. The mice themselves are harmless creatures except perhaps in very cold weather when they have been known to destroy fruit trees by gnawing the bark just above the snow line. They are gentle in disposition, and although I have picked up hundreds of them with my bare hands, they have seldom bitten me unless I happened to squeese them a little too hard.

The best known representative of the American long-tailed mice is unquestionably the white-footed, or deer, mouse. This is one of the commonest as well as one of the most beautiful of the four-footed animals in this country. Unlike the meadow mouse, it is a creature of the woodland, and "wood mouse" is the name by which it is known in many places. Among the surest signs of its presence are the empty shells of the hickory nuts, which form a considerable part of its food. These shells may always be distinguished from those which have been opened by squirrels by the manner in whih they have been cut. In nearly all cases it will be found that there are two holes in the shell—one in each of the two flat sides—and very often one of these holes is larger than the other. When you find a shell opened in this way you may be sure that white-footed mice are near by. Hunt for them in old stone heaps, decayed logs, holes in trees, and especially in old birds' nests.—November Woman's Home Companion.

DUMB CRAMBO.

Divide the company into two equal parts, one-half leaving the room; the remaining players should then select a word, which will have to be guessed by those outside the door. When the word has been chosen—say, for instance, the word "will"—the party outside the room are told that the word they are to guess rhymes with "till." A consultation then takes place, and they may think that the word is "fill." The company then enter and begin to act the word "fill," but without speaking a word. The audience, when they recognize the word that is being performed, will immediately hiss, and the actors then retire and think of another word.

Thus the game goes on until the right word is hit upon, when the company who have remained in the room clap their hands. The audience then change places with the actors.

FOR THE LITTLE CHIMNEY SWEEP.

Do you know why on all the old-fashioned roofs (Dutch roofs) there were such funny little steps? These were not for ornament, as you may suppose, but were to enable the little sweeps to reach the chimneys. On the steep, slanting roofs this would have been impossible had it not been for these attractive little steps.

The city of Paris has purchased the rooms which the painter Beranger occupied from 1854 to his death in 1857.

FARM AND GARDEN

THE IMPORTANCE OF CORRECT FEEDING.

There is a registered cow in the writer's herd that a good judge of a dairy animal would gladly hang a ribbon on with pride. But if she were to be measured by her milking one year ago she would have been sold for bologna. The circumstances are these: She was bred in the silk, her size, dairy type, barrel, udder, front and back suggestive of Golden Lads, everything to commend her, and a most excellent heifer she was with her first calf. No better breeder than she in the dairy. Yet for two years she was really what would be called an unprofitable cow. What was the cause, and whose fault was it? The feeder tried to excuse himself by all manner of excuses. The owner insisted that the trouble lay in the feed and the care. The time to renew a cow is when she is dry and unfortunate is the dairyman who does not know this. When the period of lactation entirely ceased for Daisy Hillie Cream she was fed and cared for as the owner directed. She was developing splendidly for motherhood, udder began to distend nicely, all four quarters evenly filling and swung a ponderous udder when she walked; calved all right and is milking at this writing 38 to 40 pounds of milk a day. Had this valuable cow been dealt with as thousands of her sisters in this country she would have been ground into sausage long before this, while today she is milking almost 6 quarts of milk.

It is high time to start a new breed of dairymen if it is not possible to improve the old ones. The motto of modern dairying is, choose your breed suitable to your taste if you are rich, for business if you want to make a living, then feed and care must be daily handmaids to the business.

Balance the ration for the cow's stomach, not according to the whim or flea in your brain. There is a difference between a cow's stomach and the chemist's crucible, but it is surprising how close they do agree after all. The arithmetic of the balanced ration may be a little too large for one particular dairy and not large enough for the other. The ratio of the ration is all right, but the bulk may be more than the one cow can consume and not quite enough for the other.—Rev. J. D. Detrich, before Penn'a Round-up.

GROW THE BEST.

There is always a certain amount of valuable experience obtained in raising fancy stock of cattle, and one receives from it a good deal of pleasure as well as practical experience. There is nothing like making an effort to raise the best in the market to stimulate one's ambitions and love for a calling. By securing one or two fancy animals whose standard of perfection is unquestioned, one has something to look forward to that will give him a new zest in life. There is a constant and increasing demand for fine full blooded stock, and a market can easily be found for all that the farmer or breeder can raise. One should not be deterred from trying his hand at fancy breeding because of the difficulties that must of necessity come in his way. There are many things to learn in breeding pure blooded stock which will prove of great practical value in handling the ordinary herd. A good breeder of fancy stock invariably makes a successful breeder of ordinary grades. The reason is very simple. He has become accustomed to methods of carefulness in feeding, selection and breeding which he naturally applies to the common stock. He is constantly looking forward to further improvement in the animals, and as a result the herd does well. It is this looking forward to better things, the striving to make the next generations superior to the present, that makes success in stock breeding of any kind, and any work that will tend to improve a breeder's methods should be encouraged. Therefore a little experimental work in fancy breeding, carried on in addition to the regular farming, as a sort of side issue, must prove of great benefit and value to the farmer or stockman. —James Ridgway, in Indiana Farmer.

BETTER SEED CORN.

The Iowa corn specialists reckon that only a little over sixty per cent. of corn is good seed. The rest is either dead or low in vitality, and produces poor plants. They find that careful selection increases the crop by at least ten bushels an acre. Following is the method:

Lay out the ears to be tested side by side on the floor, remove one kernel from near the butt, middle and tip of the ear, turn the ear over and remove three kernels in like manner from the opposite side, making six kernels in all, thus securing a sample from the entire ear. Place the six kernels at the end of the ear from which they were taken. Be particular that the kernels do not get mixed with the kernels from the ear lying next to it. Take a shallow box about two by three feet in size, put several inches of moist sand, dirt or sawdust in the bottom, place over this a cloth which has been ruled off into squares 1 1-2 inches each way, numbered one, two, three, and so on. Place the kernels from ear No. 1 in square No. 1, from ear No. 2 in square No. 2, and so on with all of the ears. Then place over this a cloth considerably larger than the box, cover with 1 1-2 to two inches of sand, earth or sawdust, moisten well, keep in a warm place, and the kernels will germinate in from three to five days. When sufficient time has been allowed for the kernels to germinate, remove the cover carefully, to avoid misplacing the kernels. A piece of light cheesecloth placed on the kernels before the top covering is put on will prevent the kernels from sticking to the cloth.) Examine the kernels in the first row of the germinating box. For example, if the kernels in squares Nos. 4, 8, 13 and 20 have failed to grow or show weak germination, ears Nos. 4, 8, 13 and 20 on the floor should be rejected. After examining the kernels from the first twenty ears, examine the second twenty, and so on till all the kernels have been examined and the poor ears rejected. Do not fail to remove the ears showing weak germination. If the ground is cold and the weather unfavorable in the spring, these kernels will rot, or, if they grow at all, will produce weak plants.—Massachusetts Ploughman.

HINTS ON GROWING HORSE-RADISH.

The culture of horseradish is very simple. Preferably the plant likes a rich, cool loam. It will grow on almost any soil, but the character of the root is greatly influenced by the amount of food available and the physical make up of the soil. The deeper and more friable the loam, the smoother the roots. It is grown in rows and cultivated as any other root crop may be treated. In the fall the roots are ploughed out, trimmed off and the smaller pieces used to reset the bed. These root cuttings should be from two to three inches in length and should be planted in an approximately upright condition, with the top end upward. In other words, the root cuttings should not be inverted. If they are they will grow, but they will make a ragged and fibrous growth.

The details of canning belong to the manufacturer's province. The radishes are ground up by machine, mixed with vinegar and bottled. Rarely is the work done by the man who grows the roots, but I suppose there is nothing to prevent it, providing he engages in the industry on a sufficient scale to warrant the establishment of the canning factory.—John Craig, in The Tribune Farmer.

PRACTICAL DAIRY EXPERIMENT.

At the New York experiment station and in connection with a dairy farm near by, an attempt was made to find out if they could increase the percentage of fat in the milk of ordinary dairy cows which had been kept without any particular care in feeding. They took ten cows from a dairy herd after having a record kept for a year, and then when the selected cows were at the experiment station the experimenters compared the results with ten other cows which were fed and handled as before on the farm. The experiment continued four years. The result was an average increase of 6 per cent. in butter fat contents in the milk, and the result of the more liberal ration was an increase of 50 per cent. in the total amount of milk and fat produced. The actual increase brought about by liberal feeding the first year the cows were taken from the farm was 46 per cent. in milk and 54.6 per cent. in butter fat. The increased production was secured economically so far as the cost of food is concerned.—Mirror and Farmer.

BONES.

To reduce bones to fertilizers without the use of acid takes time, but for the home garden or for window plants is well worth waiting for. Put in a barrel six inches of soil, then a closely packed layer of bones, and cover these with wood ashes, and wet with liquid manure from the stables or with the house slop. Repeat the layers as there are bones enough until the barrel is full. Cover with soil, rounding the surface, and strew thickly with clover or grass seed, or plant the top with some quick growing spreader that will knit the soil together as a cover that will not let through more moisture than is needed. If the barrel is painted, it can stand in the corner of the garden and be a thing of beauty while the work of disintegration is going on within. In a year's time empty the barrel, and, spading the contents together, make into a heap, patting the sides close, and let stand for a month, then use when it is wanted. The material will be rich in potash and phosphoric acid.—American Gardening.

Land of Girl Slaves.

China undoubtedly is the greatest slave country in the world. Of a population of 400,000,000 over one-fortieth are slaves. Every family of means keeps its girl slaves. The girls are mostly purchased to do housework, it being cheaper to buy than to hire. —Chicago Tribune.

Mr. Francis Galton, F. R. S., has founded in London University a fellowship for the promotion of the study of "National Eugenics," the study of the agencies under social control that may improve or impair the racial qualities of future generations, either physically or mentally.

THE UNION.

Published every Thursday at Clanton, Chilton county, Alabama.

Wallace C. Edler, Ed. and Pub

Subscription price, in advance, per year, $1.

For advertising rates, call at the office, Seventh street, between First and Second avenues.

Entered April 18, 1903, at Clanton, Ala., as second class matter, under act of congress of March 3, 1879.

NOTICE TO CORRESPONDENTS.

All communications to the Union must be signed by the writer's real name as well as that name which they wish to put in the paper. Letters must reach the editor Tuesday morning to get in the same week. While we will publish any and all communications complying with these requirements that do not contain any improper language, we are not responsible for the opinions expressed. tf

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?

POLL TAX.

The following letter explains itself. In this connection let us say that no man should hunt for a chance to escape paying his poll tax, as the money goes directly to the schools which we all must support and the more money that is brought into the school funds from poll taxes, the less the amount that will have to be raised to supplement the public funds. Tax Collector Hubbard will be in Clanton on February 1st to collect poll taxes. Let every delinquent meet him there. THIS IS THE LAST CHANCE TO MAKE A GOOD CITIZEN OF YOURSELF.

"State Auditor's Office,
"Montgomery, Ala.,
"January 20, 1905.

"Mr. T. J. Hubbard, Tax Collector,
"Jemison, Ala.

"Dear Sir:

"Yours of the 19th inst. received. I know of no law exempting school district trustees from the payment of the poll tax.

"Yours truly,
"T. L. SOWELL,
"State Auditor."

COTTON GINNED.

According to the Government reports, there were ginned in Chilton county up to Nov. 14, 1904, 12,692 bales, and on December 13, 1904, the CLANTON—2
etaoi shrd cmfwy shrd cmfwyv bgkqs figures were 15,969 bales of cotton of the 1904 crop.

TEACHERS' INSTITUTE.

The Teachers' Institute convened at Concord Jan. 20-21, 1905. It was opened at 10:45 with song by the choir, followed with prayer by E. H. Parrish, Sr. Welcome address by E. H. Parrish, Sr., responded by Supt. J. W. Moore. The opening address by R. E. Sessions, who impressed very forcibly the importance of the teacher's position. Our teaching force of the county was well represented, including an enrollment of 29 teachers, and our Hon. State Supt., I. W. Hill, whose introduction to the Institute was greeted by many loud cheers. The program was taken up in regular order and well rendered by the teachers present, some of the teachers on the program were absent, but their topics were taken up and ably discussed by the corps of teachers present. There was much interest manifested through the entire session, and we are sure that each one present received much needed instruction. The appreciation of Supt. Hill's presence will be seen in the following resolutions introduced by Prof. Rasco and adopted by the Institute: "1. Resolved, That we hereby most earnestly thank Supt. Hill for his presence and help in our Institute, and 2nd, Resolved, further, That we hereby declare our confidence in his ability to better the educational conditions in Alabama. 3d. Resolved, That we hereby promise him our support in any effort along educational lines." The Institute closed at 3 o'clock Saturday with songs by the choir, followed by a song entitled "The Alabama Sailor Boy," by Prof. G. B. Wheeler, and by the adoption of the following resolutions:

"Be it resolved, That we, the teachers of the Chilton County Institute, in our session of Jan. 20-21, 1905, do hereby extend to the people of Concord community, district No. 32, our hearty thanks for the cordial welcome they have given us and for the generous hospitality shown us while in their midst, and

"2. Resolved, That we tender our thanks to the choir for their well rendered music, and to the children of the community for their tasteful decoration of the building, and their appreciative attention; and

"3rd. Be it further resolved, That we desire to offer our congratulations to the people here for their spirit of thrift and enterprise in matters educational. R. E. Sessions, Annie O. Shivers, R. E. Davis, committee on resolutions."

The next Institute to meet at Thorsby, at an indefinite period.

J. M. PARRISH, JR., Sec'y.

In connection with the above report, the following from the Montgomery Advertiser of the 24th inst. will doubtless be interesting to our people. (Editor Union.)

Schools of Chilton County.

State Superintendent of Education I. W. Hill has just returned from Chilton county, where he attended a teachers' institute.

"I found the county making gratifying advances in education," he said yesterday. "In one district a neat school house has been erected and the property deeded over to the Board of Trustees of the county. This makes the first building that has been conveyed in full title to the Trustees in Chilton county. It was done under the new educational statute."

Mr. Hill is devoting much of his time nowadays to visiting the rural schools and urging them to the best work.

ROCKY MOUNT.

The farmers of Rocky Mount school district met on Saturday, the 21st, and organized by electing C. L. Glasscock chairman and B. E. Collum secretary. The following resolution was passed, viz:

"We hereby agree to reduce our cotton acreage to the figures named below, and our fertilizers in proportion: J. A. Rodgers, from 30 to 20; C. L. Glass, 16 to 10; W. V. Northcutt, 8 to 3; C. G. Glass, 3 to 2; J. W. Beasley, 30 to 20; J. M. Glass, 18 to 12; E. L. Glass, 13 to 9; J. J. Green, 6 to 4; B. E. Collum, 20 to 11; S. M. Caton, 10 to 7; J. W. Martin, 20 to 16; J. H. Hawkins, 15 to 10; A. W. Harrell, 9 to 5; W. R. Martin, 12 to 8; D. W. Williams, 40 to 25; J. G. Barnett, 9 to 5; W. C. Northcutt, J. N. Northcutt, W. V. Northcutt, J. M. Glass and T. L. Matthews did not raise any cotton last year and won't plant any this year. The first figures after each man's name is what he planted in 1904, and the second what he intends to plant in 1905. The meeting then adjourned to meet at Clanton February 1st to perfect a permanent county organization.

"C. L. GLASSCOCK,
"Chairman."

"B. E. COLLUM, Secretary."

RANDOLPH.

Some complaint of "la grippe" in this village. Mrs. Sayre, of Birmingham, is visiting her daughter, Mrs. McKerall. Tax Collector Hubbard, of Chilton, was a welcome visitor Thursday. Chilton should congratulate herself in having so good an officer as Mr. Hubbard. Dave Reisinger, our efficient "blacksmith," went to Selma Thursday. Mrs. Smith, of Pell City, is here visiting her son, J. E. Smith. C. L. Langston, of Jemison, was in our town last week. Mrs. John Wallace was very ill last week, but is better now. Joseph Smitherman, of Jemison, passed through here Saturday. Mrs. Quint Evans, wife of Tom Evans, died in Birmingham last week. Her remains were interred in the cemetery here on Sunday evening. Mrs. Evans formerly lived here. It is sad to think of her said. Seems that Chilton county is moving on nicely. Her officials are trustworthy men. She is making fine progress under the rule of the People. Long may she prosper and let the people rule.

"ONE OF THE BOYS."

JEMISON.

Mrs. Lula Bristow, wife of S. O. Bristow, who was burned to death at Dollve January 16th, was buried at this place on the 19th inst. The funeral services were conducted by Rev. Brasher, assisted by Rev. Murphy, both of Birmingham, after the service the body was borne to its last resting place in Pine Hill cemetery, followed by a long procession of sympathizing friends and relatives. She was a devoted Christian, and we can well say, "She lived for those who loved her, for those who knew her true; for the heavens that shine above, and the good that she could do."

"REX."

HAM BARBECUE.

Slice cold boiled ham and fry in some of the fat until slightly crisp. Tape up the ham, and to the fat in the pan add three tablespoons of vinegar, a teaspoon of made mustard and a teaspoon of sugar. Heat and pour over the ham.

MIXED MUSTARD.

Mix one-quarter cup of ground mustard with a scant level teaspoon of salt and half a level teaspoon of sugar. Pour on just enough boiling water to make a thick paste, then add sharp vinegar to make of the right consistency.

MUTTON PIE.

Line a buttered pudding dish with mashed and well seasoned potato. Fill the center with thinly sliced mutton and pour on stock to moisten, two tablespoons of tomato catsup and a dust of pepper and salt. Cover with mashed potato and set in a hot oven. When the pie is heated through brush over the top with soft butter and set back to brown.

RICH LEMON PIE.

Mix the grated yellow rind and the juice of two lemons with two cups of sugar, one cup of milk, four level tablespoons of cornstarch and the beaten yolks of six eggs. Cook until the mixture thickens, pour into two paste-lined plates and bake. Make a meringue of the whites of six eggs beaten stiff with one-half cup of powdered sugar, and cover the two pies. Set in a very slow oven to brown slightly.

APPLES, BAKED WITH NUTS.

Wash eight or ten large apples and core them. Chop one cup of English walnut meats fine, mix with sugar and fill the apples. Set in a making dish, pour one and one-half cups of hot water round and bake. Take the apples out carefully, without breaking, on to a serving dish, and to the syrup in the baking dish add a teaspoon of butter, a pinch of salt and a few gratings of nutmeg or other flavoring and pour around the apples. Dust the top of each with powdered sugar.

CHOCOLATE CAKE.

Cream one-half cup of butter, add one cup of sugar, one-half cup of milk, one and two-thirds cups of flour sifted with three level teaspoons of baking powder, the yolks of three eggs, and after beating, add the whites of two eggs beaten stiff. Have one and one-half squares of chocolate melted with three tablespoons of sugar and two tablespoons of water. When smooth and glossy add to the first mixture and a scant teaspoon of vanilla. Bake slowly and cover with a white icing.

RICE BORDER—CHICKEN FILLING.

Cook one and one-half cups of rice in plenty of salted boiling water until tender; drain well and press into a well buttered ring mold. Set into the oven in a pan of hot water for fifteen minutes. Have two cups of chopped chicken in a saucepan, add one-quarter cup of butter rubbed with two level tablespoons of flour and cook three minutes, add two-thirds cup of hot cream and the yolks of two eggs beaten. Season with salt and pepper and cook a minute longer. Turn the rice on to a large round plate and pour the chicken into the center. Sprinkle the chicken with a little finely chopped parsley.

TIMELY SUGGESTIONS.

When cleaning knives mix a tiny bit of carbonate of soda with the bath-brick on the knifeboard, and they will polish more easily, says the Binghamton Press.

Half a lemon dipped in salt water will do all the work of oxalic acid in cleaning copper boilers, brass teakettles and other copper or brass utensils.

When cleaning the bars of a new or rough stove, if they are first rubbed over with a cloth dipped in vinegar and water, the blacklead will be found to adhere, and a brilliant polish to be the result.

Before using new pudding tins place them in the oven with a little oatmeal or bran and water, when they will be muh sweeter, and it will prevent the pudding from sticking.

To clean lamp glasses hold them over a jug of boiling water until well steamed; then polish with a dry duster. It is far less trouble than washing, and the glasses very rarely break.

Shabby dark leather will look like new if rubbed over with either linseed oil or the well-beaten white of an egg mixed with a little black ink. Polish with soft dusters until dry and greasy.

The soiling caused by persons leaning their heads against a papered wall may be greatly lessened, if not obliterated, by laying a sheet of blotting paper over the spot and passing over it a moderately warm flatiron.

Stains on white flannel can sometimes be removed by rubbing them with glycerine and yolk of egg mixed in equal quantities. Spread on the stain, leave for half an hour, then wash the garment as usual.

When ironing, if the iron is rough and sticks and is difficult to work, sprinkle a little salt on the ironing board and rub the iron up and down upon it. It will speedily make the iron smooth again, and prevent its sticking.

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union, both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer. tf.

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, leaves himself liable to arrest and fine, the same as for theft.—Ex.

The Voice As a Source of Revenue

By Ella Morris Kretschmar.

ONLY recently from a handsome and well-educated chorus girl I learned something about the voice as a source of revenue in a city. The requirements of choir positions are first, a voice of superior quality and volume; second, training, and third, ability to read at sight. Qualified for a choir position, the chances for securing one are forlornly remote, there are dozens of applicants for every possible place. Paying dozens of applicants fall to the lot of only a rare few, while concengagements are, of course, out of the question for all voices of extraordinary quality.

For a girl with a voice of really excellent quality and fair training, only opening seems to be the chorus of light and grand opera. For the latvoice is the chief essential, but for the former, a good figure, grace of movment and aptitude for learning gestures, difficult evolutions and dances further requirements. Also, the ability to look happy is necessary, as the palty for appearing serious, troubled or unhappy while on the stage is dismis The salary of the chorus girl ranges from twelve to twenty dollars per wefrom which she must pay her board while on the road and lay up someth against months of summer idleness. The work of the chorus girl is very ling, there being always one and sometimes two rehearsals a day, lasting or three hours, and sometimes when new pieces are being put on, or revand perfected while running, it is necessary to rehearse all night after a formance.—Good House Keeping.

End of "Bread Line."

Grace Church, in New York City, bought the old Vienna Bakery site and probably will tear down the present building and lay the corner out in lawns and gardens. This will end the famous "bread line," the charity founded by the late Mr. Fleischmann.

Pointed to America.

When the German Reichstag put the great coal strike up to the Chancellor he pointed to America, where President and Congress are grappling with trusts.

From the Seat of War.

General Stoessel arrived in Nagas from Port Arthur.

It was believed in St. Petersb that the Czar would decide that war must go on till Russia can m peace with dignity.

The Czar issued a rescript to the of Port Arthur, in which he de that Russia had recovered from more serious reverses.

The Russian report of the Cos raid on New-Chwang declared that Russian losses were slight, while Japanese suffered severely.

NOTICE.

Mortgage and Crop Liens free at the office of Judge of Probate. Call on me for as many as you need.

L. H. REYNOLDS,
tf. Judge of Probate.

CLANTON COTTON MARKET.

Total receipts to Jan. 28, 05, 6,250.
Price on same date, 6 5-8c.
Total receipts same week, '04, 6,522.
Price same date, 14c.

LOCAL AND PERSONAL.

Downs has 1,000 pair of shoes at your own price. Come and get them. tf

R. A. Hancock has moved to Hokes Bluff in Etowah county to live. We are sorry to lose so good a citizen, but wish him good luck in his new home. Ed Giles has bought the Hancock place near the old Cordury mill and will live there in future.

L. B. Pounds was in Clanton Friday.

John Hayes and wife visited our town Friday.

Elder William Lively will preach at Lomax on the fifth Sunday and Saturday before.

Prof. R. E. Sessions was in Clanton Saturday.

Uncle Henry Benson and Green Burnett were in town Saturday.

Lee Hawes, of Mountain Creek, was in Clanton Saturday.

Aaron Littleton and Elbert Bean were pleasant visitors Monday.

Squire John Milford and Crayton Culp were in Clanton Monday.

J. M. Maddox and J. P. Rushing were pleasant callers Tuesday.

Harry Roper and wife were in Clanton Monday.

Oloff S. Wilders has been appointed postmaster at Rushton.

Miss Laura Cooley's marriage has left an aching void in at least one young man's heart in Clanton, with several others that are not heard from. However, "time heals all wounds."

Tax Collector Hubbard will be in Clanton on Wednesday, February 1st, to collect poll tax. This is the last opportunity for this year.

Uncle George Shaw and Rev. J. H. Thomas were in town Tuesday.

Madison Bean and Geo. Gore were in Clanton Tuesday.

W. I. Williams is up and attending to business, though still far from strong. He has acquired a very striking VanDyke beard during his illness. All are glad to see him around once more. We need more men like him in town.

Dudley Collins and little son went to Birmingham Wednesday. They were accompanied by Dr. McNeill, and were to consult Dr. Wyman, the Birmingham specialist, on the boy's case.

J. Frank Goodgame has been appointed deputy United States marshal at a salary of $1,200 per year and traveling expenses, and he is now busy serving subpoenas in Chilton county.

If you need corn, oats or hay, go to Downs'. tf

MARRIAGE LICENSES.

F. M. Littlejohn and Miss Annie C. Giles; Jesse Lee and Miss Gertie Rollins; Ben. J. Nummy and Miss Louise Culp; C. H. Cooper and Miss Alice Jackson; Charles Ellis Wade and Miss Laura Alice Cooley.

Colored.

Augustus Latham and Hattie Matthews; Frank Wood and Minnie Sandlin; Will Love and Mary Green.

WADE-COOLEY.

Charles Ellis Wade and Miss Laura Alice Cooley were united in the bonds of matrimony Wednesday at 8:30 a. m., Judge L. H. Reynolds tying the knot. The bride is the second daughter of former Sheriff J. T. Cooley, and the ceremony was performed at his residence. She was very popular and leaves many warm friends behind her. The happy couple took the morning express for Shelby, their future home, where the groom is in business. THE UNION wishes them "health, wealth and prosperity."

LITTLEJOHN-GILES.

Married, at the residence of the bride's father, Mr. Jasper Giles, on Sunday, January 22d, Mr. F. M. Littlejohn and Miss Annie C. Giles, the Rev. W. A. Wood performing the ceremony. The wedding was quite private, very few being invited, but a large number attended the infair on Monday and started the young couple on their life journey with many and hearty good wishes, they both being very popular and having many warm friends. THE UNION congratulates the happy pair and wishes them all prosperity and happiness.

JEMISON INSTITUTE.

NEWS OF THE FAR EAST.

General Stoessel arrived in Nagasaki from Port Arthur.

Increased activity was reported along the Japanese front below Mukden.

A report was published in Berlin that Marshal Oyama had received heavy reinforcements from Port Arthur.

Cossack raiders who attacked New-Chwang and points along the railroad in Manchuria were repulsed with heavy loss.

It was believed in St. Petersburg that the Czar would decide that the war must go on till Russia can make peace with dignity.

The Czar issued a rescript on the fall of Port Arthur, in which he declared that Russia had recovered from much more serious reverses.

The Russian report of the Cossack raid on New-Chwang declared that the Russian losses were slight, while the Japanese suffered severely.

The conditions in Port Arthur, as seen after the formal entry of the Japanese, indicated that the fortress had been practically given away.

It was believed in Paris that the Russian note concerning the neutrality of China was to give a freer hand to Kuropatkin, and that it would have no general effect.

Count Cassini, explaining the note of Russia warning the Powers of the alleged breach of Chinese neutrality, declared that the situation was extremely critical from an international point of view.

Russia spent $310,000,000 in fighting Japan eleven months of last year and does not try to estimate how much the war will cost her this year, though she figures that her other expenses in 1905 will foot up almost $1,000,000,000. In bidding his soldiers farewell Stoessel told them he got the best terms possible and took all the blame for the surrender.

Automobile Accident.

Mobile, Ala.—About sundown a son of Joseph Tapia was run down by an automobile on Government, near Cedar street. A broken arm and internal injuries resulted. W. W. Herron was in charge of the automobile.

Ashville, Ala.—The roads around Ashville are almost impassible. Vehicles mire to the axles in many places and horses can hardly make three miles to the hour with a rider.

A fine Roman pavement of mosaic work has been unearthed at Beggio di Calabria, Italy.

A Kentucky farmer went to his barn with a stick of dynamite in his pocket. A widow and four small children survive.

AN ABSOLUTELY FREE OFFER.

The Union would like for everybody to accept from us a free complimentary gift—a year's subscription (which is 50c per year) to the Dixie Home, one of the largest, brightest and finest illustrated magazines in the world. It is full of good reading and is the very paper to go into every home in the south. Now, if you want to receive this family magazine a whole YEAR FREE, all you have to do is to pay amount you are in arrears, if any, and send us $1 for another year's subscription to the Union. The Dixie Home will come to you absolutely FREE.

This is one of the best and most liberal offers ever made by any publisher. So come on at once, and renew your subscription or become a new subscriber and secure this magazine FREE. tf

The **UNION** *and* Saturday News **$1.25**

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?

POLL TAX.

The following letter explains itself. In this connection let us say that no man should hunt for a chance to escape paying his poll tax, as the money goes directly to the schools which we all must support and the more money that is brought into the school funds from poll taxes, the less the amount that will have to be raised to supplement the public funds. Tax Collector Hubbard will be in Clanton on February 1st to collect poll taxes. Let every delinquent meet him there. THIS IS THE LAST CHANCE TO MAKE A GOOD CITIZEN OF YOURSELF.

"State Auditor's Office,
"Montgomery, Ala.,
"January 20, 1905.

"Mr. T. J. Hubbard, Tax Collector,
"Jemison, Ala.

"Dear Sir:

"Yours of the 19th inst. received. I know of no law exempting school district trustees from the payment of the poll tax.

"Yours truly,
"T. L. SOWELL.
"State Auditor."

COTTON GINNED.

According to the Government reports, there were ginned in Chilton county up to Nov. 14, 1904, 12,692 bales, and on December 13, 1904, the CLANTON—2
etaoi shrd cmfwy shrd cmfwyv bgkqs figures were 15,969 bales of cotton of the 1904 crop.

TEACHERS' INSTITUTE.

The Teachers' Institute convened at Concord Jan. 20-21, 1905. It was opened at 10:45 with song by the choir, followed with prayer by E. H. Parrish, Sr. Welcome address by E. H. Parrish, Sr., responded by Supt. J. W. Moore. The opening address by R. E. Sessions, who impressed very forcibly the importance of the teacher's position. Our teaching force of the county was well represented, including an enrollment of 29 teachers, and our Hon. State Supt., I. W. Hill, whose introduction to the Institute was greeted by many loud cheers. The program was taken up in regular order and well rendered by the teachers present, some of the teachers on the program were absent, but their topics were taken up and ably discussed by the corps of teachers present. There was much interest manifested through the entire session, and we are sure that each one present received much needed instruction. The appreciation of Supt. Hill's presence will be seen in the following resolutions introduced by Prof. Rasco and adopted by the Institute: "1. Resolved, That we hereby most earnestly thank Supt. Hill for his presence and help in our Institute, and 2nd, Resolved, further, That we hereby declare our confidence in his ability to better the educational conditions in Alabama. 3d. Resolved, That we hereby promise him our support in any effort along educational lines." The Institute closed at 3 o'clock Saturday with songs by the choir, followed by a song entitled "The Alabama Sailor Boy," by Prof. [illegible] B. Wheeler, and by the adoption of the following resolutions:

"Be it resolved, That we, the teachers of the Chilton County Institute, in our session of Jan. 20-21, 1905, do hereby extend to the people of Concord community, district No. [illegible] our hearty thanks for the cordial welcome they have given us and for the generous hospitality shown us while in their midst, and

"2 Resolved, That we tender our thanks to the choir for their well rendered music, and to the children of the community for their tasteful decoration of the building, and their appreciative attention; and

"3rd. Be it further resolved, That we desire to offer our congratulations to the people here for their spirit of thrift and enterprise in matters educational. R. E. Sessions, Annie O. Shivers, R. E. Davis, committee on resolutions."

The next Institute to meet at Thorsby at an indefinite period.

J. M. PARRISH, JR., Sec'y.

In connection with the above report the following from the Montgomery Advertiser of the 24th inst. will doubtless be interesting to our people. (Editor Union.)

Schools of Chilton County.

State Superintendent of Education I. W. Hill has just returned from Chilton county, where he attended a teachers' institute.

"I found the county making gratifying advances in education," he said yesterday. "In one district a neat school house has been erected and the property deeded over to the Board of Trustees of the county. This makes the first building that has been conveyed in full title to the Trustees in Chilton county. It was done under the new educational statute."

Mr. Hill is devoting much of his time nowadays to visiting the rural schools and urging them to the best work.

ROCKY MOUNT.

The farmers of Rocky Mount school district met on Saturday, the 21st, and organized by electing C. L. Glasscock chairman and B. E. Collum secretary. The following resolution was passed, viz:

"We hereby agree to reduce our cotton acreage to the figures named below, and our fertilizers in proportion: J. A. Rodgers, from 30 to 20; C. L. Glass, 16 to 10; W. V. Northcutt, 8 to 3; C. G. Glass, 3 to 2; J. W. Beasley, 30 to 20; J. M. Glass, 18 to 12; E. L. Glass, 13 to 9; J. J. Green, 6 to 4; B. E. Collum, 20 to 11; S. M. Caton, 10 to 7; J. W. Martin, 20 to 16; J. H. Hawkins, 15 to 10; A. W. Harrell, 9 to 5; W. R. Martin, 12 to 8; D. W. Williams, 40 to 25; J. G. Barnett, 9 to 5; W. C. Northcutt, J. N. Northcutt, W. V. Northcutt, J. M. Glass and T. L. Matthews did not raise any cotton last year and won't plant any this year. The first figures after each man's name is what he planted in 1904, and the second what he intends to plant in 1905. The meeting then adjourned to meet at Clanton February 1st to perfect a permanent county organization.

"C. L. GLASSCOCK,
"Chairman."

"B. E. COLLUM, Secretary."

RANDOLPH.

Some complaint of "la grippe" in this village. Mrs. Sayre, of Birmingham, is visiting her daughter, Mrs. McKerall. Tax Collector Hubbard, of Chilton, was a welcome visitor Thursday. Chilton should congratulate herself in having so good an officer as Mr. Hubbard. Dave Reisinger, our efficient "blacksmith," went to Selma Thursday. Mrs. Smith, of Pell City, is here visiting her son, J. E. Smith. C. L. Langston, of Jemison, was in our town last week. Mrs. John Wallace was very ill last week, but is better now. Joseph Smitherman, of Jemison, passed through here Saturday. Mrs. Quint Evans, wife of Tom Evans, died in Birmingham last week. Her remains were interred in the cemetery here on Sunday evening. Mrs. Evans formerly lived here. It is sad to think of her said. Seems that Chilton county is moving on nicely. Her officials are trustworthy men. She is making fine progress under the rule of the People. Long may she prosper and let the people rule.

"ONE OF THE BOYS."

JEMISON.

Mrs. Lula Bristow, wife of S. O. Bristow, who was burned to death at Dolive January 16th, was buried at this place on the 19th inst. The funeral services were conducted by Rev. Brasher, assisted by Rev. Murphy, both of Birmingham, after the service the body was borne to its last resting place in Pine Hill cemetery, followed by a long procession of sympathizing friends and relatives. She was a devoted Christian, and we can well say, "She lived for those who loved her, for those who knew her best, for the heavens that shine above us, and the good that she could [illegible]

"REX."

HAM BARBECUE.

Slice cold boiled ham and fry in some of the fat until slightly crisp. Tape up the ham, and to the fat in the pan add three tablespoons of vinegar, a teaspoon of made mustard and a teaspoon of sugar. Heat and pour over the ham.

MIXED MUSTARD.

Mix one-quarter cup of ground mustard with a scant level teaspoon of salt and half a level teaspoon of sugar. Pour on just enough boiling water to make a thick paste, then add sharp vinegar to make of the right consistency.

MUTTON PIE.

Line a buttered pudding dish with mashed and well seasoned potato. Fill the center with thinly sliced mutton and pour on stock to moisten, two tablespoons of tomato catsup and a dust of pepper and salt. Cover with mashed potato and set in a hot oven. When the pie is heated through brush over the top with soft butter and set back to brown.

RICH LEMON PIE.

Mix the grated yellow rind and the juice of two lemons with two cups of sugar, one cup of milk, four level tablespoons of cornstarch and the beaten yolks of six eggs. Cook until the mixture thickens, pour into two pastry plates and bake. Make a meringue of the whites of six eggs beaten stiff with one-half cup of powdered sugar, and cover the two pies. Set in a very slow oven to brown slightly.

APPLES BAKED WITH NUTS.

Wash eight or ten large apples and core them. Chop one cup of English walnut meats fine, mix with sugar and fill the apples. Set in a making dish, pour one and one-half cups of hot water round and bake. Take the apples out carefully, without breaking, on to a serving dish, and to the syrup in the baking dish add a teaspoon of butter, a pinch of salt and a few gratings of nutmeg or other flavoring and pour around the apples. Dust the top of each with powdered sugar.

CHOCOLATE CAKE.

Cream one-half cup of butter, add one cup of sugar, one-half cup of milk, one and two-thirds cups of flour sifted with three level teaspoons of baking powder, the yolks of three eggs, and after beating add the whites of two eggs beaten stiff. Have one and one-half squares of chocolate melted with three tablespoons of sugar and two tablespoons of water. When smooth and glossy add to the first mixture and a scant teaspoon of vanilla. Bake slowly and cover with a white icing.

RICE BORDER—CHICKEN FILLING.

Cook one and one-half cups of rice in plenty of salted boiling water until tender; drain well and press into a well buttered ring mold. Set into the oven in a pan of hot water for fifteen minutes. Have two cups of chopped chicken in a saucepan, add one-quarter cup of butter rubbed with two level tablespoons of flour and cook three minutes, add two-thirds cup of hot cream and the yolks of two eggs beaten. Season with salt and pepper and cook a minute longer. Turn the rice on to a large round plate and pour the chicken into the center. Sprinkle the chicken with a little finely chopped parsley.

TIMELY SUGGESTIONS.

When cleaning knives mix a tiny bit of carbonate of soda with the bath-brick on the knifeboard, and they will polish more easily, says the Binghamton Press.

Half a lemon dipped in salt water will do all the work of oxalic acid in cleaning copper boilers, brass teakettles and other copper or brass utensils.

When cleaning the bars of a new or rough stove, if they are first rubbed over with a cloth dipped in vinegar and water, the blacklead will be found to adhere, and a brilliant polish to be the result.

Before using new pudding tins place them in the oven with a little oatmeal or bran and water, when they will be much sweeter, and it will prevent the pudding from sticking.

To clean lamp glasses hold them over a jug of boiling water until well steamed; then polish with a dry duster. It is far less trouble than washing, and the glasses very rarely break.

Shabby dark leather will look almost new if rubbed over with either linseed oil or the well-beaten white of an egg mixed with a little black ink. Polish with soft dusters until dry and greasy.

The soiling caused by persons leaning their heads against a papered wall may be greatly lessened, if not obliterated, by laying a sheet of blotting paper over the spot and passing over it a moderately warm flatiron.

Stains on white flannel can sometimes be removed by rubbing them with glycerine and yolk of egg mixed in equal quantities. Spread on the stain, leave for half an hour, then wash the garment as usual.

When ironing, if the iron is rough and sticks and is difficult to work, sprinkle a little salt on the ironing board and rub the iron up and down upon it. It will speedily make the iron smooth again, and prevent its sticking.

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union, both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer. tf.

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. **The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, leaves himself liable to arrest and fine, the same as for theft.—Ex.**

The Voice As a Source of Revenue

By Ella Morris Kretschmar.

ONLY recently from a handsome and well-educated chorus girl I learned something about the voice as a source of revenue in a city. The requirements of choir positions are first, a voice of superior quality and volume; second, training, and third, ability to read at sight. Qualified for a choir position the chances for securing one are forlornly remote, there being dozens of applicants for every possible place. Paying engagements fall to the lot of only a rare few, while concert engagements are, of course, out of the question for all but voices of extraordinary quality.

For a girl with a voice of really excellent quality and fair training, the only opening seems to be the chorus of light and grand opera. For the latter voice is the chief essential, but for the former, a good figure, grace of movement and aptitude for learning gestures, difficult evolutions and dances are further requirements. Also, the ability to look happy is necessary, as the penalty for appearing serious, troubled or unhappy while on the stage is dismissal. The salary of the chorus girl ranges from twelve to twenty dollars per week, from which she must pay her board while on the road and lay up something against months of summer idleness. The work of the chorus girl is very trying, there being always one and sometimes two rehearsals a day, lasting two or three hours, and sometimes when new pieces are being put on, or revived and perfected while running, it is necessary to rehearse all night after a performance.—Good House Keeping.

End of "Bread Line."

Grace Church, in New York City, bought the old Vienna Bakery site and probably will tear down the present building and lay the corner out in lawns and gardens. This will end the famous "bread line," the charity founded by the late Mr. Fleischmann.

Pointed to America.

When the German Reichstag put the great coal strike up to the Chancellor he pointed to America, where President and Congress are grappling with trusts.

From the Seat of War.

General Stoessel arrived in Nagasaki from Port Arthur.

It was believed in St. Petersburg that the Czar would decide that the war must go on till Russia can make peace with dignity.

The Czar issued a rescript on the fall of Port Arthur, in which he declared that Russia had recovered from most of more serious reverses.

The Russian report of the Cossack raid on New-Chwang declared that the Russian losses were slight, while the Japanese suffered severely.

Blank Deeds, Mortgages, and all official forms for Justices of the Peace, etc., for sale at The Union Office. Only best approved forms are used. Come in and give us your order. tf.

NOTICE.

Mortgage and Crop Liens free at the office of Judge of Probate. Call on me for as many as you need.

L. H. REYNOLDS,
tf. Judge of Probate.

CLANTON COTTON MARKET.

Total receipts to Jan. 22, '05, 6,250.
Price on same date, 6 5-8c.
Total receipts same week, '04, 6,523.
Price same date, 11c.

LOCAL AND PERSONAL.

Downs has 1,000 pair of shoes at your own price. Come and get them. tf

R. A. Hancock has moved to Hokes Bluff in Etowah county to live. We are sorry to lose so good a citizen, but wish him good luck in his new home. Ed Giles has bought the Hancock place near the old Cordury mill and will live there in future.

L. B. Pounds was in Clanton Friday.

Jim Hayes and wife visited our town Friday.

Rev. William Lively will preach at Lomax on the 4th Sunday and Saturday before.

Prof. R. E. Sessions was in Clanton Saturday.

Uncle Henry Benson and Green Burnett were in town Saturday.

Lee Hawes, of Mountain Creek, was in Clanton Saturday.

Aaron Littleton and Elbert Bean were pleasant visitors Monday.

'Squire John Milford and Crayton Culp were in Clanton Monday.

J. M. Maddox and J. P. Rushing were pleasant callers Tuesday.

Harry Roper and wife were in Clanton Monday.

Oloff S. Wilders has been appointed postmaster at Rushton.

Miss Laura Cooley's marriage has left an aching void in at least one young man's heart in Clanton, with several others that are not heard from. However, "time heals all wounds."

Tax Collector Hubbard will be in Clanton on Wednesday, February 1st, to collect poll tax. This is the last opportunity for this year.

Uncle George Shaw and Rev. J. H. Thomas were in town Tuesday.

Madison Bean and Geo. Gore were in Clanton Tuesday.

W. I. Williams is up and attending to business, though still far from strong. He has acquired a very striking VanDyke beard during his illness. All are glad to see him around once more. We need more men like him in town.

Dudley Collins and little son went to Birmingham Wednesday. They were accompanied by Dr. McNeill, and were to consult Dr. Wyman, the Birmingham specialist, on the boy's case.

J. Frank Goodgame has been appointed deputy United States marshal at a salary of $1,200 per year and traveling expenses, and he is now busy serving subpoenas in Chilton county.

If you need corn, oats or hay, go to Downs'. tf

MARRIAGE LICENSES.

F. M. Littlejohn and Miss Annie C. Giles; Jesse Lee and Miss Gertie Rollins; Ben. J. Nummy and Miss Louise Culp; C. H. Cooper and Miss Alice Jackson; Charles Ellis Wade and Miss Laura Alice Cooley.

Colored.

Augustus Latham and Hattie Matthews; Frank Wood and Minnie Sandlin; Will Love and Mary Green.

WADE-COOLEY.

Charles Ellis Wade and Miss Laura Alice Cooley were united in the bonds of matrimony Wednesday at 8:30 a. m., Judge L. H. Reynolds tying the knot. The bride is the second daughter of former Sheriff J. T. Cooley, and the ceremony was performed at his residence. She was very popular and leaves many warm friends behind her. The happy couple took the morning express for Shelby, their future home, where the groom is in business. THE UNION wishes them "health, wealth and prosperity."

LITTLEJOHN-GILES.

Married, at the residence of the bride's father, Mr. Jasper Giles, on Sunday, January 22d, Mr. F. M. Littlejohn and Miss Annie C. Giles, the Rev. W. A. Wood performing the ceremony. The wedding was quite private, very few being invited, but a large number attended the infair on Monday and started the young couple on their life journey with many and hearty good wishes, they both being very popular and having many warm friends. THE UNION congratulates the happy pair and wishes them all prosperity and happiness.

JEMISON INSTITUTE.

Honor Rolls for Month Ending January 13, 1905.

FIRST HONORS.

Stanley McNeill, Linwood Mooney, Beatrice Crysel, Robert Hunt, Arthur Hunt, Crumba Honeycutt, Jessie Honeycutt, Birdie Scott, Percy Johnson, Clyde Sims, Claude Reynolds, Beulah Honeycutt, Grady Reynolds, Jeff Hand, Lessie Reynolds, Jewel Thomas, Ors Durham, Lewis Durham, Willie May Jackson, Annie Marler, Ida Patton, Essie Honeycutt, Winnie Reynolds, Evie Scott, Annie Reynolds, Fred Mooney, Bonnie Jenkins, Gertie Jackson, Earl Jackson, Reuben Reynolds, Will Lowe, Olney Nix, Beulah Pinson, Gladys Sims, Silsby McNeill, McMay McNeil, Myrtle Honeycutt, Claude Shaw, Mattie Patton.

SECOND HONORS.

Pearl Scott, Luther Durham, Ewell Shaw, Willie Reynolds, Elbert Jackson, Clarence Shaw, Genie Thomas, Elbert Scott, Carry Jackson, Clifford Sims, Festus Scott, Alfred Marler.

R. E. SESSIONS, Principal.

COLLEGE NOTES.

A dairy school has been opened in connection with the University of California.

Some additional features of the Yale Summer School will soon be announced.

Plans are under way for the work to be carried on in the New York University Summer School.

The Columbia University catalogue for 1904-'05 shows an increase over last year's registration of 276 students.

The squad from which the cast and chorus of the annual Columbia 'Varsity show are to be selected has been chosen.

Professor T. A. Jaggar, of Harvard, intends next summer to make a trip to Iceland for the purpose of studying volcanic phenomena.

It was announced at the chapel of Tufts College, Medford, Mass., that Andrew Carnegie had given the institution $100,000 for a library.

A Yale Divinity School alumni association has been formed for the State of Vermont, making altogether nine alumni associations of the school.

The course of afternoon lectures on the "Literature and Antiquities of India and Persia," by Professor A. V. W. Jackson, were resumed at Columbia.

The report and register of the associate alumnae of Barnard College, 1900-1904, has just appeared, and contains much interesting information.

The Alumni Dormitory Committee and the trustees of Princeton University have accepted the plans for the alumni dormitory drawn by Benjamin W. Morris, Jr.

Exercises were suspended the latter day at the College of the City of New York in honor of the late Professor James Weir Mason, for twenty-four years head of the department of pure mathematics.

NEWS OF THE FAR EAST.

General Stoessel arrived in Nagasaki from Port Arthur.

Increased activity was reported along the Japanese front below Fukden.

A report was published in Berlin that Marshal Oyama had received heavy reinforcements from Port Arthur.

Cossack raiders who attacked New-Chwang and points along the railroad in Manchuria were repulsed with heavy loss.

It was believed in St. Petersburg that the Czar would decide that the war must go on till Russia can make peace with dignity.

The Czar issued a rescript on the fall of Port Arthur, in which he declared that Russia had recovered from much more serious reverses.

The Russian report of the Cossack raid on New-Chwang declared that the Russian losses were slight, while the Japanese suffered severely.

The conditions in Port Arthur, as seen after the formal entry of the Japanese, indicated that the fortress had been practically given away.

It was believed in Paris that the Russian note concerning the neutrality of China was to give a freer hand to Kuropatkin, and that it would have no general effect.

Count Cassini, explaining the note of Russia warning the Powers of the alleged breach of Chinese neutrality, declared that the situation was extremely critical from an international point of view.

Russia spent $310,000,000 in fighting Japan eleven months of last year and does not try to estimate how much the war will cost her this year, though she figures that her other expenses in 1905 will foot up almost $1,000,000,000. In bidding his soldiers farewell Stoessel told them he got the best terms possible and took all the blame for the surrender.

Automobile Accident.

Mobile, Ala.—About sundown a son of Joseph Tapia was run down by an automobile on Government, near Cedar street. A broken arm and internal injuries resulted. W. W. Herron was in charge of the automobile.

Ashville, Ala.—The roads around Ashville are almost impassible. Vehicles mire to the axles in many places and horses can hardly make three miles to the hour with a rider.

A fine Roman pavement of mosaic work has been unearthed at Beggio di Calabria, Italy.

A Kentucky farmer went to his barn with a stick of dynamite in his pocket. A widow and four small children survive.

AN ABSOLUTELY FREE OFFER.

The Union would like for everybody to accept from us a free complimentary gift—a year's subscription (which is 50c per year) to the Dixie Home, one of the largest, brightest and finest illustrated magazines in the world. It is full of good reading and the very paper to go into every home in the south. Now, if you want to receive this family magazine a whole YEAR FREE, all you have to do is to pay amount you are in arrears, if any, and send us $1 for another year's subscription to the Union. The Dixie Home will come to you absolutely FREE.

This is one of the best and most liberal offers ever made by any publisher. So come on at once, and renew your subscription or become a new subscriber and secure this magazine FREE. tf

WANTED.

Carpenters to meet us at Beth Salem church in Beat 6, near A. T. Hathcock's, on Saturday, January 28, 1905, about noon, and there submit estimates for contract to put up a church house.

Woman's Love

O! say not woman's love is bought
With vain and empty treasure;
O! say not a woman's heart is caught
By every idle pleasure.
When first her gentle bosom knows
Love's flame, it wanders never;
Deep in her heart the passion glows,
She loves, and loves for ever!

O! say not woman's false as fair;
That like the bee she ranges;
Still seeking flowers more sweet and rare,
As fickle fancy changes.
Ah, no! the love that first can warm
Will leave her bosom never;
No second passion e'er can charm;
She loves, and loves for ever!

The BOLDNESS of JAMIESON

BY JENNY EDDY

(Copyright, 1904, by Daily Story Pub. Co.)

It was mid-afternoon when Tom Jamieson finished the last cigar in his case. Two hours more to New York and nothing in sight to amuse him. He had devoured all the magazines on his trip out. Up to the present moment he had smoked his way back. There seemed nothing for it but two hours of ennui and that he decided he could better endure from his comfortable seat in the Pullman.

He had not been in since noon, else he might earlier have discovered that there was something on the train which would help the hours to pass with amazing rapidity. He discovered it at once on entering his car, for there in the seat in front of his, which had been vacant out of Chicago, sat quite the most charming girl he had seen since—well, since as acknowledged leader of an exclusive coterie in New York he had repressed all his emotions under the imperturable exterior which was his ideal of good form. Jamieson noticed with satisfaction that every detail of the girl's equipment was correct; that the elderly person beside her was likewise irreproachable in appearance and manner. Their conversation was distinctly audible to him and he gathered at once from the flat a's and distinct r's that they were from the far west. That was Jamieson's first shock. That any girl bred outside of his own sphere should have such perfect poise and grace was incomprehensible. He pondered the problem while the pair in front busied themselves reading. At last a low laugh roused him. The elder woman looked up at the same time.

"Oh, it is delicious, auntie! Such a situation, and the hero! What splendid nerve! You must read it."

The girl forced the open magazine into the unwilling hands of her aunt who apparently preferred to finish her own story. Jamieson, leaning forward to raise the shade, glanced down at the book.

"What was that story about, anyhow?" he wondered. "I certainly read it last week. Seems to me that hero with the splendid nerve faked acquaintance with a girl he had never met and she permitted it, knowing the difference all the time. Bad form! Bad form!"

He bought a copy to verify his suspicions, then eagerly awaited the aunt's comments. At last she looked up with a doubtful smile.

"It's very well told, my dear Jessica," she said, "but you know in real life if such a thing ever occurred—I don't suppose it could, of course, but if it did happen by any chance, it would be extremely bad form."

Jessica laughed gleefully.

"Of course it would be bad form, auntie; that's just the point. That's why I admire him. He wanted to meet her so much he couldn't wait for conventions and he simply took charge of events himself. I'd like to meet him—a man with just such stupendous——"

Jessica stopped to select her word.

"She wouldn't say brass or cheek, because they're slang, and she speaks

Quite the most charming girl.

well," meditated Jamieson, listening shamelessly. "She has used nerve once, so I'm betting that she will finish out with effrontery."

But Jessica did not finish her sentence. Something in the scenery attracted her attention and the story was stopped.

In the days that followed Jamieson often had visions of a lovely, girlish face turned distractingly away from him and a daintily booted foot which had peeped from under a mass of laces when the owner had disappeared in the shadows of a cab. The initials J. D. seemed transferred from her suit case to his brain. That he should meet her again he was perfectly certain. She evidently was somebody, and Tom Jamieson sooner or later met all the celebrities and aristocrats of the social world. It never occurred to

"Wasn't it effrontery?"

his well-bred, conventional mind to inquire her out and force and acquaintance. When circumstances brought it about in the regular way he would be only too glad to know her. But he was not possessed of the "stupendous effrontery" which brings circumstances about and molds them to its will.

It was with a premonition of seeing her again that Jamieson went alone to the Delano ball, the opening event of the New York season. His carriage stopped just short of the steps to allow another to pull away. Jamieson, looking impatiently out of the window, saw a solitary girl emerge. She gave a direction to the coachman and turned to go in. A glimmer of light fell across her face and showed it to be Jessica.

"Good Lord! is the girl crazy?" Jamieson groaned. "Western! Holy Smoke! But she ought to know she can't go about in New York unaccompanied."

He sprang out of his carriage before it stopped, and was beside Jessica when she passed through the great doors. He followed closely up the broad stairs, bowed politely when she entered the dressing room, though she was quite unaware of his presence, and when she emerged a few moments later he was there, waiting. He hardly knew what he was going to do. Only one thing was clear in the riot of invective against those who had allowed her to commit this unpardonable blunder—he should not allow her to walk alone into the reception room with all New York agape.

Curious eyes were staring when Jessica, surpassingly lovely, glided up to her hostess with Tom Jamieson a step behind.

"My dear Jessica!" said Mrs. Delano with real affection, "I am so glad you are here, and how sweet you look!"

"Thank you so much. Do you know, I almost missed coming, after all. Mrs. Osgood was called away an hour ago by her sister's illness, and as auntie went away yesterday there was no one to bring me. At first I was afraid I should have to give it up, and then, you know, we Western girls do a great many things that would shock you Easterners. Well, I thought it all over and decided that I couldn't afford to miss the finest ball of the season, so——"

"So she let me bring her," interrupted Jamieson.

"Richard, you remember Al Danforth? This is his daughter Jessica. Miss Danforth, my husband."

Jessica flashed one glance at Jamieson, then dutifully followed her hostess' lead and passed on down the line. She heard the quiet voice behind her saying the proper things to the members of the receiving party, and when she had reached the end she felt him gently draw her arm through his and lead her away. For a moment neither spoke. Then she looked at him coldly.

"May I know to whom I have the honor [illegible] conduct seems unpar-donable to you, Miss Danforth. The situation is so unusual—forgive me—but New York is so different from the West." Jamieson stopped, not knowing how to proceed.

"You mean I should not have come alone?"

He nodded.

"And you saw and—and—came to my rescue?" There was a light in her eyes that was anything but forbidding.

"How can I ever thank you? It would have spoiled my whole season if——"

Jamieson smiled. "You see, I was on the train when you came. Do you remember the story you liked so much—the hero with the splendid nerve? I sat behind you and I couldn't help hearing. I think you said you would like to meet him in real life—the hero with the stupendous——. You never finished that sentence, do you remember?"

Jessica laughed. "Yes, I remember. I couldn't find the word I wanted."

"Wasn't it effrontery?" asked Jamieson, with a boldness born of the consciousness that he was getting on.

"Perhaps it was—then," agreed Jessica. "But that was before I met him, the hero with the stupendous—courage."

Their eyes met frankly in a glance of perfect understanding as the orchestra struck up the opening waltz. Jamieson rose and bowed formally:

"I believe this is our waltz, Miss Danforth," he said, and Jessica, rising, placed her hand in his.

Odd Tales Revived.

Story of Depew's Gordon Ear story "on[illegible]own tree," was printed in the Wor[illegible]r Press so long ago as 1878, to th[illegible]ffect: A hears passing by, a stra[illegible]r having asked of the sexton "Who's [illegible]dead?" and "What complaint?" the sexton replied: "There is no compl[illegible]int; everybody is satisfied."

It was an old Worcester county story, and dating by generations the story of the two men who went into a drug store and told the proprietor they had made a soda water bet and would have their sodas now, and when the bet was decided the loser would drop in and pay for them, if that would be satisfactory to the druggist. He answered that it would, and after the sodas had been enjoyed he asked: "By the way, what was the bet?"

"My friend here," said one of the men, "bets that when Bunker Hill monument falls it will fall toward the north, and I bet it won't."—New York Sun.

Spurned.

They met on another planet
When the thing that men call death
Had freed them of foolish vestments
And given them deeper breath.
There, at the gate of a garden,
He saw her serenely stand;
He eagerly rushed to kiss her,
She merely held out a hand.

"But, darling," he said, "we promised
Ere we parted there, you know,
That our love should last forever—
Dear heart, why treat me so?
I swore that I would follow
Wherever you should stray,
And I have hastened, sweet one;
I died but yesterday."

She looked upon him coldly
And then she made reply:
"Hunt out some other darling,
Good morning and good-by.
You said that you would follow,
But that was long ago—
You didn't pine and dwindle
And die for me—ah, no!"

—Chicago News.

Coal of No Benefit to Him.

"Andy" Welch, one of the best known harness turfmen, and owner of Charter Oak park, in Hartford, and Oakley park, in Cincinnati, returned to Kentucky to visit his old friend Madden after the close of the harness-racing season at Memphis. Madden has the most beautiful estate in Kentucky, and Welch always visits him at this season of the year. While Welch and his host were riding along they came across an old negro, bent with age and shaking with the early cold.

"Which would you rather have, a quart of whisky or a ton of coal" asked Welch, seeking to jolly Uncle Jasper.

"Missur Welch, de Lord knows as ah allus burns wood," replied the quaking darky.—New York Times.

A Bad Pen.

Senator Pettus of Alabama was writing with a noisy, spluttering pen. Laying the pen down, he smiled and said:

"Once I was spending the evening with a friend of mine in Selma. We sat in the dining room, and from the kitchen came a dreadful scratching sound.

"'Martha,' said my friend to the maid, 'what is that scratching in the kitchen? It must be the dog trying to get in.'

"'Huh,' said Martha, 'dat's no dawg scratchin' de do'. Dat's de cook a-writin' a love letter to her honeysuckle.'"

Refused to Talk.

In a town in Pennsylvania [illegible] summer a meeting was held by several prominent gentlemen, the object being to use their combined influence to stop the deafening noise they usually had on the Fourth of July. Imagine their surprise when a reporter asked a doctor, one of their number and a very influential man, the following question:

"You are in favor, are you not, of the sane and sensible observance of the Fourth of July? The public, I am sure, would be glad to hear your views on——"

"Young man," interrupted the doctor, "do you think that is a proper question to ask a surgeon?"

Station for Lieut. Grant.

Lieut. U. S. Grant III, grandson of the late President Grant, has been detailed to the white house as military aid to President Roosevelt and will be stationed at Washington barracks.

TO AWAKEN WHEN YOU WISH.

Simple Plan Which Requires No Alarm Clock to Be Set.

We hear it frequently asserted that if persons will impress the thought firmly upon their minds and continue thinking about it until they have fallen asleep that they desire to awake at a certain hour in the morning, they will do it without fail, says a writer in the St. Louis Globe-Democrat. But how many people have tried this method of insuring a prompt awakening at a given hour in the morning only to find their rest throughout the night disturbed and uneasy.

The brain will usually respond to the will and awaken one in the morning near the desired hour under ordinary circumstances, but to prevent a broken uneasy sleep the adoption of only a very simple device is necessary. The last thing before getting into bed, take a watch or clock and turn the hands to the hour at which one wishes to rise and gaze at this just long enough to fix the hour firmly on the retentive memory. Then, if no other absorbing thoughts intervene between that and the moment one is locked in slumber, the night's rest will be easy and unbroken and promptly at the hour in the morning, as a rule, one will find one's self released from sleep and wide awake.

There is no need to keep thinking of the hour continually for a number of minutes, no need to repeat it over and over in the mind; all that makes the brain uneasy and results in the disturbed slumber. Simply look at the watch or clock, as I have indicated, and the influence of the mind over matter will be clearly demonstrated in the morning. Try it some night and observe how smoothly this physchological fact works.

May Sleep in Life Preservers.

Passengers on ocean liners may soon be able to sleep in life preservers, if the plans of E. Salvator, a New York inventor, do not go awry, says the American Inventor. To sleep with a cork jacket on is out of the question, so the inventor decided to make a preserver that would become effective only by its coming in contact with the water. It works on the principle of a water-generated gas which fills a belt and gives it buoyancy. Uninflated, the belt is a light thing, which would hardly be felt if worn by a sleeper, but when filled with gas it is blown up to the size of an ordinary cork jacket. The belt is made of rubber, and is about eight inches wide and can be blown up by means of a small cylinder. In this cylinder is placed a composition of acids which, when acted upon by water, instantly inflates the belt. The belt has been tested in the ocean, and it has been found that the water acts upon the acids and inflates the rubber in less than three seconds. The ingredients in this composition Mr. Salvator keeps secret.

Night.

Come, Night, upon thy raven wings,
Plumed with their rich imaginings,
To fill my dreams and charm away
The din and clamor of the day.

Fling thy deep shadow over me
Till by thy weird necromancy
Thou hast dissolved this solid care
And made it shapeless with the air.

Come with thy cup of dreams and be
An angel ministering to me,
As one who, weak from battling lies,
Unconquered, but too worn to rise.

The warrior, Day, has harried me,
A foeman pitiless is he,
Yet vanquished when, with pitying eye
And palm of peace Thou comest nigh.

Come with thy velvet darkness, Night,
Thy cloak of mail so soft and light
Yet turning every missile sent
From Care, as falls an arrow spent

Come, Night, upon thy raven wings,
Plumed with their rich imaginings,
And through the gathered darkness keep
The vigil of thy sister, Sleep.

—J. W. Foley in New York Times.

Embarrassing Inquiry.

"I don't see anything the matter with your elbow, Mr. Chaser," said Bobby, who had forgotten his mother's injunction to keep still at the dinner table.

"There isn't anything the matter with it, Bobby," innocently replied the guest. "What made you think there was."

"Why, I heard papa say that you were a nice fellow, except that you crooked your elbow too much; but it looks all right to me."

Then Bobby retired, but not in good order.—Cincinnati Commercial Tribune.

Reflection in Caricature.

In certain parts of Russia a secretly circulated caricature which has just been confiscated by the police represents the late Admiral Makaroff in the land of the shades. He is telephoning to the czar, and the purport of his message is: "All is well here. Great numbers of our men are arriving all the time. Up to the present none of the enemy have dared to intrude."

The Same Thing.

Prof. William James of Harvard, is well known for repartee. Not long ago a sophomore who thought he was extremely wise expressed some atheistical views.

"Ah," said the professor, "you are a free thinker, I perceive. You believe in nothing."

"I only believe what I can understand," the sophomore replied.

"It comes to the same thing, I suppose," said Prof. James.—Woman's Journal.

Long Voyage in Canoe.

Capt. Wise recently arrived at Margate, having made a voyage of 40,000 miles from British Columbia in a two-and-one-half ton "dugout" canoe, called Tillikum. The journey occupied three years three months and twelve days.

Danger in Health Fad

"There are people," said La Rochefoucauld, "who would never have been in love had they never heard talk of it."

There are people, too, undoubtedly, who would never—or "hardly ever"—be out of health if they thought less about the matter, for it is just as possible to take too much care of the health as too little, and it probably is every bit as mischievous.

We have all heard of the "green-eyed monster" jealousy, who "makes the food he feeds on." The health worrier does much the same. He or [illegible] broods so mournfully over some [illegible] that depression of spirits results, and de[illegible]sion is a fruitful parent of both mental and physical ills.

A medical writer of eminence said lately that he "never knew a strict dietarian who did not after a time become a confirmed dyspeptic."

People who are afraid to open their windows lest a draft should give them neuralgia, who are afraid to go out if there is a little rain, or a little wind, or a little cold, because they are "so delicate," infallibly become more so, and in time make themselves as [illegible] sitive as hot house plants.

There are, of course, certain gene[illegible] rules of health which every one sho[illegible] understand and comply with if th[illegible] wish to avoid illness, such as the d[illegible] ger of breathing impure air in unv[illegible] tilated rooms, of drinking impure w[illegible] ter, contracting chills, eating [illegible] drinking too much, and so forth.

This knowledge, however, need n[illegible] turn the care of the health into bugbear. We can make a "fad" our health as of any other use[illegible] thing. We can grow monomaniacal the value of fresh air or woolen derclothing, and the mischief of [illegible] mania is not the harm we do o[illegible] selves as much as the damage we [illegible] in turning them against the [illegible] fad.

T[illegible] wearing of wool, for stance. [illegible]; many people b[illegible] it by those resolutely s[illegible] wearing th[illegible] dists who persis[illegible] flannel shirts ostenta[illegible] maintain that their hygie[illegible] is destroyed if their hideousne[illegible] softened by wearing linen collars cuffs with them?—Queen.

Few Friends in Cit

"While in New York this time," said the man from Alabama, "I have observed one habit of certain people I met that impressed me as being very peculiar and also rather pathetic. I heard several persons actually count the number of people they knew in the whole town. To a man hailing from a section of the country where acquaintances are counted by the hundreds instead of the tens, that method of census taking seemed a tremendous business. With us it would be an impossible task to sit down and make a list of the people with whom we have a speaking acquaintance. Up here it is no trick at all. A cousin of mine who moved North two years, ago was the first person I saw perform the stunt.

"'Would you believe,' she said, 'that although I have lived in New York all this time, there are only 102 people in town to whom I could speak if I met them in the street without taking chances of being arrested as an officious stranger.'

"I laughed at her. 'How in world,' said I, 'did you happen to your calling list down to such a point?'

"'This is not my calling list,' she. 'That consists of only six nam[illegible] The 102 are just acquaintances. include the janitor, my washerwo[illegible] and the boy named Willie down in grocery.'

"Her admission struck me as re[illegible] pitiful. 'Why don't you branch I asked.

"'Branch out?' she cried. 'Oh dear man, if you had lived in York for a while you wouldn't anything about branching out. sides, I am not alone in my desola[illegible] There are lots of other folks in town in the same fix, only w[illegible] They couldn't get up to the hun[illegible] mark to save their lives.'

"Later I found that she was r[illegible] but, although the habit of coun[illegible] one's acquaintances is com[illegible] enough, I still think it strange an[illegible] sidedly touching."—New York He[illegible]

After Clash of Battl

"The day's fighting was finished, but not the day's work, nor the day's drudgery, nor the day's misery," says Frederick Palmer, in his book, "With Kuroki in Manchuria," of one of the actions of the First army. "The wounded were yet to be brought in, and the dead and the fuel to burn them collected by weary limbs. The plunging fire of the Russians against their foe, struggling through the rough fields and over rougher, untilled slopes, had caused the division 600 casualties, including the death of a colonel.

"Late in the afternoon a deluge of rain washed the blood off the grass. The flood of water turned dry beds into dashing rivulets. The flood of slaughter, also settling toward the valley, passed on by the single hospital tent—already congested at daybreak from the night attack—into the village, whose population was crowded into a few houses in order that the wounded might be crowded into others. Through every doorway caught a glimpse of prostrate fig[illegible] and of white bandages with red s[illegible] which made them like wrapped of Japan.

"Dripping hospital corps brought in dripping burdens co[illegible] with blankets or with the matti[illegible] which the rice and horse fodder o[illegible] army are transported. When d[illegible] ness came the lanterns of the s[illegible] ers twinkled in and out of the hil[illegible] Dawn found them still at work lecting stray Russian wounded. had lain suffering all night in the

for $1.50 a year and the glory w[illegible] the Czar's service brings them. the bushes, in the declivities bet[illegible] the rocks of many square acres— every fallen man be gathered? many cries coming faintly from ishly dry lips and finally dying a swoon were unanswered? At future time, when a Chinese pe[illegible] stumbles over a set of bones, the will not be the wiser."

Thought the City Tam

It was at a dinner party, and the hostess, coming up to her best friend, whispered in her ear:

"Would you mind saying just a tiny word to her by and by? She doesn't know a soul, and the women are so horrid to strangers."

The stranger indicated was inconveniently in town from Snakeville, Ore, and being a distant relative, had to be crushed in at the dinner, under protest, at the last moment.

The hostess' friend good naturedly promised to devote herself after dinner to the Snakeville widow. But the fair unknown did not meet her advances with the embarrassed delight which such civilities should have commended. "It's awfully hot in this parlor!" was her first greeting, in a tone in which there lurked a certain combative quality. By and by the conversation steered around to travel.

"Have you traveled much?" the hostess' friend suavely.

"Oh, I've been everywhere. around the world with my bro[illegible] who was engineering. Why, it w[illegible] Russia that I met the Colonel."

"Colonel" was evidently her lord.) "Yes," she went on, "w[illegible] engaged at Tsarkoe Selo, in the [illegible] they call Caprice."

This was unusual, romantic, a[illegible] New York woman said so.

"Ah!" sighed the woman Snakeville, "yes! it was rom[illegible] There's been a lot of that in my When a body's traveled round been on the plains and army post[illegible] hunting buffaloes, a place like New York seems awfully tam[illegible] kind o' pity you all here!"

The woman agreed that we in fact, very tame—chimney spar[illegible] house flies, hopping about, tepi[illegible] insignificant, in search of ent[illegible] ment.—New York Press.

"Pa Et Tabasco Sauce

When pa firs' et tabasco sauce—I'm smiling 'bout it yet,
Although his subsekent remarks I always shall regret.
We'd come to town to see the sights, and pa remarked to me,
"We'll eat at a bong-tong hotel an' sling some style," says he.
An' then he sort o' cast his eye among the plates an' all,
An' says, "That ketchup mus' be good, the bottle is so small."
An' then he took a piece o' meat and covered it quite thick.
When pa firs' et tabasco sauce and rose to make his kick.
It all comes back so plain to me, I rekolect it well,
He just was talkin' mild and calm, an' then he gave a yell
An' tried to cave the ceilin' by buttin' with his head,
"Er-hooh! er-hooh! Fire! Murder!(Hooh!" I can't tell all he said.

But when they heard his heated six women left the room,
An' said such language filled their with shame, an' also gloom.
But pa, he only gurgled some, an' he yelled again.
When firs' he et tabasco sauce about it then.
We laid him out upon a board an' him quite a while.
An' pa, he sort a' gasped at fir[illegible] then he tried to smile.
An' says, "Just heat a poker n[illegible] run it down my neck.
I want to cool off gradual; it's b[illegible] expeck."
But when he'd got me out o' d[illegible] says, "I want to get
That there blame ketchup recip[illegible] learn just how it's het.
So I can try it on the boys when [illegible] ma git hum.
Till they, too, think the con[illegible] mixed with kingdom come."

—Boston [illegible]

This Up-to-Date King.

The king of Siam, who has just subscribed to the Sir Edwin Arnold memorial, is one of the most European of native rulers. He almost invariably wears the latest thing in frock coats and silk hats, while his military uniforms look as if they had been designed at the war office. He [illegible] English better than most Engli[illegible] too, never using slang. He has [illegible] and examined with a critical e[illegible] ery civilized country, and fro[illegible] he has taken something for h[illegible] land. He would cut a big fi[illegible] the peacock alley of the Wa[illegible] New York Press.

These testimonials speak for themselves ... to the efficacy of Peruna in cases of la ...ppe or its after-effects:

A Southern Judge Cured.

Judge Horatio J. Goss, Hartwell, Ga., ...tes:

"Some five or six years ago I had a very ...vere spell of grip which left me with ays... ...nic catarrh.

"A friend advised me to try your Peruna, which I did, and was immediately benefited and cured. The third bottle completed the cure."—H. J. Goss.

Cured in a Few Weeks.

Miss Jean Cowgill, Griswold Opera House, Troy, N. Y., is the leading lady with the Aubrey Stock Co. She writes the following:

"During the past winter of 1901, I suffered for several weeks from a severe attack of grip, which left a serious catarrhal condition of the throat and head.

"Some one suggested Peruna. As a last resort, after wasting much time and money on physicians, I tried the remedy faithfully, and in a few weeks was as well as ever."—Jean Cowgill.

Saved by Pe-ru-na.

Hon. James R. Guill is one of the oldest and most esteemed men of Omaha, Neb. He has done much to make it what it is, serving on public boards a number of times. He endorses Peruna in the following words:

"I am 68 years old, am hale and hearty and Peruna has helped me attain it. Two years ago I had la grippe—my life was despaired of. Peruna save me."—J. R. Guill.

Vienna has the largest public bath in Europe.

Itch cured in 30 minutes by Woolford's Sanitary Lotion. Never fails. Sold by all druggists, $1. Mail orders promptly filled by Dr. E. Detchon, Crawfordsville, Ind.

Vaccination was made compulsory in the city of Madras in 1884.

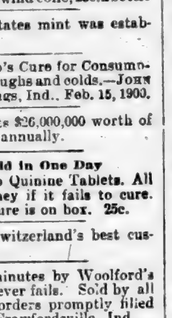
Taylor's Cherokee Remedy of Sweet Gum and Mullen is Nature's great remedy—Cures Coughs, Colds, Croup and Consumption, and all throat and lung troubles. At druggists, 25c., 50c. and $1.00 per bottle.

A Dangerous Coast.

There is a flat strip of land less than a mile long on the southwestern coast of Norway which has long been notorious for the number of shipwrecks which occur there each year. There seems to be nothing in the shape of the coast, no dangerous rocks, no mysterious currents—in short, nothing to account for the fatalities which occur there. Quite recently a scientist has found that the sand along this strip of land is strongly magnetic owing to the admixture of magnetic iron ore. At a distance of three miles from the shore the ship's compass showed a deviation of a whole degree from its true position. The cause for the frequency of shipwrecks is most obvious in the light of this discovery.

CONSTANT ACHING.

Back aches all the time. Spoils your appetite, wearies the body, worries the mind. Kidneys cause it all and Doan's Kidney Pills relieve and cure it.



H. B. McCarver, of 201 Cherry St., Portland, Ore., inspector of freight for the Trans-Continental Co., says: "I used Doan's Kidney Pills for back ache and other symptoms of kidney trouble which had annoyed me for months. I think a cold was responsible for the whole trouble. It seemed to settle in my kidneys. Doan's Kidney Pills rooted it out. It is several months since I used them, and up to date there has been no recurrence of the trouble."

Doan's Kidney Pills for sale by all dealers. Price 50 cents per box. Foster-Milburn Co., Buffalo, N. Y.

DO THE N-RAYS EXIST?

Their Being Called Into Question by Noted Scientists.

At a recent meeting of the British Association for the Advancement of Science a discussion of the so-called N-rays took place which was remarkable in that their existence was practically denied by the German and British physicists present. The N-rays, it will be remembered, are a form of radiation first noticed and described by Blondlot in 190..., and produced in many and curious ways, such as by the nerves of the human body, by plants, by incandescent burners, and are detected by an increase in the luminosity of a fluorescent screen on which they fall. The experiments of Blondlot were repeated and extended by a number of French scientists, and ... been officially noticed by the ...or Up Academy. On the other hand, ...Harper's Weekly, British and German investigators have uniformly failed in their attempts to detect the new radiation, and believe that the phenomena are for the greater part subjective, and depend entirely on the observer. This brings about a most curious state of affairs, as we find the scientists of one nation defending a certain group of investigations, which are disputed by those of other nations. Nevertheless, the French physicists are persisting in their work, and with further experiments they may be able to convince even the foreign doubters.

WISE WORDS.

Gratitude helps to kill greed.

The preacher's life is the life of his preaching.

Divine favor makes a feast of a barren board.

The lights of men never think lightly of men.

Borrowing is not much better than begging.—Lessing.

A woman whom we truly love is a religion.—Emile de Girardin.

Not until we know all that God knows can we estimate to the full the power and the sacredness of some one life which may seem the humblest in the world.—John Ruskin.

Dinner With Austrian Emperor.

The Emperor Francis Joseph has a rule of life which greatly perturbs some members of his court. He dines every day at half past 5, and he has done this since the beginning of his reign. As that hour does not suit everybody, it follows that the personages who are honored with invitations to dine with the Emperor find it very difficult to muster an appetite for dinner at tea time. They suffer in silence for the most part, but it is said that a certain great lady resolved to act.

She was invited to dine with the Emperor, but she sat at table and ate nothing. The kindly sovereign feared she was indisposed. No, she was quite well. Then why did she send every dish away? "Sire," she answered, "I never eat between meals." The repartee has had a success at Vienna. But the Emperor still dines at half past 5, without the society of that great lady.—London Chronicle.

Missouri Girls to Carry Pistols.

A number of young ladies of Joplin are forming themselves into a very unique club, the purpose of which will be to protect themselves from mashers, with which the town is overrun. The club will not have a flowery name and a set of beautifully worded by-laws.

The girls, profiting by experiences they or their friends have had recently, are intending to carry pistols when forced to be out at night unattended, and in the future when some fair one has a hand shoved deeply into her coat pocket or beneath her jacket she may be clasping the handle of a weapon, which may become dangerous in the hands of one so strongly determined to learn how to use it as the girl who enters the new club.

The club is composed of girls who are employed in stores, business and telephone offices and others who are forced to be out late at night.—Joplin Correspondence, Kansas City Journal.

Reason For Extravagance.

George H. Daniels, of the New York Central Railroad, knows a man "up the State" who bears a local reputation for extreme stinginess.

One day the man of frugal tendencies was met by a friend, who observed that the other was rigged out in his best attire, including a silk hat that was taken out of its box on only the most festive occasions.

The stingy man said: "Heard the news?"

"No. What is it?"

"Twins!" he exclaimed, jerking his thumb over his shoulder in the direction of his domicile.

The friend began to understand. "I congratulate you," said he. "That explains the holiday make-up."

"Sure!" responded the close-fisted man disgustedly. "What's the use in my trying to be economical?"—Sunday Magazine.

Up-State Attorney's Fees.

There is a good story going the rounds about a brace of popular young attorneys whose shingle adorns the front of an office on State street. They were retained to defend a man whose business is dealing in dogs, and the carried his case to a successful issue. Imagine how they felt when they sent him a bill for legal services and in response he called at their office and informed them that they would have to take their pay in pups. They rebelled, but it was a case of take bow-wows or nothing and they settled on the basis of two bull pups, a black and tan and two water spaniels. The next dog fancier who invades that legal lair will be given a warm welcome.—Albany Journal.

Colored Glasses in Demand.

"Since the fad of having electric light shades made of colored glass has appeared the manufacture of glass has taken a big jump," said C. N. Caspar. "Many of these shades are expensive, and the price asked for them seems entirely out of proportion to their decorative effect. Yet they are handsome, too, and make an excellent substitute for the imposing and elaborate lamps in use before the advent of electricity as the popular light.

"Great quantities of colored glass are made at Ottawa, Ills., and this is sold to the mills that turn it into every conceivable shape and form, from the shades I was speaking of to the most artistic decorative windows you see in the big churches. Colored glass is not blown like the ordinary window pane and bottles, but is rolled out into huge sheets. It is then cut into any desired size and the pieces are put together by a lead cement.

"That is the way the different colors are gotten into the same place, and the putting of the small pieces together is where the artist is needed. The finest materials sometimes produce a cheap article because the person who put the bits together had no artistic instinct."

Cost of Rural Free Delivery.

In 1897, when the rural service was started on probation, $40,000 was deemed sufficient for its trial. During the fiscal year that ended June 30, 1904, nearly $13,000,000 was expended for rural free delivery. For the fiscal year upon which we have now entered $20,816,600 has been appropriated for the continuance and extension of the rural mail service. There were 44,566 rural routes in existence at the end of the fiscal year on June 30th last, 9,446 new routes having been put into operation during the fiscal year. On October 1, 1904, there were 2,...135 routes established, and the service was being extended at the rate of about 800 routes a month.

The Coldest Place in the World.

Werchejansk, Siberia, is considered the northern pole of cold, or place of greatest cold in the northern hemisphere. A temperature of 69.8 degrees centigrade below zero (the freezing point of water) has been observed there, but the Russian painter, Borissow, has found a temperature of 70 degrees centigrade below zero registered on a minimum thermometer left by an Austrian exploring expedition in 1872 in the straits of Matotchkin, Nova Zembia. Another maximum thermometer registered 14 degrees below zero centigrade as the highest temperature since 1872. Apparently the place has a good title to be regarded as the pole of cold.

New York's Diamond Bill.

New York imported more precious stones and pearls last year than in any preceding twelve months, as shown by the report just sent by Appraiser Whitehead to Washington. The total valuation was $26,092,275, while the best previous record, made in 1902, was $25,678,956. In 1903 there was a decline to $24,678,956.

A larger proportion of the stones are now being cut by American workmen than ever before. The total valuation of the uncut stones that were imported was $9,675,741, while the next highest figures for this class were $7,414,419, in 1903.

First Cuban Bank Notes.

The National Bank of Cuba has issued $1,000,000 of bank notes in $1, $2, $5 and $10 denominations for Cuban circulation. These are the first bank notes issued under the Republic of Cuba and bear portraits of President Palma and other prominent Cubans. On the reverse of the notes is a picture of Morro Castle.

A modern church built upon the site of an ancient one, at Llanderand, Wales, had no bell. A farmer offered one that was lying in one of his barns. It turned out to be one that had hung in the tower of the ancient church and had not been swung for 300 years.

It is easier to return compliments than borrowed umbrellas.

FITS permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free Dr. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa.

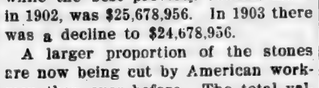
Roof gardens are now common features in Southern California.

A Guaranteed Cure For Piles.

Itching, Blind, Bleeding or Protruding Piles. Druggists will refund money if Pazo Ointment fails to cure in 6 to 14 days. 50c.

A Formosa man must have a license before he is allowed to smoke opium.

The U. S. Dept. of Agriculture gave to Salzer's Oats its heartiest endorsement. Salzer's New National Oats yielded in 1904 from 150 to 300 bu. per acre in 30 different States, and you, Mr. Farmer, can beat this in 1905, if you will.



Speltz or Emmer, above illustrated, gives 80 bushels grain and four tons hay besides per acre. It's wonderful. Salzer's seeds are pedigree seeds, bred up through careful selection to big yields.

	Per Acre.
Salzer's Beardless Barley yielded	121 bu.
Salzer's Home Builder Corn...	300 bu.
Speltz and Macaroni Wheat....	80 bu.
Salzer's Victoria Rape.....	60,000 lbs.
Salzer's Teosinte Fodder.....	160,000 lbs.
Salzer's Billion Dollar Grass...	50,000 lbs.
Salzer's Pedigree Potatoes.....	1,000 bu.

Now such yields pay and you can have them, Mr. Farmer, in 1905.

THE DISCOVERER

Of Lydia E. Pinkham's Vegetable Compound, the Great Woman's Remedy for Woman's Ills.

No other female medicine in the world has received such widespread and unqualified endorsement.

No other medicine has such a record of cures of female troubles or such hosts of grateful friends as has

Lydia E. Pinkham's Vegetable Compound.

It will entirely cure the worst forms of Female Complaints, all Ovarian Troubles, Inflammation and Ulceration, Falling and Displacement of the Womb, and consequent Spinal Weakness, and is peculiarly adapted to the Change of Life.

It has cured more cases of Backache and Leucorrhœa than any other remedy the world has ever known. It is almost infallible in such cases. It dissolves and expels tumors from the Uterus in an early stage of development.

Irregular, Suppressed or Painful Menstruation, Weakness of the Stomach, Indigestion, Bloating, Flooding, Nervous Prostration, Headache, General Debility quickly yield to it. Womb troubles, causing pain, weight and backache, instantly relieved and permanently cured by its use. Under all circumstances it invigorates the female system, and is as harmless as water.

It quickly removes that Bearing-down Feeling, extreme lassitude, "don't care" and "want-to-be-left-alone" feeling, excitability, irritability, nervousness, Dizziness, Faintness, sleeplessness, flatulency, melancholy or the "blues" and headache. These are sure indications of Female Weakness, or some derangement of the Uterus, which this medicine always cures. Kidney Complaints and Backache, of either sex, the Vegetable Compound always cures.

Those women who refuse to accept anything else are rewarded a hundred thousand times, for they get what they want—a cure. Sold by Druggists everywhere. Refuse all substitutes.

In Mississippi there are 300,000 more negroes than white people.

The Swiss military authorities are about to adopt khaki for soldiers' uniforms.

DISFIGURING ULCER

People Looked at Her in Amazement—Pronounced Incurable—Face Now Clear as Ever—Thanks God For Cuticura.

Mrs. P. Hackett, of 400 Van Buren St., Brooklyn, N. Y., says: "I wish to give thanks for the marvelous cure of my mother by Cuticura. She had a severe ulcer, which physicians had pronounced incurable. It was a terrible disfigurement, and people would stand in amazement and look after her. After there was no hope from doctors she began using Cuticura Soap, Ointment and Pills, and now, thank God, she is completely cured, and her face is as smooth and clear as ever."

Apple and Anointed.

George III. was wondering how the apple got into the dumpling.

"Because the policeman on our beat prefers it that way," explained Queen Charlotte.

From that moment the King's mind began to totter.—New York Sun.

...ed that ...g on the train ... such would help the hours to pass with amazing rapidity. He discovered it at once on entering his car, for there in the seat in front of his, which had been vacant out of Chicago, sat quite the most charming girl he had seen since—well, since as acknowledged leader of an exclusive coterie in New York he had repressed all his emotions under the imperturable exterior which was his ideal of good form. Jamieson noticed with satisfaction that every detail of the girl's equipment was correct; that the elderly person beside her was likewise irreproachable in appearance and manner. Their conversation was distinctly audible to him and he gathered at once from the flat a's and distinct r's that they were from the far west. That was Jamieson's first shock. That any girl bred outside of his own sphere should have such perfect poise and grace was incomprehensible. He pondered the problem while the pair in front busied themselves reading. At last a low laugh roused him. The elder woman looked up at the same time.

"Oh, it is delicious, auntie! Such a situation, and the hero! What splendid nerve! You must read it."

The girl forced the open magazine into the unwilling hands of her aunt who apparently preferred to finish her own story. Jamieson, leaning forward to raise the shade, glanced down at the book.

"What was that story about, anyhow?" he wondered. "I certainly read it last week. Seems to me that hero with the splendid nerve faked acquaintance with a girl he had never met and she permitted it, knowing the difference all the time. Bad form! Bad form!"

He bought a copy to verify his suspicions, then eagerly awaited the aunt's comments. At last she looked up with a doubtful smile.

"It's very well told, my dear Jessica," she said, "but you know in real life if such a thing ever occurred—I don't suppose it could, of course, but if it did happen by any chance, it would be extremely bad form."

Jessica laughed gleefully.

"Of course it would be bad form, auntie; that's just the point. That's why I admire him. He wanted to meet her so much he couldn't wait for conventions and he simply took charge of events himself. I'd like to meet him—a man with just such stupendous——"

Jessica stopped to select her word.

"She wouldn't say brass or cheek, because they're slang, and she speaks

Quite the most charming girl.

well," meditated Jamieson, listening shamelessly. "She has used nerve once, so I'm betting that she will finish out with effrontery."

But Jessica did not finish her sentence. Something in the scenery attracted her attention and the story was stopped.

In the days that followed Jamieson often had visions of a lovely, girlish

"Wasn't it effrontery?"

his well-bred, conventional mind to inquire her out and force and acquaintance. When circumstances brought it about in the regular way he would be only too glad to know her. But he was not possessed of the "stupendous effrontery" which brings circumstances about and molds them to its will.

It was with a premonition of seeing her again that Jamieson went alone to the Delano ball, the opening event of the New York season. His carriage stopped just short of the steps to allow another to pull away. Jamieson, looking impatiently out of the window, saw a solitary girl emerge. She gave a direction to the coachman and turned to go in. A glimmer of light fell across her face and showed it to be Jessica.

"Good Lord! is the girl crazy?" Jamieson groaned. "Western! Holy Smoke! But she ought to know she can't go about in New York unaccompanied."

He sprang out of his carriage before it stopped, and was beside Jessica when she passed through the great doors. He followed closely up the broad stairs, bowed politely when she entered the dressing room, though she was quite unaware of his presence, and when she emerged a few moments later he was there, waiting. He hardly knew what he was going to do. Only one thing was clear in the riot of invective against those who had allowed her to commit this unpardonable blunder—he should not allow her to walk alone into the reception room with all New York agape.

Curious eyes were staring when Jessica, surpassingly lovely, glided up to her hostess with Tom Jamieson a step behind.

"My dear Jessica!" said Mrs. Delano with real affection, "I am so glad you are here, and how sweet you look!"

"Thank you so much. Do you know, I almost missed coming, after all. Mrs. Osgood was called away an hour ago by her sister's illness, and as auntie went away yesterday there was no one to bring me. At first I was afraid I should have to give it up, and then, you know, we Western girls do a great many things that would shock you Easterners. Well, I thought it all over and decided that I couldn't afford to miss the finest ball of the season, so——"

"So she let me bring her," interrupted Jamieson.

"Richard, you remember Al Danforth? This is his daughter Jessica. Miss Danforth, my husband."

Jessica flashed one glance at Jamieson, then dutifully followed her hostess' lead and passed on down the line. She heard the quiet voice behind her saying the proper things to the members of the receiving party. When she had reached the end she felt him gently draw her arm through his and lead her away. For a moment neither spoke. Then she looked at him coldly.

"May I know to whom I have the honor——"

"I suppose my conduct seems unpar-

TO AWAKEN WHEN YOU WISH.

Simple Plan Which Requires No Alarm Clock to Be Set.

We hear it frequently asserted that if persons will impress the thought firmly upon their minds and continue thinking about it until they have fallen asleep that they desire to awake at a certain hour in the morning, they will do it without fail, says a writer in the St. Louis Globe-Democrat. But how many people have tried this method of insuring a prompt awakening at a given hour in the morning only to find their rest throughout the night disturbed and uneasy.

The brain will usually respond to the will and awaken one in the morning near the desired hour under any circumstances, but to prevent the unbroken uneasy sleep the adoption of only a very simple device is necessary. The last thing before getting into bed, take a watch or clock and turn the hands to the hour at which one wishes to rise and gaze at this just long enough to fix the hour firmly on the retentive memory. Then, if no other absorbing thoughts intervene between that and the moment one is locked in slumber, the night's rest will be easy and unbroken and promptly at the hour in the morning, as a rule, one will find one's self released from sleep and wide awake.

There is no need to keep thinking of the hour continually for a number of minutes, no need to repeat it over and over in the mind; all that makes the brain uneasy and results in the disturbed slumber. Simply look at the watch or clock, as I have indicated, and the influence of the mind over matter will be clearly demonstrated in the morning. Try it some night and observe how smoothly this physchological fact works.

Odd Tales Revived.

Senator Depew's Gordon Ear story "off my own tree," was printed in the Worcester Press so long ago as 1878, to this effect: A hears passing by, a stranger having asked of the sexton "Who's dead?" and "What complaint?" the sexton replied: "There is no complaint; everybody is satisfied."

It was an old Worcester county story, antedating by generations the story of the two men who went into a drug store and told the proprietor they had made a soda water bet and would have their sodas now, and when the bet was decided the loser would drop in and pay for them, if that would be satisfactory to the druggist. He answered that it would, and after the sodas had been enjoyed he asked: "By the way, what was the bet?"

"My friend here," said one of the men, "bets that when Bunker Hill monument falls it will fall toward the north, and I bet it won't."—New York Sun.

Spurned.

They met on another planet
When the thing that men call death
Had freed them of foolish vestments
And given them deeper breath.
There, at the gate of a garden,
He saw her serenely stand;
He eagerly rushed to kiss her,
She merely held out a hand.

"But, darling," he said, "we promised
Ere we parted there, you know,
That our love should last forever—
Dear heart, why treat me so?
I swore that I would follow
Wherever you should stray,
And I have hastened, sweet one;
I died but yesterday."

She looked upon him coldly
And then she made reply:
"Hunt out some other darling.
Good morning and good-by.
You said that you would follow,
But that was long ago—
You didn't pine and dwindle
And die for me—ah, no!"

—Chicago News.

Coal of No Benefit to Him.

"Andy" Welch, one of the best-known harness turfmen, and owner of Charter Oak park, in Hartford, and Oakley park, in Cincinnati, returned to Kentucky to visit his old friend Madden after the close of the harness-racing season at Memphis. Madden has the most beautiful estate in Kentucky, and Welch always visits him at this season of the year. While Welch and his host were riding along they came across an old negro, bent with age and shaking with the early cold.

"Which would you rather have, a quart of whisky or a ton of coal" asked Welch, seeking to jolly Uncle Jasper.

"Mistur Welch, de Lord knows as ah allus burns wood," replied the quaking darky.—New York Times.

A Bad Pen.

Senator Pettus of Alabama was writing with a noisy, spluttering pen. Laying the pen down, he smiled and said:

"Once I was spending the evening with a friend of mine in Selma. We sat in the dining room, and from the kitchen came a dreadful scratching sound.

"'Martha,' said my friend to the maid, 'what is that scratching in the kitchen? It must be the dog trying to get in.'

"'Huh,' said Martha, 'dat's no dawg scratchin' dé do'. Dat's de cook a-writin' a love letter to her honeysuckle.'"

Refused to Talk.

In a town in Pennsylvania last summer a meeting was held by several prominent gentlemen, the object being to use their combined influence to stop the deafening noise they usually had on the Fourth of July. Imagine their surprise when a reporter asked a doctor, one of their number and a very influential man, the following question:

"You are in favor, are you not, of a sane and sensible observance of the Fourth of July? The public, I am sure, would be glad to hear your views on——"

"Young man," interrupted the doctor, "do you think that is a proper question to ask a surgeon?"

Station for Lieut. Grant.

Lieut. U. S. Grant III, grandson of the late President Grant, has been detailed to the white house as military aid to President Roosevelt and will be stationed at Washington barracks.

May Sleep in Life Preservers.

Passengers on ocean liners may soon be able to sleep in life preservers, if the plans of E. Salvator, a New York inventor, do not go awry, says the American Inventor. To sleep with a cork jacket on is out of the question, so the inventor decided to make a preserver that would become effective only by its coming in contact with the water. It works on the principle of a water-generated gas which fills a belt and gives it buoyancy. Uninflated, the belt is a light thing, which would hardly be felt if worn by a sleeper, but when filled with gas it is blown up to the size of an ordinary cork jacket. The belt is made of rubber, and is about eight inches wide and can be blown up by means of a small cylinder. In this cylinder is placed a composition of acids which, when acted upon by water, instantly inflates the belt. The belt has been tested in the ocean, and it has been found that the water acts upon the acids and inflates the rubber in less than three seconds. The ingredients in this composition Mr. Salvator keeps secret.

Night.

Come, Night, upon thy raven wings,
Plumed with their rich imaginings,
To fill my dreams and charm away
The din and clamor of the day.

Fling thy deep shadow over me
Till by thy weird necromancy
Thou hast dissolved this solid care
And made it shapeless with the air.

Come with thy cup of dreams and be
An angel ministering to me,
As one who, weak from battling lies,
Unconquered, but too worn to rise.

The warrior, Day, has harried me,
A foeman pitiless is he,
Yet vanquished when, with pitying eye
And palm of peace Thou comest nigh.

Come with thy velvet darkness, Night,
Thy cloak of mail so soft and light
Yet turning every missile sent
From Care, as falls an arrow spent

Come, Night, upon thy raven wings,
Plumed with their rich imaginings,
And through the gathered darkness keep
The vigil of thy sister, Sleep.

—J. W. Foley in New York Times.

Embarrassing Inquiry.

"I don't see anything the matter with your elbow, Mr. Chaser," said Bobby, who had forgotten his mother's injunction to keep still at the dinner table.

"There isn't anything the matter with it, Bobby," innocently replied the guest. "What made you think there was."

"Why, I heard papa say that you were a nice fellow, except that you crooked your elbow too much; but it looks all right to me."

Then Bobby retired, but not in good order.—Cincinnati Commercial Tribune.

Reflection in Caricature.

In certain parts of Russia a secretly circulated caricature which has just been confiscated by the police represents the late Admiral Makaroff in the land of the shades. He is telephoning to the czar, and the purport of his message is: "All is well here. Great numbers of our men are arriving all the time. Up to the present none of the enemy have dared to intrude."

The Same Thing.

Prof. William James of Harvard, is well known for repartee. Not long ago a sophomore who thought he was extremely wise expressed some atheistical views.

"Ah," said the professor, "you are a free thinker, I perceive. You believe in nothing."

"I only believe what I can understand," the sophomore replied.

"It comes to the same thing, I suppose," said Prof. James.—Woman's Journal.

Long Voyage in Canoe.

Capt. Wise recently arrived at Margate, having made a voyage of 40,000 miles from British Columbia in a two-and-one-half ton "dugout" canoe, called Tillikum. The journey occupied three years three months and twelve days.

Danger in Health Fad

"There are people," said La Rochefoucauld, "who would never have been in love had they never heard talk of it."

There are people, too, undoubtedly, who would never—or "hardly ever"—be out of health if they thought less about the matter, for it is just as possible to take too much care of the health as too little, and it probably is every bit as mischievous.

We have all heard of the "green-eyed monster" jealousy, who "makes the food he feeds on." The health worrier does much the same. He or she broods so mournfully over some little symptom or ailment that depression of spirits results, and depression is a fruitful parent of both mental and physical ills.

A medical writer of eminence said lately that he "never knew a strict dietarian who did not after a time become a confirmed dyspeptic."

People who are afraid to open their windows lest a draft should give them neuralgia, who are afraid to go out if there is a little rain, or a little wind, or a little cold, because they are "so delicate," infallibly become more so, and in time make themselves as sensitive as hot house plants.

There are, of course, certain general rules of health which every one should understand and comply with if he wish to avoid illness, such as the danger of breathing impure air in unventilated rooms, of drinking impure water, contracting chills, eating or drinking too much, and so forth.

This knowledge, however, need not turn the care of the health into a bugbear. We can make a "fad" of our health as of any other thing. We can grow monomaniacal on the value of fresh air or woolen underclothing, and the mischief of such mania is not the harm we do ourselves as much as the damage we do others in turning them against the subject of our fad.

Take the wearing of woolen, for instance. Have not many people become resolutely set against it by those fanatics who persist in wearing red flannel shirts ostentatiously and who maintain that their hygienic purity is destroyed if their hideously unsoftened by wearing linen collars and cuffs with them?—Queen.

Few Friends in Cit

"While in New York this time," said the man from Alabama, "I have observed one habit of certain people I met that impressed me as being very peculiar and also rather pathetic. I heard several persons actually count the number of people they knew in the whole town. To a man hailing from a section of the country where acquaintances are counted by the hundreds instead of the tens, that method of census taking seemed a tremendous business. With us it would be an impossible task to sit down and make a list of the people with whom we have a speaking acquaintance. Up here it is no trick at all. A cousin of mine who moved North two years ago was the first person I saw perform the stunt.

"'Would you believe,' she said, 'that although I have lived in New York all this time, there are only 102 people in town to whom I could speak if I met them in the street without taking chances of being arrested as an officious stranger.'

"I laughed at her. 'How,' world,' said I, 'did you happen your calling list down to such point?'

"'This is not my calling list,' she. 'That consists of only six.' The 102 are just acquaintances include the janitor, my washer and the boy named Willie down grocery.'

"Her admission struck me as pitiful. 'Why don't you branch I asked.

"'Branch out?' she cried. 'O dear man, if you had lived in York for a while you wouldn't anything about branching out sides, I am not alone in my desi There are lots of other folks town in the same fix, only w They couldn't get up to the ju mark to save their lives.'

"Later I found that she was but, although the habit of co one's acquaintances is co enough. I still think it strange a ridedly touching."—New York H

After Clash of Batt

"The day's fighting was finished, but not the day's work, nor the day's drudgery, nor the day's misery," says Frederick Palmer, in his book, "With Kuroki in Manchuria," of one of the actions of the First army. "The wounded were yet to be brought in, and the dead and the fuel to burn them collected by weary limbs. The plunging fire of the Russians against their foe, struggling through the rough fields and over rougher, untilled slopes, had caused the division 600 casualties, including the death of a colonel.

"Late in the afternoon a deluge of rain washed the blood off the grass. The flood of water turned dry beds into dashing rivulets. The flood of slaughter, also settling toward the valley, passed on by the single hospital tent—already congested at daybreak from the night attack—into the village, whose population was crowded into a few houses in order that the wounded might be crowded into others. Through every doorway caught a glimpse of prostrate fi and of white bandages with red which made them like wrapped of Japan.

"Dripping hospital corps brought in dripping burdens co with blankets or with the matt which the rice and horse fodder army are transported. When ness came the lanterns of the s ers twinkled in and out of the hi Dawn found them still at work lecting stray Russian wounded had lain suffering all night in the

for $1.50 a year and the glory the Czar's service brings them the bushes, in the declivities bet the rocks of many square acres— every fallen man be gathered? many cries coming faintly from ishly dry lips and finally dying a swoon were unanswered? At future time, when a Chinese pe stumbles over a set of bones, the will not be the wiser."

Thought the City Tam

It was at a dinner party, and the hostess, coming up to her best friend, whispered in her ear:

"Would you mind saying just a tiny word to her by and by? She doesn't know a soul, and the women are so horrid to strangers."

The stranger indicated was inconveniently in town from Snakeville, Ore, and being a distant relative, had to be crushed in at the dinner, under protest, at the last moment.

The hostess' friend good naturedly promised to devote herself after dinner to the Snakeville widow. But the fair unknown did not meet her advances with the embarrassed delight which such civilities should have commended. "It's awfully hot in this parlor!" was her first greeting, in a tone in which there lurked a certain combative quality. By and by the conversation steered around to travel.

"Have you traveled much?" the hostess' friend suavely.

"Oh, I've been everywhere, around the world with my br who was engineering. Why, it Russia that I met the Colonel."

"Colonel" was evidently her lord.) "Yes," she went on, "w engaged at Tsarkoe Selo, in the they call Caprice."

This was unusual, romantic, an New York woman said so.

"Ah!" sighed the woman Snakeville, "yes! it was rom There's been a lot of that in m When a body's traveled round been on the plains and army post hunting buffaloes, a place like New York seems awfully tam kind o' pity you all here!"

The woman agreed that we in fact, very tame—chimney spar house flies, hopping about, tepid insignificant, in search of ente ment.—New York Press.

"Pa Et Tabasco Sauce

When pa firs' et tabasco sauce—I'm smiling 'bout it yet,
Although his subsekent remarks I always shall regret.
We'd come to town to see the sights, and pa remarked to me
"We'll eat at a bong-tong hotel an' sling some style," says he
An' then he sort o' cast his eye among the plates an' all.
An' says, "That ketchup mus' be good, the bottle is so small."
An' then he took a piece o' meat and covered it quite thick
When pa firs' et tabasco sauce and rose to make his kick.
It all comes back so plain to me, I rekolect it well.
He just was talkin' mild and calm, an' then he gave a yell
An' tried to cave the ceilin' by buttin' with his head.
"Er-hooh! er-hooh! Fire! Murder! Hooh!" I can't tell all he said.

But when they heard his heated six women left the room,
An' said such language filled their with shame, an' also gloom;
But pa, he only gurgled some, and he yelled again.
When firs' he et tabasco sauce a about it then.
We laid him out upon a board an' f him quite a while,
An' pa, he sort a gasped at fir then he tried to smile,
An' says, "Just heat a poker no run it down my neck
I want to cool off gradual; it's be expeck."
But when he'd got me out o' doo says, "I want to get
That there bum-e ketchup recip learn just how it's het,
So I can try it on the boys when y ma git hum,
Till they, too, think the condim mixed with kingdom come."

—Boston G

This Up-to-Date King.

The king of Siam, who has just subscribed to the Sir Edwin Arnold memorial, is one of the most European of native rulers. He almost invariably wears the latest thing in frock coats and silk hats, while his military uniforms look as if they had been designed at the war office. He s English better than most Englis too, never using slang. He h and examined with a critical ey ery civilized country, and from he has taken something for his land. He would cut a big figu the peacock alley of the Wald New York Press.

LIGHT BY THE RELEASED

"The World of Medicine Recognizes Grip as Epidemic Catarrh."—Medical Tests.

La Grippe is Epidemic Catarrh.

...spares no class or nationality. The ...cultured and the ignorant, the aristo... ...rat and the pauper, the masses and the ...asses are alike subject to la grippe. None ...re exempt—all are liable.

...Grip is well named. The original French ...erm, la grippe, has been shortened by the ...ney American to read Grip.

...Without intending to do so, a new word ...as been coined that exactly describes the ...ase. As if some hideous giant with awful ...rip had clutched us in its fatal clasp.

...Men, women, children, whole towns and ...ities are caught in the baneful grip of a ...errible monster.

...Have you the grip? Or, rather, has the ...rip got you? If so, read the following ...etters.

...These testimonials speak for themselves ...as to the efficacy of Peruna in cases of la ...rippe or its after effects.

A Southern Judge Cured.

...Judge Horatio J. Goss, Hartwell, Ga ...writes:

..."Some five or six years ago I had a very ...severe spell of grip which left me with eye ...ome catarrh.

"A friend advised me to try your Peruna which I did, and was immediately benefited and cured. The third bottle completed the cure." H. J. Goss.

Cured in a Few Weeks.

Miss Jean Cowgill, Griswold Opera House Troy, N. Y. is the leading lady with the Aubrey Stock Co. She writes the following:

"During the past winter of 1901, I suffered for several weeks from a severe attack of grip, which left a serious catarrhal condition of the throat and head.

"Some one suggested Peruna. As a last resort, after wasting much time and money on physicians, I tried the remedy faithfully, and in a few weeks was as well as ever." Jean Cowgill

Saved by Pe-ru-na.

Hon. James R. Guill is one of the oldest and most esteemed men of Omaha, Neb. He has done much to make it what it is, serving on public boards a number of times. He endorses Peruna in the following words:

"I am 68 years old, am hale and hearty and Peruna has helped me attain it. Two years ago I had la grippe; my life was despaired of. Peruna saved me." J. R. Guill.

A Dangerous Coast.

There is a flat strip of land less than a mile long on the southwestern coast of Norway which has long been notorious for the number of shipwrecks which occur there each year. There seems to be nothing in the shape of the coast, no dangerous rocks, no mysterious currents—in short, nothing to account for the fatalities which occur there. Quite recently a scientist has found that the sand along this strip of land is strongly magnetic owing to the admixture of magnetic iron ore. At a distance of three miles from the shore the ship's compass showed a deviation of a whole degree from its true position. The cause for the frequency of shipwrecks is most obvious in the light of this discovery.

CONSTANT ACHING.

Back aches all the time. Spoils your appetite, wearies the body, worries the mind. Kidneys cause it all and Doan's Kidney Pills relieve and cure it.

H. B. McCarver, of 201 Cherry St., Portland, Ore., inspector of freight for the Trans-Continental Co., says: "I used Doan's Kidney Pills for backache and other symptoms of kidney trouble which had annoyed me for months. I think a cold was responsible for the whole trouble. It seemed to settle in my kidneys. Doan's Kidney Pills rooted it out. It is several months since I used them, and up to date there has been no recurrence of the trouble."

Doan's Kidney Pills for sale by all dealers. Price 50 cents per box. Foster-Milburn Co., Buffalo, N. Y.

DO THE N-RAYS EXIST?

Their Being Called Into Question by Noted Scientists.

At a recent meeting of the British Association for the Advancement of Science a discussion of the so-called N-rays took place which was remarkable in that their existence was practically denied by the German and British physicists present. The N-rays, it will be remembered, are a form of radiation first noticed and described by Blondlot in 1902, and produced in many and curious ways, such as by the nerves of the human body, by plants, by incandescent burners, and are detected by an increase in the luminosity of a fluorescent screen on which they fall. The experiments of Blondlot were repeated and extended by a number of French scientists, and have been officially noticed by the French Academy. On the other hand, remarks Harper's Weekly, British and German investigators have uniformly failed in their attempts to detect the new radiation, and believe that the phenomena are for the greater part subjective, and depend entirely on the observer. This brings about a most curious state of affairs, as we find the scientists of one nation defending a certain group of investigations, which are disputed by those of other nations. Nevertheless, the French physicists are persistent in their work, and with further experiments they may be able to convince even the foreign doubters.

WISE WORDS.

Gratitude helps to kill grief.

The preacher's life is the life of his flock.

Divine favor makes a feast of a barren board.

The lights of men never think lightly of men.

Borrowing is not much better than begging.—Lessing.

A woman whom we truly love is a religion.—Emile de Girardin.

Not until we know all that God knows can we estimate to the full the power and the sacredness of some one life which may seem the humblest in the world.—John Ruskin.

Dinner With Austrian Emperor.

The Emperor Francis Joseph has a rule of life which greatly perturbs some members of his court. He dines every day at half past 5, and he has done this since the beginning of his reign. As that hour does not suit everybody, it follows that the personages who are honored with invitations to dine with the Emperor find it very difficult to muster an appetite for dinner at tea time. They suffer in silence for the most part, but it is said that a certain great lady resolved to act.

She was invited to dine with the Emperor, but she sat at table and ate nothing. The kindly sovereign feared she was indisposed. No, she was quite well. Then why did she send every dish away? "Sire," she answered, "I never eat between meals." The repartee has had a success at Vienna. But the Emperor still dines at half past 5, without the society of that great lady.—London Chronicle.

Missouri Girls to Carry Pistols.

A number of young ladies of Joplin are forming themselves into a very unique club, the purpose of which will be to protect themselves from mashers, with which the town is overrun. The club will not have a flowery name and a set of beautifully worded by-laws.

The girls, profiting by experiences they or their friends have had recently, are intending to carry pistols when forced to be out at night unattended, and in the future when some fair one has a hand shoved deeply into her coat pocket or beneath her jacket she may be clasping the handle of a weapon, which may become dangerous in the hands of one so strongly determined to learn how to use it as the girl who enters the new club.

The club is composed of girls who are employed in stores, business and telephone offices and others who are forced to be out late at night.—Joplin Correspondence, Kansas City Journal.

Reason For Extravagance.

George H. Daniels, of the New York Central Railroad, knows a man "up the State" who bears a local reputation for extreme stinginess.

One day the man of frugal tendencies was met by a friend, who observed that the other was togged out in his best attire, including a silk hat that was taken out of its box on only the most festive occasions.

The stingy man said: "Heard the news?"

"No. What is it?"

"Twins!" he exclaimed, jerking his thumb over his shoulder in the direction of his domicile.

The friend began to understand. "I congratulate you," said he. "That explains the holiday make-up."

"Sure!" responded the close-fisted man disgustedly. "What's the use in my trying to be economical?"—Sunday Magazine.

Up-State Attorney's Fees.

There is a good story going the rounds about a brace of popular young attorneys whose shingle adorns the front of an office on State street. They were retained to defend a man whose business is dealing in dogs, and they carried his case to a successful issue. Imagine how they felt when they sent him a bill for legal services and in response he called at their office and informed them that they would have to take their pay in pups. They rebelled, but it was a case of take bow-wows or nothing and they settled on the basis of two bull pups, a black and tan and two water spaniels. The next dog fancier who invades that legal lair will be given a warm welcome.—Albany Journal.

Colored Glasses in Demand.

"Since the fad of having electric light shades made of colored glass has appeared the manufacture of glass has taken a big jump," said C. N. Caspar. "Many of these shades are expensive, and the price asked for them seems entirely out of proportion to their decorative effect. Yet they are handsome, too, and make an excellent substitute for the imposing and elaborate lamps in use before the advent of electricity as the popular light.

"Great quantities of colored glass are made at Ottawa, Ills., and this is sold to the mills that turn it into every conceivable shape and form, from the shades I was speaking of to the most artistic decorative windows you see in the big churches. Colored glass is not blown like the ordinary window pane and bottles, but is rolled out into huge sheets. It is then cut into any desired size and the pieces are put together by a lead cement.

"That is the way the different colors are gotten into the same place, and the putting of the small pieces together is where the artist is needed. The finest materials sometimes produce a cheap article because the person who put the bits together had no artistic instinct."

Cost of Rural Free Delivery.

In 1897, when the rural service was started on probation, $40,000 was deemed sufficient for its trial. During the fiscal year that ended June 30, 1904, nearly $13,000,000 was expended for rural free delivery. For the fiscal year upon which we have now entered $20,816,600 has been appropriated for the continuance and extension of the rural mail service. There were 24,566 rural routes in existence at the end of the fiscal year on June 30th last, 9,446 new routes having been put into operation during the fiscal year. On October 1, 1904, there were 27,155 routes established, and the service was being extended at the rate of about 800 routes a month.

The Coldest Place in the World.

Werchojansk, Siberia, is considered the northern pole of cold, or place of greatest cold in the northern hemisphere. A temperature of 69.8 degrees centigrade below zero (the freezing point of water) has been observed there, but the Russian painter, Borissow, has found a temperature of 70 degrees centigrade below zero registered on a minimum thermometer left by an Austrian exploring expedition in 1872 in the straits of Matotchkin, Nova Zembia. Another maximum thermometer registered 14 degrees below zero centigrade as the highest temperature since 1872. Apparently the place has a good title to be regarded as the pole of cold.

New York's Diamond Bill.

New York imported more precious stones and pearls last year than in any preceding twelve months, as shown by the report just sent by Appraiser Whitehead to Washington. The total valuation was $26,092,275, while the best previous record, made in 1902, was $25,678,956. In 1903 there was a decline to $24,678,956.

A larger proportion of the stones are now being cut by American workmen than ever before. The total valuation of the uncut stones that were imported was $9,675,741, while the next highest figures for this class were $7,412,419, in 1903.

First Cuban Bank Notes.

The National Bank of Cuba has issued $1,000,000 of bank notes in $1, $2, $5 and $10 denominations for Cuban circulation. These are the first bank notes issued under the Republic of Cuba and bear portraits of President Palma and other prominent Cubans. On the reverse of the notes is a picture of Morro Castle.

A modern church built upon the site of an ancient one, at Llanderand, Wales, had no bell. A farmer offered one that was lying in one of his barns. It turned out to be one that had hung in the tower of the ancient church and had not been swung for 200 years.

It is easier to return compliments than borrowed umbrellas.

FITS permanently cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. $2 trial bottle and treatise free. Dr. R. H. KLINE, Ltd., 931 Arch St., Phila., Pa.

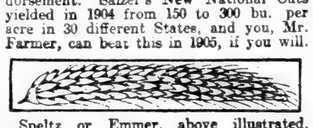
Roof gardens are now common features in Southern California.

A Guaranteed Cure For Piles.

Itching, Blind, Bleeding or Protruding Piles. Druggists will refund money if Pazo Ointment fails to cure in 6 to 14 days. 50c.

A Formosa man must have a license before he is allowed to smoke opium.

The U. S. Dept. of Agriculture gives to Salzer's Oats its heartiest endorsement. Salzer's New National Oats yielded in 1904 from 150 to 300 bu. per acre in 30 different States, and you, Mr. Farmer, can beat this in 1905, if you will.



Speltz or Emmer, above illustrated, gives 80 bushels grain and four tons hay besides per acre. It's wonderful. Salzer's seeds are pedigree seeds, bred up through careful selection to big yields.

	Per Acre.
Salzer's Beardless Barley yielded	121 bu.
Salzer's Home Builder Corn...	300 bu.
Speltz and Macaroni Wheat....	80 bu.
Salzer's Victoria Rape.....	60,000 lbs.
Salzer's Teosinte Fodder.....	160,000 lbs.
Salzer's Billion Dollar Grass....	50,000 lbs.
Salzer's Pedigree Potatoes.....	1,000 bu.

Now such yields pay and you can have them, Mr. Farmer, in 1905.

SEND 10c IN STAMPS

and this notice to the John A. Salzer Seed Co., La Crosse, Wis., and you will get their big catalog and lots of farm seed samples free. [A. C. L.]

THE DISCOVERER

Of Lydia E. Pinkham's Vegetable Compound, the Great Woman's Remedy for Woman's Ills.

No other female medicine in the world has received such widespread and unqualified endorsement.

No other medicine has such a record of cures of female troubles or such hosts of grateful friends as has

Lydia E. Pinkham's Vegetable Compound.

It will entirely cure the worst forms of Female Complaints, all Ovarian Troubles, Inflammation and Ulceration, Falling and Displacement of the Womb, and consequent Spinal Weakness, and is peculiarly adapted to the Change of Life.

It has cured more cases of Backache and Leucorrhœa than any other remedy the world has ever known. It is almost infallible in such cases. It dissolves and expels tumors from the Uterus in an early stage of development.

Irregular, Suppressed or Painful Menstruation, Weakness of the Stomach, Indigestion, Bloating, Flooding, Nervous Prostration, Headache, General Debility quickly yield to it. Womb troubles, causing pain, weight and backache, instantly relieved and permanently cured by its use. Under all circumstances it invigorates the female system, and is as harmless as water.

It quickly removes that Bearing-down Feeling, extreme lassitude, "don't care" and "want-to-be-left-alone" feeling, excitability, irritability, nervousness, Dizziness, Faintness, sleeplessness, flatulency, melancholy or the "blues" and headache. These are sure indications of Female Weakness, or some derangement of the Uterus, which this medicine always cures. Kidney Complaints and Backache, of either sex, the Vegetable Compound always cures.

Those women who refuse to accept anything else are rewarded a hundred thousand times, for they get what they want—a cure. Sold by Druggists everywhere. Refuse all substitutes.

In Mississippi there are 300,000 more negroes than white people.

The Swiss military authorities are about to adopt khaki for soldiers' uniforms.

DISFIGURING ULCER

People Looked at Her in Amazement—Pronounced Incurable—Face Now Clear as Ever—Thanks God For Cuticura.

Mrs. P. Hackett, of 400 Van Buren St., Brooklyn, N. Y., says: "I wish to give thanks for the marvelous cure of my mother by Cuticura. She had a severe ulcer, which physicians had pronounced incurable. It was a terrible disfigurement, and people would stand in amazement and look after her. After there was no hope from doctors she began using Cuticura Soap, Ointment and Pills, and now, thank God, she is completely cured, and her face is as smooth and clear as ever."

Apple and Anointed.

George III. was wondering how the apple got into the dumpling.

"Because the policeman on our beat prefers it that way," explained Queen Charlotte.

From that moment the King's mind began to totter.—New York Sun.

How's This?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & Co., Toledo, O.

ATTEMPT ON CZAR'S LIFE

Load of Grape Shot Fired on Imperial Party at St. Petersburg.

ARTILLERY GUNNERS SUSPECTED

During the Ceremonial of the Blessing of the Waters of the Neva, Cannon in Firing Salute Discharges Loaded Shell—Winter Palace Hit—Commander of Battery Arrested.

St. Petersburg, Russia.—At the conclusion of the blessing of the waters of the Neva, when the salutes were fired from the fortress of St. Peter and St. Paul and from a battery on the Place de la Bourse, opposite the Winter Palace, a rain of grape shot from the latter fell on the temporary chapel on the ice of the Neva and many bullets entered the Winter Palace, the Czar and his party narrowly escaping death.

It was at first thought that the occurrence was an accident, but after a hurried investigation the police reached the conclusion that a deliberate attempt had been made to take the Czar's life.

Their examination showed that six pieces of the shell entered the ground floor of the palace, which stands behind the pavilion. Six windows were broken on the first floor.

A later inspection established the fact that the ammunition used in firing the salute was a case shell. Case shot is only used in point blank firing at close range, projecting the bullets direct at the objective, instead of bursting over it, as in the case of shrapnel. A policeman who was killed was guarding the pavement twenty paces to the right of the imperial pavilion. The distance from the pavilion to the battery was 400 yards.

The missiles went high, entering windows of the splendid row of salons along the water front from which the Empress, the ladies of the Court and the members of the Diplomatic Corps, including the United States Ambassador, Mr. McCormick, and the Secretary, Mr. Eddy, and Second Secretary Bliss and all the high dignitaries of the State, army and navy were witnessing the glittering spectacle below.

The first impression of those who heard the crash was that it was due to falling crystals from the glass chandeliers, and caused by concussion from the booming guns; but everybody had been laboring under a more or less nervous strain because of the strike situation, and when the truth was realized the windows were hastily vacated and the greatest excitement reigned within the Palace.

The Czar was promptly informed of the occurrence, but showed slight emotion, even when an officer pointed out to him, as the imperial procession returned to the palace, the places where the bullets and the fragments of the shell had hit.

He returned to the palace at the head of his staff, shook hands with the ladies of the Court and the diplomats, and conversed briefly on general matters. To the French Ambassador he expressed sympathy with President Loubet in the loss of his mother.

The inquiry into the circumstances attending the discharge of the case-shot resulted in the arrest of Captain Davydoff, of the artillery.

The officers on duty with the battery in firing the salute were:

Capt. Davydoff, commanding; Capt. Karzeff and Lieuts. Count Koutaissoff, Perebinosoff and Miller. The battery was composed of old muzzle-loading guns.

INFIDEL DROPS DEAD IN CHURCH

Revivalist Had Just Told Him Only Christianity Would Save Him.

Winamac, Ind.—Worshipers at the chapel at Wilders Station, near this city, were in a state of great excitement over an incident which occurred at a revival service. The Rev. James McCarey, a well-known evangelist, who was conducting a meeting, made a fervid exhortation to sinners to repent. While he was talking, Richard Bossy, a confessed unbeliever in religion, stepped into the church. As Mr. McCarey's eyes rested on him he exclaimed:

"There is one unbeliever in this congregation; a sinner who cannot be saved from death unless he becomes a Christian!"

As the words were uttered there was an exclamation of pain from Mr. Bossy and he fell to the floor, uttering the single word, "Oh!" Members of the congregation ran to him, but he was dead when they reached his side.

BAIL FOR MRS. CHADWICK.

On Federal Charges Only — Amount Fixed at $20,000.

Cleveland, Ohio.—J. P. Dawley, in the United States Circuit Court, asked that bail for the release of Mrs. Cassie L. Chadwick be fixed. Judge Wing placed the amount at $20,000. Dawley said this amount would be furnished.

A JAPANESE PRIZE.

The British Steamship Roseley Condemned.

Nagasaki, Japan.—The British steamship Roseley, which was seized by a Japanese warship in the Sea of Japan while on her way to Vladivostok with a cargo of Cardiff coal, was condemned by a prize court.

For New Prison.

Prisons Superintendent Collins, in his annual report, made public at Albany, N. Y., favored the abandonment of Sing Sing and Auburn prisons and the building of a big central institution.

Sentenced For Stealing $73,000.

James M. A. Watson, convicted of embezzling $73,000 from the District government at Washington, D. C., was sentenced to ten years in jail. An appeal was taken.

FALL RIVER STRIKE ENDS

Gov. Douglas Settles Difficulties of Textile Operatives and Men.

Tie-Up of Over Six Months—Cause of the Trouble — Meeting Held in Boston Between Employes and Strikers.

Boston, Mass.—The strike of the cotton mill operatives at Fall River, which affected about 25,000 persons, and which has been in progress for six months, was settled through the mediation of Governor Douglas.

Under the terms of an agreement accepted by both manufacturers and operatives at a conference held at the State House, the strikers will return to work at once under the 12½ per cent. reduction against which they struck last July, and with no discrimination because of the strike.

No rate of wages was established, but it was agreed that Governor Douglas shall investigate the matter of margins between the cost of cotton to the mill owners and the selling price of the cloth, and submit his conclusions as to an average margin upon which the manufacturers are to pay a dividend of 5 per cent. on wages earned from the present time to April 1.

Both sides regard the outcome of the deliberations as a victory.

Governor Douglas, in a statement issued after the conference, expressed especial pleasure that the manufacturers had accepted even a modified form of arbitration, and said that he felt assured that the arbitration seed now planted would grow in a few years to a point that would prevent a recurrence of "these demoralizing and pitiful strikes."

Fall River, Mass.—The news of the settlement of the strike was received in this city with great enthusiasm. The posting of bulletins on the newspaper boards and the appearance of extra editions on the streets containing news of the settlement was the signal for an almost instantaneous outpouring of mill people. Within half an hour of the time that word first came to the city of a settlement the streets were crowded with men and women giving every manifestation of joy.

The strike began July 25, 1904, and was the greatest disturbance the textile industry of America has ever known. About 25,000 operatives were thrown out of work. Seventy-one mills controlled by thirty-three corporations remained idle until the middle of November, since which time most of the factories have been running, generally with less than one-half the usual force.

The strike was directly due to a reduction of 12½ per cent. in wages. The mills had reduced wages 10 per cent. eight months previously. Under the second reduction the standard price for weaving was 17.32 cents per cut.

The mills affected by the strike have a combined capital of $25,000,000, and have 2,300,000 spindles. During the months the seventy-one mills were shut down the operatives lost nearly $150,000 weekly, and the corporations about $23,000. The aggregate direct losses to all interests to date is estimated at fully $5,000,000. The indirect losses were also considerable.

RECORD IN PASSENGERS KILLED

Worst Quarter Known For Fatal Railway Accidents.

Washington, D. C.—The Interstate Commerce Commission has issued a report on railroad accidents in the United States during July, August and September, 1904, showing that 228 passengers and 183 employes were killed, and 2154 passengers and 1593 employes injured in train accidents. Other accidents to passengers and employes, not the result of collisions or derailments, bring the aggregate casualties for the quarter up to 1032 killed and 13,207 injured. There were 1439 collisions and 1321 derailments, the damage to cars, engines and roadway being $2,439,073.

The report says that while these figures show a gratifying decrease in the number of employes killed, the three months, as a whole, may be termed the most disastrous quarter on record in fatal accidents to passengers.

207,000 MINERS OUT.

Spread of the Coal Strike in Germany —The Government's Efforts.

Essen, Germany.—Two hundred and seven thousand out of 268,000 miners in the Rhine country have gone out on strike. The Government commissioners were busy taking statements preparatory to forming judgment, and are giving counsel to both sides of the dispute. Boisterous crowds of strikers in several places have been dispersed by mounted police, who used their sabres and blank cartridges.

SHIFTS DIPLOMATS.

Czar Sends Ouroussoff to Vienna—Muravieff to Rome.

Rome, Italy.—Prince Ouroussoff, the Russian Ambassador to Italy, has been appointed Ambassador to Austria-Hungary. M. Muravieff, the Russian Minister of Justice, is to succeed Prince Ouroussoff at Rome.

WORLD'S HIGHEST PEAK.

Tibet Survey Mission Gives That Distinction to Mount Everest.

London, England.—A dispatch to the Standard from Calcutta says that the Tibet survey mission has established the fact that Mount Everest is the highest peak in the world.

Panther Attacks Train.

A panther attacked a car of sheep on the Erie road, near Mast Hope, when the train stopped to cool hot journals.

French Autoist Fined.

Henri Fournier, well known French automobilist, was fined for speeding in Fifth avenue, New York City.

Grand Duchess Dead.

Grand Duchess Caroline of Saxe-Weimar is dead.

ARMY ENTERS PORT ARTHUR

One Regiment From Each Brigade of Japanese March In.

CORRESPONDENTS INSPECT FORT

Wild Lawlessness of Russian Soldiers Just Prior to the Official Surrender—Procession of Mikado's Army Five Miles Long—Gen. Stoessel Blamed For the Surrender—Memorial Services Held

Headquarters of the Third Japanese Army at Port Arthur, via Tientsin.—The victorious Japanese army formally entered Port Arthur. General Nogi with his staff entered first through the old town and took his stand in the public square of the new town. The army was represented by one regiment from each brigade.

The procession, which was five miles long, was three hours passing the saluting base, after which the troops passed out of the city through the new town. The correspondents then visited the captured city for the first time.

The old town buildings were badly smashed by shells, but in the new town the damage was slight. All the shipping in the harbor was badly damaged by shell fire, the warships being practically useless, owing to the injuries they had sustained by shells.

Proposals for the surrender of Port Arthur were first made December 29 at a council of war. General Stoessel was in favor of surrender, but some of his general officers were bitterly opposed to it. The regimental officers and the troops were not consulted.

The first news they had of the surrender was January 1 after General Stoessel had communicated with the Japanese.

The scenes which followed were disgraceful. Drunken soldiers filled the streets and refused to obey their officers. Many of them destroyed the guns upon the positions they had defended and came into the city without permission.

The infantry loudly protested that the fortress had been given away, threw their rifles and ammunition into the harbor and proceeded to break into warehouses and loot and drink vodka until in a helpless condition.

It was evident that the surrender was not necessary, as there were 31,000 effective men in the fortress. The supply of ammunition was short, but it was not exhausted. Food was scarce, but private stores were not requisitioned by the military.

There is no difficulty in getting good meals in the city even now from the stores in private possession. A portion of the fortress was capable of defense for months longer. It was the opinion of the non-combatants at Port Arthur that the surrender was unnecessary, as the troops were willing and able to fight to the bitter end.

General Stoessel was much blamed for what was characterized as a disgraceful conclusion of a splendid defense, which ended with the death of Major-General Kondratenko, who was loved by the soldiers, and was the life of the defense.

Memorial services were held in honor of the spirits of the Japanese dead, upon the plain north of the village of Shuishi, a short distance from Port Arthur. Regiments representing the entire Japanese army were present.

A shrine was erected on the crest of a small hill, and the troops formed a circle around it. General Nogi and his staff were present. Lunch was served afterward in the open to all the officers present. It was a splendid spectacle.

GEN. STOESSEL SAILS FOR HOME

Leaves Nagasaki With Staff and More Than 500 Officers and Men.

Nagasaki, Japan.—The French steamer Australien sailed just before 8 o'clock in the evening for Marseilles, France, having on board General Stoessel and his wife and 565 Russians, including Admirals Grigorovitch and Lockinsky, Generals Gorbatowsky and Reiss, and 245 other officers and their wives. The Australien was not allowed to leave the harbor before dark as a precaution against the Russians or others obtaining knowledge of the defenses. The steamer was piloted out of Nagasaki by Japanese naval officers.

During their stay here the Russian officers bought curios valued at more than $12,000, having ample supplies of money, but the soldiers had not received their pay for many months.

General Fock remains a prisoner in Japan.

VAN OF PRISONERS WRECKED.

One Killed by Wagon Going Over High Embankment.

Philadelphia, Pa. — While a prison van filled with eight long term prisoners for the House of Correction was being driven to the prison it went over a twenty-foot embankment. One of the prisoners died an hour later from the injuries he received. The rest, including the guard, were placed in the new Municipal Hospital. The horse shied at a piece of paper.

JAPS CAPTURE STEAMER.

Dutch Coaler Heading For Vladivostok From Cardiff Stopped.

Tokio, Japan.—A Japanese torpedo-boat destroyer captured the Dutch steamer Wilhelmina, which was carrying Cardiff coal to Vladivostok in the Tsushima Straits and brought her to Sasebo.

With Cars or Tongue.

A bride and bridegroom were on their honeymoon. The bride, in telegraphing to her father, announced that they were "having a lovely time, a row every morning before breakfast."

Her father, evidently reminiscent of his own experiences, wired back:

"How do you pronounce r-o-w?"—London Tit-Bits.

Whales and serpents are voiceless. So, also are the porcupine, the armadillo, and the giraffe.

RATE BILLS INTRODUCED

Administration's Plan For Regulating Railroad Tariff.

One Bill Empowers the Interstate Commission to Fix Rates—Other Creates a Court to Review Rates Fixed.

Washington, D. C.—The so-called Administration measures to increase the powers of the Interstate Commerce Commission were introduced in the House. There were two of them, one from Representative Esch, of Wisconsin, and the other from Representative Townsend, of Michigan. These bills are regarded as having the indorsement of President Roosevelt, because their authors were told by the President that their ideas about dealing with the railway rate question accorded with his own, and at his suggestion they collaborated with Attorney-General Moody in drafting the proposed legislation.

The Esch and Townsend bills are along the lines of most of the suggestions made by other Congressmen to give a greater degree of Federal supervision over railway freight rates. The Esch measure gives the Interstate Commerce Commission the right to fix a rate, and the Townsend bill provides for the creation of a court of transportation, which shall have authority to say whether that rate is reasonable. In thus proposing a special court to deal with rate adjudication the Townsend bill adopts the suggestion of Secretary of the Navy Morton, and goes contrary to the idea of Representative Hepburn, Chairman of the Committee on Interstate and Foreign Commerce, and Senator Elkins, Chairman of the Interstate Commerce Committee, that provision should be made for an additional Judge in each Federal circuit to handle interstate commerce cases. It is generally believed that the Esch and Townsend bills were read and approved by the President before they were introduced.

The Esch bill provides that the Interstate Commerce Commission shall declare, when complaint is made, what shall be a just and reasonable rate, practice or regulation for the future with respect to any matter of transportation. The order shall become operative thirty days after notice to the persons affected. At any time within sixty days any person feeling the rate to be unjust, unreasonable or discriminatory, may institute proceedings in the Court of Transportation, sitting as a court of equity, to have it reviewed.

The Townsend bill creates a Court of Transportation with the powers of a Circuit Court, and is to have original exclusive jurisdiction of all cases growing out of such orders, regulations and requirements that may be made and promulgated by the Interstate Commerce Commission, either in law or in equity. It is to be composed of a Chief Justice, to whom a salary of $9000 a year is to be paid, and four Associate Justices at a salary of $8500 each. Appeal from this court is to be had to the Supreme Court of the United States only.

A rate bill representing the views of the six Democratic members of the House Commerce Committee and also those of Representative John Sharp Williams, the Democratic floor leader, was introduced by Representative Davey, of Louisiana. It gives the Interstate Commerce Commission the power to fix a rate that is to remain in force until overruled by the United States Court having proper jurisdiction.

SAT DEAD FACE TO FACE.

Murder Followed by Suicide Over Investigation of a Treasurer's Books.

Veedersburg, Ind.—John Brant, a well-known Democratic politician, and Charles Eckburg, financial secretary of the Odd Fellows' lodge, of this city, were found at 4 o'clock in the afternoon sitting facing each other in a barber shop, each dead from a bullet in the brain.

Brant was a member of a committee appointed by the lodge to investigate Eckburg's books, and a letter on Eckburg spoke of intended suicide and that he "would carry Brant with him."

Until the letter was found it was supposed that the two men had quarreled and fought in the barber shop, which they entered early in the morning. Pistol shots were heard, but the sound was muffled.

Eckburg's letter, addressed to the public, shows that he had planned to assassinate Brant and for that purpose invited him to the shop. A revolver was found in a cuspidor near Eckburg's body. The men leave families. The Coroner began investigating the case.

DROPS DEAD AFTER SERMON.

Rev. Dr. Harvey Hatcher, of Atlanta, Ga., Dies in a Hotel.

Charleston, S. C.—Rev. Dr. Harvey Hatcher, of Atlanta, Ga., representative of the American Baptist Publication Society, of Philadelphia, fell dead in a hotel lobby in Beaufort.

He had preached in the morning.

PALACE OF PEACE SITE.

Netherlands Government Selects Place For Carnegie's Gift.

The Hague.—The Government has selected the military parade ground near the Bosch (the royal park) as the site for Carnegie's Palace of Peace. The selection is made subject to the approval of the States-General.

Boy Trials.

Willie—I earned a nickel today.

Father—Are you sure? How much did you do?

Willie—Oh, I moved the piano and beat the parlor rug and emptied all the ashes.

Father—Well, a nickel is a whole lot of money.—Philadelphia Bulletin.

Ex-Empress Eugenie may be seen almost any fine day taking long drives in a motor car in the Bois de Boulogne, Paris.

WOMAN'S WORLD

RUSSIAN HOUSE GOWNS.

There are some very fascinating features in dress which the Americans are only just beginning to copy from the French, and one of them is the use of those informal garments which the clever Parisienne distinguishes as robes intimes. Family life in France is the extreme of informality, and for the late breakfast and for the family dinner madame—and mademoiselle as well, for that matter—indulges in those graceful and artistic garments that suggest, without entirely carrying out, the negligee idea.

To wear the very dressy silk petticoats the Parisienne perhaps spends more time and thought and money upon her lingerie than upon the rest of her wardrobe, there are the most delightful and artistic coats or jackets or whatever one chooses to call them. The oneseamo crepe de chine as the double widths have come to be called, is a mighty favorite for these, for the necessary shirring, tucking and accordeon plaitings can better be planned for and with less waste of material in the wide than in the narrow fabric.

The yoke is really the foundation of those charming accessories to one's wardrobe; and this is covered up and concealed by a thousand and one clever devices in the trimming line. Their construction is so simple that even the veriest amateur in the dressmaking line can fashion them for herself. From the concealed yoke the full folds of the little jacket depend, and here is it shirred, tucked or accordeon plaited, the length being regulated to suit the wearer. In accordance with the more formal fashions there is quite a fancy for the half and three-quarters lengths, and very graceful, it must be confessed, they look. Yards upon yards of lace are used for ruffling and edging; and the sleeves are just as elaborate as well may be, and of half or taree-quarter length to match the coat.

Very often a sash of velvet ribbon of a tint that will harmonize or contrast with the crepe de chine is threaded through the plaiting and tied in front in a careless grace. It must hang loosely around the figure, just on the curve of the hip, rather than the waist line; and full tassels in jet beads or something of that order give a weight to the sash ends and hold the sash in place.

WOMEN FARMERS A SUCCESS.

What have we here but full-fledged women farmers. It is true that women have entered into every branch of the trade occupations, but comparatively few have undertaken this difficult and trying task. It means all work and no rest to strong men. What must it mean to women? Women now adorn every department of literature, art and science. They also have a share in the more rude branches of the self-supporting vocations. None, however, are quite so difficult and require such steady workers as this producing from the earth. Of course, the conditions of today, and are not those of 20 years back, and it is now possible to rely upon someone when a relief is necessary. There are also other improvements which do not leave bare such facts as one had to contend with so long ago. Since this branch has been accepted as one worthy of attention by women, the branches of farming that are both congenial and profitable to women, bee culture, fruit-raising, poultry, vegetable and flower culture, are receiving attention. Bees are a good paying proposition, and any woman who contemplates entering into this profession will do well to take this as a specialty. A small capital is required to start, and constant attention is required only at certain times. Fruit is always profitable and so is poultry and vegetables. They are rather hard to take care of, but in the end reap fine financial harvest for those concerned. Women being unusually fond of flowers, enables them to study their advent with greater knowledge and more judgment than other things in which they take no interest, and if one should take particular care of them and start on a small scale they would most assuredly make money for the farmers within a short time.—Newark Advertiser.

IMPORTANCE OF WELL-FITTING SHOE.

There is more to be understood about a shoe than the heel, and this is the general cut and style. When women are not over particular regarding their footgear, but who pay fabulous prices for their shoes, should give more time to the fit and becomingness of a shoe. The shape of one's foot should be studied and attention given to the sort of shoes which is most comfortable. Those who do not have their shoes made to order, which, by the way, is only a fad, should take time when purchasing a pair of shoes. Many things are to be considered—first of all the general comfort and look of the shoe. Some women have the idea that a shoe which is positively ugly, which has a broad, flat sole and a low heel, should be healthy, but it is not so, for many women would be in perfect agony with such a shoe. The ar the foot should be studied, and are just as many women wh stand a high heel as there ar can wear easily the low one. street wear the light weight ca onys are the best, and those w are laced are also most comfort It is best, if possible, to wear a erately high Cuban heel on a casions, excepting of course, ings.—Newark Advertiser.

MODERN WOMAN'S ADV TAGES.

It is quite possible in this a that women do for appreci good fortunes in having thin ranged for their benefit and co that if otherwise, would make considerably more difficult to trea path of life, besides increasin burdens she has now unfold erything which is possible to a glish is done, and the woman sh has, perhaps, the best of all. has the advantage of a cosmop country, where all mortals are co She is looked upon as a portio the American race, which sig that she is fully equal to a prince royal blood or a millionaire's d ter. In the modern vast depart store she can come in the mor and stay as long as she che Whether she buys or not she is a come guest. The stores are equi sumptuously and flowers, music all the comforts of life are at her mand, the best part being, perha the non-charge of it all. Ma have changed considerably within past decade, and now women ca as much liberty, in very many sports, as men.

THE CARE OF THEEVES

Since the beauty specialists succeeding in their art in practica beautifying women's faces, every ture has been experimented up with the most favorable results. eyes alone have withstood the tific method, and as they are a delicate organ it is well not to tam with them. They are without a do the most salient feature of the fa and should be cared for as su Their beauty lies entirely with woman herself, and whether they a a credit or a discredit to her fac of one's own making. There ar few important "don'ts" which, if lowed, would do much to preserve eyes and have a great tendency make them beautiful. The follow are some:

Don't read with insufficient light.
Don't read in a moving train.
Don't read while you rock.
Don't read after the eyes have be taxed with sewing or such like.
Don't use the eyes when they sma
Don't look at the sun.
Don't face the wind if avoida without some protection.
Don't squint.
Don't read with the head lowere —Exchange.

ITALY'S BABY PRINCE.

Although the royal Italian nurse is managed in a very democra manner, under the supervision of English governess and her corps assistants, there are many ancie prejudice regarding the proper r ing of a royal baby that much be herred to and consequently the li heir apparent, the Prince of P mont, must submit in his helpless fant state to b ing swathed in l bands of linen, which ke his low limbs almost immobile, although little arms are free.

Although the two little Italian p cesses and their new brothers a not loaded down with the mag cence enjoyed by the occupants of Russian royal nurseries, still th little southern royalties posses beautiful and luxurious nurser cles that would cause many a wes mother, with her ideas of simpli for children, to open her eyes.

Then, too, the baby prince ha cradle of solid silver, decorated w symbol figures. The two fig supporting the basket are over feet in height, and the cradle pro is four feet from the floor. Wash ton Times.

THE SLENDER WAIST AGAIN

Every possible means are resor to nowadays to make the waist look slender, and this without undue lacing or pinching either. T the new gown accentuates this s der and rounded waist need not ca any alarm among those who mak fetish of health fads. Its achi ment is a matter of appearance ra er than of reality and the belt ta will be found to measure quite many inches as in the early days the blouses and straight front sets. The broad and built out sh er is primarily responsible for and very dainty indeed is the eff it produces. Of course, it is an eff that must be managed with discr nation or the results will not be th sought for. With the broad slender in comparison. All new sleeves are designed with object in view.—Newark Advertis

A new cartridge in use by French army, will propel a bullet a mile without any perceptible or fall.

Mr. Wasserman says that he h been around the world more than on and that this was the first time that he has ever been swindled or robbed

New Corporation.

Pansy, Ala.—The Pansy Company of Scranton, Pa., with a capital stock of $25,000, filed with Secretary of State R. R. McDavid a copy of its charter secured in New Jersey.

The company will operate saw mills and other enterprises, at Pansy, in Houston county.

The privilege of the Pansy Lumber Company, among other things, are "to acquire, hold, lease and sell timber, farming, grazing, mineral and other lands and the products thereof; to build, construct, maintain and operate plant and works for the development of such lands and for the handling, preparing and sendering commercially available the various products. Also to manufacture iron, steel, manganese, coke, copper and other materials.

Ginners Will Meet Soon.

Montgomery, Ala.—The ginners of Alabama will meet here February 4.

The call for the meeting comes from J. A. Taylor, president of the National Ginners' Association.

In arranging for the meeting, Mr Taylor has put himself in communication with the leading ginners of the state. He has written them urging a state convention to be held to discuss and act upon matters of importance to them.

The meeting is to devise some way of securing to the ginners and planters the benefits that are derived from the gathering of cotton statistics.

In his communication to the ginners President Taylor says:

"Spinners and speculators have agents to report to them on crop conditions and yield. We furnish information, but get word back too late to be of use to us, or to our customers. The ginners are in closer touch with the cotton situation than any other class and we can make the organization a power for good in the South."

It is expected that there will be a large attendance upon the convention.

Watchman Shot in Hand.

Birmingham, Ala.—Watchman Helton at the Louisville and Nashville yards was shot in the hand Sunday morning about 2:30 o'clock by an unknown white man.

Mr. Helton is stationed at Fifth avenue and Thirteenth street and saw three men attempting to board a passing train. He attempted to make them leave when one of the men turned on him and fired a pistol, the ball striking him in the hand. The three men then ran toward the city and escaped.

Plan Press Association.

Florence, Ala.—The newspaper men of Lauderdale and Colbert counties will meet in Tuscumbia Saturday to organize a press association. There are two papers in Lauderdale county and four in Colbert, and all will be represented at the meeting.

To Increase Stock.

Birmingham, Ala.—The Dimmick Pipe Company has called a stockholders' meeting for February 28, at 4 o'clock in the afternoon, at which time there will be action taken on a proposition to increase the capital stock of the company to not exceed $1,000,000. It is the purpose of the company to add another pit to their large water pipe plant at North Birmingham this year, and to make other betterments at a cost of about $2[illegible]. THE UNION.

EQUAL RIGHTS TO ALL; SPECIAL FAVORS TO NONE.

VOL. II. CLANTON, ALA., FEBRUARY 2, 1905. NO. 45

ALABAMA NEWS.

Current Events Gathered as They Happen.

Robbed on Train.

Birmingham, Ala.—M. Wasserman, who lives in New York, was robbed on train coming into Birmingham from New Orleans at an early hour Saturday morning. The theft was committed as Mr. Wasserman was leaving the train in the union passenger station, and he believes that it was done by three well-dressed young white men, description of whom he has furnished the police department.

In a wallet stolen from his pocket he had two checks for $50 each on the Southern Express Company at New Orleans and a number of private papers which would interest no one but himself. He states that the theft was made by one of the men while another of them engaged him in a conversation relative to swapping dress suit cases. The young man who attempted to swap baggage with him was very handsomely dressed.

Mr. Wasserman says that he has been around the world more than once and that this was the first time that he has ever been swindled or robbed.

New Corporation.

Pansy, Ala.—The Pansy Company, of Scranton, Pa., with a capital stock of $25,000, filed with Secretary of State C. R. McDavid a copy of its charter secured in New Jersey.

The company will operate saw mills and other enterprises, at Pansy, in Houston county.

The privilege of the Pansy Lumber Company, among other things, are "to acquire, hold, lease and sell timber, farming, grazing, mineral and other lands and the products thereof; to build, construct, maintain and operate plant and works for the development of such lands and for the handling, preparing and sendering commercially available the various products. Watchman Shot in Hand.

Birmingham, Ala.—Watchman Helton at the Louisville and Nashville yards was shot in the hand Sunday morning about 2:30 o'clock by an unknown white man.

Mr. Helton is stationed at Fifth avenue and Thirteenth street and saw three men attempting to board a passing train. He attempted to make them leave when one of the men turned on him and fired a pistol, the ball striking him in the hand. The three men then ran toward the city and escaped.

Plan Press Association.

Florence, Ala.—The newspaper men of Lauderdale and Colbert counties will meet in Tuscumbia Saturday to organize a press association. There are two papers in Lauderdale county and four in Colbert, and all will be represented at the meeting.

To Increase Stock.

Birmingham, Ala.—The Dimmick Pipe Company has called a stockholders' meeting for February 28, at 2 o'clock in the afternoon, at which time there will be action taken on the proposition to increase the capital stock of the company to not exceeding $1,000,000. It is the purpose of the company to add another pit to the large water pipe plant at North Birmingham this year, and to make other betterments at a cost of about $250,000. The company has enjoyed unbounded prosperity since it began operations six years ago, having a trade with every section of the country, as well as doing an export business. It is one of the most solid industrial concerns in the entire South.

Caught in Oklahoma.

Tuscumbia, Ala.—Sheriff W. E. Bevill has received a telegram from officers in Oklahoma City, notifying him of the capture in that city of Bill King, the negro who murdered Henry Irving and the latter's 13-year-old son, in this county Christmas eve night. King made his escape after the murder, and was followed by Sheriff Bevill to Memphis, where all trace of the murderer was lost.

Irving and his boy were willed without provocation, and a reward of $75 was offered by a fraternal order, of which the elder Irving was a member, which has been supplemented by the governor, for the delivery of the murderer to the sheriff of this country.

Wanted in Louisiana.

Mobile, Ala.—W. M. Scott, who came to Mobile from New Orleans after Ed Williams, who has a number of aliases, left for Montgomery to interview Governor Cunningham with the view to securing the person of the young man, who is now serving a sentence at hard labor for carrying concealed weapons. Mr. Scott is armed with a requisition from the governor of Louisiana, he being deputized to act for that state. Mr. Scott had a consultation with the trial judge who sentenced Williams, also the solicitor, but it is impossible to learn what satisfaction he obtained from these officials.

It is charged that Williams while agent of the Southern Express Company at White Castle, La., and after being there only two days, left with $267.50 of the company's money. He also had other property, identification of which has been made as coming from White Castle.

Water Committee Met.

Birmingham, Ala.—The following is the gist of the first meeting of the general committee on greater water supply:

Office of consulting engineer for the proposed preliminary survey created, and Julian Kendrick was unanimously chosen to the position.

Chairman W. P. G. Harding was instructed to appoint a committee of fifteen citizens of Jefferson county to appear before the board of revenue at as early a date as possible and ask that an appropriation sufficient to defray the expenses of the preliminary survey be made.

Resolutions were adopted instructing the chairman to increase the general committee by adding the names of the mayors of North Birmingham, Woodlawn, Avondale and East Lake, and two citizens from each of those localities.

Deaf Mute In Prison.

Montgomery, Ala.—John Wilson, a deaf mute, 24 years old and of good appearance, is held at police headquarters on a charge of practicing a fraud.

Wilson presented to Charles R. Westcott, a letter signed by Colonel Charles P. Jones, in which the deaf mute was highly endorsed as a worthy young man and recommended that he be assisted financially in defraying his expenses at a school for mutes.

At police headquarters a cash book was taken from the person of Wilson which showed that he had collected considerable money from Montgomery citizens on the forged letter of Colonel Jones, which was typewritten on his letter head.

Wilson said that he came to Montgomery from Birmingham and that his home was in Louisville, Ky.

Shooting at Ensley.

Ensley, Ala.—In a difficulty at a saloon here Saturday night, Frank Fuller was shot by Bert Sharp. The bullet struck him in the shoulder, but the wound is not a dangerous one. The two men are said to have been at out for several days past. Witnesses say that Fuller struck Sharp over the head with a billiard cue. Both men were put under arrest.

Sharp is employed at the rail mill.

A New Corporation.

Luverne, Ala.—The Cody-Henderson Company, of Luverne, with a capital stock of $35,000, filed notice of its incorporation.

The corporators are J. C. Henderson and associates.

Several New Buildings.

Birmingham, Ala.—Wheelock, Joy & Wheelock, architects, are at present engaged in drawing plans for a series of two-story buildings to be erected along the west side of Twentieth street from Second alley to Third avenue, where the disastrous fire of a month ago occurred.

The burned structures were the property of General Louis V. Clark, the rest of the buildings to Third avenue were the property of Mr. Marx, of Montgomery. The two will erect together the series of new structures along the street. Despite the fact that they are to be of only two stories, they will be thoroughly modern in equipment.

Heavy Car Contract Awarded.

Anniston, Ala.—The Western Steel Car and Foundry Company has been awarded contracts within the last few days for the building of fourteen hundred freight cars by the local plant, and that work on them would commence just as soon as material could be secured. The greater majority of these cars are to be built for the Southern road, in fact more than one thousand of the number.

Everything will be in readiness for starting up the rolling mill on Monday, February 6. It is expected the puddling furnaces will start on that day; the finishing mill about a week later. Owing to the very disagreeable weather that has been prevailing for the past few weeks the company has been unable to get in material, but with more open weather it will soon be all aglow from one end to the other with life. All the machinery has been gone over and placed in good condition. A working force is rapidly being employed and systematized.

No More Companies.

Montgomery, Ala.—The compromise board, composed of the governor, the attorney general and the state auditor made one more compromise on the matter of privilege taxes for corporations in the state. This was for the Central Iron and Coal Company of Tuscaloosa, which admits that it had last year a capital stock of $600,000, on which the tax of one-tenth of one per cent. would have been $600. The matter was compromised for $300, and is about the fourth of the kind effected since the passage of the new section of the revenue law stipulating the charge. This fee is for the tax of 1904, and does not include anything for this year. It is understood that there will be no compromise this year, though this is not authoritatively stated.

Succumbs to Paralytic Stroke.

Tuscaloosa, Ala.—News of the death of G. Lunsford Treywick has been brought to the city, who has resided in this section since Alabama was a territory. Mr. Treywick went for a walk over his plantation early in the afternoon and not having returned late in the evening a search was made. At 8 o'clock he was found prostrated in an open cotton field stricken with paralysis and in an unconscious state. He was immediately carried to his home, where medical aid was summoned, but he died within a short while after reaching his home. It is thought he lay in the field several hours after receiving the stroke.

Played With Blasting Powder.

Anniston, Ala.—One boy is dead and two are seriously injured as a result of an accident Sunday on the Gladden place, two miles west of Alexandria.

One of the number, Ike Broom died this morning at 9 o'clock and his thirteen-year-old brother, Colonel Broom, is not expected to live. The face and hands of a boy by the name of Baker are badly, but not seriously burned. There were three boys in the party. They were around a big fire in a field and were sprinkling powder over it, when the clothes of Ike Broom, aged 17, were ignited.

The other boys rushed to his assistance and met with a similar fate. The boys so badly burned are the sons of William Broom. They had found a keg of blasting powder and filled their pockets with the explosive.

More Mill Stock Is Issued.

Montgomery, Ala.—The Ellawhite cotton mills, of Uniontown, have issued $75,000 of additional stock, making the whole amount $175,000, with which it is expected that the factory will be enlarged, more spindles put in and additional capacity provided for in other ways. This mill has been one of the most remarkable successes of the country. It was organized in 1900, and the mill has been a source of revenue from the day it began work.

Discharged on Self-Defense.

Tuskegee, Ala.—On the plea of self-defense, Justice Proctor released Sheriff Connor, Deputy Lamar and City Marshal Taylor, who shot to death Jim and Bob McBryde while attempting to arrest them.

Increased Acreage In Strawberries.

Brewton, Ala.—Lovelace Brothers have sold their strawberry and fruit orchard, consisting of something over one hundred acres, near Brewton, to Northern capitalists, who will cultivate it. The strawberry industry in this section is assuming large proportions, and a very large acreage will be put in this season.

The extremely cold weather this week has materially interferred with brick work, the mortar freezing.

Died From Falling.

Anniston, Ala.—J. T. Vinson, who died from the effects of a contusion on the head received by falling into a pit, was buried here Saturday.

WILL THEY BE HEARD?

Vladimer Interviewed on the Cause of the Russian Trouble in January.

IS PASSING A GREAT CRISIS.

Troubels Have Been Caused By Trade Depression and Lack of Employment—Not Revolutionary.

St. Petersburg.—Grand Duke Vladimer, uncle of Emperor Nicholas, and commander of the imperial guard, has granted an interview to the Associated Press at the duke's palace in Quay de LaCour, adjoining the winter palace.

The correspondent was received in the duke's private study. The grand duke is a man of perhaps 60 years, a veteran in appearance, as well as in fact, for he won his spurs and the cross of St. George twenty-five years ago on the plains before Plevna. He is big-framed and dark visaged, and has iron gray hair, and resembles more his brother, Alexander III, than his nephew, Emperor Nicholas. Although his face and frame show marks of recent illness, the nervous energy he displays gives the impression of a man of force and action.

"You must remember," said the grand duke in French, "you must remember I am a grand duke and a subject of the Emperor. As such I am extremely loyal to him, and I am Russian from the crown of my head to the tip of my toes," accompanying the words with a sweeping gesture.

"What information can I give you?"

"The newspapers abroad," suggested the correspondent, "have made many statements regarding the avents of January 22d."

Stands Aghast at Stories.

"I know; I have read accounts in the foreign press. I have stood aghast at the frightful stories of the butchery of innocent people which they have printed. I know they say well-intentioned patriots with a priest at their head commanded peacefully to place their grievances before his majesty, were ruthlessly shot down in the streets, but we know that behind this peaceful procession was an anarchistic and socialistic plot of which the overwhelming majority of the workmen were merely innocent tools. We know from examination of the dead and those arrested that some alleged priests were actually revolutionary agitators, and students in disguise. We had to save the city from a mob. Unfortunately, to do so, innocent and guilty suffered alike. But suppose 140,000 men had reached the gates of the winter palace; they would have sacked it as the mob sacked Versailles. From the palace they would have gone elsewhere and the whole city would have been delivered over to anarchy, riot, bloodshed and flames. Our duty was the duty of every government.

Same in Other Countries.

"The same situation has confronted cities in other countries. Why, because this occurred in Russia, should the whole world point the finger of scorn at us? In the midst of our difficulties, why should we be turned upon? Why should America especially misinterpret and think ill of us? We have always been friends—friends of a century—friends when America needed friends. I remember when America was our great friend. Why has all this changed? What has Russia done to deserve it? What has Russia done to America? Why should the foreign press, especially that of Great Britain, not hesitate before an inquiry? No invention seems too horrible for them to print.

"They do not explain that on Saturday every dead wall in street St. Petersburg was placarded with warnings to the people not to assemble. No, but they tell that thousands of innocent people were killed and other thousands wounded, and paint the streets as running red with blood. They even say the dead were pushed under the ice of the Neva at night. It is infamous. They say nothing of isolated officers set upon by mobs in the streets and hammered into insensibility or of policemen killed or wounded. As a matter of fact, complete returns show that exactly 126 are dead. Several hundred were wounded. I can't give the precise figures of the wounded, but you shall have an opportunity to see the full reports."

Farmers Have Cotton.

Tallippoosa, Ala.—News is received here from Romulus of the burning of A. B. Patrick's gin. It seems that the fire did not develop until the small hours of the night. There was cotton and corn stored there to the amount of $20,000, which was totally destroyed with no insurance. Many of the small farmers had their entire crop stored, waiting for higher prices.

General Lee Speaks.

Canton, Ohio—At the commemoration of the late President McKinley at the Young Men's McKinley Club banquet Tuesday night, among other things, General Fitzhugh Lee said:

General Lee Speaks.

"Ohio, it is true, is the state of his nativity. Her citizens knew and loved the living McKinley, her soil is sacred with the grave that marks the resting place of the dead McKinley; her people will cherish his lofty character and his splendid services as long as the mountains kiss the heavens or the rivers roll to the sea.

"Ohio, however, can not bound his boundless fame, for on the wings of renown his glory has been wafted to all parts of the world. Tonight each state which is represented by a star in the national crown which binds the American union is equally interested in all that concerns the name and fame of the man who sleeps his last sleep in your midst so quietly that no sound can ever wake him to glory again.

Virginia Proud of Sons.

"Old Virginia is proud of the fact that she gave to the country George Washington. She, too, rejoices that she was the mother of Thomas Jefferson. She sent forth also James Madison, the father of the constitution; Patrick Henry, the great creator of American liberty. She brought forth, too, James Monroe, and the great jurist, John Marshall. Proud as the old state may be at the career of her sons, she is equally proud as an American state, in all that concerns the noble life and the great work of William McKinley—the typical American citizen. The great men I have mentioned, with Adams, Hamilton and Franklin and other distinguished colleagues, worked out successfully the problem of human government, discovered constitutional liberty, caused freedom to dwell in our midst and erected popular government which has widened and broadened since their day, until the national banner floats over more square leagues of land than did that of Rome after seven centuries of growth.

"We should look more frequently back to those men of the past whose intellectual labors accomplished so much, while gazing, too, upon the great future unrolling before us, but whether looking back or looking forward, our hearts and memories should go out to one whose splendid national work healed the scars of war and brought in closer union the men whose loaded guns were once pointed at the breasts of each other. He is the source, to a marvelous degree, from which has flowed the fraternity of the sections.

Proposes His Own Epitaph.

"'Could I,' he once said to me, 'write an epitaph upon my tomb, I would say: 'Here lies a President of the United States who has done more to bring all the sections of a common country into more harmonious and closer friendship than any of his predecessors.'

"He has fought his last battle. He has written upon the roll of fame the last record of his great life. He has left the inspiration of a beautiful life and exalted character, and illustrious example in all that pertains to a stainless private life and a most distinguished public career.

"We of the south do not forget the kind words Mr. McKinley uttered in his speech at Atlanta, Ga., when he said:

"'In the spirit of fraternity we should share with you in the care of the graves of the confederate soldiers,' and we remember, too, that the Virginia constitutional convention was in session at Richmond at the time of his death, and that memorial exercises were held where the executive, the judicial and legislative departments of the state united with the members of the convention in deploring his death.

"Sleep on, oh just and wise ruler. Your birth was a blessing to your country, your life a blessing to all of its inhabitants; your death a calamity which has excited the lamentations of a world; all the sections tonight hear the echo of the voice of the great soldier, U. S. Grant, who, on his death bed, said:

"'I feel that we are approaching an era of great good feeling between federal and confederate soldiers. I shall not be here to witness it in its perfection, but I feel within me that it is to be so. Let us have peace.'

Big Diamond Found.

Johannesburg, Transvaal.—The largest diamond ever discovered has been found near Pretoria. The stone weighs 3,032 carats and is said to be a pure white diamond of good quality. It is locally valued at $3,500,000 to $4,000,000. The famous Kihnoor which is valued at $600,000, weighs 123 carats, though it is said to have weighed 900 before it was cut.

Tennessee to Tax Bachelors.

Nashville, Tenn.—The lower house of the legislature today passed the Rawls bill taxing unmarried men after it had been amended so as to apply directly to the home county of the author of the measure.

Home Grown Fruit Trees

I have for sale a fine assortment of fruit trees, particularly adapted to this climate. Peaches, Plums and Apples, of the best varieties for this section, and all guaranteed true to name. Prices Reasonable. J. L. Winslow, Pine Hill Nursery, Thorsby, Ala.

Light Laconics.

The most experienced shopper never gets a bargain at a church fair.

A woman doesn't require nearly so much material to make trouble as she does to make a dress.

A man who gets down on his knees to propose will be there for the rest of his life, if he is accepted.

A girl always thinks a man is truthful when he tells her that she is beautiful, even when she knows she isn't.

It takes a smart man to catch a widow, but any young thing with big blue eyes and an innocent look can capture a widower.

GIGANTIC RAILWAY TERMINAL FACILITIES FOR NEW YORK CITY

Involve the Use of More Than Nineteen City Blocks.

THE plans for the new terminal in New York City involve the use of an area of more than nineteen city blocks between Forty-second and Fifty-seventh street, Madison and Lexington avenues.

The station proper, together with the postoffice and express buildings, will cover the blocks between Vanderbilt and Lexington avenues from Forty-fifth to Forty-third streets inclusive, and the block fronting on Forty-second street between Vanderbilt avenue and Depew place.

The buildings will be set back from Forty-second street a distance of about forty feet, and back from Vanderbilt a distance of about seventy feet, so as to afford a generous approach to the station and give the effect of 140 feet open space on the Forty-second street frontage and 130 feet open space on the Vanderbilt avenue frontage.

The frontage of these buildings will be 680 feet on Vanderbilt avenue, 625 feet on Forty-fifth street, 460 feet on Lexington avenue, 275 feet on Forty-fourth street, 260 feet on Depew place, and 300 feet on Forty-second street.

In addition to the public streets there will be connections by ample private roadways and walks to Madison avenue on the west and Lexington avenue on the east; thus giving the traveling public facilities for entering the station not only from Forty-second street on the south, Vanderbilt avenue and Depew place, but from Madison avenue on the west and Lexington avenue on the east.

Besides the main entrances and exits there are additional entrances and exits for the suburban passengers, so that the commuter need not enter the main part of the station, but can go directly from the street to the train or from the train to the street by an easy incline, avoiding all staircases. There is provided at the express level a connection with the subway. There is also a splendid entrance and exit to the station by way of an incline from Madison avenue, enabling the cab or foot passengers to approach or leave the station at the west end of the grand concourse. At the subway level there is provided a subordinate concourse with ample waiting and retiring rooms. At this level there is provided a loop for quickly dispatching the suburban trains and provision has also been made for a possible connection with the rapid transit system.

The baggage room adjoins Depew place, Forty-fifth street and Vanderbilt avenue, with 1300 feet of street frontage and 47,000 square feet of floor space, sufficient to care for baggage in rush seasons without the delay of delivery now experienced at all large stations.

It has been the intention in preparing these plans to sacrifice everything to the convenience of the traveling public and to the proper administration of a terminal railway station.

The architects (Warren & Wetmore associated with Reed & Stem) have admirably accomplished the following results:

They have provided the best possible facilities for getting to and getting away from the station.

The cab stand is situated in the most convenient place for arriving passengers.

The outgoing baggage is convenient to the ticket offices, and the incoming baggage is convenient to the exits.

They have separated the incoming and the outgoing passengers, thus avoiding the usual confusion.

They have provided ample waiting rooms and a grand concourse sufficiently large to accommodate the largest possible excursion or holiday crowd.

The suburban passengers are separated from the express passengers, but with the entrances and exits so arranged that there is perfect facility for getting from one to the other.

Ample space is provided for the incoming crowd, and there is a waiting vestibule for those desiring to meet arriving passengers.

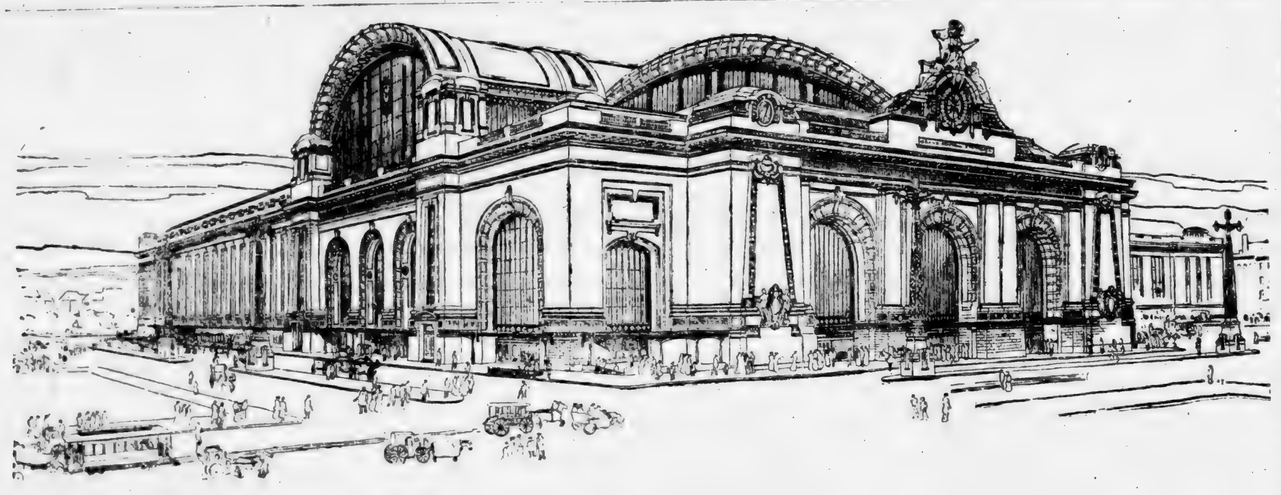
The express concourse and waiting rooms are so situated that suburban passengers can use them if desirable, and these accommodations are so placed that from the standpoint of facility in handling the passengers either tier of tracks may be used interchangeably.

There is ample space for the handling of incoming and outgoing baggage.

The approaches and departures from the station are on the company's own property.

To the north of the concourse and carrying the cornice line of this monumental part of the building, around the entire building, are placed the company's offices, containing about 250,000 square feet in area, exclusive of corridors, elevators, etc., with entrances at the two corners of the building at Forty-fifth street and Park avenue, and with ample elevator facilities leading to the concourse itself. These offices are built around a magnificent court, thus providing beautiful light for each office and providing for splendid natural light in the higher part of the train room.

Provision is made for doubling the capacity of the station without in any way interfering with the architectural features or general plan of the station. The facade presents an effect which appeals to one at once as presenting a magnificent station, and one which will be an ornament to the city, and one of which citizens may well be proud.

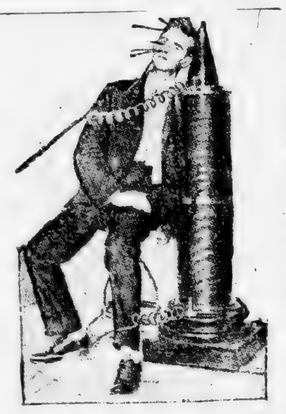


THE GRAND CENTRAL TERMINAL STATION OF NEW YORK CITY FOR THE NEW YORK CENTRAL AND HUDSON RIVER RAILROAD CO

AID TO THE OCULIST.

Electro-Magnet at Bridgeport to Take Pieces of Steel From Eyes.

In the X-ray room at the Bridgeport Hospital the largest electro-magnet in the world for use in surgical operations has recently been set up. It was designed and constructed for Dr. Frank



A MIGHTY MAGNET.

M. Wilson, of that city, to aid in performing certain operations upon the eye which without it are impossible to be performed, and because of this inability many a human eye loses its sight forever. While this magnet is the same as all other magnets in the manner of its working, the degree and extent of its work must be seen to be appreciated, for it surpasses any other magnet ever made for such purposes. This magnet carries along to a further point what other magnets have formerly accomplished in a lesser degree, and this greater degree of efficiency is brought about by the simple use of greater magnetic force than was ever before used.

Briefly described, the magnet stands on one end on the floor. It is five feet high, weighs a quarter of a ton, and the steel core is five inches in diameter, and around this core is wound two miles of No. 8 copper wire, making it in total diameter as large around as a common wooden water pail or nail keg.

The particular specific cases for which this magnet is intended are those in which a piece of steel has become imbedded in the eye. Since the employment of what is called the new steel and the increased speed at which metals are turned on the lathes, there has been a large increase in the number of eye injuries from particles of steel being thrown with sufficient violence into the eye to cut their way through the vitreous humor and make it impossible, with the methods formerly employed, to remove such substances.

When it is desired to operate, the patient stands by the side of the magnet with the affected eye resting on a small brass support, the eye just clearing the point of the magnet. The point is removable, so that it may be sterilized. If there is a particle of steel in the patient's eye he is likely to shriek, jump from the magnet and clasp his hand to his eye, for the magnet has drawn the steel up through the humor, and it is exposed to the view of the oculist. With a slight operation now the particle is removed. It often happens, too, that a patient comes to the oculist for treatment of an eye and tells the oculist that he is sure that there is a piece of steel in his eye, as several particles were taken from the eye by a fellow workman a few days previously. The magnet is brought into use, but the patient does not wince. That satisfies the oculist that there is no steel in the patient's eye, and he understands that he must look for some other cause of the ailment. It is this facility for inferential diagnosis that makes this great magnet so valuable an adjunct to the oculist.

The power of the magnet is best shown when a person sits beside it with one side of his face against the conical end. The current is turned on and an attendant places several wire nails as thick and as long as a lead pencil with their heads against the other side of the face. Those nails will not fall to the floor, but remain sticking to the face, just the same as if they had been driven through.

How far the magnetic influence of this instrument extends has not been defined as yet, but from the way the watches of the physicians and the attendants about the hospital behave, it is thought that it extends throughout the entire hospital, which covers two blocks of ground. Whenever persons go into the room where this magnet is placed Superintendent Jones asks for their watches, as they will be so thoroughly magnetized if near the magnet when the current is turned on that they will be useless until after they are demagnetized.

This great magnet has been inspected by scientific men and professors from several colleges, and they are of the opinion that it opens up a line of research which has hitherto been practically undeveloped. Upon Dr. Frank M. Wilson's return from Europe he will conduct a line of original research from which striking results are expected.—New York Tribune.

Unregenerate Opinion.

The caller limped up the front steps and rang the bell.

"Is this where the Rev. Dr. Fourthly lives?" he asked.

"Yes, sir," replied the housemaid.

"Well, will you please tell him he may be a good man, but that I think he ought to show his faith by his works? This is the second time I've lamed myself by falling down on his icy sidewalk. Good morning."

Then he turned and limped slowly down the steps.—Chicago Tribune.

BRITISH QUARANTINE RULE REQUIRES DOGS TO WEAR HARNESS UNDER CERTAIN CONDITIONS FOR SIX MONTHS.

Appeals to the British Board of Agriculture for a limitation in the six months' quarantine of dogs who had to be quartered by special permission with certified and approved veterinarians, have resulted in a certain mitigation. Now, dogs coming from the

How the Harness Looks On and Off the Dog, the Inscription on the Saddle and the Official Seal of the Board of Agriculture Affixed to the Harness.

Continent, America, Africa or Australia, can be quarantined for three months at an approved veterinarian's or can be retained at a kennel designated by the owner for six months, provided it wears a harness marked "in quarantine for rabies."

The harness which is to be worn will be sealed by the Board of Agriculture, and it will be a punishable misdemeanor for any one but the authorized official to break those seals. While wearing the harness, the dog "may not be legally absent from the premises mentioned in the order unless it is also muzzled." While on a highway or thoroughfare, or while being removed by rail, the wearer of the new harness is required to be also controlled by a collar and chain.

A HANDY HAMMER.

This is a simple labor saver costing nothing beyond the work of placing the hammer head in position, and it will enable one to draw a nail with greater ease and without bending it. The illustration shows the idea plainly, which is simply to have the end of the handle project beyond the head for about an inch.

The handle is fastened in the head in the usual manner and a hole bored

through the projecting end close to the head of the hammer through which a piece of iron is driven to prevent the head from pulling through. A very simple tool, but one of the many simple things which may be used on every farm to great advantage.

Typhoid From Wells.

The wells of farms visited in summer by city folk are now regarded as perhaps the chief source of typhoid fever.

A Famous Rhinoceros Dead.

After forty-one years' residence at the Zoological Gardens, Jim, the veteran rhinoceros, died the other night. The keeper who entered his stable in the morning found him lying dead at the front. Overnight he had seemed better and had eaten a hearty meal. Then he went to sleep. The position of his body seemed to show that he had awakened in the night and staggered forth to the bars in front of his stable. Then he had fallen and died.—London Mail.

A Fable.

The Wealthy Patient was in a Quandary.

"The Fee of the Eminent Surgeon will be $1.99 more than I have in the Bank. If, however, I Die, the Eminent Lawyer will take $1.99 more than I Leave. Which shall it be?"

While he was still debating, a Plumber repaired a Leak on the Third Floor and received the Whole Estate.

Moral: When between the Devil and the Deep Sea a Third Party may get you.—Harper's Bazar.

Too Many to Remember.

A gentleman about to move out of the city and wishing information in regard to help, called on a friend and said:

"You've been living in the suburbs so long I suppose you've had considerable experience with servant girls?"

"Well, yes," replied the other. "It's got so that when my wife is interviewing an applicant now she always begins by asking: 'Were you ever employed by me before? If so, when and for how long?'"—Philadelphia Ledger.

Rival of the Bee in China.

A curious Chinese industry is wax farming, or the cultivation of a wax-producing insect, the Ericerus pelin, an account of which has just been given by Professor Saski, of the Agricultural College of the Imperial University of Japan, in a special bulletin.—London Globe.

France has issued a new 25-centime piece of nickel, struck off in polygonal form, to avoid the resemblance to silver coins of about the same size.

WOMEN OF MEXICO.

Their Home Life and Pastimes—Horrible Bull Fights.

As a cure for the American disease of nervousness there is nothing like a visit to Mexico, according to Mrs. Bert Seaboldt, formerly editor and proprietor of "The Stock and Mining Journal" of Salt Lake City, who has just returned from that picturesque country.

"No one in Mexico does anything more than he can help," says Mrs. Seaboldt, "and the upper classes have learned how to avoid almost everything that requires exertion. The men spend their time riding and drinking champagne, and the women lie around and look pretty. It may become monotonous after a time, but for a few months, after the strenuous atmosphere of the United States, the eternal manana, manana (tomorrow, tomorrow) of the Mexicans is like the balm of Gilead.

"And the Mexicans are the most hospitable of people to the stranger within their gates. They take you right into their line, and if they like you your room will be a bower of blossoms during the whole of your stay, and there will be a continuous serenade under your windows. They are very primitive people, and the serenade, which we are accustomed to associate only with poetry, is a matter of every-day life with them. Perhaps that is because they have real latticed windows under which to sing their serenades.

"Another idyllic feature of Mexican life is their habit of eating out of doors. It is quite the custom among the upper classes in the City of Mexico to drive out to the President's Palace for breakfast. The grounds and part of the palace are open to the public, and a restaurant which is a fashionable place of resort has been erected there. By the time you get back from breakfast it is time for luncheon, and you go somewhere else for that. In the afternoon you sleep or drive, and at night you go to one of the hotels for dinner, or perhaps to the floating gardens, which look like huge lily pads on the surface of the water.

"For the afternoon drive you will probably go to the Alameda, or matrimonial market. Marriage is the only occupation open to the women of Mexico, and they make a regular business of it. Mothers take their marriageable daughters, dressed to kill, to the Alameda, and drive slowly up and down, to and fro. The marriageable men do the same thing, and when a young man sees a girl who takes his fancy he follows her carriage and finds a way of obtaining an introduction. This has to be done through her parents, for no young girl is ever allowed to see a man alone.

"The bull fights afford another opportunity for the matchmakers. They occupy the same place in the social life of Mexico as the theatre does with us. The women go in their best feathers, not only to see, but to be seen. It seems a strange place for the cultivation of the tender passion, and it is hard to understand how the Mexicans, who are in some ways so lovable, should take such a delight in blood. It is the Indian strain in them, I suppose. The bull fights are simply horrible. I have seen horses with their legs ripped from top to bottom, or with blood gushing from a wound in the side, like water from a hydrant. And yet they would be forced before the bull again and compelled to endure fresh tortures. The fights take place on Sunday afternoons, and people attend them as regularly and quite as much as a matter of course as they go to church."

In this land of indolence there is no such thing as careers for the women, even of the most modest variety, Mrs. Seaboldt says.

"The women of the upper classes are often very well educated," she says, "and there are some good convent schools, but their education is acquired merely as an accomplishment, and they never make any practical use of it. Their only business is to look pretty before marriage, and take care of their children afterward. Their lives are certainly very dull. Much as I enjoyed Mexico, I do not envy the lot of the Mexican women. Yet American women, even if they are known to have been in business, are treated beautifully there. The lower class women have more liberty and wider interests than those of the upper classes, and it is they who do the beautiful drawn work for which Mexico is famous."—New York Tribune.

All Nonsense.

A half-witted rustic cherished the harmless delusion that he was a proficient shorthand writer. On Sunday morning he appeared in church armed with note book and pencil, and, while the vicar was preaching, filled several pages with curious strokes and curves.

A few days afterward youth and cleric met in the street. The youth produced his notes and asked the preacher how his sermon looked on paper. The reverend gentleman scanned the pages scornfully. "It's nothing but nonsense, William," he said, with an air of superior wisdom; "utter and complete nonsense!"

"That's jest what I thought when ye were delivering it, sir," William remarked, with a complacent smile on his face.—Birmingham Eng.) Post.

Boy Trials.

Willie—I earned a nickel today.

Father—Are you sure? How much did you do?

Willie—Oh, I moved the piano and beat the parlor rug and emptied all the ashes.

Father—Well, a nickel is a whole lot of money.—Philadelphia Bulletin.

Ambassadors to England.

No more splendid roll is to be in our history than that of our sentatives at the court o In the number appear fi were subsequently presidents United States. There are the of many men famous as stat and honorably distinguished great scenes of our national life the names of lawyers of great and in Washington Irving, Ba Motley and Lowell men who hav ed luster to our literature.

The Aztec Indians of Mexico noted for their strength. An porter has been seen to take of claret weighing 400 pounds back and carry it quite a dista

Size and Value of a Fir Tr

A fir tree was cut on Oregon ly which made nine sawings ing fourteen feet in length, 21,483 feet broad measure. The uct of this one tree will bring than $1,000.

The Primrose League.

The Primrose League, found English tories in honor of Lo consfield, is twenty-one years o ing risen from an original me ship of 957 to 1,686,387. It is as being the first great politi ganization to invite the parti of women in its membership some extent in its manag Avowedly carried on to suppo servative leaders, of course, it discusses and never criticises t tion.

A physician reported by Prof ler, of Goettingen, has been work out in a few seconds the of any numbers of five figures to learn and repeat in twelve a half minutes a row of 204 The greatest earlier feat in for numbers was the learning figures in 57 minutes.

Blind Man a Typewriter.

A blind typewriter operato W. E. Raper, is employed at las engine works. He not only operator, but is a rapid and ac one, and no one would suspect, his rapid and confident manip of the keys, that he can not works in the same manner numerous companions. Letter sages and telegrams are dictat a graphophone, and the graph in turn dictates its message stenographer.

In learning the use of a ma he had placed on the keys dots known as the New York system, that represented by th When he learned the location keys the raised dots were disp with, and now he can use almo typewriter with a universal shift board. He has been employed eral establishments as a typew operator, not using a graph but taking dictation direct upo machine. Mr. Raper is handic in one manner, and that is in the rection of his manuscript. But account of this handicap his w superior to that of the ordinary writer operator who can see, has learned to make exceedingly typographical errors.

A FELLOW FEELING.

Why She Felt Lenient Towards Drunkard.

A great deal depends on the poi view. A good temperance woman led, in a very peculiar way, to re her somewhat harsh judgment of poor devil who cannot resist his and she is now the more charit She writes:

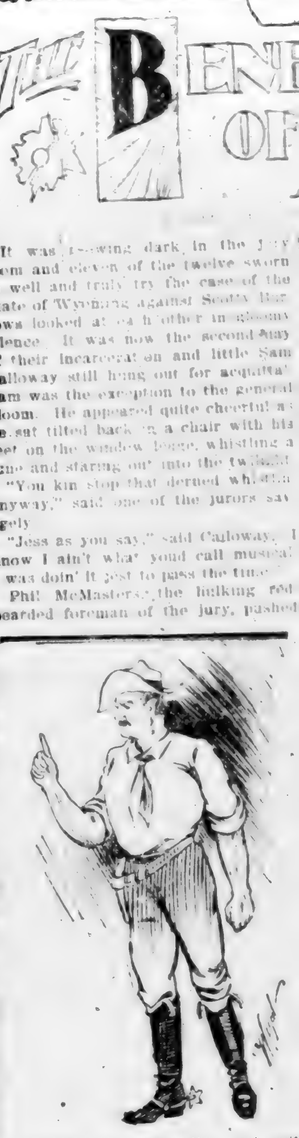
"For many years I was a great ferer from asthma. Finally my h got so poor that I found I could n down, but walked the floor whilst ers slept. I got so nervous I coul rest anywhere.

"Specialists told me I must gi the use of coffee—the main thing I always thought gave me some r I consulted our family physician he, being a coffee fiend himself me to pay no attention to their a Coffee had such a charm for me in passing a restaurant and g whiff of the fragrance I could n sist a cup. I felt very lenient t the drunkard who could not pass saloon. Friends often urged Postum, but I turned a deaf ear ing 'That may do for people to w coffee is harmful, but not for me fee and I will never part.'

"At last, however, I bought a age of Postum, although I was s could not drink it. I prepared it a rected, and served it for break "Well, bitter as I was against it, I say that never before had I tast more delicious cup of coffee! h that day to this (more than 2 ye have never had a desire for the old fee. My health soon returned: asthma disappeared. I began to well, and in a short time I gain pounds in weight.

"One day I handed my phys the tablets he had prescribed for telling him I had no use for them. stayed for dinner. When I passed his coffee cup he remarked, 'I am to see you were sensible enough to let yourself be persuaded that fee was harmful. This is the bes of coffee I ever drank,' he conti 'the trouble is so few people know to make good coffee.' When he his second cup I told him he drinking Postum. He was inc lous, but I convinced him, and n uses nothing but Postum in his and has greatly improved. Name given by Postum Co., Creek, Mich.

Look in each package for the little book, "The Road to Wellv



"I'm goin' ter argy this out wit Sammy."

It was growing dark in the j room and eleven of the twelve sworn to well and truly try the case of the State of Wyoming against Scotty Burrows looked at each other in solemn silence. It was now the second day of their incarceration and little Sam Calloway still hung out for acquittal. Sam was the exception to the general gloom. He appeared quite cheerful as he sat tilted back in a chair with his feet on the window ledge, whistling a tune and staring out into the twilight.

"You kin stop that derned whistlin' anyway," said one of the jurors savagely.

"Jess as you say," said Calloway. "I know I ain't what you'd call musical I was doin' it jest to pass the time."

Phil McMasters, the hulking red bearded foreman of the jury, pushed back his chair and went over and took a seat on the window sill.

"See here, Sammy," he said, "are you any kin to this yer defendant Scotty Burrows?"

"No, sir," answered Calloway. "I ain't no kin o' mine."

"Any of yer wife's kin?"

"Nixie, Bill."

"Does he owe you money?"

"Nary cent."

"Then what are you so pig-headed mule-headed about this for?"

"I ain't mule-headed," said Calloway. "It's you men. If you'd only come around to my way o' thinkin' we could get out of here in five minutes. I ain't in favor o' stayin' here any longer than I have to; $2 a day and charms for me, but I ain't cookin' railroad Scotty just because I want drinks."

"Didn't you say you were a cowman?"

"Sure thing."

"Well, the yearling passed Hi Lamotte on the keen jump with tail up and Scotty's brand smokin' his side an' makin' straight for the H Circle A cow, an' when Hank look down in the coulee he seen Scotty stompin' out the fire. That evidently wasn't contradictory."

"Sure thing it was. Didn't you hear Scotty call him a lying half breed right than in court? What makes so plum anxious ter convict?"

"I ain't anxious," said the foreman, "but I want this cattle rustlin' stopped and I want ter go home an' 'tend to my business some time."

"So do we," came the chorus.

"Oh, let up, Sammy," cried a juror. "Thar ain't no sense in actin' that way."

"You leave him to me, now," said the foreman in a menacing tone. "You've had your say aplenty." He turned to the obstinate juryman. "Sammy," he resumed, "I'll give you a show. I'll draw straws with you to see whether we acquit Scotty or not."

"I never go against another man's game," said Calloway, "unless it's immoral. See here, McMasters, you ain't toneney like you argyin' ever since we was closeted in here an' when I've tried ter say suthin' on Scotty's side o' the case you've bellered me down, same as you've bellered down the others. The same, I know Scotty didn't brand that Half Circle A calf, an' I'll be by that till there's a skatin' carnival on the brimstun lake."

The foreman's brows knit in an angry frown. Slowly and with his eyes fixed threateningly on Calloway he began

THE UNION.

EQUAL RIGHTS TO ALL, SPECIAL FAVORS TO NONE.

VOL. II. CLANTON, ALA., FEBRUARY 2, 1905. NO. 45

ALABAMA NEWS.

Current Events Gathered as They Happen.

Robbed on Train.

Birmingham, Ala.—Sherman, who lives in New [illegible] robbed on a train coming to Birmingham from New Orleans an early hour Saturday morning. The theft was committed as Mr. Wasserman was leaving the train in the union passenger station, and he believes that it was done by three well-dressed young white men, a description of whom he has furnished the police department.

In a wallet stolen from his pocket he had two checks for $50 each on the Southern Express Company at New Orleans and a number of private papers which would interest no one but himself. He states that the theft was made by one of the men while another of them engaged him in a conversation relative to swapping dress suit cases. The young man who attempted to swap baggage with him was very handsomely dressed.

Mr. Wasserman says that he has been around the world more than once and that this was the first time that he has ever been swindled or robbed.

New Corporation.

Pansy, Ala.—The Pansy Company, of Scranton, Pa., with a capital stock of $25,000, filed with Secretary of State R. R. McDavid a copy of its charter secured in New Jersey.

The company will operate saw mills and other enterprises, at Pansy, in Houston county.

The privilege of the Pansy Lumber Company, among other things, are "to acquire, hold, lease and sell timber, farming, grazing, mineral and other lands and the products thereof; to build, construct, maintain and operate plant and works for the development of such lands and for the handling, preparing and sendering commercially available the various products. Also to manufacture iron, steel, manganese, coke, copper and other materials.

Ginners Will Meet Soon.

Montgomery, Ala.—The ginners of Alabama will meet here February 4.

The call for the meeting comes from J. A. Taylor, president of the National Ginners' Association.

In arranging for the meeting, Mr. Taylor has put himself in communication with the leading ginners of the state. He has written them urging a state convention to be held to discuss and act upon matters of importance to them.

The meeting is to devise some way of securing to the ginners and planters the benefits that are derived from the gathering of cotton statistics.

In his communication to the ginners President Taylor says:

"Spinners and speculators have agents to report to them on crop conditions and yield. We furnish information, but get word back too late to be of use to us, or to our customers. The ginners are in closer touch with the cotton situation than any other class and we can make the organization a power for good in the South."

It is expected that there will be a large attendance upon the convention.

Watchman Shot In Hand.

Birmingham, Ala.—Watchman Helton at the Louisville and Nashville yards was shot in the hand Sunday morning about 2:30 o'clock by an unknown white man.

Mr. Helton is stationed at Fifth avenue and Thirteenth street and saw three men attempting to board a passing train. He attempted to make them leave when one of the men turned on him and fired a pistol, the ball striking him in the hand. The three men then ran toward the city and escaped.

Plan Press Association.

Florence, Ala.—The newspaper men of Lauderdale and Colbert counties will meet in Tuscumbia Saturday to organize a press association. There are two papers in Lauderdale county and four in Colbert, and all will be represented at the meeting.

To Increase Stock.

Birmingham, Ala.—The Dimmick Pipe Company has called a stockholders' meeting for February 28, at 2 o'clock in the afternoon, at which time there will be action taken on the proposition to increase the capital stock of the company to not exceeding $1,000,000. It is the purpose of the company to add another pit to the large water pipe plant at North Birmingham this year, and to make other betterments at a cost of about $250,000. The company has enjoyed unparalleled prosperity since it began operations six years ago, having a trade with every section of the country, as well as doing an export business. It is one of the most solid industrial concerns in the entire South.

Caught in Oklahoma.

Tuscumbia, Ala.—Sheriff W. E. Bevill has received a telegram from officers in Oklahoma City, notifying him of the capture in that city of Bill King, the negro who murdered Henry Irving and the latter's 12-[illegible] in [illegible] county, Christmas [illegible] made his escape after the murder, and was followed by Sheriff Bevill to Memphis, where all trace of the murderer was lost.

Irving and his boy were killed without provocation, and a reward of $75 was offered by a fraternal order, of which the elder Irving was a member, which has been supplemented by the governor, for the delivery of the murderer to the sheriff of this country.

Wanted in Louisiana.

Mobile, Ala.—W. M. Scott, who came to Mobile from New Orleans after Ed Williams, who has a number of aliases, left for Montgomery to interview Governor Cunningham with the view to securing the person of the young man, who is now serving a sentence at hard labor for carrying concealed weapons. Mr. Scott is armed with a requisition from the governor of Louisiana, he being deputized to act for that state. Mr. Scott had a consultation with the trial judge who sentenced Williams, also the solicitor, but it is impossible to learn what satisfaction he obtained from these officials.

It is charged that Williams while agent of the Southern Express Company at White Castle, La., and after being there only two days, left with $267.50 of the company's money. He also had other property, identification of which has been made as coming from White Castle.

Water Committee Met.

Birmingham, Ala.—The following is the gist of the first meeting of the general committee on greater water supply:

Office of consulting engineer for the proposed preliminary survey created, and Julian Kendrick was unanimously chosen to the position.

Chairman W. P. G. Harding was instructed to appoint a committee of fifteen citizens of Jefferson county to appear before the board of revenue at as early a date as possible and ask that an appropriation sufficient to defray the expenses of the preliminary survey be made.

Resolutions were adopted instructing the chairman to increase the general committee by adding the names of the mayors of North Birmingham, Woodlawn, Avondale and East Lake, and two citizens from each of those localities.

Deaf Mute In Prison.

Montgomery, Ala.—John Wilson, a deaf mute, 24 years old and of good appearance, is held at police headquarters on a charge of practicing a fraud.

Wilson presented to Charles R. Westcott, a letter signed by Colonel Charles P. Jones, in which the deaf mute was highly endorsed as a worthy young man and recommended that he be assisted financially in defraying his expenses at a school for mutes.

At police headquarters a cash book was taken from the person of Wilson which showed that he had collected considerable money from Montgomery citizens on the forged letter of Colonel Jones, which was typewritten on his letter head.

Wilson said that he came to Montgomery from Birmingham and that his home was in Louisville, Ky.

Shooting at Ensley.

Ensley, Ala.—In a difficulty at a saloon here Saturday night, Frank Fuller was shot by Bert Sharp. The bullet struck him in the shoulder, but the wound is not a dangerous one. The two men are said to have been at out for several days past. Witnesses say that Fuller struck Sharp over the head with a billiard cue. Both men were put under arrest.

Sharp is employed at the rail mill.

A New Corporation.

Luverne, Ala.—The Cody-Henderson Company, of Luverne, with a capital stock of $35,000, filed notice of its incorporation.

The corporators are J. C. Henderson and associates.

Several New Buildings.

Birmingham, Ala.—Wheelock, Joy & Wheelock, architects, are at present engaged in drawing plans for a series of two-story buildings to be erected along the west side of Twentieth street from Second alley to Third avenue, where the disastrous fire of a month ago occurred.

The burned structures were the property of General Louis V. Clark, the rest of the buildings to Third avenue were the property of Mr. Marx, of Montgomery. The two will erect together the series of new structures along the street. Despite the fact that they are to be of only two stories, they will be thoroughly modern in equipment.

Heavy Car Contract Awarded.

Anniston, Ala.—The Western Steel Car and Foundry Company has been awarded contracts within the last few days for the building of fourteen hundred freight cars by the local plant, and that work on them would commence just as soon as material could be secured. The greater majority of these cars are to be built for the Southern road, in fact more than one thousand of the number.

Everything will be in readiness for starting up the rolling mill on Monday, February 6. It is expected the puddling furnaces will start on that day; the finishing mill about a week later. Owing to the very disagreeable weather that has been prevailing for the past few weeks the company has been unable to get in material, but with more open weather it will soon be all aglow from one end to the other with life. All the machinery has been gone over and placed in good condition. A working force is rapidly being employed and systematized.

No More Companies.

Montgomery, Ala.—The compromise board, composed of the governor, the attorney general and the state auditor made one more compromise on the matter of privilege taxes for corporations in the state. This was for the Central Iron and Coal Company of Tuscaloosa, which admits that it had last year a capital stock of $600,000, on which the tax of one-tenth of one per cent. would have been $600. The matter was compromised for $300, and is about the fourth of the kind effected since the passage of the new section of the revenue law stipulating the charge. This fee is for the tax of 1904, and does not include anything for this year. It is understood that there will be no compromise this year, though this is not authoritatively stated.

Succumbs to Paralytic Stroke.

Tuscaloosa, Ala.—News of the death of G. Lunsford Treywick has been brought to the city, who has resided in this section since Alabama was a territory. Mr. Treywick went for a walk over his plantation early in the afternoon and not having returned late in the evening a search was made. At 8 o'clock he was found prostrated in an open cotton field stricken with paralysis and in an unconscious state. He was immediately carried to his home, where medical aid was summoned, but he died within a short while after reaching his home. It is thought he lay in the field several hours after receiving the stroke.

Played With Blasting Powder.

Anniston, Ala.—One boy is dead and two are seriously injured as a result of an accident Sunday on the Gladden place, two miles west of Alexandria.

One of the number, Ike Broom died this morning at 9 o'clock and his thirteen-year-old brother, Colonel Broom, is not expected to live. The face and hands of a boy by the name of Baker are badly, but not seriously burned. There were three boys in the party. They were around a big fire in a field and were sprinkling powder over it, when the clothes of Ike Broom, aged 17, were ignited.

The other boys rushed to his assistance and met with a similar fate. The boys so badly burned are the sons of William Broom. They had found a keg of blasting powder and filled their pockets with the explosive.

More Mill Stock Is Issued.

Montgomery, Ala.—The Ellawhite cotton mills, of Uniontown, have issued $75,000 of additional stock, making the whole amount $175,000, with which it is expected that the factory will be enlarged, more spindles put in and additional capacity provided for in other ways. This mill has been one of the most remarkable successes of the country. It was organized in 1900, and the mill has been a source of revenue from the day it began work.

Discharged on Self-Defense.

Tuskegee, Ala.—On the plea of self-defense, Justice Proctor released Sheriff Connor, Deputy Lamar and City Marshal Taylor, who shot to death Jim and Bob McBryde while attempting to arrest them.

Increased Acreage In Strawberries.

Brewton, Ala.—Lovelace Brother have sold their strawberry and fruit orchard, consisting of something over one hundred acres, near Brewton, to Northern capitalists, who will cultivate it. The strawberry industry in this section is assuming large proportions, and a very large acreage will be put in this season.

The extremely cold weather this week has materially interferred with brick work, the mortar freezing.

Died From Falling.

Anniston, Ala.—J. T. Vinson, who died from the effects of a contusion on the head received by falling into a pit, was buried here Saturday.

WILL THEY BE HEARD?

Vladimer Interviewed on the Cause of the Russian Trouble in January.

IS PASSING A GREAT CRISIS.

Troubels Have Been Caused By Trade Depression and Lack of Employment—Not Revolutionary.

St. Petersburg.—Grand Duke Vladimer, uncle of Emperor Nicholas, and commander of the imperial guard, has granted an interview to the Associated Press at the duke's palace in Quay de Lanskur, adjoining the winter palace.

The correspondent was received in the duke's private study. The grand duke is a man of perhaps 60 years, a veteran in appearance, as well as in fact, for he won his spurs and the cross of St. George twenty-five years ago on the plains before Plevna. He is big-framed and dark visaged, and has iron gray hair, and resembles more his brother, Alexander III, than his nephew, Emperor Nicholas. Although his face and frame show marks of recent illness, the nervous energy he displays gives the impression of a man of force and action.

"You must remember," said the grand duke in French, "you must remember I am a grand duke and a subject of the Emperor. As such I am extremely loyal to him, and I am Russian from the crown of my head to the tip of my toes," accompanying the words with a sweeping gesture.

"What information can I give you?"

"The newspapers abroad," suggested the correspondent, "have made many statements regarding the events of January 22d."

Stands Aghast at Stories.

"I know; I have read accounts in the foreign press. I have stood aghast at the frightful stories of the butchery of innocent people which they have printed. I know they say well-intentioned patriots with a priest at their head commanded peacefully to place their grievances before his majesty, were ruthlessly shot down in the streets, but we know that behind this peaceful procession was an anarchistic and socialistic plot of which the overwhelming majority of the workmen were merely innocent tools. We know from examination of the dead and those arrested that some alleged priests were actually revolutionary agitators, and students in disguise. We had to save the city from a mob. Unfortunately, to do so, innocent and guilty suffered alike. But suppose 140,000 men had reached the gates of the winter palace; they would have sacked it as the mob sacked Versailles. From the palace they would have gone elsewhere and the whole city would have been delivered over to anarchy, riot, bloodshed and flames. Our duty was the duty of every government.

Same in Other Countries.

"The same situation has confronted cities in other countries. Why, because this occurred in Russia, should the whole world point the finger of scorn at us? In the midst of our difficulties, why should we be turned upon? Why should America especially misinterpret and think ill of us? We have always been friends—friends of a century—friends when America needed friends. I remember when America was our great friend. Why has all this changed? What has Russia done to deserve it? What has Russia done to America? Why should the foreign press, especially that of Great Britain, not hesitate before an inquiry? No invention seems too horrible for them to print.

"They do not explain that on Saturday every dead wall in street St. Petersburg was placarded with warnings to the people not to assemble. No, but they tell that thousands of innocent people were killed and other thousands wounded, and paint the streets as running red with blood. They even say dead were pushed under the ice of the Neva at night. It is infamous. They say nothing of isolated officers set upon by mobs in the streets and hammered into insensibility or of policemen killed or wounded. As a matter of fact complete returns show that exactly 126 are dead. Several hundred were wounded. I can't give the precise figures of the wounded, but you shall have an opportunity to see the full reports."

Farmers Have Cotton.

Tallippoosa, Ala.—News is received here from Romulus of the burning of A. B. Patrick's gin. It seems that the fire did not develop until the small hours of the night. There was cotton and corn stored there to the amount of $20,000, which was totally destroyed with no insurance. Many of the small farmers had their entire crop stored, waiting for higher prices.

General Lee Speaks.

Canton, Ohio—At the commemoration of the late President McKinley at the Young Men's McKinley Club banquet Tuesday night, among other things, General Fitzhugh Lee said:

General Lee Speaks.

"Ohio, it is true, is the state of his nativity. Her citizens knew and loved the living McKinley, her soil is sacred with the grave that marks the resting place of the dead McKinley; her people will cherish his lofty character and his splendid services as long as the mountains kiss the heavens or the rivers roll to the sea.

"Ohio, however, can not bound his boundless fame, for on the wings of renown his glory has been wafted to all parts of the world. Tonight each state which is represented by a star in the national crown which binds the American union is equally interested in all that concerns the name and fame of the man who sleeps his last sleep in your midst so quietly that no sound can ever wake him to glory again.

Virginia Proud of Sons.

"Old Virginia is proud of the fact that she gave to the country George Washington. She, too, rejoices that she was the mother of Thomas Jefferson. She sent forth also James Madison, the father of the constitution; Patrick Henry, the great creator of American liberty. She brought forth, too, James Monroe, and the great jurist, John Marshall. Proud as the old state may be at the career of her sons, she is equally proud as an American state, in all that concerns the noble life and the great work of William McKinley—the typical American citizen. The great men I have mentioned, with Adams, Hamilton and Franklin and other distinguished colleagues, worked out successfully the problem of human government, discovered constitutional liberty, caused freedom to dwell in our midst and erected popular government which has widened and broadened since their day, until the national banner floats over more square leagues of land than did that of Rome after seven centuries of growth.

"We should look more frequently back to those men of the past whose intellectual labors accomplished so much, while gazing, too, upon the great future unrolling before us, but whether looking back or looking forward, our hearts and memories should go out to one whose splendid national work healed the scars of war and brought in closer union the men whose loaded guns were once pointed at the breasts of each other. He is the source, to a marvelous degree, from which has flowed the fraternity of the sections.

Proposes His Own Epitaph.

"'Could I,' he once said to me, 'write an epitaph upon my tomb, I would say: 'Here lies a President of the United States who has done more to bring all the sections of a common country into more harmonious and closer friendship than any of his predecessors.'

"He has fought his last battle. He has written upon the roll of fame the last record of his great life. He has left the inspiration of a beautiful life and exalted character, and illustrious example in all that pertains to a stainless private life and a most distinguished public career.

"We of the south do not forget the kind words Mr. McKinley uttered in his speech at Atlanta, Ga., when he said:

"'In the spirit of fraternity we should share with you in the care of the graves of the confederate soldiers,' and we remember, too, that the Virginia constitutional convention was in session at Richmond at the time of his death, and that memorial exercises were held where the executive, the judicial and legislative departments of the state united with the members of the convention in deploring his death.

"Sleep on, oh just and wise ruler. Your birth was a blessing to your country, your life a blessing to all of its inhabitants; your death a calamity which has excited the lamentations of a world; all the sections tonight hear the echo of the voice of the great soldier, U. S. Grant, who, on his death bed, said:

"'I feel that we are approaching an era of great good feeling between federal and confederate soldiers. I shall not be here to witness it in its perfection, but I feel within me that it is to be so. Let us have peace.'

Big Diamond Found.

Johannesburg, Transvaal.—The largest diamond ever discovered has been found near Pretoria. The stone weighs 3,032 carats and is said to be a pure white diamond of good quality. It is locally valued at $3,500,000 to $4,000,000. The famous Kihnoor which is valued at $600,000, weighs 123 carats, though it is said to have weighed 900 before it was cut.

Tennessee to Tax Bachelors.

Nashville, Tenn.—The lower house of the legislature today passed the Rawls bill taxing unmarried men after it had been amended so as to apply directly to the home county of the author of the measure.

Light Laconics.

The most experienced shopper never gets a bargain at a church fair.

A woman doesn't require nearly so much material to make trouble as she does to make a dress.

A man who gets down on his knees to propose will be there for the rest of his life, if he is accepted.

A girl always thinks a man is truthful when he tells her that she is beautiful, even when she knows she isn't.

It takes a smart man to catch a widow, but any young thing with big blue eyes and an innocent look can capture a widower.

GIGANTIC RAILWAY TERMINAL FACILITIES FOR NEW YORK CITY

...ive the Use of More Than Nineteen City Blocks.

THE plans for the new terminal in New York City involve the use of an area of more than nineteen city blocks between Forty-second and Fifty-seventh street, Madison and Lexington avenues.

The station proper, together with the postoffice and express buildings, will cover the blocks between Vanderbilt and Lexington avenues from Forty-fifth to Forty-third streets inclusive, and the block fronting on Forty-second street between Vanderbilt avenue and Depew place.

The buildings will be set back from Forty-second street a distance of about forty feet, and back from Vanderbilt a distance of about seventy feet, so as to afford a generous approach to the station and give the effect of 140 feet open space on the Forty-second street frontage and 130 feet open space on the Vanderbilt avenue frontage.

The frontage of these buildings will be 680 feet on Vanderbilt avenue, 625 feet on Forty-fifth street, 460 feet on Lexington avenue, 275 feet on Forty-fourth street, 260 feet on Depew place, and 300 feet on Forty-second street.

In addition to the public streets there will be connections by ample private roadways and walks to Madison avenue on the west and Lexington avenue on the east; thus giving the traveling public facilities for entering the station not only from Forty-second street on the south, Vanderbilt avenue and Depew place, but from Madison avenue on the west and Lexington avenue on the east.

Besides the main entrances and exits there are additional entrances and exits for the suburban passengers, so that the commuter need not enter the main part of the station, but can go directly from the street to the train or from the train to the street by an easy incline, avoiding all staircases. There is provided at the express level a connection with the subway. There is also a splendid entrance and exit to the station by way of an incline from Madison avenue, enabling the cab or foot passengers to approach or leave the station at the west end of the grand concourse. At the subway level there is provided a subordinate concourse with ample waiting and retiring rooms. At this level there is provided a loop for quickly dispatching the suburban trains and provision has also been made for a possible connection with the rapid transit system.

The baggage room adjoins Depew place, Forty-fifth street and Vanderbilt avenue, with 1300 feet of street frontage and 47,000 square feet of floor space, sufficient to care for baggage in rush seasons without the delay of delivery now experienced at all large stations.

It has been the intention in preparing these plans to sacrifice everything to the convenience of the traveling public and to the proper administration of a terminal railway station.

The architects (Warren & Wetmore associated with Reed & Stem) have admirably accomplished the following results:

They have provided the best possible facilities for getting to and getting away from the station.

The cab stand is situated in the most convenient place for arriving passengers.

The outgoing baggage is convenient to the ticket offices, and the incoming baggage is convenient to the exits.

They have separated the incoming and the outgoing passengers, thus avoiding the usual confusion.

They have provided ample waiting rooms and a grand concourse sufficiently large to accommodate the largest possible excursion or holiday crowd.

The suburban passengers are separated from the express passengers, but with the entrances and exits so arranged that there is perfect facility for getting from one to the other.

Ample space is provided for the incoming crowd, and there is a waiting vestibule for those desiring to meet arriving passengers.

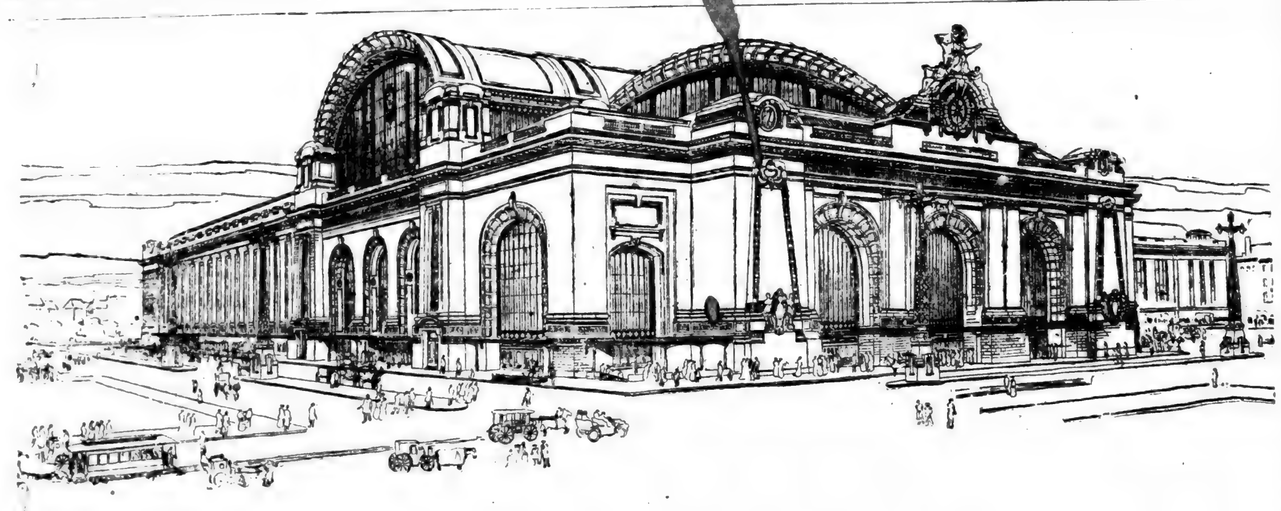
The express concourse and waiting rooms are so situated that suburban passengers can use them if desirable, and these accommodations are so placed that from the standpoint of facility in handling the passengers either tier of tracks may be used interchangeably.

There is ample space for the handling of incoming and outgoing baggage.

The approaches and departures from the station are on the company's own property.

To the north of the concourse and carrying the cornice line of this monumental part of the building, around the entire building, are placed the company's offices, containing about 250,000 square feet in area, exclusive of corridors, elevators, etc., with entrances at the two corners of the building at Forty-fifth street and Park avenue, and with ample elevator facilities leading to the concourse itself. These offices are built around a magnificent court, thus providing beautiful light for each office and providing for splendid natural light in the higher part of the train room.

Provision is made for doubling the capacity of the station without in any way interfering with the architectural features or general plan of the station. The facade presents an effect which appeals to one at once as presenting a magnificent station, and one which will be an ornament to the city, and one of which citizens may well be proud.



THE GRAND CENTRAL TERMINAL STATION OF NEW YORK CITY FOR THE NEW YORK CENTRAL AND HUDSON RIVER RAILROAD CO

AID TO THE OCULIST.

Electro-Magnet at Bridgeport to Take Pieces of Steel From Eyes.

In the X-ray room at the Bridgeport Hospital the largest electro-magnet in the world for use in surgical operations has recently been set up. It was designed and constructed for Dr. Frank M. Wilson, of that city, to aid in performing certain operations upon the eye which without it are impossible to be performed, and because of this inability many a human eye loses its sight forever. While this magnet is the same as all other magnets in the manner of its working, the degree and extent of its work must be seen to be appreciated, for it surpasses any other magnet ever made for such purposes. This magnet carries along to a further point what other magnets have formerly accomplished in a lesser degree, and this greater degree of efficiency is brought about by the simple use of greater magnetic force than was ever before used.

A MIGHTY MAGNET.

Briefly described, the magnet stands on one end on the floor. It is five feet high, weighs a quarter of a ton, and the steel core is five inches in diameter, and around this core is wound two miles of No. 8 copper wire, making it in total diameter as large around as a common wooden water pail or nail keg.

The particular specific cases for which this magnet is intended are those in which a piece of steel has become imbedded in the eye. Since the employment of what is called the new steel and the increased speed at which metals are turned on the lathes, there has been a large increase in the number of eye injuries from particles of steel being thrown with sufficient violence into the eye to cut their way through the vitreous humor and make it impossible, with the methods formerly employed, to remove such substances.

When it is desired to operate, the patient stands by the side of the magnet with the affected eye resting on a small brass support, the eye just clearing the point of the magnet. The point is removable, so that it may be sterilized. If there is a particle of steel in the patient's eye he is likely to shriek, jump from the magnet and clasp his hand to his eye, for the magnet has drawn the steel up through the humor, and it is exposed to the view of the oculist. With a slight operation now the particle is removed. It often happens, too, that a patient comes to the oculist for treatment of an eye and tells the oculist that he is sure that there is a piece of steel in his eye, as several particles were taken from the eye by a fellow workman a few days previously. The magnet is brought to use, but the patient does not wince. That satisfies the oculist that there is no steel in the patient's eye, and he understands that he must look for some other cause of the ailment. It is this facility for inferential diagnosis that makes this great magnet so valuable an adjunct to the oculist.

The power of the magnet is best shown when a person sits beside it with one side of his face against the conical end. The current is turned on and an attendant places several wire nails as thick and as long as a lead pencil with their heads against the other side of the face. Those nails will not fall to the floor, but remain sticking to the face, just the same as if they had been driven through.

How far the magnetic influence of this instrument extends has not been defined as yet, but from the way the watches of the physicians and the attendants about the hospital behave, it is thought that it extends throughout the entire hospital, which covers two blocks of ground. Whenever persons go into the room where this magnet is placed Superintendent Jones asks for their watches, as they will be so thoroughly magnetized if near the magnet when the current is turned on that they will be useless until after they are demagnetized.

This great magnet has been inspected by scientific men and professors from several colleges, and they are of the opinion that it opens up a line of research which has hitherto been practically undeveloped. Upon Dr. Frank M. Wilson's return from Europe he will conduct a line of original research from which striking results are expected.—New York Tribune.

A Famous Rhinoceros Dead.

After forty-one years' residence at the Zoological Gardens, Jim, the veteran rhinoceros, died the other night. The keeper who entered his stable in the morning found him lying dead at the front. Overnight he had seemed better and had eaten a hearty meal. Then he went to sleep. The position of his body seemed to show that he had awakened in the night and staggered forth to the bars in front of his stable. Then he had fallen and died.—London Mail.

A Fable.

The Wealthy Patient was in a Quandary.

"The Fee of the Eminent Surgeon will be $1.99 more than I have in the Bank. If, however, I Die, the Eminent Lawyer will take $1.99 more than I Leave. Which shall it be?"

While he was still debating, a Chambermaid repaired a Leak on the Third Floor and received the Whole Estate.

Moral! When between the Devil and the Deep Sea a Third Party may get you.—Harper's Bazar.

Too Many to Remember.

A gentleman about to move out of the city and wishing information in regard to help, called on a friend and said:

"You've been living in the suburbs so long I suppose you've had considerable experience with servant girls?"

"Well, yes," replied the other. "It's got so that when my wife is interviewing an applicant now she always begins by asking: 'Were you ever employed by me before? If so, when and for how long?'"—Philadelphia Ledger.

BRITISH QUARANTINE RULE REQUIRES DOGS TO WEAR HARNESS UNDER CERTAIN CONDITIONS FOR SIX MONTHS.

Appeals to the British Board of Agriculture for a limitation in the six months' quarantine of dogs who had to be quartered by special permission with certified and approved veterinarians have resulted in a certain mitigation. Now, dogs coming from the Continent, America, Africa or Australia, can be quarantined for three months at an approved veterinarian's or can be retained at a kennel designated by the owner for six months, provided it wears a harness marked "in quarantine for rabies."

How the Harness Looks On and Off the Dog, the Inscription on the Saddle and the Official Seal of the Board of Agriculture Affixed to the Harness.

The harness which is to be worn will be sealed by the Board of Agriculture, and it will be a punishable misdemeanor for any one but the authorized official to break those seals. While wearing the harness, the dog "may not be legally absent from the premises mentioned in the order unless it is also muzzled." While on a highway or thoroughfare, or while being removed by rail, the wearer of the new harness is required to be also controlled by a collar and chain.

A HANDY HAMMER.

This is a simple labor saver costing nothing beyond the work of placing the hammer head in position, and it will enable one to draw a nail with greater ease and without bending it. The illustration shows the idea plainly, which is simply to have the end of the handle project beyond the head for about an inch.

The handle is fastened in the head in the usual manner and a hole bored through the projecting end close to the head of the hammer through which a piece of iron is driven to prevent the head from pulling through. A very simple tool, but one of the many simple things which may be used on every farm to great advantage.

Typhoid From Wells.

The wells of farms visited in summer by city folk are now regarded as perhaps the chief source of typhoid fever.

Rival of the Bee in China.

A curious Chinese industry is wax farming, or the cultivation of a wax-producing insect, the Ericerus pelin, an account of which has just been given by Professor Saski, of the Agricultural College of the Imperial University of Japan, in a special bulletin.—London Globe.

France has issued a new 25-centime piece of nickel, struck off in polygonal form, to avoid the resemblance to silver coins of about the same size.

WOMEN OF MEXICO.

Their Home Life and Pastimes—Horrible Bull Fights.

As a cure for the American disease of nervousness there is nothing like a visit to Mexico, according to Mrs. Bert Seaboldt, formerly editor and proprietor of "The Stock and Mining Journal" of Salt Lake City, who has just returned from that picturesque country.

"No one in Mexico does anything more than he can help," says Mrs. Seaboldt, "and the upper classes have learned how to avoid almost everything that requires exertion. The men spend their time riding and drinking champagne, and the women lie around and look pretty. It may become monotonous after a time, but ... months after the strenuous life of the United States, the eternal manana, manana (tomorrow, tomorrow) of the Mexicans is like the balm of Gilead.

"And the Mexicans are the most hospitable of people to the stranger within their gates. They take you right into their life, and if they like you your room will be a bower of blossoms during the whole of your stay, and there will be a continuous serenade under your windows. They are very primitive people, and the serenade, which we are accustomed to associate only with poetry, is a matter of every-day life with them. Perhaps that is because they have real latticed windows under which to sing their serenades.

"Another idyllic feature of Mexican life is their habit of eating out of doors. It is quite the custom among the upper classes in the City of Mexico to drive out to the President's Palace for breakfast. The grounds and part of the palace are open to the public, and a restaurant which is a fashionable place of resort has been erected there. By the time you get back from breakfast it is time for luncheon, and you go somewhere else for that. In the afternoon you sleep or drive, and at night you go to one of the hotels for dinner, or perhaps to the floating gardens, which look like huge lily pads on the surface of the water.

"For the afternoon drive you will probably go to the Alameda, or matrimonial market. Marriage is the only occupation open to the women of Mexico, and they make a regular business of it. Mothers take their marriageable daughters, dressed to kill, to the Alameda, and drive slowly up and down, to and fro. The marriageable men do the same thing, and when a young man sees a girl who takes his fancy he follows her carriage and finds a way of obtaining an introduction. This has to be done through her parents, for no young girl is ever allowed to see a man alone.

"The bull fights afford another opportunity for the matchmakers. They occupy the same place in the social life of Mexico as the theatre does with us. The women go in their best feathers, not only to see, but to be seen. It seems a strange place for the cultivation of the tender passion, and it is hard to understand how the Mexicans, who are in some ways so lovable, should take such a delight in blood. It is the Indian strain in them, I suppose. The bull fights are simply horrible. I have seen horses with their legs ripped from top to bottom, or with blood gushing from a wound in the side, like water from a hydrant. And yet they would be forced before the bull again and compelled to endure fresh tortures. The fights take place on Sunday afternoons, and people attend them as regularly and quite as much as a matter of course as they go to church."

In this land of indolence there is no such thing as careers for the women, even of the most modest variety, Mrs. Seaboldt says.

"The women of the upper classes are often very well educated," she says, "and there are some good convent schools, but their education is acquired merely as an accomplishment, and they never make any practical use of it. Their only business is to look pretty before marriage, and take care of their children afterward. Their lives are certainly very dull. Much as I enjoyed Mexico, I do not envy the lot of the Mexican women. Yet American women, even if they are known to have been in business, are treated beautifully there. The lower class women have more liberty and wider interests than those of the upper classes, and it is they who do the beautiful drawn work for which Mexico is famous."—New York Tribune.

All Nonsense.

A half-witted rustic cherished the harmless delusion that he was a proficient shorthand writer. On Sunday morning he appeared in church armed with note book and pencil, and, while the vicar was preaching, filled several pages with curious strokes and curves.

A few days afterward youth and cleric met in the street. The youth produced his notes and asked the preacher how his sermon looked on paper. The reverend gentleman scanned the pages scornfully. "It's nothing but nonsense, William," he said, with an air of superior wisdom; "utter and complete nonsense!"

"That's jest what I thought when ye were delivering it, sir," William remarked, with a complacent smile on his face.—Birmingham Eng.) Post.

Boy Trials.

Willie—I earned a nickel today.

Father—Are you sure? How much did you do?

Willie—Oh, I moved the piano and beat the parlor rug and emptied all the ashes.

Father—Well, a nickel is a whole lot of money.—Philadelphia Bulletin.

Ambassadors to England.

No more splendid roll is to be found in our history than that of our representatives at the court of St. James. In the number appear five men who were subsequently presidents of the United States. There are the names of many men famous as statesmen and honorably distinguished in the great scenes of our national life; also the names of lawyers of great reputation and in Washington Irving, Bancroft, Motley and Lowell men who have added luster to our literature.

The Aztec Indians of Mexico are noted for their strength. An Aztec porter has been seen to take a cask of claret weighing 400 pounds on his back and carry it quite a distance.

Size and Value of a Fir Tree.

A fir tree was cut on Oregon recently that made nine sawings averaging 16 feet in length, scaling 21,483 board measure. The product of this tree will bring more than $1,000.

The Primrose League.

The Primrose League, founded by English tories in honor of Lord Beaconsfield, is twenty-one years old, having risen from an original membership of 957 to 1,686,387. It is peculiar as being the first great political organization to invite the participation of women in its membership and to some extent in its management. Avowedly carried on to support conservative leaders, of course, it rarely discusses and never criticises their action.

A physician reported by Prof. Mueller, of Goettingen, has been able to work out in a few seconds the square of any numbers of five figures, and to learn and repeat in twelve and one half minutes a row of 204 figures. The greatest earlier feat in memory for numbers was the learning of 24 figures in 57 minutes.

Blind Man a Typewriter.

A blind typewriter operator, G. W. E. Raper, is employed at the Atlas engine works. He not only is operator, but is a rapid and accurate one, and no one would suspect, seeing his rapid and confident manipulation of the keys, that he can not see. He works in the same manner as his numerous companions. Letters, messages and telegrams are dictated to a graphophone, and the graphophone in turn dictates its message to the stenographer.

In learning the use of a machine he had placed on the keys raised dots known as the New York point system, that represented by the keys. When he learned the location of the keys the raised dots were dispensed with, and now he can use almost any typewriter with a universal shift keyboard. He has been employed in several establishments as a typewriter operator, not using a graphophone, but taking dictation direct upon the machine. Mr. Raper is handicapped in one manner, and that is in the correction of his manuscript. But on account of this handicap his work is superior to that of the ordinary typewriter operator who can see, and has learned to make exceedingly few typographical errors.

A FELLOW FEELING.

Why She Felt Lenient Towards the Drunkard.

A great deal depends on the point of view. A good temperance woman, filled, in a very peculiar way, to refer somewhat harsh judgment of the poor devil who cannot resist his cups, and she is now the more charitable. She writes:

"For many years I was a great sufferer from asthma. Finally my health got so poor that I found I could not lie down, but walked the floor while others slept. I got so nervous I could not rest anywhere.

"Specialists told me I must give up the use of coffee—the main thing I always thought gave me some relief. I consulted our family physician, and he, being a coffee fiend himself, told me to pay no attention to their advice. Coffee had such a charm for me that in passing a restaurant and getting a whiff of the fragrance I could not resist a cup. I felt very lenient toward the drunkard who could not pass a saloon. Friends often urged me to try Postum, but I turned a deaf ear, saying 'That may do for people to whom coffee is harmful, but not for me. I love coffee and I will never part.'

"At last, however, I bought a package of Postum, although I was sure I could not drink it. I prepared it as directed, and served it for breakfast. Well, bitter as I was against it, I must say that never before had I tasted a more delicious cup of coffee! From that day to this (more than 2 years) I have never had a desire for the coffee. My health soon returned, my asthma disappeared, I began to get well, and in a short time I gained 10 pounds in weight.

"One day I handed my physician the tablets he had prescribed for me, telling him I had no use for them, as I stayed for dinner. When I passed him his coffee cup he remarked, 'I am glad to see you were sensible enough to let yourself be persuaded that coffee was harmful. This is the best cup of coffee I ever drank,' he continued, 'the trouble is so few people know how to make good coffee.' When I drank his second cup I told him I was drinking Postum. He was very jealous, but I convinced him, and he now uses nothing but Postum in his family and has greatly improved in health." Name given by Postum Co., Battle Creek, Mich.

Look in each package for the famous little book, "The Road to Wellville."

Snapshot

A swan and cygnets, nothing more,
Background of silver, reedy shore,
Dim shapes of rounded trees, the high
Effulgence of a summer sky.

Only a snapshot. Just a flash,
And it was fixed—the mimic wash,
The parent bird on soaring slow,
Her fussy little fleet in tow,
The all-pervading sultry haze,
The white lights on the waterways—
A scene that never was before,
A scene that will be—never more!

Alas! for us. We look and wait,
And labor but to imitate;
In vain for new effects we seek— . . .
Earth's briefest moment is unique.
—Austin Dobson in Longman's Magazine.

BENEFIT OF DOUBT

BY KENNETT HARRIS

(Copyright, 1904, by Daily Story Pub. Co.)

It was growing dark in the jury room and eleven of the twelve sworn to well and truly try the case of the State of Wyoming against Scotty Burrows looked at each other in gloomy silence. It was now the second day of their incarceration and little Sam Calloway still hung out for acquittal. Sam was the exception to the general gloom. He appeared quite cheerful as he sat tilted back in a chair with his feet on the window ledge, whistling a tune and staring out into the twilight.

"You kin stop that derned whistlin' anyway," said one of the jurors savagely.

"Jess as you say," said Calloway, "I know I ain't what youd call musical. I was doin' it jest to pass the time."

Phil McMasters, the hulking red-bearded foreman of the jury, pushed

"I'm goin' ter argy this out with Sammy."

back his chair and went over and took a seat on the window sill.

"See here, Sammy," he said, "are you any kin to this yer defendant, Scotty Burrows?"

"No, sir," answered Calloway. "He ain't no kin o' mine."

"Any of yer wife's kin?"

"Nixie, Bill."

"Does he owe you money?"

"Nary cent."

"Then what are you so plague-goned mule-headed about this for?"

"I ain't mule-headed," said Calloway, "it's you men. If you'd come around to my way o' thinkin' we'd be out of here inside o' five minutes. I ain't in favor o' stayin' here any longer than I have to; $2 a day ain't no charms for me, but I ain't goin' to railroad Scotty just because I want a drink."

"Didn't you hear the evidence?"

"Sure thing."

"Well, the yearling passed Hank Lamotte on the keen jump with his tail up and Scotty's brand smokin' on his side an' made straight for the Half Circle A cow, an' when Hank looked down in the coolie he seen Scotty stompin' out the fire. That evidence wasn't contradicted."

"Sure thing it was. Didn't you hear Scotty call him a lying half-breed pup right thar in court? What makes you so plum anxious ter convict?"

"I ain't anxious," said the foreman, "but I want this cattle rustlin' stopped and I want ter go home an' 'tend to my business some time."

"So do we," came the chorus.

"Oh, let up, Sammy," cried a juror. "Thar ain't no sense in actin' this a way."

"You leave him to me, now," said the foreman in a menacing tone; "you've had your say aplenty." He turned to the obstinate juryman. "Sammy," he resumed, "I'll give you a show. I'll draw straws with you to see wh ther we acquit or convict."

"I never go against another man's game," said Calloway, "'sides which, it's immoral. See here, McMasters, I ain't tongney like you. You've been argyin' ever sence we wus close-herded in here an' when I've tried ter say suthin' on Scotty's side o' the case you've bellered me down, same's you've bellered down the others. All the same, I know Scotty didn't brand that Half Circle A calf, an' I'll stay by that till there's a skatin' carnival on the brimstun lake."

The foreman's brows knit in an ugly frown. Slowly and with his eyes fixed threateningly on Calloway he began to remove his coat. Then he rolled his shirt sleeves above his brawny, hairy elbows. Calloway turned pale.

"Gents," said the foreman, "extry-ordn'ry cases sometimes require extryordn'ry argyments. I'm a goin' ter argy this out with Sammy an' I don't want none o' you mixin' in the debate. You might as well turn your faces to the wall. You can hear the points I make jest as well."

One by one the ten turned their chairs about, laughing and joking as they did so, but obviously in unwholesome fear of the knotty fists of the ferocious McMasters.

"Better own up Phil's right, Sammy," called one.

"I come from Missoura," drawled Calloway, rather tremulously.

A sudden crash succeeded, then a volley of profanity from the foreman of the jury, and the noise of a lively scuffle. Another and a louder crash indicated that the table had overturned. The jurymen writhed in their chairs. A bang and a sound of rending wood. It was too much for flesh and blood to bear. The ten jurors turned as one man in time to see McMasters go down heavily before a blow from a chair leg wielded by the insignificant Calloway.

With a bound the obstinate juryman was on top of his antagonist plying the improvised cudgel about his head and defensive arms in a frenzy of fear lest he might arise.

"Let up, you little devil," shouted McMasters. "Let up! I've had enough, I tell you!"

"What do you think o' the case now?" demanded Calloway, bringing down the chair leg with unabated energy.

"Let up!" roared McMasters.

"Don't you think there's a reasonable doubt about Scotty brandin' that there calf?" panted Calloway. "Tell me, doggone you!"

McMasters made a herculean effort to throw off his promiscuously active incubus, but the movement left his head unprotected and Calloway was quick to avail himself of his opportunity.

"Yes," groaned the foreman, "there's a doubt, all right. Now quit."

Calloway suffered him to rise. "That's all right then," he remarked, drawing the tattered remnants of his shirt about him, with one hand, but retaining his weapon in the other. "Now, fellers," he continued, turning with a new air of authority to his brethren, "straighten up that table an' we'll proceed ter take another ballot."

The command was executed in an awkward silence, that was broken by a loud knocking at the locked door. "What are you men playin' at in there?" demanded the voice of Al

"Oh, God bless you!" cried Scotty's wife.

Williams, the sheriff's deputy. "Are you comin' to a disagreement or tryin' who can jump the farthest?"

It was McMasters who answered. "We'll call you when we want you, Al," he said gruffly. "We don't want you now." Then as the deputy's footfall died away on the stair he added, "What's took place in this yer jury room don't go out o' this jury room; that's your oaths. What I want to know is if them oaths is going to be kep?"

"S' far's I'm concerned," said Calloway. "I guess the rest is goin' to keep ther mouths shut. Our deliberations is to be kep' secret, the judge said. Only," he added, with a look at McMasters, "I'm a-countin' on two votes for acquittal."

Five minutes later the jury filed into the court room, where Scotty Burrows, in the custody of the sheriff, was gripping his chair arms with whitened knuckles and glancing nervously at his wife, who, pale and wide-eyed, clasped her baby to her bosom and panted as the judge looked over his spectacles at the foreman.

"Are you agreed upon your verdict?" asked the judge.

"We are," answered the jury's foreman. "We find the prisoner, Scotty Burrows, not guilty."

"Oh, God bless you!" cried Scotty's wife.

LIFE INSURANCE BUSINESS VAST

Assets of Companies in New York State Equal to $2,226,423,202.

If the assets of all the life insurance companies engaged in business in the United States were distributed equally to all the population of the world, each man, woman and child of every continent and every country, from Africa to Labrador would receive $2 each, says a writer in the Era Magazine. There would be $2 for every human being on the globe.

The assets of the life insurance companies of this country—that is, the actual property, real estate, bonds, stocks, etc., which they own—amount in the aggregate to more than $2,000,000,000. The companies doing business in New York state, and these include also practically all of the companies with headquarters in other states—had at the close of 1903, assets, in exact figures, equal in value to $2,226,423,202. Such is the magnitude of the institution of life insurance! If all the adult men in America, of every race and occupation, should contribute simultaneously $100 each toward a fund, that enormous sum would not equal the value of the property owned by the American life insurance companies.

More than $500,000 of the money paid to the companies every year by policy holders goes to defray the expense of maintaining a spy system. After all the preliminary precautions have been taken the medical examination made, the references looked up—after the policy has been granted, detectives are employed to watch policy holders. Your money is paid to employ men to follow you through your daily walk, to track you into restaurants, to interview your servants, to use all the other low and contemptible means which these creeping shadowers employ. The spy system of the "combine" is interesting.

Stickled for Etiquette.

Regular army officers say that volunteers are a trifle deficient in matters of military etiquette. As illustrative of their weakness in this respect, Major General Corbin tells an amusing story of a young lieutenant of militia who accompanied his fellow volunteers to the war game at Manassas recently.

It appears that the young volunteer officer in question was conversing with regular army officers near Gen. Corbin's tent, when Gen. Grant and his staff passed. The regular officers arose and saluted, but the volunteer lieutenant sat still.

"That was Gen. Grant," said one of the regulars to the lieutenant. "Why didn't you salute him?"

"Oh," responded the volunteer, nonchalantly, "I've only been here a few days and we haven't been introduced."—Collier's.

A Woman's "No."

A woman's "no" had no dismay for me;
I'd often heard it said that it meant "yes."
I don't know why, I'm sure, that this should be,
But there's truth in the saying, more or less.
And so, of course, I thought I had some show.
Although repeatedly she answered "No."

"Mere coquetry," I thought. "She wants to make
Me think she is not to be lightly won.
I have to suffer something for her sake,
Or else it wouldn't be a bit of fun.
She merely plays a part." I must say, though,
She played it well. Much firmness in that "No."

I humored her. I feigned a deep despair.
I said she had ruined all my life.
I called her heartless, cruel, too, as fair;
Again I begged her to become my wife.
I did not think that this time she would throw
Me down—but all the same she answered "No."

Then I began to doubt, for when I tried
To flirt with others she cared not a snap.
To all appearances, and then beside
She flirted, also, with another chap.
It was not then an unexpected blow
When, for the fourteenth time, she answered "No."

It was no wonder that I feared she meant
In sober truth my offer to decline.
I said, "I'll see if that is her intent;
For the last time I'll ask her to be mine."
That brought the confirmation of my fears—
She simply said: "Not in a hundred years."

Poetry and Prose.

The ablest writers in England have revived the Walt Whitman controversy. Several of them assert he was "beyond question the ablest man America has produced." Able things he was, versatile as a versifier, prodigious as a philanthropist, knowing as a student of woman and Bohemia to the marrow of his bones. Personally Whitman was a lovable character. I knew him intimately twelve years and was pallbearer at his grave, but a few names like Hawthorne, Holmes, Lowell and, last but not least, George Arnold find a warmer place in my heart. And, seriously, was anything ever said in verse that couldn't have been better told in prose? A few skeptics, like the writer, doubt it.

Wants Rare French Stamps.

The Paris Gaulois states that Col. Delauney, chairman of the French Philatelic Federation, has received a letter from Gen. Nogi, requesting a price list of rare French stamps.

BEGGAR HAD MADE MONEY.

Scotchman's Odd Will Showed He Found Calling Profitable.

The Scotch papers of the year 1817 reported at length the life and death of a notable beggar, William Stevenson. About the year 1787 Stevenson and his wife separated upon the strange terms that the first of the two to propose a reunion was to pay the other $500 forfeit. The forfeit apparently was never incurred, as neither of them, as far as could be ascertained, ever saw the other again. Then Stevenson took to the road as a beggar, and lived for thirty years a free and jolly life; but at last, in his 85th year, he was struck down with an incurable disease. When he came within sight of death he sent for a baker and ordered twelve dozen burial cakes, a large quantity of sugared biscuit, and an ample supply of wines and spirits. He next sent for a joiner and instructed him to make "a good, sound, dry, roomy, comfortable coffin," laying the stress upon its comfortableness. Then he summoned a gravedigger and instructed him to dig "a comfortable grave" in a special spot in Riccarton churchyard. The old woman who attended him was instructed to find in a certain rag hidden in a certain hole the money to defray all these expenses. Having thus relieved his mind of all anxiety as to his posthumous comfort, Stevenson died in peace. After his death were found in his garret two bags—one full of silver and the other of gold pieces—and a box containing bonds for various amounts, including one for $1,500—close upon $5,000 in all. He was bequeathed to distant relatives with the exception of $100 to the old woman who had attended him and a large sum to provide a feast for all the beggars of Scotland who cared to come to see his body "lie in state."

About Connecticut Tobacco.

The story of Sumatra leaf tobacco as grown under cheesecloth in Connecticut is one of the romantic episodes of agriculture, says a writer in Country Life in America. A Florida fruit grower had got some tobacco plants that got into his pineapple seed by accident and he noticed that they were taller and of finer texture under the lath shade. The bureau of soils, while surveying the Connecticut valley, found a soil that was practically the same as that of Sumatra, on which the famous tobacco is grown. (The bureau has samples of soil from almost every important agricultural region of the world.) The government got an expert to start an industry and the next two years some of the growers made over 100 per cent profit.

The industry as a whole is successful. A large company with plenty of capital is necessary, for it costs $650 to cover and grow an acre of this tobacco. The growers receive from $1.20 to $2.50 a pound for the product. The imported article brings $2.50 to $3.00 and we have been importing about $6,000,000 worth a year.

Words of Love.

Do you know a heart that hungers
For a word of love and cheer?
There are many such about us;
It may be that one is near.
Look around you. If you find it,
Speak the word that's needed so,
And your own heart may be strengthened
By the help that you bestow.

It may be that some one falters
On the brink of sin and wrong,
And a word from you might save him,
Help to make the tempted strong.
Look about you, O my sister,
What a sin is yours and mine,
If we see that help is needed
And we give no friendly sign.

Never think kind words are wasted,
Bread on waters cast are they,
And it may be we shall find them
Coming back to us some day.
Coming back when sadly needed,
In a time of sore distress;
So, my friend, let's give them freely;
Gift and giver God will bless.

Attorney's Services Valuable.

T. D. Shea, an attorney of Nanticoke, Pa., has just returned victor in a curious suit against the Susquehanna Coal company. He sued for $5,000 for legal services during the great coal strike of two years ago. The company, a part of the Pennsylvania railroad system, was unwilling to pay more than $500, claiming that was ample payment for the service rendered. Mr. Shea is over six feet tall and built proportionately. It was held by the counsel that his presence alone among the strikers kept them from harming the company's property. The jury took the same view and awarded him $4,500.

Doesn't Want to Die.

Dr. Abdul Hikmet, a Turkish resident in Paris, has been requested by the Turkish embassy to return within twenty days to Constantinople where an order for his execution awaits him. The doctor recently published a violently-worded pamphlet charging the sultan with responsibility for the massacre of non-Mussulmans in the Turkish empire. He has appealed to the French government for protection.

Boy Works to Pay Debt.

Four years ago a boy of Oakland, Cal., shot and killed a man who had been annoying his sister. He was acquitted, but his trial left him in debt $250. He mortgaged a lot he owned for the amount, paid his lawyers and went to sea on the battleship Iowa. He returned with money enough to pay off the debt with interest and intends now to work ashore.

Picture Postcards Censored.

Picture postcards are subjected to stern censorship in some continental countries. In Russia those bearing the portrait of Tolstoi have been suppressed. Turkey forbids any postcard bearing the name of Allah or Mohammed or the portrait of a Mussulman. France will not permit the designer to ridicule the corpulence of the king of Portugal.

Value of the Forests

"How many leaves do you think a tree has?" asked the man who had read it all up, stopping his friend in the park. "Of course you don't know. Some birches have 200,000, and each leaf has 100,000 mouths. I know of a sixty-year-old beech that had 35,000 leaves and a thirty-five-year old one that had only 3,000.

"Those 35,000 leaves, dried, weigh only ten pounds, and the 3,000 dried only three-quarters of a pound. But they do tremendous work in a season. During a spring and summer birches and lindens have been found to exhale 600 or 700 pounds of water per pound of dry leaves; the ash tree about 500; beeches, 400; maples, 400 and oaks, 250. The conifers give out about 100 pounds a tree. To stagger you still more, an acre of beech forest of, say, 500 trees would exhale about 2,000,000 pounds.

"And the funniest part of it all to me is that the water in a tree, or the moisture, really amounts to more than half the weight of the tree, or from 55 to 60 per cent, while the wood weighs but 40 to 45 per cent. In a big forest what you don't see weighs more than what you do see. Funny, isn't it.

"As to forests and water," continued the tree man, "I learned that a partial cutting down of the Volga river valley forests had the tremendous effect of lessening so great an area of water as the Caspian sea. I figured the comparison, and found that, pro rata, six feet of water would be taken off Lake Superior, eight off Lake Michigan, eighteen off Lake Erie and twenty-seven off Lake Ontario. I was staggered.

"Then I found that deforestation, as we call it, has robbed the Vistula river of twenty-six inches of water, the magnificent Rhine of twenty-eight inches, and the beautiful blue Danube of fifty-five inches. Let me hit you nearer home. The Hudson has been called a drowned river because the sea encroaches upon it. But you're drowning it more now by your deforestation, and you'd better hurry up with these Adirondack lands. The salt water now, they say, goes up to Hastings.

"The Schuykill is less in volume than ever. So is the Mohawk, and so is the Connecticut. Even the fish left the lower part of the Savannah river but they're trying to do something with that water now.

"Another queer thing is that Christopher Columbus' son, Fernando, who crossed the ocean with him, was the first man to start the question of forests causing rainfall by his observations of the wealth of vegetation on the Island of Jamaica."—New York Sun.

Shrewd Trick of Banker

James Edoff of San Francisco and the Auditorium Hotel tells how the game of high finance was worked out in Nevada in the '60's. He says:

"I had a quasi uncle who was a banker in a town we will call Rosebud in Nevada. I was employed in his bank, where I saw some things, I can tell you. The distance from Rosebud to Howling Mill was 140 miles and there were more holdups on that section of road in those days than anywhere in the United States.

"A man we will call R. D. Roberts, a millionaire, came into the bank one morning and told my uncle he wanted to buy exchange for $5,000 on the bank of Howling Hill.

"'All right,' said my uncle; 'It will cost you $500.'

"Roberts declared it was cheap at the price.

"Now, my uncle had no account with the bank at Howling Hill and no funds there. He had to draw on a San Francisco bank and request them to arrange the exchange for him. All this he told to Roberts.

"When Roberts was gone he said to me: 'Jim, go out and get a candle box.' When I brought in the box he packed it full of sawdust, put $5,000 in the middle of the sawdust, nailed down the box and addressed it to the cashier of the Howling Mill bank.

"I remember the stage wheeled right up past the door of the bank and on the front seat by the driver sat Roberts. My uncle came out with the box as the stage drew up.

"'Here, Roberts, catch this,' he called, and he tossed up the candle box to Roberts. 'As you go by the bank in Howling Hill throw it down, will you? It's some quartz of some mines here they want to look at. Don't forget it.'

"'All right, I won't,' said Roberts, and he tossed the box into the boot along with other odds and ends.

"That's how Roberts carried his own money and paid $500 for the privilege," concluded Mr. Edoff.

Mr. Edoff is rich and prosperous now and is developing a literary turn. He is thinking strongly of writing a book of his reminiscences of early Nevada and California. He has hundreds of true stories, all as good as this one he told recently.—Chicago Chronicle.

Carved Out a Kingdom

In new kilts and plaid and playing a pibroch of triumph on his pipes, John Farquharson Macrae, formerly of Scotland, but now of Tierra del Fuego, strode the gangway of a steamer in Liverpool the other day, bound once more for South America. During twenty-two years, spent for the most part among the hostile natives of the land's end of the Western continent, Macrae clung to his pipes as he clung to his Scottish accent. When he had no human companion to converse with his pibroch resounded over the waters of the Magellan strait.

As a youth he left his native heath for Argentina and reared cattle. After a few years he found himself in possession of 500 horses and a couple of thousand sheep.

These animals he marched 2,000 miles, with the aid of a compass and chart, to southern Patagonia. He watered and fed his flocks and herds with only five men to assist him, but at the end of a year of hunger and thirst and fatigue he found himself in possession of a fine stretch of country over 80,000 acres in extent. After leasing this land for ten years he sought fresh territory and marched over into Tierre del Fuego.

He was the first Briton to penetrate into the country and the natives resented the intrusion. The tall Aonas and the stunted Yaghanas came in hordes, attacked his little castle and lay in wait for him with arrows.

An intrepid rider and an unerring shot, however, he would ride away concealed by the horse's body and shooting with deadly effect. For several years he carried his life in his hands, but at last the savages began to regard him with such respect and fear that they christened him "Sorto," the native equivalent for "the devil."

For some years the Scottish pioneer has been undisputed monarch of Tierra del Fuego, where he has amassed a fortune. It is with the bagpipes that he rules.

Jewelry of the World

London is the greatest mart in the world for all precious stones. Hither are brought from the mines of South Africa, from the ocean reefs of Ceylon, from the jungles of Burma, diamonds, pearls and rubies. The finest stones in the world are bought and sold in London.

Britain is very proud of its jewelry trade. "Whatever they may say in Paris," remarked C. E. Newbegin, managing director of the Goldsmiths and Silversmiths' Company, 112 Regent street, to an Express representative recently, "the fact remains that wealthy clients from all the world over come to London to buy jewelry.

"We are not insular in our ideas," continued Mr. Newbegin. "We go to Paris once or twice a year to study new designs, and sometimes we discover something original. But, as a rule, the jewelry of France is unsuited to the wearers of Britain. It is too flamboyant in style. There is an extravagant female clientele over there, delighting in the most expensive and obtrusive gems, which has no existence on this side of the channel."

Mr. Newbegin gave it as his opinion that the stocks in the great jewelry shops of Regent street and Bond street amounted in value to close on £5,000,000. Single stones costing from £2,000 to £7,000 are by no means uncommon.

This great wealth, while it rests in British hands, finds work for British labor. The foreign jeweler opens only one or two rooms in London. All his work is done abroad. He imports his manufactured jewelry free of duty, sells it at a high profit, and the money goes back to his native land without the payment of any income tax to the British exchequer.—London Daily Express.

Not Like Mother's Make

"Like mother used to make"—ah, me!
What memories are mine
Of the old days and the plain ways
Revived by that brief line!

In these degenerate times I wear
The trousers of the day,
With creases down the front of them
And colors grave or gray;
They're built upon the latest lines,
And cost a pretty stake—
And yet, ah me! those pants are not
Like mother used to make.

My coats are done by tailor men
Of such artistic taste
That if the slightest wrinkle showed
They'd think themselves disgraced;
They turn me out in fashion's form,
In which there's no mistake—
And yet their cut is not at all
Like mother used to make.

My shirts are cut by skillful hands
From linen of the best,
And fitted to me perfectly
By every fitter's test;
And eke my socks in every hue
The rainbow dares to take—
And yet those shirts or socks are not
Like mother used to make.

My hair is cut by tonsors trained
To wield the shears with skill
That gives to every customer
A high esthetic thrill;
A hirsute harmony is mine,
In which no discords break—
And yet the tonsor's cut is not
Like mother used to make.

"Like mother used to make"—ah, me!
What memories are mine
Of the old days and the plain ways
Revived by that brief line!
—William J. Lampton, in Chicago Record-Herald Magazine.

THE UNION.

Published every Thursday at Clanton, Chilton county, Alabama.

Wallace C. Edler, Ed. and Pub

Subscription price, in advance, per

For advertising rates, call at the office, Seventh street, between First and Second avenues.

Entered April 15, 1903, at Clanton, Ala., as second class matter, under act of congress of March 3, 1879.

NOTICE TO CORRESPONDENTS.

All communications to the Union must be signed by the writer's real name as well as that name which they wish to put in the paper. Letters must reach the editor Tuesday morning to get in the same week. While we will publish any and all communications complying with these requirements that do not contain any improper language, we are not responsible for the opinions expressed. tf

UNION CLUBBING LIST....

The UNION *and* Yellow Jacket, **$1.00**

The UNION *and* Home and Farm **$1.00**

The UNION *and* Weekly Montgomery Advertiser. **$1.25**

The UNION *and* Weekly Atlanta Constitution. **$1.50**

The UNION *and* Semi-Weekly Globe Democrat **$1.50**

The UNION *and* Saturday News **$1.25**

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?

COTTON MEETING.

The Cotton Association of Chilton County convened at Clanton on February 1st and after hearing reports from the Southern Cotton Association which met at New Orleans on January 26, 1905, the following report was read and adopted:

Report of Committee.

"We, your committee on ways and means and permanent organization, submit the following report, to-wit:

"1. That, having faith in the work done and the plan adopted by the Southern Cotton Association at New Orleans on the 26th day of January, 1905, we recommend that the plan adopted by the said Association for organizing the Southern Cotton Associations, be strictly followed, and to this end that this body do not organize today, but recommend to its members that they take part in the Mass Meetings called by the said Southern Association to meet in the several school Districts of this County on the 11th day of February, 1905, for the purpose of organizing Chilton County.

"2. We further recommend that this body request and urge all cotton producers, merchants, bankers, manufacturers and members of the different professions of each school District in this County to lay down their private interests for one day and meet in the several School Districts on February 11th, 1905, and devote that day to the general welfare of the people of our County. Let us come together and thus make a grand success. One for all, all for one.

"3. We further recommend that W. H. Conway, as Chairman, be authorized and requested to communicate with Commissioner of Agriculture Poole, or other proper officials of the Southern Cotton Association, and request them to furnish him such blank forms and papers pertaining to the organization as they may be able to supply, and that said Conway, upon obtaining such supplies, shall furnish them to the several School Districts on February 11th, to the end that our organization may be regularly formed.

"4. We further recommend that the sense of this body be expressed today upon the subject of holding a County Fair some time in the Fall of this year and offering suitable prizes for the purpose of encouraging our farmers to diversify their crops and grow their own meats and food products at home All of which is respectfully submitted.

"W. H. CONWAY,
"W. T. HAND,
"TIPTON MULLINS,
"W. I. MULLINS,
"E. A. MATTHEWS,
"Committee."

So much of the plan adopted at New Orleans as is necessary for present purposes is as follows:

"Whereas, All the various industries of the world are under thorough and systematic organization to protect, develop and manage their special interests; and,

"Whereas, The cotton interests of the Southern States are not organized, and by reason of not being so organized there is no uniform system for regulating production, securing markets, financing the products and generally supervising and advancing such interests; therefore, be it

"Resolved, 1. That there shall be one supreme organization, known as the Southern Cotton Association, embracing all of the cotton producing States and Territories, to evolve and execute practical and efficient plans with reference to cotton production, cotton supply, cotton marketing and financing, by systematic and carefully adapted organization of all cotton interest and by legislation as experience suggests to effect and enforce the purposes of the organization.

"2. The purposes of the association shall be to regulate cotton production, cotton supply and financing, and especially cotton marketing, using every effort to secure broader markets, and to limit the production to the demand at remunerative prices, and to reduce to a minimum all expense of handling cotton and its products from the time it leaves the field until it reaches the consumer.

"3. That there shall be an organization in each cotton growing State and Territory subordinate to the central organization, to be known as the State or Territorial organization.

"4. That there shall be an organization in each county or parish producing cotton of each cotton growing State, subordinate to the State or Territory central organization.

"5. That there shall be an organization effected in each of the civil subdivisions of the county or parish subordinate to the county or parish organization and under regulations of the county or parish organizations.

"6. There shall be a president, a vice president, a secretary and a treasurer of the 'Southern Cotton Association,' and of the organization of each State, Territory, county and parish, who shall hold office for one year and until their successors are elected and qualified.

"7. The duties of each officer shall be prescribed in the constitution and by-laws for each organization as hereinafter provided.

"10. That the cotton producers of each School District of each county or parish shall meet on the 11th day of February, 1905, organize by election of officers, and, after so organizing, shall at once proceed to elect three representatives from the cotton producers of that precinct to the county or parish association, to be held on the 16th day of February, 1905, at the parish or county seat.

"Each county or parish association shall, on the date to be named, convene at the county or parish seat and organize by the election of its own officers and its representative to the State organization.

"Second—That there shall be held in each school district or other smallest political subdivision of the county, on the 11th day of February, 1905, at 1 o'clock p. m., a meeting of all citizens of said district or other smallest political subdivision who are interested in the growing of cotton, which meeting shall elect a committee of three on acreage and membership.

"Third—At said precinct meeting the farmers and land owners present shall be asked to sign the following agreement:

"We, the undersigned farmers, or land owners, living in (school district) (beat), (precinct), No. ——, County of ——, State of ——, hereby pledge ourselves to reduce the acreage planted by us in cotton, and to reduce our consumption of fertilizer in growing cotton, as shown by the statements set opposite our names.

"Name, ——; acreage, 1904. ——, acreage, 1905——; fertilizer, 1904 ——; fertilizer, 1905, ——.

"Fourth—That said Committee on Acreage and Membership shall immediately canvass said district, and ask all farmers and land owners in said District who do not attend said meeting to sign and pledge, and said Committee shall return said pledge to the Chairman of said precinct.

"Fifth—Said precinct chairmen shall preserve said pledges, and they shall immediately make a written report to the county chairman, showing the total number of acres planted in cotton in said precinct in 1904, and the total number to be planted in 1905; the total amount of fertilizer used in growing cotton in said precinct and the total amount to be used in said precinct in said years."

The membership fee for all persons joining this association shall be 25 cents and fees, this to be collected and turned over to the treasurer of the county.

Write to W. H. Conway, Jemison, Ala., for stationery needed in the School District meetings on February 11th unless names and addresses have already been left with him for supplies.

W. H. CONWAY,
Chairman.
J. H. DENNIS, Secretary.

BEAT NINE ITEMS.

Miss Lottie Kennedy, whose time expired as assistant at the Cross Roads school last Friday, went home Monday. Miss Kennedy was a good teacher and We regret to lose her from our school and neighborhood. Messrs. Johnnie and A. F. Mims, our enterprising saw mill boys, made a trip to Birmingham last week. R. D. Hardy, late of this vicinity, carried a nice drove of milch cows off to Ensley last week. Our farmers are all anxious to hear from the New Orleans convention, and ye writer would love to hear of cotton going up. Success to THE UNION.

NIM ROD.

MARS HILL.

We hear most every day among our neighbors talk as to fertilizer and cotton planting. In regard to fertilizers, if we farmers would haul more straw and leaves and litter and make our own fertilizer we would make a great saving to ourselves. Now, brother farmers, the time is drawing near to sow our spring oats, so put in that 25 per cent that you are going to reduce your cotton into oats and corn and sweet potatoes, all things we can use at home and save us spending our cotton money. We have all said we would abide by the New Orleans convention and now let us do it. You know they say (among a certain class) that the farmers won't stick together in an organization, so let us show them that we have "stickability" in us. We have stuck together in one instance and won the fight, and we can win the next one all right. O. P. Scott and others had a fox hunt Friday night, and caught one. Success to THE UNION and it subscribers.

MARS HILLIAN.

RANDOLPH.

Our [illegible]e are feeling rather "blue" over the [illegible]ice of cotton, but in spite of the slu[illegible] Randolph enjoys a good trade. J[illegible] C. Woolley and Murk Smitherm[illegible] of Lawley, were in town Friday. W[illegible] G. Hayes and H. H. Armstrong, of Macedonia, were visitors Friday. Messrs. Gray and Crockett, of Ocampo, are visiting J. E. Smith. John S. Waldrop was in town Wednesday. Tom McCumber, of Selma, is visiting relatives here. We sympathize with Mr. and Mrs. Oliver Smitherman in the death of their baby. They awoke one night last week and found it dead in bed. Miss Monte Hayes left for Birmingham Wednesday to visit her sister, Mrs. Hightower. Miss Monte has been conducting the Randolph hotel for several weeks, during which she won golden opinions. Mrs. Hardie Smitherman is still in poor health. Jasper Smitherman, one of Chilton's former sheriffs, but now of Bessemer, left Thursday night to take the train for his home. F. J. Fitts, of Hubbard, was a welcome visitor Friday. Mrs. Sophia Hightower, of Birmingham, is visiting here. Let all the correspondents of THE UNION arouse themselves and give us the news of their respective localities. We wish to hear from them regularly.

"ONE OF THE BOYS."

COLLINS' CHAPEL.

A few dots from here I trust will be welcome. Our school is progressing fine. We have about 100 on roll and about 12 or 15 boarding students. I don't believe we have an equal in this county; our teachers can't be beat nor our patrons, so why not be pleased over such a good thing. So boys, when you are thinking of going off to school, why just come to the "Chapel." We will make everything nice for you. There is no use in saying anything about our teacher personally, for he is known to be one of the best anywhere.

Boys, what is the matter with our guano men? They seem not to have been round to see us yet. I guess they know what the convention done. Our guano bills will not be two-thirds of what they were in 1904, and that means 10-cent cotton. It looks like the speculators want our cotton for nothing, but let us fight them on that a while longer, boys, before we give up. "It's always the darkest just before day." Well, I hope all of the voters are qualified, for I feel like there will be an election on stock law and school tax. With best wishes to THE UNION.

J. D. COLLINS.

COOPER.

Editor Union:

Please allow me space to publish this. I have a boy named Ward Jones that won't stay at home. He is between 15 and 16 years old and is small to his age. Now, I forbid anybody in this state or adjoining states to feed him or let him stay all night. He ran away in December and went to Prattville, and his uncle and brother persuaded him and paid his way to come home. He came home on the 29th of January, but left next day again. I've not heard from him since, and did not get to talk to him any[illegible]

INSTALLATION AT JEMISON.

Geronermo tribe, No. 99, Improved Order of Red Men, installed officers for the present term on their last meeting night (23d sleep, cold moon). Officers installed were: J. M. B. Johnson, Prophet; J. H. Patton, Jr., Sachem; J. W. Patton, Senior Sagamore; J. E. Durham, Junior Sagamore; E. B. Langston, Chief of Records; H. L. Durbin, Keeper of Wampum. The tribe is making good progress and expects to take the scalps of many pale faces during the present term.

Fertilizers Falling Off.

Nashville, Tenn.—According to the railroads, shipments of fertilizers from this, the largest distributing point, will show a falling off of 40 per cent. this season.

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union, both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer. tf.

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, leaves himself liable to arrest and fine, the same as for theft.—Ex.

tf

To John O. Dunivan, Claud B. Dunovan and Robert Dunovan.

Whereas, Beulah Matthews, an heir at law of the estate of Jeremiah Dunovan, deceased, has filed her application in said court for a sale of the lands described in said application, belonging to the estate of said decedent, for the purpose of division, upon the ground that said land can not be equitably divided, and the 6th day of March, 1905, has been appointed for the hearing of said application, you are, therefore, hereby notified to appear before said court on said 6th day of March, 1905, to contest said application, if they think proper.

Witness my hand, this 31st day of January, 1905.

L. H. REYNOLDS,
Judge of Probate.

Bull Fight the Thing

In Spain Young and Old Worship the Matador.

By S. L. Bensusan.

PAN-y los toros! When you have lived awhile in Spain you understand what this cry means, the cry of a sun-struck, pleasure-loving people not free from the lust of cruelty. The bull ring is half in shade and half in blinding sunshine. The shady side is dear, the sunny side is cheap and crowded. Pedro every corrida, but Pedro and Juanna could only afford the annual visit to the sunny side, and this luxury always followed Holy Week. To be sure it was an event. Juanna would rise early and devote an hour to Pedro's solitary suit before its owner was awake; he generally had some noticeable piece of finery fresh for the occasion. They would their breakfast with them to eat in one of the public gardens and enjoy a bottle of wine which cost in English money rather less than threepence. they would have good seats on the sunny side close to the barrier, and they should not miss any piece of work however delicate. The expense that day, when seats and finery and wine, oranges and sandwiches were for, sometimes amounted to ten pesetas, nearly six shillings in English and such a sum is not lightly spent from the proceeds of paper selling and generous bloodshed. Twenty horses and six bulls would sometimes the sum total of slaughtered things, and then Pedro and Juanna would be there were compensating joys in life after all."—Metropolitan.

Grain Rates Reduced.

Philadelphia, Pa.—Announcement has been made by the Pennsylvania Railroad Company, the Baltimore and Ohio Railroad Company and the Chesapeake and Ohio Railroad Company, of a reduction in the grain freight rate from Chicago to Philadelphia, Newport News and Baltimore. The new rate will become operative on February 1. The amount of the reduction is not known.

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?

COTTON MEETING.

The Cotton Association of Chilton County convened at Clanton on February 1st and after hearing reports from the Southern Cotton Association which met at New Orleans on January 26, 1905, the following report was read and adopted:

Report of Committee.

"We, your committee on ways and means and permanent organization, submit the following report, to-wit:

"1. That, having faith in the work done and the plan adopted by the Southern Cotton Association at New Orleans on the 26th day of January, 1905, we recommend that the plan adopted by the said Association for organizing the Southern Cotton Associations, be strictly followed, and to this end that this body do not organize today, but recommend to its members that they take part in the Mass Meetings called by the said Southern Association to meet in the several school Districts of this County on the 11th day of February, 1905, for the purpose of organizing Chilton County.

"2. We further recommend that this body request and urge all cotton producers, merchants, bankers, manufacturers and members of the different professions of each school District in this County to lay down their private interests for one day and meet in the several School Districts on February 11th, 1905, and devote that day to the general welfare of the people of our County. Let us come together and thus make a grand success. One for all, all for one.

"3. We further recommend that W. H. Conway, as Chairman, be authorized and requested to communicate with Commissioner of Agriculture Poole, or other proper officials of the Southern Cotton Association, and request them to furnish him such blank forms and papers pertaining to the organization as they may be able to supply, and that said Conway, upon obtaining such supplies, shall furnish them to the several School Districts on February 11th, to the end that our organization may be regularly formed.

"4. We further recommend that the sense of this body be expressed today upon the subject of holding a County Fair some time in the Fall of this year and offering suitable prizes for the purpose of encouraging our farmers to diversify their crops and grow their own meats and food products at home. All of which is respectfully submitted.

"W. H. CONWAY,
"W. T. HAND,
"TIPTON MULLINS,
"W. I. MULLINS,
"E. A. MATTHEWS,
"Committee."

So much of the plan adopted at New Orleans as is necessary for present purposes is as follows:

"Whereas, All the various industries of the world are under thorough and systematic organization to protect, develop and manage their special interests; and,

"Whereas, The cotton interests of the Southern States are not organized, and by reason of not being so organized there is no uniform system for regulating production, securing markets, financing the products and generally supervising and advancing such interests; therefore, be it

"Resolved, 1. That there shall be one supreme organization, known as the Southern Cotton Association, embracing all of the cotton producing States and Territories, to evolve and execute practical and efficient plans with reference to cotton production, cotton supply, cotton marketing and financing, by systematic and carefully adapted organization of all cotton interest and by legislation as experience suggests to effect and enforce the purposes of the organization.

"2. The purposes of the association shall be to regulate cotton production, cotton supply and financing, and especially cotton marketing, using every effort to secure broader markets, and to limit the production to the demand at remunerative prices, and to reduce to a minimum all expense of handling cotton and its products from the time it leaves the field until it reaches the consumer.

"3. That there shall be an organization in each cotton growing State and Territory subordinate to the central organization, to be known as the State or Territorial organization.

"4. That there shall be an organization in each county or parish producing cotton of each cotton growing State, subordinate to the State or Territory central organization.

"5. That there shall be an organization effected in each of the civil subdivisions of the county or parish subordinate to the county or parish organization and under regulations of the county or parish organizations.

"6. There shall be a president, a vice president, a secretary and a treasurer of the Southern Cotton Association, and of the organization of each State, Territory, county and parish, who shall hold office for one year and until their successors are elected and qualified.

"7. The duties of each officer shall be prescribed in the constitution and by-laws for each organization as hereinafter provided.

"10. That the cotton producers of each School District of each county or parish shall meet on the 11th day of February, 1905, organize by election of officers, and, after so organizing, shall at once proceed to elect three representatives from the cotton producers of that precinct to the county or parish association, to be held on the 16th day of February, 1905, at the parish or county seat.

"Each county or parish association shall, on the date to be named, convene at the county or parish seat and organize by the election of its own officers and its representative to the State organization.

"Second—That there shall be held in each school district or other smallest political subdivision of the county, on the 11th day of February, 1905, at 1 o'clock p. m., a meeting of all citizens of said district or other smallest political subdivision who are interested in the growing of cotton, which meeting shall elect a committee of three on acreage and membership.

"Third—At said precinct meeting the farmers and land owners present shall be asked to sign the following agreement:

"We, the undersigned farmers, or land owners, living in (school district) (beat), (precinct), No. ——, County of ——, State of ——, hereby pledge ourselves to reduce the acreage planted by us in cotton, and to reduce our consumption of fertilizer in growing cotton, as shown by the statements set opposite our names.

"Name, ——; acreage, 1904 ——, acreage, 1905 ——; fertilizer, 1904 ——; fertilizer, 1905, ——.

"Fourth—That said Committee on Acreage and Membership shall immediately canvass said district, and ask all farmers and land owners in said District who do not attend said meeting to sign and pledge, and said Committee shall return said pledge to the Chairman of said precinct.

"Fifth—Said precinct chairmen shall preserve said pledges, and they shall immediately make a written report to the county chairman, showing the total number of acres planted in cotton in said precinct in 1904, and the total number to be planted in 1905; the total amount of fertilizer used in growing cotton in said precinct and the total amount to be used in said precinct in said years."

The membership fee for all persons joining this association shall be 25 cents and fees, this to be collected and turned over to the treasurer of the county.

Write to W. H. Conway, Jemison, Ala., for stationery needed in the School District meetings on February 11th unless names and addresses have already been left with him for supplies.

W. H. CONWAY,
Chairman.

J. H. DENNIS, Secretary.

BEAT NINE ITEMS.

Miss Lottie Kennedy, whose time expired as assistant at the Cross Roads school last Friday, went home Monday. Miss Kennedy was a good teacher and we regret to lose her from our school and neighborhood. Messrs. Johnnie and A. F. Mims, our enterprising saw mill boys, made a trip to Birmingham last week. R. D. Hardy, late of this vicinity, carried a nice drove of milch cows off to Ensley last week. Our farmers are all anxious to hear from the New Orleans convention, and ye writer would love to hear of cotton going up. Success to THE UNION.

NIM ROD.

MARS HILL.

We hear most every day among our neighbors talk as to fertiliser and cotton planting. In regard to fertilizers, if we farmers would haul more straw and leaves and litter and make our own fertilizer we would make a great saving to ourselves. Now, brother farmers, the time is drawing near to sow our spring oats, so put in that 25 per cent that you are going to reduce your cotton into oats and corn and sweet potatoes, all things we can use at home and save us spending our cotton money. We have all said we would abide by the New Orleans convention, and now let us do it. You know they say (among a certain class) that the farmers won't stick together in an organization, so let us show them that we have "stickability" in us. We have stuck together in one instance and won the fight, and we can win the next one all right. O. P. Scott and others had a fox hunt Friday night, and caught one. Success to THE UNION and it subscribers.

MARS HILLIAN.

RANDOLPH.

Our people are feeling rather "blue" over the price of cotton, but in spite of the slump Randolph enjoys a good trade. J. C. Woolley and Murk Smitherman, of Lawley, were in town Friday. W. G. Hayes and H. H. Armstrong, of Macedonia, were visitors Friday. Messrs. Gray and Crockett, of Ocampo, are visiting J. E. Smith. John S. Waldrop was in town Wednesday. Tom McCumber, of Selma, is visiting relatives here. We sympathize with Mr. and Mrs. Oliver Smitherman in the death of their baby. They awoke one night last week and found it dead in bed. Miss Monte Hayes left for Birmingham Wednesday to visit her sister, Mrs. Hightower. Miss Monte has been conducting the Randolph hotel for several weeks, during which she won golden opinions. Mrs. Hardie Smitherman is still in poor health. Jasper Smitherman, one of Chilton's former sheriffs, but now of Bessemer, left Thursday night to take the train for his home. F. J. Fitts, of Hubbard, was a welcome visitor Friday. Mrs. Sophia Hightower, of Birmingham, is visiting here. Let all the correspondents of THE UNION arouse themselves and give us the news of their respective localities. We wish to hear from them regularly.

"ONE OF THE BOYS."

COLLINS' CHAPEL.

A few dots from here I trust will be welcome. Our school is progressing fine. We have about 100 on roll and about 12 or 15 boarding students. I don't believe we have an equal in this county; our teachers can't be beat nor our patrons, so why not be pleased over such a good thing. So boys, when you are thinking of going off to school, why just come to the "Chapel." We will make everything nice for you. There is no use in saying anything about our teacher personally, for he is known to be one of the best anywhere.

Boys, what is the matter with our guano men? They seem not to have been round to see us yet. I guess they know what the convention done. Our guano bills will not be two-thirds of what they were in 1904, and that means 10-cent cotton. It looks like the speculators want our cotton for nothing, but let us fight them on that a while longer, boys, before we give up. "It's always the darkest just before day." Well, I hope all of the voters are qualified, for I feel like there will be an election on stock law and school tax. With best wishes to THE UNION.

J. D. COLLINS.

COOPER.

Editor Union:

Please allow me space to publish this. I have a boy named Ward Jones that won't stay at home. He is between 15 and 16 years old and is small to his age. Now, I forbid anybody in this state or adjoining states to feed him or let him stay all night. He ran away in December and went to Prattville, and his uncle and brother persuaded him and paid his way to come home. He came home on the 29th of January, but left next day again. I've not heard from him since, and did not get to talk to him any.

J. S. JON[illegible]

INSTALLATION AT JEMISON.

Geronermo tribe, No. 99, Improved Order of Red Men, installed officers for the present term on their last meeting night (23d sleep, cold moon). Officers installed were: J. M. B. Johnson, Prophet; J. H. Patton, Jr., Sachem; J. W. Patton, Senior Sagamore; J. E. Durham, Junior Sagamore; E. B. Langston, Chief of Records; H. L. Durbin, Keeper of Wampum. The tribe is making good progress and expects to take the scalps of many pale faces during the present term.

Fertilizers Falling Off.

Nashville, Tenn.—According to the railroads, shipments of fertilizers from this, the largest distributing point, will show a falling off of 40 per cent, this season.

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union, both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer. tf.

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, leaves himself liable to arrest and fine, the same as for theft.—Ex.

tf

To John O. Dunivan, Claud B. Dunovan
Probate Court.

To John O. Dunovan, Claud B. Dunovan and Robert Dunovan.

Whereas, Beulah Matthews, an heir at law of the estate of Jeremiah Dunovan, deceased, has filed her application in said court for a sale of the lands described in said application, belonging to the estate of said decedent, for the purpose of division, upon the ground that said land can not be equitably divided, and the 6th day of March, 1905, has been appointed for the hearing of said application, you are, therefore, hereby notified to appear before said court on said 6th day of March, 1905, to contest said application, if they think proper.

Witness my hand, this 31st day of January, 1905.

L. H. REYNOLDS,
Judge of Probate.

Bull Fight the Thing

In Spain Young and Old Worship the Matador. : : : :

By S. L. Bensusan.

FANy los toros! When you have lived awhile in Spain you understand what this cry means, the cry of a sun-stricken pleasure-loving people not free from the lust of cruelty. The bull ring is half in shade and half in blinding sunshine, the shady side is dear, the sunny side is cheap and crowded. Pedro and Juanna could only afford the annual visit to the sunny side, and this luxury always followed Holy Week. To be sure it was an event. On the great Sunday Juanna would rise early and devote an hour or two to Pedro's solitary suit before its owner was awake; he generally had a new tie or a new waistband to celebrate the happy day, while Juanna herself had some noticeable piece of finery fresh for the occasion. They would take their breakfast with them to eat in one of the public gardens and enjoy a bottle of wine which cost in English money rather less than threepence. Then they would have good seats on the sunny side close to the barrier, so that they should not miss any piece of work however delicate. The expense that day, when seats and finery and wine, oranges and sandwiches were paid for, sometimes amounted to ten pesetas, nearly six shillings in English money, and such a sum is not lightly spent from the proceeds of paper selling and cigar making. It was a red-letter day, a day of ample food and endless and generous bloodshed. Twenty horses and six bulls would sometimes be the sum total of slaughtered things, and then Pedro and Juanna would feel that there were compensating joys in life after all."—Metropolitan.

Grain Rates Reduced.

Philadelphia, Pa.—Announcement has been made by the Pennsylvania Railroad Company, the Baltimore and Ohio Railroad Company and the Chesapeake and Ohio Railroad Company, of a reduction in the grain freight rate from Chicago to Philadelphia, Newport News and Baltimore. The new rate will become operative on February 1. The amount of the reduction is not known.

Ozark Bank Authorized.

Ozark, Ala.—The application of D. Holman, H. C. Dowling, R. E. Holman, H. L. Holman and Allen Holman to organize the First National Bank of Ozark, Ala., with $25,000 capital, was approved Monday by the comptroller of the currency.

Supreme Court Takes Recess.

Washington—The supreme court of the United States Monday took a recess for three weeks.

LOCAL AND PERSONAL.

J. A. Neeley was a pleasant visitor Thursday. He reports that Mrs. J. W Neeley is quite ill.

J. A. Huett and W. M. Moon were in Clanton Thursday. Mr. Huett has bought a farm on the edge of Autauga county, near Billingsley. Sorry to lose him from Chilton, but they need some good voters over in Autauga.

Circuit Clerk Sam W. Collins spent Friday in Montgomery.

J. T. M. Chandler was in Clanton Saturday.

Several young republicans, among them G. L. Giles, B. E. Williams, M. L. Giles and R. W. Foshee, were in town Saturday.

Z. A. and J. W. Avery were pleasant visitors Saturday.

R. J. Williams was in Clanton Saturday.

J. H. Thompson was a pleasant visitor Saturday.

Mrs. M. E. Smith, widow of the late M. L. Smith, is here on a visit to her son, Attorney A. C. Smith. She intends residing in the future with her daughter, Mrs. William Kelley, at Sylacauga.

T. J. Billingsley was in Clanton Monday.

G. W. Lowery was in town Monday.

Judge Reynolds spent Monday and Tuesday at Jemison on business.

J. D. Caton and F. D. Cherry were pleasant visitors Tuesday.

J. N. and G. W. Scott were in Clanton Wednesday.

Dick Price was a pleasant visitor Wednesday.

W. H. Conway spent Tuesday and Wednesday in Clanton looking after the interests of the cotton association.

J. J. and J. M. Grant, of Verbena, were in Clanton Wednesday.

R. L. and James Barrett were in town Wednesday.

J. N. Dennis was in town Wednesday.

Deputy Marshal Goodgame has made two arrests in Chilton with prospects for more.

Parties unknown placed dynamite in Lyon's photograph gallery and utterly demolished the contents.

S. J. Dawson was in town Wednesday.

R. P. Kendrick was a pleasant visitor Wednesday.

MARRIAGE LICENSES.

J. M. Waller and Miss Etta Moon. M. H. Bussie and Miss Ora Sears. M O. Culp and Miss Lula Duncan. W. J. Headley and Miss L. A. Mims.

COLORED

Walter Lawhorn and Fannie Taylor.

AN ABSOLUTELY FREE OFFER.

The Union would like for everybody to accept from us a free complimentary gift—a year's subscription (which is 50c per year) to the Dixie Home, one of the largest, brightest and finest illustrated magazines in the world. It is full of good reading and is the very paper to go into every home in the south. Now, if you want to receive this family magazine a whole YEAR FREE, all you have to do is to pay amount you are in arrears, if any, and send us $1 for another year's subscription to the Union. The Dixie Home will come to you absolutely FREE.

This is one of the best and most liberal offers ever made by any publisher. So come on at once, and renew your subscription or become a new subscriber and secure this magazine FREE. tf

For the Safety of the Public.

Possibly the Supreme Court of New Hampshire has pointed the way to a settlement of the plea of temporary insanity in cases of homicide, with a sympathetic jury to accept it. The number of persons arraigned for trial on a charge of homicide who succeed in demonstrating to juries that they were sane immediately before the act, insane at the time of the act and sane just afterward, is surprisingly large.

But the New Hampshire Supreme Court has called a halt in the case of William Henry Wilkins, who murdered his wife with an axe and pleaded momentary insanity as an excuse. The court accepted the plea of not guilty because of momentary insanity, but astonished the prisoner by ordering his commitment to the State prison, without hard labor, "for the safety of the public," for an indeterminate period and until discharged by due order of the court.—Cincinnati Commercial-Tribune.

She Declined the Seat.

Georgie was a well behaved little boy. He had been especially taught by his father to be polite to ladies and in a crowded car always to give up his seat to one of the gentle sex regardless of age, social condition and good looks. On a New York City surface car last Sunday papa had an unlooker-for and embarrassing illustration of how well Georgie had learned his lesson. The car was crowded, but Georgie had pre-empted a seat. A handsome young lady entered at one of the stations at which the train stopped. There was not a vacant seat.

"Take my seat, ma'am," said little Georgie, as he doffed his cap.

She didn't take the seat. She looked fierce enough to box his ears, and the passengers had to laugh in spite of her mortification. Georgie was sitting on papa's lap when he so gallantly offered to give up his seat to the pretty young lady.

JAPANESE WAR OUTFIT.

TROOPS WELL PROTECTED AGAINST COLDEST WEATHER.

All Clothing Made of the Best Material—Great Coats of Thick Woolen Goods and Hooded—Many Details of How the Health of Soldiers is Preserved.

Miss McCaul, who was recently commissioned by Her Majesty to go to Japan to inquire into the working of the Japanese Red Cross society, has brought back with her the complete outfit of a soldier of the Japanese Imperial Guard, which was presented to her by Gen. Teranchi, the minister of war, together with samples of the food supplied to the soldier on active service. These various articles, which have been inspected by the king, who has expressed great interest in the many ingenious devices they present, will shortly be exhibited at the Royal United Service Institution, Whitehall. They are worthy, says the British Medical Journal, which publishes special photographs, of the most careful study by all military officers and afford a striking example of the care and strong common sense with which the health and comfort of the soldier are considered by those responsible for his outfit and the minute attention to detail which is characteristic of the Japanese army.

One notable feature of all the clothing is that it is apparently made of the best material. The material for the winter clothing appears to be all wool, and warm. In the neat blue parade uniform, jacket or tunic, plain flat brass buttons are done away with as far as possible, fastenings being in nearly all instances carried out by means of flat hooks and eyes. The summer jacket and trousers are of khaki drill; the jacket is perfectly plain, and there are no buttons on any of the garments. A strip of white linen is issued to wind round the neck as a collar inside the tunic. The forage cap which goes with this uniform is a marvel of lightness. It has a detachable linen cover to be used in summer, from which hangs a linen screen to protect the neck. This screen being made in three parts—a centre and two sides—allows the air to pass freely. For all uniforms the trousers are made like riding breeches, in that they end above the ankle, where they are made to fit tight to the limb, being fastened by tapes instead of buttons.

Putties or gaiters must, of course, be worn with these. The ordinary great-coat is of thick woollen cloth with bone buttons. It has a hood which can be drawn over the head. A comparatively small detail in the cut of this, as also of the winter great-coat, shows how carefully health and comfort, and therefore individual efficiency, have been considered. The free edges of the front, instead of being cut straight, slope outward below the waist, making the skirt of the coat lap over more completely below; it is thus prevented from gaping in walking, and the legs and knees are protected from rain. The front of the skirt can be buttoned back to allow free movement of the lower limbs for marching in dry weather. A mosquito net "helmet" or head covering in addition to its value as a preventive of malaria, is a great comfort in summer, where there are many flies.

The "coldproof" winter overcoat merits some description, for it seems to be devised to insure warmth in the most severe climate. Made of thick woollen cloth, it has a large collar covered with fur, which is of course inside when the collar is raised. From the middle of the edge of this collar a button or hood can be pulled out so as to cover the head, and over this can be worn the ample detached woollen "coldproof" hood, which from its shape and long ends to wrap round the neck recalls the hoods of Chaucer's time. Hanging by cords from the neck are large gloves or mittens—one division for all the fingers and one for the thumb; they can thus be worn off, when the hand is required for firing or any other purpose, without being lost. A sheepskin waistcoat with the wool outside is also issued for severe weather. It fastens at one side. The underclothing is of similar good material to that of the outer garments, a cotton shirt and drawers for summer and a thick knitted woollen jersey, or sweater, and pants for winter. The ribbed woollen stockings are made without heels, and warm toecaps and issued in the coldest weather to wear over the stockings to prevent frost bite. These toecaps are made of a lamb's wool material like very thick lint, the soft surface being inside. A roll of fine striped flannel of very good quality and about a yard and a half long is issued to be wound round the abdomen and takes the place of a cholera belt. It is interesting to note that the woollen cloth and blanket are made in the Japanese military woollen cloth factory, while [illegible]p cloth, cotton cloth and leather [illegible] made or prepared in private fac[illegible]es in Japan and cut out and sewn [illegible] the military clothing depot.—London Globe.

The Things Necessary.

Motorist—Are all the tools in the tool-chest?

Valet—Yes, sir.

Motorist—Are all the cushions and lap-robes in the tonner?

Valet—Yes, sir.

Motorist—Is the tank full of gasolene?

Valet—Yes, sir.

Motorist—Have you brought down all our goggles?

Valet—Yes, sir.

Motorist—Well, run up to my room and bring the roll of bills out of the top bureau drawer so that we will have enough money to pay our fines. Then we shall be ready to start.—Town Topics.

The Choice.

All the folks in our house had to tell
one day
In which one of all the rooms they liked
best to stay.
Mother chose the living-room, where we
mostly sit;
Sister likes the parlor nights, with the
big lamp lit;
Grammy said her own room's better'n
all the rest;
Jack (he's always studying) likes the
library best;
I just love the attic, where ther's room
to swing
Or roller-skate or spin a top or play
most anything.
But when I asked my father, he laughed
and said that he
Guessed he'd choose whatever place
mother chanced to be!
—New Orleans Picayune.

Ransomed

BY R. C. PITZER

(Copyright, 1904, by Daily Story Pub. Co.)

They sat on a flat boulder in Pine Canon, while a heavy-set, bull-necked man in a black mask leaned on a rifle and looked at them. The girl was white and silent, and her escort held her hand. He was a young man, dark and imperious, but his eyes had a soft glow in them, and he looked at her with that ecstatic expression which but one woman can bring to a man's face.

"Don't worry," he whispered, as he fondled the little hand, "it isn't anything serious. The men have my checks to pay for our ransom, and when they return with the money we will be released. It is only the matter of an hour or so. Turn your head, Mary—I do believe you are crying. And I thought you such a brave girl," he continued in a tone of forced raillery. "You are always laughing at me because I am timid with dogs, and last week you refused me again, for no other reason than because I ran away from a gang of drunken rowdies. I never thought to see you crying over such a harmless adventure."

"Don't make fun of me, Harry," she pleaded, as she struggled with her tears. "I never said that I was brave. I know that I'm a c-coward, but I want my h-h-husband to be brave for both. And you're not," she continued, indignation getting the better of her fear. "When these men came, you just held out your hands; and you've been like a l-l-lamb."

Harry turned his head aside to conceal the broad grin that flashed across his face. Then he moved nearer and caught her other hand.

"Listen, Mary," he said. "I know that you think me a coward, though I am but cautious. I can risk myself when there is any reason for doing so, but a reason with me must be something more than mere braggadocio. You have lived in the West so long that you can appreciate nothing but spectacular bravery. In my part of the country, that is not needed. I am not what you think me; indeed I am not."

Mary disengaged her hands and hid her face in her handkerchief. "I think that I know you," she said in a smothered voice. "At least, there is nothing hypocritical nor false about you. You do not pretend to be what you are not."

Harry's face was convulsed in an extraordinary manner, and turned to a sea-green hue. "No," he answered faintly, "I have never pretended to be better than I am, even to you. But if anything would make me false to myself, it would have been a desire for your approbation; a wish to be what you would have me be."

"I understand you," she said. "I even know what you are thinking of now. You believe that I might—love you—if you could make me admire your bravery. Is it not so? And you are thinking of attacking that man

Don't worry," he whispered.

there. It would be a brave deed, Harry. It would be too brave—too rash."

"No," Harry answered, "not rash, and not as dangerous as you think. It would need but a little quickness, and I have that. I am going to do it, Mary. I am going to get you away from here before the men return. I will not ask you to marry me—I will not do this for reward. But you know that I love you, and I would risk a greater danger than this for your sake."

"Oh, no! no!" Mary whispered. "Don't do it, Harry. He might kill you, and I—and a—" Her voice died away.

"And you love me?" Harry asked eagerly. "You don't say so, but I know it already. It is only your exaggerated ideal of bravery that keeps you from confessing it. You think that I am not worthy of you; but I am, and I will prove it."

"You take a good deal for granted," said Mary with sudden coldness. "I don't think that I have given you any reason to say that my interest is more than friendly."

"It isn't that," he replied. "I spoke hastily, but I meant that you could

Exchanging flying shots as they ran.

love me if you would. At least, I will show you that you have a false opinion of me. Hello there, Mr. Outlaw!"

"Well, whatcher want?" growled the mask. "You sit still there, Fletcher, an' don't come none of your Arkansas tricks on me. Whatcher want, hey?"

"I want a match," Harry returned, "and I'll trade you a cigar for it. Will you come here, or may I walk over there?"

"Come along," said the man as he threw the rifle in the hollow of his arm. "I don't care if I do smoke, seein' it's you."

"No! no!" Mary whispered, "I didn't mean it, Harry. You must not do anything so foolish."

"I must go, anyhow," he answered. "The man will be suspicious else, and perhaps start a row himself. You must not worry, for I won't do anything that seems dangerous." And with a final "it will be all right," he strolled over to where the outlaw stood.

"Here," he said, offering a cigar, "take that, old man—and that! and that!" delivering two heavy blows on the man's chest. He of the mask staggered backward, and Harry snatched the revolver that dangled by the outlaw's hip.

"Now," he cried, "we're on even terms, and I'll teach you what it means to bother Miss Lindsey."

The outlaw did not wait to be taught, nor to regain his equilibrium. The blows started him down the canon, and, still at a half-falling angle, he began to run. Harry bounded after him, while Mary, with clasped hands and sparkling eyes, sprang to her feet.

"Harry!" she cried, "come back—come back to me!" But Harry did not heed her, and she sank down on the boulder.

Harry and the outlaw were exchanging flying shots as they ran, and in a moment the fugitive bounded behind a heavy dyke of granite. When Harry reached the rock, he found the man sitting down, and blowing and puffing from his exertions. The mask had fallen off, and a round, red, laughing face was disclosed.

"Gee-whil-whillikens!" the outlaw gasped. "I ain't no good at a run no more. It kind of—ah—cleans me out. Ain't got no wind at all. How'd I do it, partner? Say, that was rich. Ha! ha! ha!"

"Ssh! ssh!" Harry hissed. "You'll give the whole thing away, Evans, and I can't stand another 'no.'"

"Is it goin' to work?" Evans asked. "She's a fine gal. Fletcher, an' you can be proud of her anywheres. If it wasn't for us knowin' you to be a pretty good man—"

"For heaven's sake!" Harry cried in desperation; "get out! Man! man! will you sit here like a fool until she comes and catches you?"

"All right, Fletcher, all right. You needn't get warm about it. If it was me, though, I'd be makin' tracks up to where she's waitin'. As you're in no hurry—" But Harry had turned at this suggestion, and was stumbling and puffing over the boulders.

Mary saw him coming and ran forward. "You are not hurt?" she asked. "Have you killed him?"

Harry shook his head. "He got away," he gasped.

"And we must get away, too," Mary said with exaggerated fear. "He'll meet the others, and all three will come. They will kill you, Harry!"

"I think that those men are done for," Harry returned. "We needn't hurry on their account. But, Mary, you don't say what I want you to say. Have you no word for me, dear?"

Mary smiled and blushed. "Hush," she whispered. "I didn't care about bravery, Harry. It was all make believe, and when I was ready, I would have said yes without the help of your men."

"What!" Harry exclaimed.

Mary's smile broadened into a delicious grin, and she made the canon echo to her rippling laughter. "You are not the only actor," she gasped. "I recognized their voices—every one of them—and I knew that you had hired them. But don't you care, dear," she continued soothingly, as she saw his miserable despondence, "I won't tell about it. We will keep it just between ourselves, won't we?"

And they did.

Weak in Orthography.

Col. Phil Thompson tells of the trials experienced by a friend of his who recently acquired a new stenographer. The dear little thing is a trifle weak in orthography, but Thompson's friend has been loath to call her down, in view of the fact that she tries so hard to please. He is too big hearted to discharge the girl, for she needs the money; so he corrects the spelling himself.

Recently, however, he was forced to call her attention to the fact that in a letter of some seventy-five words, she had committed eight errors, among which was "fourty."

"My, my!" exclaimed the friend. "This won't do, you know; I can't stand for forty spelled this way!"

The willing worker looked over his shoulder at the offending word. "Gracious!" she exclaimed, "how careless of me! I left out the 'gh,' didn't I?"—Collier's.

Central African Lakes Drying Up.

In 1859, some distance southeast of Lake Nyassa, in central Africa, Livingstone discovered Lake Shirwa, a body of water about thirty miles long and fifteen miles wide, which has now entirely disappeared with the exception of a few ponds. Lake Nyami, discovered by Livingstone at the same time, has also disappeared. The cause of the change appears to be a gradual drying up of bodies of water in Central Africa. As marking the results of a single half-century the changes named show a rapidity of mutation in those inland waters not equaled elsewhere in the contemporary geographer's survey, though the shrinking of Salt lake in Utah is also very remarkable.

Open the Door of Your Heart.

Open the door of your heart, my lad,
To the angels of love and truth;
When the world is full of unnumbered
joys,
In the beautiful dawn of youth.
Casting aside all things that mar,
Saying to wrong, "Depart!"
To the voices of hope that are calling
you
Open the doors of your heart.

Open the door of your heart, my lass,
To the things that shall abide;
To the holy thoughts that lift your soul
Like the stars at eventide.
All of the fadeless flowers that bloom
In the realms of song and art
Are yours, if you'll only give them room.
Open the door of your heart.

Open the door of your heart, my friend,
Heedless of class or creed,
When you hear the cry of brother's voice,
The sob of a child in need.
To the shining heaven that o'er you
bends
You need no map or chart;
But only the love the Master gave.
Open the door of your heart.
—Edward Everett Hale.

Considerate Irishman.

A French chauffeur was driving in Ireland when he rode over a cyclist. The injured man apologized. "Pray continue your journey," said he. "I am really ashamed to have incommoded such a sportsman." Next day the chauffeur received a letter from this sympathetic stranger full of regrets and making tender inquiries about the state of the automobile. "I must tell you," it proceeded, "that as a result of yesterday's accident, for which I alone am responsible, I expect to die soon. But I am arranging to leave you a third of my property so that you can embellish your automobile with all the latest improvements."

Will Breed Zebras in Africa.

Lord Howard De Walden, probably the richest young man in England, has gone to east Africa on a hunting expedition after big game. He has purchased a large territory near Lake Victoria Nyanza, where he intends to establish a farm for breeding zebras. His estate, which consists entirely of property in London, is worth over $1,000,000 a year.

Duty a Cordial.

No man's spirits were ever hurt by doing his duty; on the contrary, one good action, one temptation, resisted and overcome, one sacrifice of desire or interest, purely for conscience sake, will prove a cordial for weak and low spirits, far beyond what either indulgence or diversion, or company, can do for them.—Paley.

SWIMMING A GOOD EXERCISE.

Tests Show It Makes Greatest Increase in Red Blood Corpuscles.

A series of experiments conducted by Dr. Philip B. Hawk, demonstrator of physiological chemistry at the University of Pennsylvania, has proved that swimming is the most beneficial exercise.

As described by the World's Work, Dr. Hawk visited the dressing rooms at the athletic field and immediately before each athlete left for his exercise drew blood from him by means of the regularly prepared sterile needle. Then when the athlete returned to the dressing room after running, jumping, pole-vaulting or engaging in water polo the needle was again be brought into play and second sample of blood drawn.

Analysis of the blood to discover how far each exercise increased the number of red corpuscles showed that water polo and other forms of swimming resulted in the largest increase. The swimming exercises were thus shown to be the most beneficial, for the greater the number of red corpuscles the richer is the blood. Swimming resulted in an average increase of 21 per cent, as against 17 per cent for the next best exercise—short-distance running.

After one of these examinations during the athletic season, while the men were in the pink of condition and exerting themselves to the utmost, Dr. Hawk found the following results, in round numbers, from the count of the blood corpuscles: Percentage of gain after the 100-yard dash, 25; 120-yard hurdles, 21.5; half-mile run, 18; mile run, 14; two-mile run, 9; broad jump, six jumps, 15; three-minute water polo game, 27.

THE LAW VS. KINDNESS.

Good Samaritan Suffers for Eccentricities of Ohio Statutes.

"Got a buzzard here?" inquired Charles W. Heyl, deputy game warden, of Mrs. Frank Edgerton of South Sixth street, according to the Columbus, Ohio, correspondent of the New York Herald.

"Yes, sir," the woman replied.

"Want to sell it?"

"No, sir; but you can have it if you want it."

"Can I see it?"

"Certainly; just come this way, please."

And Mrs. Edgerton walked back to the coal shed, where the bird was confined, opened the door and then walked back to the house. In a moment or two Heyl appeared with the buzzard under his coat. He showed a badge and said: "Tell your husband that I am a game warden and for him to appear before Squire Lakin."

A son of Mr. Edgerton, who is an employe in the Panhandle shops, while strolling through the fields, found a buzzard with a broken leg. The bird was fed and kindly treated and became a pet, running around the neighborhood as it pleased. When the family went away from the house the buzzard would be confined in the coal shed.

An affidavit charges Edgerton with having "in his possession a buzzard not then and there being in captivity prior to May 6, 1902, and not then and there having the permission to do the aforesaid act."

The Man Who Might.

My grandpa used to tell us boys
About a man he knew
'Way out in northern Illinois,
In eighteen forty-two;
This fellow's brag of how he might—
When first out west he come—
Have easy bought Chicago's site
For one small jug of rum.

We'd always ask grandfather why
The feller did not trade,
An' he'd say: "'Twas just a lie
The chap made up, I'm afraid;
But even though he'd looked ahead
And heard the busy hum
Of future years, when all is said,
He'd rather had the rum."

Then grandpa'd laugh a bit an' say,
"As we go down the years—
No matter where extends the way,
Or how our fortune steers,
We'll surely meet the helpless wight,
At every turn, I vum!—
Who might have bought Chicago's site
For one small jug of rum."
—Pittsburg Post.

Writer Says Genius Is Insanity.

According to Mrs. Kate Upson Clark, the way to be happy, though a genius, is never to marry. "The poet's wife," said Mrs. Clark in a recent address, "does not care for poetry after the first week, any more than the grocer's boy does for figs. She never wishes to tell of the neighborhood's gossip but she interrupts some great thought of her husband's; then he imagines she is bereft of sympathy and looks for it in the wives and daughters of his neighbors, and if he is handsome he usually finds it. The genius should not marry. A woman wants her husband—not his art. Genius is insantiy. In order to be a genius he lives most of the time in a world of deep emotions. It is hard for people of artistic temperament to conform to ordinary rules. Thus divorce, suicide, drunkenness and impulsive vices are found among people of genius. The irrepressible temperament seems to be absolutely necessary to art."

Contest of Smelling Powers.

A new game for long evenings has been devised and tried by an English house party. It is a contest of smelling powers. Numbered programs and numbered bottles contain essence of cloves, gin, eucalyptus, sherry and other groceries. The game is to identify these. And the difficulty of distinction has occurred to many men who have tried the decanters with the nose in the hope of deciding whether it is brandy or whisky. In this particular effort to recapture a sense in which the dog masters mankind a woman won.

BALLAD OF BUBBLY CREEK

On the Old Chicago River—A Memory of Boyhood in Halsted Street's Historic Ground

On the old Chicago river in those strenuous days of yore,
Sweeping like a tawny tiger past the green and pebbly shore,
And the yellow current foaming as it crashed against the pier,
And the bells of huge Chicago pealing richly on the ear!

Oh, those chiming bells that brought you tender dreams of long ago
As you drifted with the current, soothed by soft rippling flow,
And a dreamy languor creeping nestled in your throbbing brain,
As the cool, delicious water lulled your [illegible] ache and pain.

There we'd swim far up the river, breasting the roaring tide,
As the current swept us down stream, chuckling as in haughty pride,
And the old stern wheeler "Natchez" poked her nose around the bend,
Big "Jim" Bludsoe was her pilot, and a staunch and stalwart friend.

Swimming up behind the tug boats, just to catch the foaming spray,
Rising, falling on the billows, and up and down as porpoise play,
Tossed upon the crouching white caps, tumbling on the white caps' crest,
Floating with the rippling current, diving with keen savage zest.

And the raft of Buffalo barges drifted down before our sight,
And the shrill steam whistles blowing, vexed the drowsy ear of night,
And the foghorn, hoarsely growling, seemed to split the brooding air
And black smoke stacks of the freighter loomed as ghastly as despair.

Then we heard the measured rolling of the war-presaging drum,
Growling like a testy tyrant and throbbing with a martial hum,
And we saw gaunt cannon frowning from the barracks on the shore,
And the sunset gun would thunder the summer day was o'er.

And we saw bright sabres glisten 'neath the big mellow harvest moon,
As we heard the stalwart soldiers [illegible] up a rousing tune,
And the haughty horses' hoofbeats tattering upon the way,
And the neighing and the prancing of the chestnut and the bay.

And big raw "recruities" drilling with awkward, clumsy grace,
And the spruce and brisk young [illegible] with the bronzed, poetic face,
And the jingling of the harness as the cavalry swept by,
And my Starsanatripes," the soldiers' the apple of our eye.

On the Chicago river, tossing [illegible]
Flowing [illegible] grisly shiver with [illegible]
cargo of [illegible] pion as it [illegible]
Twisting like a [illegible] ples through [illegible] town
Choked with drowned men and [illegible] plunging in oblivion's frown.

What's the use of always roaming like the eagle o'er the sea,
Questing like a swarthy gypsy o'er the green sward frank and free,
Take me back to old Chicago, for my heart is sick for home,
I can't stand dark alien faces scowling 'cross the sundering foam.

Take me back to old Chicago, far across the sundering sea,
Let me get in touch with Halsted—Bubbly Creek's the place for me.
Every man brags of his birthplace—Chicago is the town for me.
Oh, you big, old clumsy city, sprawling round the inland sea!
JAMES E. KINSELL,
Registry Division Chicago Postoffice.

Found Where Noah Live

K. V. Millard, who now resides in Indianapolis, has been for several years studying the archaeology of Egypt. For the last year, until his recent return to this country, he was engaged in making excavations at various places on the Nile, especially at Gizeh, in the neighborhood of the great Pyramid of Cheops.

"I have discovered during the last three years," said Mr. Millard, "just where Noah lived, where the ark was built, and that Noah built the great Pyramid of Khufu, known as the Pyramid of Gizeh.

"Noah was the greatest king this world has ever seen. He was the greatest of the Egyptian Pharaohs, not excepting Rameses the Great.

"Noah was a millionaire. The Biblical account of the flood gives no clew as to where he lived or where his ship carpenters were at work for 120 years constructing the ark.

"Noah was six hundred years old when the flood came. It is evident that he must have been a millionaire and a man of great authority. He built the ark at his own expense. Such a boat in those times would cost more than half a million dollars. He must have been in a position to command vast multitudes to work for him regardless of their interest in him in his work, or of their own personal inclinations.

"Noah built the great pyramid during the earlier part of the fifth Egyptian dynasty, and not more than twelve hundred years after God had expelled Adam and Eve from the Garden of Eden. If Noah's size and intellectual powers were proportionate at his age to ours, then in brain and brawn and stature he, too, must have been a giant."—Washington Star.

Crow Lived Many Year

George McCarren, a farmer living near this city, has just received a much prized little aluminum plate marked as follows: "Return to George McCarren, Orrville, Ohio," with which an interesting story is connected.

George McCarran, Sr., father of the man who received the little billet of aluminum, was an eccentric naturalist, and spent much time in the study of birds and insects. During McCarren's youth, about twenty years ago, he says he remembers being told by his father, the elder McCarren, of a dispute the latter had had with a fellow naturalist of Akron, Ohio, as to the age to be attained by a common crow, and finally to settle the matter McCarren attached an aluminum tag to a crow captured in the fields and sent the bird forth with the plate securely fastened to its neck by wires. The legend on the plate requested the finder to return it to McCarren if anything should happen to the bird.

As McCarren, Jr., remembers it, two men made a bet as to when the plate would be returned with twenty years. If the crow were killed or died they counted on the little plate being found and returned to the address on the plate. If this were not returned they believed it would be sufficient evidence that the bird was still alive. McCarren bet that the plate would not be returned within that time; hence he won the bet. The crow was shot by a farmer boy near Angers in Holmes county last week and the billet returned to the sender, the bettor, the elder McCarren having died before he could realize the proceeds and the satisfaction of winning his wager. The little billet is highly prized by the McCarrens as a memento of the father's eccentricity.—Orrville Correspondence Toronto Globe.

Power of the Came

"It's only lately that I've had any faith in dreams," says the young wife of a middle aged newspaper man. "I used to scoff at them, but now—well, I had a warning in a dream, a genuine warning, and it did me good. My husband doesn't believe in women racing and chasing over the country alone, and when he went out to St. Louis on a business trip last month he made me promise by the ashes of my ancestors that I wouldn't stir out of Washington till he came back. He hadn't been gone a week before my next door neighbor began to coax me to go to Atlantic City with her. She said I needed a change, and that for my husband's sake I ought to take it. She said we'd have a splendid time and that we'd get home before George came back, so that he need never know a thing about it. One way and another she worked on my feelings that I consented to go. We were to start Thursday morning. Wednesday night I had my dream. I dreamed that we went to Atlantic City and when George came home I didn't say a word about it. It was a Saturday morning when he came home, and my dream, and I thought he went out and bought a copy of a New York paper. It had a half page picture of the Atlantic City boardwalk in it, a reproduction of a photograph, and there, in the foreground, I was, wearing a bathing dress that George couldn't help recognizing. In my dream it quite upset up my happy home, and when I awoke I had lost all desire to go to Atlantic City. Not me. It isn't safe to keep your comings and goings a secret from anybody, with camera fiends running around loose."—Washington Post.

She Cooed to Pood

On Thanksgiving morning a pretty young woman in a squirrel coat and a big veil sat in an electric runabout that was standing in front of a house on West Fortieth street, opposite Bryant park. On the seat beside her was a little white poodle. Down the street came two young chaps who were celebrating the day by strolling around town in the time-honored attire of ragamuffins. One was dressed to represent a fat negress, and his make-up and dialect were good enough for the vaudeville stage. The other wore a Happy Hooligan costume that was irresistibly funny. Just as they came up to the girl in the automobile she cooed to the poodle and asked:

"Are you cold, sweetheart?"

The sidewalk comedians stopped, smiled at the girl with the most languishing air they could assume, and then bowed to her, crying:

"Not at all, dearest!"

Then suddenly they turned and glared at each other. "She done called dat ter me," cried the negress, with fine simulation of rage. "I beg your pardon, I really beg your pardon," the lady addressed herself to the poodle cried the Happy Hooligan with exaggerated politeness.

The girl sat in a state of abject consternation at the scene her words and the poodle had evoked.

"Go 'way, man! Go 'way!" bellowed the imitation negress, with a wave of her hand. "Disher lady——"

But the girl heard no more. She pushed the lever and the runabout rolled swiftly away from the rival fiends. Then the sidewalk comedians fell in each other's arms in a paroxysm of laughter at the evident admiration of the poodle worshiper.—New York Press.

COL. BECKWITH SAYS:

Take Pleasure in Commending Pe-ru-na For Coughs and Colds."

COL. PAUL E. BECKWITH.

Colonel Paul E. Beckwith, Lt. Col., retired, 1st Reg. Minute Men, in a letter from 1503 Vermont avenue, N. W., Washington, D. C., writes:

"From the unqualified endorsement of many of my friends, I take pleasure in commending your remedies for coughs and colds."—Paul E. Beckwith.

IN FIELD OR BARRACKS PE-RU-NA IS EFFICACIOUS.

The constant exposure to the elements experienced in an outdoor life is not so apt to cause coughs and colds as sedentary habits.

Those who are brought face to face with the weather every day in active life are much less liable to catarrhal diseases than those who are housed up in illy ventilated rooms. And yet both of these classes are more or less subject to catarrh and catarrhal diseases. The soldier as well as the civilian finds it frequently necessary to use Peruna on account of coughs and colds.

ALL CLASSES ARE SUBJECT TO CATARRH.

No one is exempt. The strong and healthy are less liable than the weak and ill, but none entirely escape.

Peruna has always been a great favorite with the military men, both in the army and navy.

The strongest kind of testimonials are received from officers of high rank concerning the virtues of Peruna for all catarrhal ailments.

Only a small per cent. of these can be used for publication for want of space.

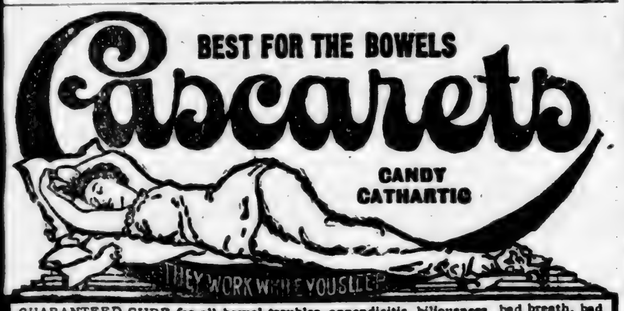
Mr. Harrison L. Deam, Burnside Post No. 8, Department of the Potomac, Colonel Encampment No. 69, Union Veterans' Legion, Colonel Green Clay Smith Regiment No. 17, U. V. U., Department of the Potomac, Military Order Loyal Legion, Department of Columbia, Major 34th Indiana Veteran Volunteer Infantry, writes:

"There is no longer any question as to the curative qualities of Peruna in all catarrhal troubles. Its successful use by many of my friends entitles it to confidence and endorsement."

BEST FOR THE BOWELS

Cascarets

CANDY CATHARTIC



GUARANTEED CURE for all bowel troubles, appendicitis, biliousness, bad breath, bad blood, wind on the stomach, bloated bowels, foul mouth, headache, indigestion, pimples, pains after eating, liver trouble, sallow skin and dizziness. Bryan's Story of Himself.

"My first ambition," said W. J. Bryan in a lecture at Topeka, Kan., "was to be a Baptist preacher. I dropped that ambition after I had seen a baptizing when I was still a boy, but my republican friends have been mean enough to say that my giving it up was due to the natural aversion of a democrat for water. My next ambition was to be a farmer and my third to be a lawyer. I fell into politics accidentally, but stayed there by choice. I had no intention when I went to Nebraska of going into politics. It is easily proved by the fact that at the time I went there the state was republican, the district republican, the county republican, the city republican, the ward republican, and I regret to add that there has not been so great a change in their political complexion as I would like."

Whist and Inventing.

Here is an incident illustrating how business problems pursue the inventor of the airbrake. A few years ago a game of whist was progressing smoothly, when after one of the deals Mr. Westinghouse did not pick his cards up, but kept drawing on a piece of paper before him. The others watched him curiously, remarked that they were ready to proceed, and then waited and waited, unable to understand why he should pay no attention to them. Suddenly, with a flash of triumph in his eye and exultation in his voice, he cried out, "Brown, I've got that natural gas meter fixed—here it is; it can not fail to work successfully," and picking up his cards he asked: "Whose turn is it to play?"

Ancient Timekeeping.

Ancient timekeeping has received new light from two remarkable stones lately unearthed by the German explorers on the site of the old Ionic port of Miletus. These stones are the remains of calendars, of which one is shown to date from 109 A. D. The year was divided into 12 zodiacal signs and against each month the motion of the remaining signs was given, with a note predicting the weather. On the left side were 30 holes, a wooden peg being moved forward one hole each day, thus giving the astronomical date.

Number of Suicides.

There were 5,340 suicides in the United States in 1899; 6,755 in 1900; 7,245 in 1901; 8,291 in 1902; 8,597 in 1903, and 9,240 in 1904. And all the fools are not dead yet by a long way.

Last year France produced 960,337,201 gallons of cider.

Itch cured in 30 minutes by Woolford's Sanitary Lotion. Never fails. Sold by all druggists, $1. Mail orders promptly filled by Dr. E. Detchon, Crawfordsville, Ind.

Only one man in 700 pays an income tax in India.

Taylor's Cherokee Remedy of Sweet Gum and Mullen is Nature's great remedy—Cures Coughs, Colds, Croup and Consumption, and all throat and lung troubles. At druggists, 25c., 50c. and $1.00 per bottle.

The Deepest Mine.

The deepest mining shaft has been sunk to a little more than a mile in Cape Colony and the deepest bore hole has reached the same depth in Silesia. It is said that there should be no insurmountable difficulties in carrying a shaft down twelve miles. An approximate estimate has shown that to reach a depth of two miles the cost would be $2,500,000. Ten years would be required and a rock temperature of 122 degrees Fahrenheit would be found; while to penetrate twelve miles would cost $25,000,000 and would take 85 years, the rock temperature expected being 272 degrees Fahrenheit.

A WOMAN'S MISERY.

Mrs. John LaRue, of 115 Paterson Avenue, Paterson, N. J., says: "I was troubled for about nine years, and what I suffered no one will ever know. I used about every known remedy that is said to be good for kidney complaint, but without deriving permanent relief. Often when alone in the house the backache has been so bad that it brought tears to my eyes. The pain at times was so intense that I was compelled to give up my household duties and lie down. There were headaches, dizziness and blood rushing to my head to cause bleeding at the nose. The first box of Doan's Kidney Pills benefited me so much that I continued the treatment. The stinging pain in the small of my back, the rushes of blood to the head and other symptoms disappeared."

Doan's Kidney Pills for sale by all dealers. 50 cents per box. Foster-Milburn Co., Buffalo, N. Y.

Rapid Progress in Japan.

Up to 1897 there was not a single public telephone in Japan. The first systems were installed in 1890. At the end of 1901 there were 179 public stations, with twenty-five city systems and 25,000 subscribers, while as many more were demanding telephone service. The Japs are capable of "hurricane fighting," but also capable of hurricane progress. In 1871 there were 19,000 telegrams sent; in 1881, 2,586,000; in 1891, 4,674,000, and in 1901, 16,221,000.

10,000 Plants for 10c.

This is a remarkable offer the John A. Salzer Seed Co., La Crosse, Wis., makes.

Salzer Seeds have a national reputation as the earliest, finest, choicest the earth produces. They will send you their big plant and seed catalog, together with enough seed to grow

1,000 fine, solid Cabbages,
2,000 rich, juicy Turnips,
2,000 blanching, nutty Celery,
2,000 rich, buttery Lettuce,
1,000 splendid Onions,
1,000 rare, luscious Radishes,
1,000 gloriously brilliant Flowers.

This great offer is made in order to induce you to try their warranted seeds—for when you once plant them you will grow no others, and

ALL FOR BUT 10c POSTAGE,

providing you will return this notice, and if you will send them 20c in postage, they will add to the above a big package of the earliest Sweet Corn on earth—Salzer's Fourth of July—fully 10 days earlier than Cory, Peep o' Day, etc., etc. [A. C. L.]

Jap Punishment.

In Japanese schools a mischievous boy is made to stand and hold a slender stick of lighted punk until it burns cut. If he is caught breaking off the lower end of the stick a second punishment is added.

15 YEARS OF TORTURE.

Itching and Painful Sores Covered Head and Body—Cured in Week by Cuticura.

"For fifteen years my scalp and forehead was one mass of scabs, and my body was covered with sores. Words cannot express how I suffered from the itching and pain. I had given up hope when a friend told me to get Cuticura. After bathing with Cuticura Soap and applying Cuticura Ointment for three days, my head was as clear as ever, and to my surprise and joy, one cake of soap and one box of ointment made a complete cure in one week. (Signed) H. B. Franklin, 717 Washington St., Allegheny, Pa."

Ancient Forks.

A London jeweler has made a collection of ancient forks used in England, which show some little known facts about the table manners of a few centuries ago. The forks, which are of solid silver, date from the sixteenth century. In many cases the designs in all this time have scarcely varied in any detail, and the forks look like those which might be bought today. The old forks were a great luxury in their time, and were only used by the aristocracy.

Last Cowhide Boots in Senate.

With the coming retirement of Senator Cockrell, of Missouri, will go the last pair of cowhide boots from the senate. When he first took his seat, twenty-nine years ago, he wore this ante-bellum footgear and he still clings to it.

Senator Cockrell is tall, broad-shouldered, but a gaunt, lean man. He stoops a little when he walks and bends his head forward, with a hand spread fan shape behind his ear when he desires to listen.

Studying Japanese.

Fifteen officers of the German army are at present studying Japanese in the Berlin Seminary for Oriental Languages.

Barrie has received more than $250,000 from his plays.

A Guaranteed Cure For Piles.

Itching, Blind, Bleeding or Protruding Piles. Druggists will refund money if Pazo Ointment fails to cure in 6 to 14 days. 50c.

There are 298 miles of railway in the Congo Free State.

H. H. GREEN'S SONS, of Atlanta, Ga., are the only successful Dropsy Specialists in the world. See their liberal offer in advertisement in another column of this paper.

Fifty-two billion dollars passed through the London Clearing House last year.

Mrs. Winslow's Soothing Syrup for children teething, soften the gums, reduces inflammation, allays pain, cures wind colic, 25c. a bottle

Single eyeglasses are prohibited in the German Army.

A Curious Custom.

A curiosity in the matter of bell ringing is to be met with at Fulburne, near Cambridge. The church bells there not only ring the hours of the day, but at intervals also the date of the month. Thus, at 12 o'clock noon on the 31st there would be forty-three strokes.

Queen of Madagascar.

The queen of Madagascar, whom the French deposed in 1897, is about to marry M. Garnier. She has become accustomed to the ways of civilization during her long imprisonment, and has developed a love of fine clothes, which her government allowance allows her to gratify.

Lost Courage With Names.

Like Lieutenant Ellis, of the Russian Baltic fleet, there are many descendants of Scottish or English families in the Russian service, but most of them have Russianized their names, as in the case of the Hamilton whose name is now Humaroff.

Many Accidents.

Persons are killed at the rate of one for every day in the year in the New York city streets by vehicles.

FABLES OF THE WISE.

Many a shaft at random sent
Finds mark the archer little meant.
—Sir Walter Scott.

Be valiant, but not too venturous.—John Lyly.

Be wisely worldly, be not worldly wise.—Francis Quarles.

Remembered joys are never past.—James Montgomery.

He who serves well his country has no need of ancestors.—Voltaire.

To love one soul for its beauty and grace and truth is to open the way to appreciate all beautiful, true and gracious souls, and to recognize spiritual beauty wherever it is seen.

The earth shall drink of the heat before she knows her nature or her strength. Then shall she bring forth to the uttermost the treasures of her bosom. For there are things hidden far down, and the deep things of life, till the fire reveals them.—H. W. Beecher.

Every individual will be happier the more clearly he understands that his vocation consists, not in exacting service from others, but in ministering to others, in giving his life the ransom of many. A man who does this will be worthy of his food and not fail to have it.—Tolstoi.

One of the most curious bridges ever built, perhaps unique in the history of the world, was that made by the British troops in 1860. They were marching on Pekin, but found their progress barred by a flooded river of considerable width and depth. A timber party was formed, but found nothing to cut down or borrow suitable for a bridge. At last a huge store of coffins were discovered in the village, and with these the soldiers built their bridge and crossed alive over the receptacles for the dead.

An English naval cadet who, on his training ship, took 11 first prizes, and in the first examination obtained 97.6 percent, was rejected at the medical examination on account of a small defect in one little toe.

Parkman's Sense of Justice.

A friend met Francis Parkman walking along the street holding two street boys by their coat collars. In reply to his friend's request for an explanation Parkman said: "I found this boy had eaten an apple without dividing with his little brother. Now I'm going to buy one for the little boy and make the big one look on while he eats it."—St. Nicholas.

Deafness Cannot Be Cured

by local applications as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever. Nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars free. F. J. CHENEY & Co., Toledo, O.

Sold by Druggists, 75c.

Take Hall's Family Pills for constipation.

Some one has been figuring out the number of words a man utters in a year and finds the average to be 11,800,000.

Nineteen pianos, every one of which was a wedding present, are in the possession of the Prince and Princess of Wales.

WOMEN'S NEGLECT

SUFFERING THE SURE PENALTY

Health Thus Lost Is Restored by Lydia E. Pinkham's Vegetable Compound.

How many women do you know who are perfectly well and strong? We hear every day the same story over and over again. "I do not feel well; I am so tired all the time!"

Miss Kate McDonald

More than likely you speak the same words yourself, and no doubt you feel far from well. The cause may be easily traced to some derangement of the female organs which manifests itself in depression of spirits, reluctance to go anywhere or do anything, backache, bearing-down pains, flatulency, nervousness, sleeplessness, leucorrhœa.

These symptoms are but warnings that there is danger ahead, and unless heeded a life of suffering or a serious operation is the inevitable result.

The never-failing remedy for all these symptoms is Lydia E. Pinkham's Vegetable Compound.

Miss Kate McDonald, of Woodbridge, N. J., writes:

Dear Mrs. Pinkham:

"I think that a woman naturally dislikes to make her troubles known to the public, but restored health has meant so much to me that I cannot help from telling mine for the sake of other suffering women.

"For a long time I suffered untold agony with a uterine trouble and irregularities, which made me a physical wreck, and no one thought I would recover, but Lydia E. Pinkham's Vegetable Compound has entirely cured me, and made me well and strong, and I feel it my duty to tell other suffering women what a splendid medicine it is."

If you are ill, don't hesitate to get a bottle of Lydia E. Pinkham's Vegetable Compound at once, and write to Mrs. Pinkham, Lynn, Mass., for special advice—it is free and always helpful.

COMMODORE NICHOLSON RECOMMENDS PE-RU-NA.

COMMODORE Somerville Nicholson, of the United States Navy, in a letter from 1837 R Street, Northwest, Washington, D. C., says:

"Your Peruna has been and is now used by so many of my friends and acquaintances as a sure cure for catarrh that I am convinced of the curative qualities and I unhesitatingly recommend it to all persons suffering from that complaint."

Our army and our navy are the natural protection of our country.

Peruna is the natural protection of the army and navy in the vicissitudes of climate and exposure.

We have on file thousands of testimonials from prominent people in the army and navy.

We can give our readers only a slight glimpse of the vast array of unsolicited endorsements Dr. Hartman is constantly receiving for his widely known and efficient remedy, Peruna.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. S. B. Hartman, President of The Hartman Sanitarium, Columbus, Ohio, and he will be pleased to give you his valuable advice.

A Tobacco Grower's Profit

is dependent upon a properly balanced fertilizer.

No crop is so easily spoiled as tobacco. The fertilizer must be *right*, and to be right it *must* contain at least 10% actual

Potash

Test it: Supply one patch with fertilizer with plenty of Potash, another with little or no potash, and note the results. Every tobacco grower should have our little book, "Tobacco Culture"—it will be sent free—write to:

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?

COTTON MEETING.

The Cotton Association of Chilton County convened at Clanton on February 1st and after hearing reports from the Southern Cotton Association which met at New Orleans on January 26, 1905, the following report was read and adopted:

Report of Committee.

"We, your committee on ways and means and permanent organization, submit the following report, to-wit:

"1. That, having faith in the work done and the plan adopted by the Southern Cotton Association at New Orleans on the 26th day of January, 1905, we recommend that the plan adopted by the said Association for organizing the Southern Cotton Associations, be strictly followed, and to this end that this body do not organize today, but recommend to its members that they take part in the Mass Meetings called by the said Southern Association to meet in the several school Districts of this County on the 11th day of February, 1905, for the purpose of organizing Chilton County.

"2. We further recommend that this body request and urge all cotton producers, merchants, bankers, manufacturers and members of the different professions of each school District in this County to lay down their private interests for one day and meet in the several School Districts on February 11th, 1905, and devote that day to the general welfare of the people of our County. Let us come together and thus make a grand success. One for all, all for one.

"3. We further recommend that W. H. Conway, as Chairman, be authorized and requested to communicate with Commissioner of Agriculture Poole, or other proper officials of the Southern Cotton Association, and request them to furnish him such blank forms and papers pertaining to the organization as they may be able to supply, and that said Conway, upon obtaining such supplies, shall furnish them to the several School Districts on February 11th, to the end that our organization may be regularly formed.

"4. We further recommend that the sense of this body be expressed today upon the subject of holding a County Fair some time in the Fall of this year and offering suitable prizes for the purpose of encouraging our farmers to diversify their crops and grow their own meats and food products at home All of which is respectfully submitted.

"W. H. CONWAY,
"W. T. HAND,
"TIPTON MULLINS,
"W. I. MULLINS,
"E. A. MATTHEWS,
"Committee."

So much of the plan adopted at New Orleans as is necessary for present purposes is as follows:

"Whereas, All the various industries of the world are under thorough and systematic organization to protect, develop and manage their special interests; and

"Whereas, The cotton interests of the Southern States are not organized, and by reason of not being so organized there is no uniform system for regulating production, securing markets, financing the products and generally supervising and advancing such interests; therefore, be it

"Resolved, 1. That there shall be one supreme organization, known as the Southern Cotton Association, embracing all of the cotton producing States and Territories, to evolve and execute practical and efficient plans with reference to cotton production, cotton supply, cotton marketing and financing, by systematic and carefully adapted organization of all cotton interest and by legislation as experience suggests to effect and enforce the purposes of the organization.

"2. The purposes of the association shall be to regulate cotton production, cotton supply and financing, and especially cotton marketing, using every effort to secure broader markets, and to limit the production to the demand at remunerative prices, and to reduce to a minimum all expense of handling cotton and its products from the time it leaves the field until it reaches the consumer.

"3. That there shall be an organization in each cotton growing State and Territory subordinate to the central organization, to be known as the State or Territorial organization.

"4. That there shall be an organization in each county or parish producing cotton of each cotton growing State subordinate to the State or Territory central organization.

"5. That there shall be an organization effected in each of the civil subdivisions of the county or parish subordinate to the county or parish organization and under regulations of the county or parish organizations.

"6. There shall be a president, a vice president, a secretary and a treasurer of the 'Southern Cotton Association,' and of the organization of each State, Territory, county and parish, who shall hold office for one year and until their successors are elected and qualified.

"7. The duties of each officer shall be prescribed in the constitution and by-laws for each organization as hereinafter provided.

"10. That the cotton producers of each School District of each county or parish shall meet on the 11th day of February, 1905, organize by election of officers, and, after so organizing, shall at once proceed to elect three representatives from the cotton producers of that precinct to the county or parish association, to be held on the 16th day of February, 1905, at the parish or county seat.

"Each county or parish association shall, on the date to be named, convene at the county or parish seat and organize by the election of its own officers and its representative to the State organization.

"Second—That there shall be held in each school district or other smallest political subdivision of the county on the 11th day of February, 1905, at 1 o'clock p. m., a meeting of all citizens of said district or other small political subdivision who are interested in the growing of cotton, which meeting shall elect a committee of three on acreage and membership.

"Third—At said precinct meeting the farmers and land owners present shall be asked to sign the following agreement:

"We, the undersigned farmers, or land owners, living in (school district) (beat), (precinct), No. ——, County of ——, State of ——, hereby pledge ourselves to reduce the acreage planted by us in cotton, and to reduce our consumption of fertilizer in growing cotton, as shown by the statements set opposite our names.

"Name, ——; acreage, 1904, ——; acreage, 1905——; fertilizer, 1904 ——; fertilizer, 1905, ——.

"Fourth—That said Committee on Acreage and Membership shall immediately canvass said district, and ask all farmers and land owners in said District who do not attend said meeting to sign and pledge, and said Committee shall return said pledge to the Chairman of said precinct.

"Fifth—Said precinct chairmen shall preserve said pledges, and they shall immediately make a written report to the county chairman, showing the total number of acres planted in cotton in said precinct in 1904, and the total number to be planted in 1905, the total amount of fertilizer used in growing cotton in said precinct and the total amount to be used in said precinct in said years."

The membership fee for all persons joining this association shall be 25 cents and fees, this to be collected and turned over to the treasurer of the county.

Write to W. H. Conway, Jemison, Ala., for stationery needed in the School District meetings on February 11th unless names and addresses have already been left with him for supplies.

W. H. CONWAY.
Chairman.
J. H. DENNIS, Secretary.

BEAT NINE ITEMS.

Miss Lottie Kennedy, whose time expired as assistant at the Cross Roads school last Friday, went home Monday. Miss Kennedy was a good teacher and We regret to lose her from our school and neighborhood. Messrs. Johnie and A. F. Mims, our enterprising saw mill boys, made a trip to Birmingham last week. R. D. Hardy, late of this vicinity, carried a nice drove of milch cows off to Ensley last week. Our farmers are all anxious to hear from the New Orleans convention, and ye writer would love to hear of cotton going up. Success to THE UNION.

NIM ROD.

MARS HILL.

We hear most every day among our neighbors talk as to fertilizer and cotton planting. In regard to fertilizers, if we farmers would haul more straw and leaves and litter and make our own fertilizer we would make a great saving to ourselves. Now, brother farmers, the time is drawing near to sow our spring oats, so put in that 25 per cent that you are going to reduce your cotton into oats and corn and sweet potatoes, all things we can use at home and save us spending our cotton money. We have all said we would abide by the New Orleans convention and now let us do it. You know the say (among a certain class) that the farmers won't stick together in an organization, so let us show them that we have "stickability" in us. We have stuck together in one instance and won the fight, and we can win the next one all right. O. P. Scott and others had a fox hunt Friday night, and caught one. Success to THE UNION and it subscribers.

MARS HILLIAN.

RANDOLPH.

Our people are feeling rather "blue" over the price of cotton, but in spite of the slump Randolph enjoys a good trade. J. C. C. Woolley and Mura Smitherman, of Lawley, were in town Friday. W. G. Hayes and H. H. Armstrong, of Macedonia, were visitors Friday. Messrs. Gray and Crockett, of Decampo, are visiting J. E. Smith. John S. Waldrop was in town Wednesday. Tom McCumber, of Selma, is visiting relatives here. We sympathize with Mr. and Mrs. Oliver Smitherman in the death of their baby. They awoke one night last week and found it dead in bed. Miss Monte Hayes left for Birmingham Wednesday to visit her sister, Mrs. Hightower. Miss Monte has been conducting the Randolph hotel for several weeks, during which she won golden opinions. Mrs. Hardie Smitherman is still in poor health. Jasper Smitherman, one of Chilton's former sheriffs, but now, of Bessemer, left Thursday night to take the train for his home. F. J. Fitts, of Hubbard, was a welcome visitor Friday. Mrs. Sophia Hightower, of Birmingham, is visiting here. Let all the correspondents of THE UNION arouse themselves and give us the news of their respective localities. We wish to hear from them regularly.

"ONE OF THE BOYS."

COLLINS' CHAPEL.

A few dots from here I trust will prove progress-ive.

[illegible] cotton speculators want our [illegible] fight them on that a while longer, boys, before we give up for "it's always the darkest just before day." Well, I hope all of the voters are qualified, for I feel like there will be an election on stock law and school tax. With best wishes to THE UNION.

J. D. COLLINS.

COOPER.

Editor Union:

Please allow me space to publish this. I have a boy named Ward Jones that won't stay at home. He is between 15 and 16 years old and is small for his age. Now, I forbid anybody in this state or adjoining states to feed him or let him stay all night. He ran away in December and went to Prattville, and his uncle and brother persuaded him and paid his way to come home. He came home on the 29th of January, but left next day again. I've not heard from him since, and did not get to talk to him any.

J. S. JONES.

INSTALLATION AT JEMISON.

Geronermo tribe, No. 99, Improved Order of Red Men, installed officers for the present term on their last meeting night (23d sleep, cold moon). Officers installed were: J. M. B. Johnson, Prophet; J. H. Patton, Jr., Sachem; J. W. Patton, Senior Sagamore; J. E. Durham, Junior Sagamore; E. B. Langston, Chief of Records; H. L. Durbin, Keeper of Wampum. The tribe is making good progress and expects to take the scalps of many pale faces during the present term.

Fertilizers Falling Off.

Nashville, Tenn.—According to the railroads, shipments of fertilizers from this, the largest distributing point, will show a falling off of 40 per cent. this season.

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union, both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer. tf.

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, puts himself liable to arrest and fine the same as for theft.—Ex.

To John O. Dunivan, Claud B. Dunovan—Probate Court.

To John O. Dunovan, Claud B. Dunovan and Robert Dunovan.

Whereas, Beulah Matthews, an heir at law of the estate of Jeremiah Dunovan, deceased, has filed her application in said court for a sale of the lands described in said application, belonging to the estate of said decedent, for the purpose of division, upon the ground that said land can not be equitably divided, and the 6th day of March, 1905, has been appointed for the hearing of said application, you are, therefore, hereby notified to appear before said court on said 6th day of March, 1905, to contest said application, if they think proper.

Witness, my hand, this 31st day of January, 1905.

L. H. REYNOLDS,
Judge of Probate.

Bull Fight the Thing

In Spain Young and Old Worship the Matador.

By S. L. Bensusan.

PAN y los toros! When you have lived awhile in Spain you understand what this cry means, the cry of a sun-stricken, pleasure-loving people not free from the lust of cruelty. The bull ring is half in shade and half in blinding sunshine, the shady side is dear, the sunny side is cheap and crowded at every corrida, but Pedro and Juanna could only afford the annual visit to the sunny side, and this luxury always followed Holy Week. To be sure it was an event. On the great Sunday Juanna would rise early and devote an hour or two to Pedro's solitary suit before its owner was awake; he generally had a new tie or a new waistband to celebrate the happy day, while Juanna had some noticeable piece of finery fresh for the occasion. They would take their breakfast with them to eat in one of the public gardens and enjoy the bottle of wine which cost in English money rather less than threepence. They would have good seats on the sunny side close to the barrier, so that they should not miss any piece of work however delicate. The expense of that day, when seats and finery and wine, oranges and sandwiches were paid for, sometimes amounted to ten pesetas, nearly six shillings in English money, and such a sum is not lightly spent from the proceeds of paper selling and cigar making. It was a red-letter day, a day of ample food and endless shouting and generous bloodshed. Twenty horses and six bulls would sometimes make the sum total of slaughtered things, and then Pedro and Juanna would feel that there were compensating joys in life after all."—Metropolitan.

Grain Rates Reduced.

Philadelphia, Pa.—Announcement has been made by the Pennsylvania Railroad Company, the Baltimore and Ohio Railroad Company and the Chesapeake and Ohio Railroad Company, of a reduction in the grain freight rate from Chicago to Philadelphia, Newport News and Baltimore. The new rate will become operative on February 1. The amount of the reduction is not known.

Ozark Bank Authorized.

LOCAL AND PERSONAL.

J. A. Neeley was a pleasant visitor Thursday. He reports that Mrs. J. W Neeley is quite ill.

J. A. Huett and W. M. Moon were in Clanton Thursday. Mr. Huett has bought a farm on the edge of Autauga county, near Billingsley. Sorry to lose him from Chilton, but they need some good voters over in Autauga.

Circuit Clerk Sam W. Collins spent Friday in Montgomery.

J. T. M. Chandler was in Clanton Saturday.

Several young republicans, among them G. L. Giles, B. E. Williams, M. L. Giles and R. W. Foshee, were in town Saturday.

Z. A. and J. W. Avery were pleasant visitors Saturday.

R. J. Williams was in Clanton Saturday.

J. H. Thompson was a pleasant visitor Saturday.

Mrs. M. E. Smith, widow of the late M. L. Smith, is here on a visit to her son-in-law, A. C. Smith. She intends moving in the future with her daughter, Mrs. William Kelley, at Sylacauga.

[illegible] was in Clanton Mon-

G. W. Avery was in town Mon-

[illegible] Reynolds spent Monday and [illegible] Jemison on business.

J. D. Caton and F. D. Cherry were pleasant visitors Tuesday.

J. N. and G. W. Scott were in Clanton Wednesday.

Dick Price was a pleasant visitor Wednesday.

W. H. Conway spent Tuesday and Wednesday in Clanton looking after [illegible] Time cotton association.

J. J. and J. M. Grant, of Verbena, were in Clanton Wednesday.

R. P. and James Barrett were in town Wednesday.

J. N. Dennis was in town Wednesday.

Deputy Marshal Goodgame has made two arrests in Chilton with prospects for more.

Parties unknown placed dynamite in Lyon's photograph gallery and utterly demolished the contents.

S. J. Dawson was in town Wednesday.

R. P. Kendrick was a pleasant visitor Wednesday.

MARRIAGE LICENSES.

J. M. Waller and Miss Etta Moon. M. H. Bussie and Miss Ora Sears. M. O. Culp and Miss Lula Duncan. W. J. Headley and Miss L. A. Mims.

AN ABSOLUTELY FREE OFFER.

The Union would like for everybody to accept from us a free complimentary gift—a year's subscription (which is 50c per year) to the Dixie Home, one of the largest, brightest and finest illustrated magazines in the world. It is full of good reading and is the very paper to go into every home in the south. Now, if you want to receive this family magazine a whole YEAR FREE, all you have to do is to pay amount you are in arrears, if any, and send us $1 for another year's subscription to the Union. The Dixie Home will come to you absolutely FREE

This is one of the best and most liberal offers ever made by any publisher. So come on at once, and renew your subscription or become a new subscriber and secure this magazine FREE. tf

For the Safety of the Public.

Possibly the Supreme Court of New Hampshire has formed the way to a settlement of the plea of temporary insanity in cases of homicide, with a sympathetic jury to accept it. The number of persons arraigned for trial on a charge of homicide who succeed in demonstrating to juries that they were sane immediately before the act, insane at the time of the act and sane just afterward, is surprisingly large.

But the New Hampshire Supreme Court has called a halt in the case of William Henry Wilkins, who murdered his wife with an axe and pleaded momentary insanity as an excuse. The court accepted the plea of not guilty because of momentary insanity, but astonished the prisoner by ordering his commitment to the State prison, without hard labor, "for the safety of the public," for an indeterminate period and until discharged by due order of the court.—Cincinnati Commercial-Tribune.

She Declined the Seat.

Georgie was a well behaved little boy. He had been especially taught by his father to be polite to ladies and in a crowded car always to give up his seat to one of the gentle sex, regardless of age, social condition and good looks. On a New York City subway car last Sunday papa had an unlooker-for and embarrassing illustration of how well Georgie had learned his lesson. The car was crowded, but Georgie had pre-empted a seat. A handsome young lady entered at one of the stations at which the train stopped. There was not a vacant seat.

"Take my seat, ma'am," said little Georgie, as he doffed his cap.

She didn't take the seat. She looked fierce enough to box his ears, and the passengers had to laugh in spite of her mortification. Georgie was sitting on papa's lap when he so gallantly offered to give up his seat to the pretty young lady.

JAPANESE WAR OUTFIT.

TROOPS WELL PROTECTED AGAINST COLDEST WEATHER.

All Clothing Made of the Best Material—Great Coats of Thick Woolen Goods and Hooded—Many Details of How the Health of Soldiers Is Preserved.

Miss McCaul, who was recently commissioned by Her Majesty to go to Japan to inquire into the working of the Japanese Red Cross society, has brought back with her the complete outfit of a soldier of the Japanese Imperial Guard, which was presented to her by Gen. Teranchi, the minister of war, together with samples of the food supplied to the soldier on active service. These various articles, which have been inspected by the king, who has expressed great interest in the many ingenious devices they present, will shortly be exhibited at the Royal United Service Institution, Whitehall. They are worthy, says the British Medical Journal, which publishes special photographs, of the most careful study by all military officers and afford a striking example of the care and strong common sense with which the health and comfort of the soldier are considered by those responsible for his outfit and the minute attention to detail which is characteristic of the Japanese army.

One notable feature of all [illegible]ing is that it is apparently made of the best material. The [illegible] for winter clothing appears to be [illegible] and warm. In the neat blue parade uniform, jacket or tunic, plain flat brass buttons are done away with as far as possible, fastenings being in nearly all instances carried out by means of flat hooks and eyes. The summer jacket and trousers are of khaki drill; the jacket is perfectly plain, and there are no buttons on any of the garments. A strip of white linen is issued to wind round the neck as a collar inside the tunic. The [illegible] cap which goes with this uniform is a marvel of lightness. It has a detachable linen cover to be used in summer, from which hangs a linen screen to protect the neck. This screen being made in three parts—a centre and two sides—allows the air to pass freely. For all uniforms the trousers are made like riding breeches, in that they end above the ankle, where they are made to fit tight to the limb, being fastened by tapes instead of buttons.

Putties or gaiters must, of course, be worn with these. The ordinary great-coat is of thick woollen cloth with bone buttons. It has a hood which can be drawn over the head. A comparatively small detail in the cut of this, as also of the winter great-coat, shows how carefully health and comfort, and therefore individual efficiency, have been considered. The free edges of the front, instead of being cut straight, slope outward below the waist, making the skirt of the coat lap over more completely below; it is thus prevented from gaping in walking, and the legs and knees are protected from rain. The front of the skirt can be buttoned back to allow free movement of the lower limbs for marching in dry weather. A mosquito net "helmet" or head covering in addition to its value as a preventive of malaria, is a great comfort in summer, where there are many flies.

The "coldproof" winter overcoat merits some description, for it seems to be devised to insure warmth in the most severe climate. Made of thick woollen cloth, it has a large collar covered with fur, which is of course inside when the collar is raised. From the middle of the edge of this collar a button or hood can be pulled out so as to cover the head, and over this can be worn the ample detached woollen "coldproof" hood, which from its shape and long ends to wrap round the neck recalls the hoods of Chaucer's time. Hanging by cords from the neck are large gloves or mittens—one division for all the fingers and one for the thumb, they can thus be worn off, when the hand is required for firing or any other purpose, without being lost. A sheepskin waistcoat with the wool outside is also issued for severe weather. It fastens at one side. The underclothing is of similar good material to that of the outer garments, a cotton shirt and drawers for summer and a thick knitted woollen jersey, or sweater, and pants for winter. The ribbed woollen stockings are made without heels, and warm toecaps and issued in the coldest weather to wear over the stockings to prevent frost bite. These toecaps are made of a lamb's wool material like very thick lint, the soft surface being inside. A roll of fine striped flannel of very good quality and about a yard and a half long is issued to be wound round the abdomen and takes the place of a cholera belt. It is interesting to note that the woollen cloth and blanket are made in the Japanese military woollen cloth factory, while hemp cloth, cotton cloth and leather are made or prepared in private factories in Japan and cut out and sewn in the military clothing depot.—London Globe.

The Things Necessary.

Motorist—Are all the tools in the tool-chest?

Valet—Yes, sir.

Motorist—Are all the cushions and lap-robes in the tonner?

Valet—Yes, sir.

Motorist—Is the tank full of gasolene?

Valet—Yes, sir.

Motorist—Have you brought down all our goggles?

Valet—Yes, sir.

Motorist—Well, run up to my room and bring the roll of bills out of the top bureau drawer so that we will have enough money to pay our fines. Then we shall be ready to start.—Town Topics.

The Choice.

All the folks in our house had to tell one day
In which one of all the rooms they liked best to stay.
Mother chose the living-room, where we mostly sit,
Sister likes the parlor nights, with the big lamp lit,
Grammy said her own room's better'n all the rest,
Jack (he's always studying) likes the libr'y best.
I just love the attic, where ther's room to swing
Or roller-skate or spin a top or play most anything.
But when I asked my father, he laughed and said that he
Guessed he'd choose whatever place mother chanced to be!
—New Orleans Picayune.

Ransomed

BY R. C. PITZER

(Copyright, 1904, by Daily Story Pub. Co.)

They sat on a flat boulder in Pine Canon, while a heavy-set, bull-necked man in a black mask leaned on a rifle and looked at them. The girl was white and silent, and her escort held her hand. He was a young man, dark and imperious, but his eyes had a soft glow in them, and he looked at her with that ecstatic expression which but one woman can bring to a man's face.

"Don't worry," he whispered, as he fondled the little hand, "it isn't anything serious. The men have my checks to pay for our ransom, and when they return with the money we will be released. It is only the matter of an hour or so. Turn your head, Mary—I do believe you are crying. And I thought you such a brave girl," he continued in a tone of forced raillery. "You are always laughing at me because I am timid with dogs, and last week you refused me again, for no other reason than because I ran away from a gang of drunken rowdies. I never thought to see you crying over such a harmless adventure."

"Don't make fun of me, Harry," she pleaded, as she struggled with her tears. "I never said that I was brave. I know that I'm a c-coward, but I want my h-h-husband to be brave for both. And you're not," she continued, indignation getting the better of her fear. "When these men came, you just held out your hands; and you've been like a l-l-lamb."

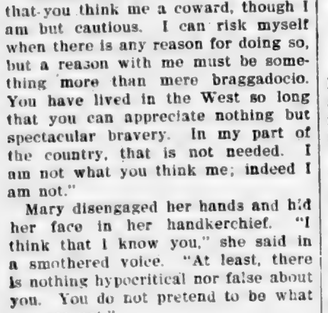
Harry turned his head aside to conceal the broad grin that flashed across his face. Then he moved nearer and caught her other hand.

"Listen, Mary," he said. "I know that you think me a coward, though I am but cautious. I can risk myself when there is any reason for doing so, but a reason with me must be something more than mere braggadocio. You have lived in the West so long that you can appreciate nothing but spectacular bravery. In my part of the country, that is not needed. I am not what you think me; indeed I am not."

Mary disengaged her hands and hid her face in her handkerchief. "I think that I know you," she said in a smothered voice. "At least, there is nothing hypocritical nor false about you. You do not pretend to be what you are not."

Harry's face was convulsed in an extraordinary manner, and turned to a sea-green hue. "No," he answered faintly, "I have never pretended to be better than I am, even to you. But if anything would make me false to myself, it would have been a desire for your approbation; a wish to be what you would have me be."

"I understand you," she said. "I even know what you are thinking of now. You believe that I might—love you—if you could make me admire your bravery. Is it not so? And you are thinking of attacking that man



Don't worry," he whispered.

there. It would be a brave deed, Harry. It would be too brave—too rash."

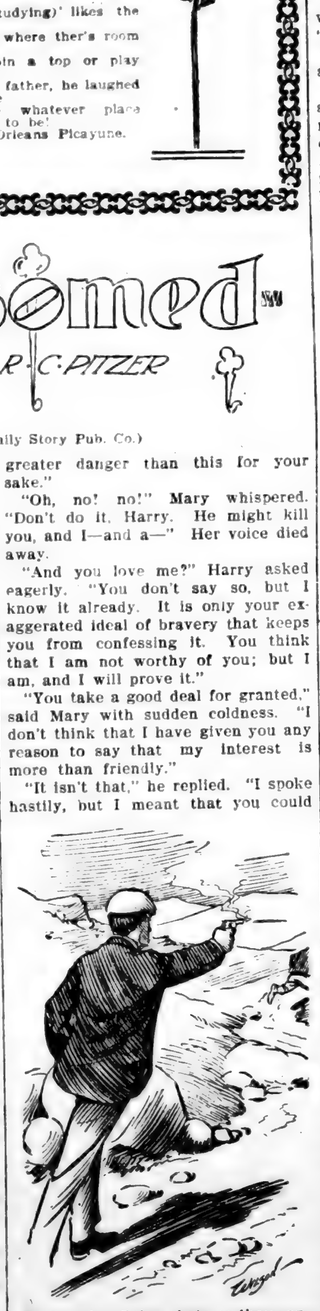
"No," Harry answered, "not rash, and not as dangerous as you think. It would need but a little quickness, and I have that. I am going to do it, Mary. I am going to get you away from here before the men return. I will not ask you to marry me—I will not do this for reward. But you know that I love you, and I would risk a greater danger than this for your sake."

"Oh, no! no!" Mary whispered. "Don't do it, Harry. He might kill you, and I—and a—" Her voice died away.

"And you love me?" Harry asked eagerly. "You don't say so, but I know it already. It is only your exaggerated ideal of bravery that keeps you from confessing it. You think that I am not worthy of you; but I am, and I will prove it."

"You take a good deal for granted," said Mary with sudden coldness. "I don't think that I have given you any reason to say that my interest is more than friendly."

"It isn't that," he replied. "I spoke hastily, but I meant that you could



Exchanging flying shots as they ran.

love me if you would. At least, I will show you that you have a false opinion of me. Hello there, Mr. Outlaw!"

"Well, whatcher want?" growled the mask. "You sit still there, Fletcher, an' don't come none of your Arkansas tricks on me. Whatcher want, hey?"

"I want a match," Harry returned, "and I'll trade you a cigar for it. Will you come here, or may I walk over there?"

"Come along," said the man as he threw the rifle in the hollow of his arm. "I don't care if I do smoke, seein' it's you."

"No! no!" Mary whispered. "I didn't mean it, Harry. You must not do anything so foolish."

"I must go, anyhow," he answered. "The man will be suspicious else, and perhaps start a row himself. You must not worry, for I won't do anything that seems dangerous." And with a final "it will be all right," he strolled over to where the outlaw stood.

"Here," he said, offering a cigar, "take that, old man—and that!" and that!" delivering two heavy blows on the man's chest. He of the mask staggered backward, and Harry snatched the revolver that dangled by the outlaw's hip.

"Now," he cried, "we're on even terms, and I'll teach you what it means to bother Miss Lindsey."

The outlaw did not wait to be taught, nor to regain his equilibrium. The blows started him down the canon, and, still at a half-falling angle, he began to run. Harry bounded after him, while Mary, with clasped hands and sparkling eyes, sprang to her feet.

"Harry!" she cried, "come back—come back to me!" But Harry did not heed her, and she sank down on the boulder.

Harry and the outlaw were exchanging flying shots as they ran, and in a moment the fugitive bounded behind a heavy dyke of granite. When Harry reached the rock, he found the man sitting down, and blowing and puffing from his exertions. The mask had fallen off, and a round, red, laughing face was disclosed.

"Ge-whil-whillikens!" the outlaw gasped. "I ain't no good at a run no more. It kind of—ah—cleans me out. Ain't got no wind at all. How'd I do it, partner? Say, that was rich. Ha! ha! ha!"

"Ssh! ssh!" Harry hissed. "You'll give the whole thing away, Evans, and I can't stand another 'no.'"

"Is it goin' to work?" Evans asked. "She's a fine gal, Fletcher, an' you can be proud of her anywheres. If it wasn't for us knowin' you to be a pretty good man—"

"For heaven's sake!" Harry cried in desperation; "get out! Man! man! will you sit here like a fool until she comes and catches you?"

"All right, Fletcher, all right. You needn't get warm about it. If it was me, though, I'd be makin' tracks up to where she's waitin'. As you're in no hurry—" But Harry had turned at this suggestion, and was stumbling and puffing over the boulders.

Mary saw him coming and ran forward. "You are not hurt?" she asked. "Have you killed him?"

Harry shook his head. "He got away," he gasped.

"And we must get away, too," Mary said with exaggerated fear. "He'll meet the others, and all three will come. They will kill you, Harry!"

"I think that those men are done for," Harry returned. "We needn't hurry on their account. But, Mary, you don't say what I want you to say. Have you no word for me, dear?"

Mary smiled and blushed. "Hush," she whispered. "I didn't care about bravery, Harry. It was all make believe, and when I was ready, I would have said yes without the help of your men."

"What!" Harry exclaimed.

Mary's smile broadened into a delicious grin, and she made the canon echo to her rippling laughter. "You are not the only actor," she gasped. "I recognized their voices—every one of them—and I knew that you had hired them. But don't you care, dear," she continued soothingly, as she saw his miserable despondence, "I won't tell about it. We will keep it just between ourselves, won't we?"

And they did.

Weak in Orthography.

Col. Phil Thompson tells of the trials experienced by a friend of his who recently acquired a new stenographer. The dear little thing is a trifle weak in orthography, but Thompson's friend has been loath to call her down, in view of the fact that she tries so hard to please. He is too big hearted to discharge the girl, for she needs the money; so he corrects the spelling himself.

Recently, however, he was forced to call her attention to the fact that in a letter of some seventy-five words, she had committed eight errors, among which was "fourty."

"My, my!" exclaimed the friend. "This won't do, you know; I can't stand for forty spelled this way!"

The willing worker looked over his shoulder at the offending word. "Gracious!" she exclaimed, "how careless of me! I left out the 'gh,' didn't I?"—Collier's.

Central African Lakes Drying Up.

In 1859, some distance southeast of Lake Nyassa, in central Africa, Livingstone discovered Lake Shirwa, a body of water about thirty miles long and fifteen miles wide, which has now entirely disappeared with the exception of a few ponds. Lake Nyami, discovered by Livingstone at the same time, has also disappeared. The cause of the change appears to be a gradual drying up of bodies of water in Central Africa. As marking the results of a single half-century the changes named show a rapidity of mutation in those inland waters not equaled elsewhere in the contemporary geographer's survey, though the shrinking of Salt lake in Utah is also very remarkable.

Open the Door of Your Heart.

Open the door of your heart, my lad,
To the angels of love and truth;
When the world is full of unnumbered joys,
In the beautiful dawn of youth,
Casting aside all things that mar,
Saying to wrong, "Depart!"
To the voices of hope that are calling you
Open the doors of your heart.

Open the door of your heart, my lass,
To the things that shall abide;
To the holy thoughts that lift your soul
Like the stars at eventide.
All of the fadeless flowers that bloom
In the realms of song and art
Are yours, if you'll only give them room.
Open the door of your heart.

Open the door of your heart, my friend,
Heedless of class or creed,
When you hear the cry of brother's voice,
The sob of a child in need.
To the shining heaven that o'er you bends
You need no map or chart,
But only the love the Master gave.
Open the door of your heart.
—Edward Everett Hale.

Considerate Irishman.

A French chauffeur was driving in Ireland when he rode over a cyclist. The injured man apologized. "Pray continue your journey," said he. "I am really ashamed to have incommoded such a sportsman." Next day the chauffeur received a letter from this sympathetic stranger full of regrets and making tender inquiries about the state of the automobile. "I must tell you," it proceeded, "that as a result of yesterday's accident, for which I alone am responsible, I expect to die soon. But I am arranging to leave you a third of my property so that you can embellish your automobile with all the latest improvements."

Will Breed Zebras in Africa.

Lord Howard De Walden, probably the richest young man in England, has gone to east Africa on a hunting expedition after big game. He has purchased a large territory near Lake Victoria Nyanza, where he intends to establish a farm for breeding zebras. His estate, which consists entirely of property in London, is worth over $1,000,000 a year.

Duty a Cordial.

No man's spirits were ever hurt by doing his duty; on the contrary, one good action, one temptation, resisted and overcome, one sacrifice of desire or interest, purely for conscience sake, will prove a cordial for weak and low spirits, far beyond what either indulgence or diversion, or company, can do for them.—Paley.

SWIMMING A GOOD EXERCISE.

Tests Show It Makes Greatest Increase in Red Blood Corpuscles.

A series of experiments conducted by Dr. Philip B. Hawk, demonstrator of physiological chemistry at the University of Pennsylvania, has proved that swimming is the most beneficial exercise.

As described by the World's Work, Dr. Hawk visited the dressing rooms at the athletic field and immediately before each athlete left for his exercise drew blood from him by means of the regularly prepared sterile needle. Then when the athlete returned to the dressing room after running, jumping, pole-vaulting or engaging in water polo the needle would again be brought into play and a second sample of blood drawn.

Analysis of the blood to discover how far each exercise increased the number of red corpuscles showed that water polo and other forms of swimming resulted in the largest increase. The swimming exercises were thus shown to be the most beneficial, for the greater the number of red corpuscles the richer is the blood. Swimming resulted in an average increase of 21 per cent, as against 17 per cent for the next best exercise—short-distance running.

After one of these examinations during the athletic season, while the men were in the pink of condition and exerting themselves to the utmost, Dr. Hawk found the following results, in round numbers, from the count of the blood corpuscles: Percentage of gain after the 100-yard dash, 25; 120-yard hurdles, 21.5; half-mile run, 18; mile run, 14; two-mile run, 9; broad jump, six jumps, 15; three-minute water polo game, 27.

THE LAW VS. KINDNESS.

Good Samaritan Suffers for Eccentricities of Ohio Statutes.

"Got a buzzard here?" inquired Charles W. Heyl, deputy game warden, of Mrs. Frank Edgerton of South Sixth street, according to the Columbus, Ohio, correspondent of the New York Herald.

"Yes, sir," the woman replied.

"Want to sell it?"

"No, sir; but you can have it if you want it."

"Can I see it?"

"Certainly; just come this way, please."

And Mrs. Edgerton walked back to the coal shed, where the bird was confined, opened the door and then walked back to the house. In a moment or two Heyl appeared with the buzzard under his coat. He showed a badge and said: "Tell your husband that I am a game warden and for him to appear before Squire Lakin."

A son of Mr. Edgerton, who is an employe in the Panhandle shops, while strolling through the fields, found a buzzard with a broken leg. The bird was fed and kindly treated and became a pet, running around the neighborhood as it pleased. When the family went away from the house the buzzard would be confined in the coal shed.

An affidavit charges Edgerton with having "in his possession a buzzard not then and there being in captivity prior to May 6, 1902, and not then and there having the permission to do the aforesaid act."

The Man Who Might.

My grandpa used to tell us boys
About a man he knew
'Way out in northern Illinois,
In eighteen forty-two;
This fellow's brag of how he might—
When first out west he come—
Have easy bought Chicago's site
For one small jug of rum.

We'd always ask grandfather why
The feller did not trade,
An' he'd say: "'Twas just a lie
The chap made up, I'm afraid;
But even though he'd looked ahead
And heard the busy hum
Of future years, when all is said,
He'd rather had the rum."

Then grandpa'd laugh a bit an' say,
"As we go down the years—
No matter where extends the way,
Or how our fortune steers,
We'll surely meet the helpless wight,
At every turn, I vum!—
Who might have bought Chicago's site
For one small jug of rum."
—Pittsburg Post.

Writer Says Genius Is Insanity.

According to Mrs. Kate Upson Clark, the way to be happy, though a genius, is never to marry. "The poet's wife," said Mrs. Clark in a recent address, "does not care for poetry after the first week, any more than the grocer's boy does for figs. She never wishes to tell of the neighborhood's gossip but she interrupts some great thought of her husband's; then he imagines she is bereft of sympathy and looks for it in the wives and daughters of his neighbors, and if he is handsome he usually finds it. The genius should not marry. A woman wants her husband—not his art. Genius is insantiy. In order to be a genius he lives most of the time in a world of deep emotions. It is hard for people of artistic temperament to conform to ordinary rules. Thus divorce, suicide, drunkenness and impulsive vices are found among people of genius. The irrepressible temperament seems to be absolutely necessary to art."

Contest of Smelling Powers.

A new game for long evenings has been devised and tried by an English house party. It is a contest of smelling powers. Numbered programs and numbered bottles contain essence of cloves, gin, eucalyptus, sherry and other groceries. The game is to identify these. And the difficulty of distinction has occurred to many men who have tried the decanters with the nose in the hope of deciding whether it is brandy or whisky. In this particular effort to recapture a sense in which the dog masters mankind a woman won.

BALLAD OF BUBBLY CREEK

On the Old Chicago River—A Memory of Boyhood in Halsted Street's Historic Ground

On the old Chicago river in those strenuous days of yore,
Sweeping like a tawny tiger past the green and pebbly shore,
And the yellow current foaming as it crashed against the pier
And the bells of huge Chicago pealing richly on the ear!

Oh, those chiming bells that brought you tender dreams of long ago
As you drifted with the current, soothed by soft rippling flow,
And a dreamy languor creeping nestled in your throbbing brain,
And the cold, delicious water lulled your heartache and your pain.

There we'd swim far up the river, buffeting the roaring tide,
As the current swept us down stream, chuckling as in haughty pride,
And the old stern wheeler "Natchez" poked her nose around the bend,
Big "Jim" Bludsoe was her pilot, and a staunch and stalwart friend.

Swimming up behind the tug boats, just to catch the foaming spray,
Rising, falling on the billows, and up and down as porpoise play,
Tossed upon the crouching white caps, tumbling on the white caps' crest,
Floating with the rippling current, diving with keen savage zest.

And the raft of Buffalo barges drifted down before our sight,
And the shrill steam whistles blowing, vexed the drowsy ear of night,
And the foghorn, hoarsely growling, seemed to split the brooding air
And black smoke stacks of the freighter loomed as ghastly as despair.

Then we heard the measured rolling of the war-presaging drum,
Growling like a testy tyrant and throbbing with a martial hum,
And we saw gaunt cannon frowning from the barracks on the shore,
And the sunset gun would thunder when the summer day was o'er.

And we saw bright sabres glisten 'neath the big mellow harvest moon,
As we heard the stalwart soldiers strike up a rousing tune,
And the haughty horses' hoofbeats clattering upon the way,
And the neighing and the prancing of the chestnut and the bay.

And big raw "recruities" drilling with awkward, clumsy [illegible]
And the spruce and brisk [illegible] with the bronzed [illegible]
And the jingling of the [illegible] cavalry swept by,
"Sammy Starspangle[illegible]" the apple of our eye.

On the old Chicago [illegible] barren bed
Flowing with a grisly [illegible] cargo of the dead
Twisting like a hungry [illegible] piles through the town
Choked with drowned men and [illegible] plunging in oblivion's frown.

What's the use of always [illegible] eagle over the sea
Questing like a swarthy [illegible] green sward frank or free
Take me back to old Chicago [illegible] heart is sick for home
I can't stand dark alien faces [illegible] 'cross the sundering foam

Take me back to old Chicago, [illegible] the sundering sea,
Let me get in touch with Halsted [illegible] Creek's the place for me
Every man brags of his birthplace [illegible] cago is the town for me
Oh, you big, old clumsy city, spraw[illegible] round the inland sea!

Found Where Noah Live

K. V. Millard, who now resides in Indianapolis, has been for several years studying the archaeology of Egypt. For the last year, until his recent return to this country, he was engaged in making excavations at various places on the Nile, especially at Gizeh, in the neighborhood of the great Pyramid of Cheops.

"I have discovered during the last three years," said Mr. Millard, "just where Noah lived, where the ark was built, and that Noah built the great Pyramid of Khufu, known as the Pyramid of Gizeh.

"Noah was the greatest king this world has ever seen. He was the greatest of the Egyptian Pharaohs, not excepting Rameses the Great.

"Noah was a millionaire. The Biblical account of the flood gives no clew as to where he lived or where his ship carpenters were at work for 120 years constructing the ark.

"Noah was six hundred years when the flood came. It is ev[illegible] that he must have been a millio[illegible] and a man of great authority [illegible] built the ark at his own exp[illegible] Such a boat in those times would [illegible] more than half a million dollars [illegible] must have been in a position to [illegible] vast multitudes to work for him [illegible] gardless of their interest in him [illegible] his work, or of their own perso[illegible] clinations.

"Noah built the great pyramid [illegible] ing the earlier part of the [illegible] Egyptian dynasty, and not more [illegible] twelve hundred years after God [illegible] expelled Adam and Eve from th[illegible] den of Eden. If Noah's size an[illegible] tellectual powers were proport[illegible] at his age to ours, then in brain [illegible] brawn and stature he, too, must [illegible] been a giant."—Washington Star.

Crow Lived Many Yea[illegible]

George McCarren, a farmer living near this city, has just received a much prized little aluminum plate marked as follows: "Return to George McCarren, Orrville, Ohio," with which an interesting story is connected.

George McCarran, Sr., father of the man who received the little billet of aluminum, was an eccentric naturalist, and spent much time in the study of birds and insects. During McCarren's youth, about twenty years ago, he says he remembers being told by his father, the elder McCarren, of a dispute the latter had had with a fellow naturalist of Akron, Ohio, as to the age to be attained by a common crow, and finally to settle the matter McCarren attached an aluminum tag to a crow captured in the fields and sent the bird forth with the plate securely fastened to its neck by wires. The legend on the plate requested the finder to return it to McCarren in [illegible] anything should happen to the bi[illegible]

As McCarren, Jr., remembers it two men made a bet as to wh[illegible] the plate would be returned w[illegible] twenty years. If the crow were l[illegible] or died they counted on the littl[illegible] let being found and returned to th[illegible] dress on the plate. If this were returned they believed it would sufficient evidence that the bird w[illegible] be still alive. McCarren bet tha[illegible] plate would not be returned w[illegible] that time; hence he won the bet. [illegible] crow was shot by a farmer boy n[illegible] Angers in Holmes county last w[illegible] and the billet returned to the so[illegible] the bettor, the elder McCarren ha[illegible] died before he could realize the [illegible] ceeds and the satisfaction of wi[illegible] his wager. The little billet is h[illegible] prized by the McCarrens as a me[illegible] to of the father's eccentricity.—[illegible] ville Correspondence Toronto Glo[illegible]

Power of the Came[illegible]

"It's only lately that I've had any faith in dreams," says the young wife of a middle aged newspaper man. "I used to scoff at them, but now—well, I had a warning in a dream, a genuine warning, and it did me good. My husband doesn't believe in women racing and chasing over the country alone, and when he went out to St. Louis on a business trip last month he made me promise by the ashes of my ancestors that I wouldn't stir out of Washington till he came back. He hadn't been gone a week before my next door neighbor began to coax me to go to Atlantic City with her. She said I needed a change, and that for my husband's sake I ought to take it. She said we'd have a splendid time and that we'd get home before George came back, so that he need never know a thing about it. One way and another she worked on my feelin[illegible] that I consented to go. We w[illegible] start Thursday morning. Wedn[illegible] night I had my dream. I dre[illegible] that we went to Atlantic City an[illegible] when George came home I didn[illegible] a word about it. It was a S[illegible] morning when he came home, i[illegible] dream, and I thought he went ou[illegible] bought a copy of a New York [illegible] It had a half page picture of the [illegible] tic City boardwalk in it, a repr[illegible] tion of a photograph, and there, i[illegible] foreground, I was, wearing a ha[illegible] dress that George couldn't help r[illegible] nizing. In my dream it quite [illegible] up my happy home, and when I s[illegible] I had lost all desire to go to At[illegible] City. Not me. It isn't safe to [illegible] keep your comings and goings a[illegible] from anybody, with camera fiend[illegible] ning around loose."—Wash[illegible] Post.

She Cooed to Pood[illegible]

On Thanksgiving morning a pretty young woman in a squirrel coat and a big veil sat in an electric runabout that was standing in front of a house on West Fortieth street, opposite Bryant park. On the seat beside her was a little white poodle. Down the street came two young chaps who were celebrating the day by strolling around town in the time-honored attire of ragamuffins. One was dressed to represent a fat negress, and his make-up and dialect were good enough for the vaudeville stage. The other wore a Happy Hooligan costume that was irresistibly funny. Just as they came up to the girl in the automobile she cooed to the poodle and asked:

"Are you cold, sweetheart?"

The sidewalk comedians stopped, smiled at the girl with the most languishing air they could assume, and then bowed to her, crying:

"Not at all, dearest!"

Then suddenly they turned glared at each other. "She done dat ter me," cried the negress, fine simulation of rage. "I be[illegible] pardon, I really beg your pardo[illegible] the lady addressed herself to cried the Happy Hooligan with gerated politeness.

The girl sat in a state of abje[illegible] sternation at the scene her w[illegible] the poodle had evoked.

"Go 'way, man! Go 'way!" br[illegible] the imitation negress, with a of her hand. "Disher lady——

But the girl heard no more pushed the lever and [illegible] rolled swiftly away from th[illegible] fins. Then the sidewalk com[illegible] fell in each other's arms in a [illegible] ysm of laughter at the evident [illegible] fiture of the poodle worshiper[illegible] York Press.

CONSUMPTION

The Choice.

All the folks in our house had to tell
one day
In which one of all the rooms they liked
best to stay.
Mother chose the living-room, where we
mostly sit;
Sister likes the parlor nights, with the
big lamp lit;
Grammy said her own room's better'n
all the rest.
Jack (he's always studying)' likes the
library best.
I just love the attic, where ther's room
to swing
Or roller-skate or spin a top or play
'most anything.
But when I asked my father, he laughed
and said that he
Guessed he'd choose whatever place
mother chanced to be!
—New Orleans Picayune.

Ransomed

BY R. C. PITZER

(Copyright, 1904, by Daily Story Pub. Co.)

They sat on a flat boulder in Pine Canon, while a heavy-set, bull-necked man in a black mask leaned on a rifle and looked at them. The girl was white and silent, and her escort held her hand. He was a young man, dark and imperious, but his eyes had a soft glow in them, and he looked at her with that ecstatic expression which but one woman can bring to a man's face.

"Don't worry," he whispered, as he fondled the little hand, "it isn't anything serious. The men have my checks to pay for our ransom, and when they return with the money we will be released. It is only the matter of an hour or so. Turn your head, Mary—I do believe you are crying. And I thought you such a brave girl," he continued in a tone of forced raillery. "You are always laughing at me because I am timid with dogs, and last week you refused me again, for no other reason than because I ran away from a gang of drunken rowdies. I never thought to see you crying over such a harmless adventure."

"Don't make fun of me, Harry," she pleaded, as she struggled with her tears. "I never said that I was brave. I know that I'm a c-coward, but I want my h-h-husband to be brave for both. And you're not," she continued, indignation getting the better of her fear. "When these men came, you just held out your hands; and you've been like a l-l-lamb."

Harry turned his head aside to conceal the broad grin that flashed across his face. Then he moved nearer and caught her other hand.

"Listen, Mary," he said. "I know that you think me a coward, though I am but cautious. I can risk myself when there is any reason for doing so, but a reason with me must be something more than mere braggadocio. You have lived in the West so long that you can appreciate nothing but spectacular bravery. In my part of the country, that is not needed. I am not what you think me; indeed I am not."

Mary disengaged her hands and hid her face in her handkerchief. "I think that I know you," she said in a smothered voice. "At least, there is nothing hypocritical nor false about you. You do not pretend to be what you are not."

Harry's face was convulsed in an extraordinary manner, and turned to a sea-green hue. "No," he answered faintly, "I have never pretended to be better than I am, even to you. But if anything would make me false to myself, it would have been a desire for your approbation; a wish to be what you would have me be."

"I understand you," she said. "I even know what you are thinking of now. You believe that I might—love you—if you could make me admire your bravery. Is it not so? And you are thinking of attacking that man

Don't worry," he whispered.

there. It would be a brave deed, Harry. It would be too brave—too rash."

"No," Harry answered, "not rash, and not as dangerous as you think. It would need but a little quickness, and I have that. I am going to do it, Mary. I am going to get you away from here before the men return. I will not ask you to marry me—I will not do this for reward. But you know that I love you, and I would risk a greater danger than this for your sake."

"Oh, no! no!" Mary whispered. "Don't do it, Harry. He might kill you, and I—and a—" Her voice died away.

"And you love me?" Harry asked eagerly. "You don't say so, but I know it already. It is only your exaggerated ideal of bravery that keeps you from confessing it. You think that I am not worthy of you; but I am, and I will prove it."

"You take a good deal for granted," said Mary with sudden coldness. "I don't think that I have given you any reason to say that my interest is more than friendly."

"It isn't that," he replied. "I spoke hastily, but I meant that you could

Exchanging flying shots as they ran.

love me if you would. At least, I will show you that you have a false opinion of me. Hello there, Mr. Outlaw!"

"Well, whatcher want?" growled the mask. "You sit still there, Fletcher, an' don't come none of your Arkansas tricks on me. Whatcher want, hey?"

"I want a match," Harry returned, "and I'll trade you a cigar for it. Will you come here, or may I walk over there?"

"Come along," said the man as he threw the rifle in the hollow of his arm. "I don't care if I do smoke, seein' it's you."

"No! no!" Mary whispered. "I didn't mean it, Harry. You must not do anything so foolish."

"I must go, anyhow," he answered. "The man will be suspicious else, and perhaps start a row himself. You must not worry, for I won't do anything that seems dangerous." And with a final "it will be all right," he strolled over to where the outlaw stood.

"Here," he said, offering a cigar, "take that, old man—and that!" and that!" delivering two heavy blows on the man's chest. He of the mask staggered backward, and Harry snatched the revolver that dangled by the outlaw's hip.

"Now," he cried, "we're on even terms, and I'll teach you what it means to bother Miss Lindsey."

The outlaw did not wait to be taught, nor to regain his equilibrium. The blows started him down the canon, and, still at a half-falling angle, he began to run. Harry bounded after him, while Mary, with clasped hands and sparkling eyes, sprang to her feet.

"Harry!" she cried, "come back—come back to me!" But Harry did not heed her, and she sank down on the boulder.

Harry and the outlaw were exchanging flying shots as they ran, and in a moment the fugitive bounded behind a heavy dyke of granite. When Harry reached the rock, he found the man sitting down, and blowing and puffing from his exertions. The mask had fallen off, and a round, red, laughing face was disclosed.

"Ge-whil-whilikens!" the outlaw gasped. "I ain't no good at a run no more. It kind of—ah—cleans me out. Ain't got no wind at all. How'd I do it, partner? Say, that was rich. Ha! ha! ha!"

"Ssh! ssh!" Harry hissed. "You'll give the whole thing away, Evans, and I can't stand another 'no.'"

"Is it goin' to work?" Evans asked. "She's a fine gal, Fletcher, an' you can be proud of her anywheres. If it wasn't for us knowin' you to be a pretty good man—"

"For heaven's sake!" Harry cried in desperation; "get out! Man! man! will you sit here like a fool until she comes and catches you?"

"All right, Fletcher, all right. You needn't get warm about it. If it was me, though, I'd be makin' tracks up to where she's waitin'. As you're in no hurry—" But Harry had turned at this suggestion, and was stumbling and puffing over the boulders.

Mary saw him coming and ran forward. "You are not hurt?" she asked. "Have you killed him?"

Harry shook his head. "He got away," he gasped.

"And we must get away, too," Mary said with exaggerated fear. "He'll meet the others, and all three will come. They will kill you, Harry!"

"I think that those men are done for," Harry returned. "We needn't hurry on their account. But, Mary, you don't say what I want you to say. Have you no word for me, dear?"

Mary smiled and blushed. "Hush," she whispered. "I didn't care about bravery, Harry. It was all make believe, and when I was ready, I would have said yes without the help of your men."

"What!" Harry exclaimed.

Mary's smile broadened into a delicious grin, and she made the canon echo to her rippling laughter. "You are not the only actor," she gasped. "I recognized their voices—every one of them—and I knew that you had hired them. But don't you care, dear," she continued soothingly, as she saw his miserable despondence, "I won't tell about it. We will keep it just between ourselves, won't we?"

And they did.

Weak in Orthography.

Col. Phil Thompson tells of the trials experienced by a friend of his who recently acquired a new stenographer. The dear little thing is a trifle weak in orthography, but Thompson's friend has been loath to call her down, in view of the fact that she tries so hard to please. He is too big hearted to discharge the girl, for she needs the money; so he corrects the spelling himself.

Recently, however, he was forced to call her attention to the fact that in a letter of some seventy-five words, she had committed eight errors, among which was "fourty."

"My, my!" exclaimed the friend. "This won't do, you know; I can't stand for forty spelled this way!"

The willing worker looked over his shoulder at the offending word. "Gracious!" she exclaimed, "how careless of me! I left out the 'gh,' didn't I?"—Collier's.

Central African Lakes Drying Up.

In 1859, some distance southeast of Lake Nyassa, in central Africa, Livingstone discovered Lake Shirwa, a body of water about thirty miles long and fifteen miles wide, which has now entirely disappeared with the exception of a few ponds. Lake Nyami, discovered by Livingstone at the same time, has also disappeared. The cause of the change appears to be a gradual drying up of bodies of water in Central Africa. As marking the results of a single half-century the changes named show a rapidity of mutation in those inland waters not equaled elsewhere in the contemporary geographer's survey, though the shrinking of Salt lake in Utah is also very remarkable.

Open the Door of Your Heart.

Open the door of your heart, my lad,
To the angels of love and truth;
When the world is full of unnumbered
joys,
In the beautiful dawn of youth.
Casting aside all things that mar,
Saying to wrong, "Depart!"
To the voices of hope that are calling
you
Open the doors of your heart.

Open the door of your heart, my lass,
To the things that shall abide;
To the holy thoughts that lift your soul
Like the stars at eventide.
All of the fadeless flowers that bloom
In the realms of song and art
Are yours, if you'll only give them room.
Open the door of your heart.

Open the door of your heart, my friend,
Heedless of office or creed,
When you hear the cry of brother's voice,
The sob of a child in need.
To the shining heaven that o'er you
bends
You need no map or chart,
But only the love the Master gave.
Open the door of your heart.
—Edward Everett Hale.

Considerate Irishman.

A French chauffeur was driving in Ireland when he rode over a cyclist. The injured man apologized. "Pray continue your journey," said he. "I am really ashamed to have incommoded such a sportsman." Next day the chauffeur received a letter from this sympathetic stranger full of regrets and making tender inquiries about the state of the automobile. "I must tell you," it proceeded, "that as a result of yesterday's accident, for which I alone am responsible, I expect to die soon. But I am arranging to leave you a third of my property so that you can embellish your automobile with all the latest improvements."

Will Breed Zebras in Africa.

Lord Howard De Walden, probably the richest young man in England, has gone to east Africa on a hunting expedition after big game. He has purchased a large territory near Lake Victoria Nyanza, where he intends to establish a farm for breeding zebras. His estate, which consists entirely of property in London, is worth over $1,000,000 a year.

Duty a Cordial.

No man's spirits were ever hurt by doing his duty; on the contrary, one good action, one temptation, resisted and overcome, one sacrifice of desire or interest, purely for conscience sake, will prove a cordial for weak and low spirits, far beyond what either indulgence or diversion, or company, can do for them.—Paley.

SWIMMING A GOOD EXERCISE.

Tests Show It Makes Greatest Increase in Red Blood Corpuscles.

A series of experiments conducted by Dr. Philip B. Hawk, demonstrator of physiological chemistry at the University of Pennsylvania, has proved that swimming is the most beneficial exercise.

As described by the World's Work, Dr. Hawk visited the dressing rooms at the athletic field and immediately before each athlete left for his exercise drew blood from him by means of the regularly prepared sterile needle. Then when the athlete returned to the dressing room after running, jumping, pole-vaulting or engaging in water polo the needle would again be brought into play and a second sample of blood drawn.

Analysis of the blood to discover how far each exercise increased the number of red corpuscles showed that water polo and other forms of swimming resulted in the largest increase. The swimming exercises were thus shown to be the most beneficial, for the greater the number of red corpuscles the richer is the blood. Swimming resulted in an average increase of 21 per cent, as against 17 per cent for the next best exercise—short-distance running.

After one of these examinations during the athletic season, while the men were in the pink of condition and exerting themselves to the utmost, Dr. Hawk found the following results, in round numbers, from the count of the blood corpuscles: Percentage of gain after the 100-yard dash, 25; 120-yard hurdles, 21.5; half-mile run, 18; mile run, 14; two-mile run, 9; broad jump, six jumps, 15; three-minute water polo game, 27.

THE LAW VS. KINDNESS.

Good Samaritan Suffers for Eccentricities of Ohio Statutes.

"Got a buzzard here?" inquired Charles W. Heyl, deputy game warden, of Mrs. Frank Edgerton of South Sixth street, according to the Columbus, Ohio, correspondent of the New York Herald.

"Yes, sir," the woman replied.

"Want to sell it?"

"No, sir; but you can have it if you want it."

"Can I see it?"

"Certainly; just come this way, please."

And Mrs. Edgerton walked back to the coal shed, where the bird was confined, opened the door and then walked back to the house. In a moment or two Heyl appeared with the buzzard under his coat. He showed a badge and said: "Tell your husband that I am a game warden and for him to appear before Squire Lakin."

A son of Mr. Edgerton, who is an employe in the Panhandle shops, while strolling through the fields, found a buzzard with a broken leg. The bird was fed and kindly treated and became a pet, running around the neighborhood as it pleased. When the family went away from the house the buzzard would be confined in the coal shed.

An affidavit charges Edgerton with having "in his possession a buzzard not then and there being in captivity prior to May 6, 1902, and not then and there having the permission to do the aforesaid act."

The Man Who Might.

My grandpa used to tell us boys
About a man he knew
Way out in northern Illinois,
In eighteen forty-two;
This fellow's brag of how he might—
When first out west he come—
Have easy bought Chicago's site
For one small jug of rum.

We'd always ask grandfather why
The feller did not trade,
An' he'd say: "'Twas just a lie
The chap made up, I'm afraid;
But even though he'd looked ahead
And heard the busy hum
Of future years, when all is said,
He'd rather had the rum."

Then grandpa'd laugh a bit an' say,
"As we go down the years—
No matter where extends the way,
Or how our fortune steers,
We'll surely meet the helpless wight,
At every turn, I vum!—
Who might have bought Chicago's site
For one small jug of rum."
—Pittsburg Post.

Writer Says Genius Is Insanity.

According to Mrs. Kate Upson Clark, the way to be happy, though a genius, is never to marry. "The poet's wife," said Mrs. Clark in a recent address, "does not care for poetry after the first week, any more than the grocer's boy does for figs. She never wishes to tell of the neighborhood's gossip but she interrupts some great thought of her husband's; then he imagines she is bereft of sympathy and looks for it in the wives and daughters of his neighbors, and if he is handsome he usually finds it. The genius should not marry. A woman wants her husband—not his art. Genius is insantiy. In order to be a genius he lives most of the time in a world of deep emotions. It is hard for people of artistic temperament to conform to ordinary rules. Thus divorce, suicide, drunkenness and impulsive vices are found among people of genius. The irrepressible temperament seems to be absolutely necessary to art."

Contest of Smelling Powers.

A new game for long evenings has been devised and tried by an English house party. It is a contest of smelling powers. Numbered programs and numbered bottles contain essence of cloves, gin, eucalyptus, sherry and other groceries. The game is to identify these. And the difficulty of distinction has occurred to many men who have tried the decanters with the nose in the hope of deciding whether it is brandy or whisky. In this particular effort to recapture a sense in which the dog masters mankind a woman won.

BALLAD OF BUBBLY CREEK

On the Old Chicago River—A Memory of Boyhood in Halsted Street's Historic Ground

On the old Chicago river in those strenuous days of yore,
Sweeping like a tawny tiger past the green and pebbly shore,
And the yellow current foaming as it crashed against the pier,
And the bells of huge Chicago pealing richly on the ear!

Oh, those chiming bells that brought you tender dreams of long ago
As you drifted with the current, soothed by soft rippling flow,
And a dreamy languor creeping nestled in your throbbing brain,
And the cold, delicious water lulled your heartache and your pain.

There we'd swim far up the river, buffeting the roaring tide,
As the current swept us down stream, chuckling as in haughty pride,
And the old stern wheeler "Natchez" poked her nose around the bend,
Big "Jim" Bludsoe was her pilot, and a staunch and stalwart friend.

Swimming up behind the tug boats, just to catch the foaming spray,
Rising, falling on the billows, and up and down as porpoise play,
Tossed upon the crouching white caps, tumbling on the white caps' crest,
Floating with the rippling current, diving with keen savage zest.

And the raft of Buffalo barges drifted down before our sight,
And the shrill steam whistles blowing, vexed the drowsy ear of night,
And the foghorn, hoarsely growling, seemed to split the brooding air
And black smoke stacks of the freighter loomed as ghastly as despair.

Then we heard the measured rolling of the war-presaging drum,
Growling like a testy tyrant and throbbing with a martial hum,
And we saw gaunt cannon frowning from the barracks on the shore,
And the sunset gun would thunder when the summer day was o'er.

And we saw bright sabres glisten 'neath the big mellow harvest moon,
As we heard the stalwart soldiers sing up a rousing tune,
And the haughty horses' hoofbeats clattering upon the way,
And the neighing and the prancing of chestnut and the bay.

And big raw "recruities" drilling with awkward, clumsy grace,
And the spruce and brisk young cavalry with the bronzed, hardy face,
And the jingling of the harness as cavalry swept by,
"Sammy Starsanstripes" the scribbl the apple of our eye.

On the old Chicago river, [illegible] barren bed,
Flowing with a grisly shiver with cargo of the dead,
Twisting like a hungry scorpion [illegible] ples through the town
Choked with drowned men and [illegible] plunging in oblivion's frown.

What's the use of always roaming like eagle o'er the sea,
Questing like a swarthy gypsy [illegible] green sward frank and free,
Take me back to old Chicago, [illegible] heart is sick for home,
I can't stand dark alien faces [illegible] 'cross the sundering foam.

Take me back to old Chicago, far [illegible] the sundering sea,
Let me get in touch with Halsted-[illegible] Creek's the place for me.
Every man brags of his birthplace [illegible] cago is the town for me.
Oh, you big, old clumsy, city, sprawling round the inland sea!

JAMES E. KINSELL
Registry Division Chicago Postoffice.

Found Where Noah Live

K. V. Millard, who now resides in Indianapolis, has been for several years studying the archaeology of Egypt. For the last year, until his recent return to this country, he was engaged in making excavations at various places on the Nile, especially at Gizeh, in the neighborhood of the great Pyramid of Cheops.

"I have discovered during the last three years," said Mr. Millard, "just where Noah lived, where the ark was built, and that Noah built the great Pyramid of Khufu, known as the Pyramid of Gizeh.

"Noah was the greatest king this world has ever seen. He was the greatest of the Egyptian Pharaohs, not excepting Rameses the Great.

"Noah was a millionaire. The Biblical account of the flood gives no clew as to where he lived or where his ship carpenters were at work for 120 years constructing the ark.

"Noah was six hundred years [illegible] when the flood came. It is evi[dent] that he must have been a millio[naire] and a man of great authority. [He] built the ark at his own exp[ense]. Such a boat in those times would [cost] more than half a million dollars. [He] must have been in a position to [command] vast multitudes to work for him, [re]gardless of their interest in him [or] his work, or of their own personal [in]clinations.

"Noah built the great pyramid [dur]ing the earlier part of the [fifth] Egyptian dynasty, and not more [than] twelve hundred years after God [had] expelled Adam and Eve from the [gar]den of Eden. If Noah's size and [in]tellectual powers were proportion[ate] at his age to ours, then in brain, [in] brawn and stature he, too, must [have] been a giant."—Washington Star.

Crow Lived Many Yea

George McCarren, a farmer living near this city, has just received a much prized little aluminum plate marked as follows: "Return to George McCarren, Orrville, Ohio," with which an interesting story is connected.

George McCarran, Sr., father of the man who received the little billet of aluminum, was an eccentric naturalist, and spent much time in the study of birds and insects. During McCarren's youth, about twenty years ago, he says he remembers being told by his father, the elder McCarren, of a dispute the latter had had with a fellow naturalist of Akron, Ohio, as to the age to be attained by a common crow, and finally to settle the matter McCarren attached an aluminum tag to a crow captured in the fields and sent the bird forth with the plate securely fastened to its neck by wires. The legend on the plate requested the finder to return it to McCarren in anything should happen to the bi[rd].

As McCarren, Jr., remembers it two men made a bet as to wh[ether] the plate would be returned w[ithin] twenty years. If the crow were k[illed] or died they counted on the littl[e] let being found and returned to th[em] dress on the plate. If this were returned they believed it would sufficient evidence that the bird w[as] be still alive. McCarren bet that plate would not be returned w[ithin] that time; hence he won the bet. crow was shot by a farmer boy n[ear] Angers in Holmes county last [week] and the billet returned to the so[n] the bettor, the elder McCarren ha[d] died before he could realize the ceeds and the satisfaction of win his wager. The little billet is h[ighly] prized by the McCarrens as a me to of the father's eccentricity.—[Mc]ville Correspondence Toronto Glo

Power of the Came

"It's only lately that I've had any faith in dreams," says the young wife of a middle aged newspaper man. "I used to scoff at them, but now—well, I had a warning in a dream, a genuine warning, and it did me good. My husband doesn't believe in women racing and chasing over the country alone, and when he went out to St. Louis on a business trip last month he made me promise by the ashes of my ancestors that I wouldn't stir out of Washington till he came back. He hadn't been gone a week before my next door neighbor began to coax me to go to Atlantic City with her. She said I needed a change, and that for my husband's sake I ought to take it. She said we'd have a splendid time and that we'd get home before George came back, so that he need never know a thing about it. One way and another she worked on my feelin[gs] that I consented to go. We w[ere] start Thursday morning. Wedn[es]night I had my dream. I dr[eam] that we went to Atlantic City an[d] when George came home I didn[t] a word about it. It was a S[un]morning when he came home, i[n] dream, and I thought he went ou[t] bought a copy of a New York [pa]It had a half page picture of the [At]tic City boardwalk in it, a repr[o]tion of a photograph, and there, [in] foreground, I was, wearing a ha[t] dress that George couldn't help [re]nizing. In my dream it quite [broke] up my happy home, and when I [awoke] I had lost all desire to go to At[lan]City. Not me. It isn't safe to [go] keep your comings and goings a[way] from anybody, with camera fiend[s] ning around loose."—Washi[ngton] Post.

She Cooed to Pood

On Thanksgiving morning a pretty young woman in a squirrel coat and a big veil sat in an electric runabout that was standing in front of a house on West Fortieth street, opposite Bryant park. On the seat beside her was a little white poodle. Down the street came two young chaps who were celebrating the day by strolling around town in the time-honored attire of ragamuffins. One was dressed to represent a fat negress, and his make-up and dialect were good enough for the vaudeville stage. The other wore a Happy Hooligan costume that was irresistibly funny. Just as they came up to the girl in the automobile she cooed to the poodle and asked:

"Are you cold, sweetheart?"

The sidewalk comedians stopped, smiled at the girl with the most languishing air they could assume, and then bowed to her, crying:

"Not at all, dearest!"

Then suddenly they turned glared at each other. "She done dat ter me," cried the negress, fine simulation of rage. "I be[g] pardon, I really beg your pardo[n]" the lady addressed herself to cried the Happy Hooligan with gerated politeness.

The girl sat in a state of abj[ect] sternation at the scene her w[ords] the poodle had evoked.

"Go 'way, man! Go 'way!" [cried] the imitation negress, with a of her hand. "Disher lady——

But the girl heard no more pushed the lever and [the car] rolled swiftly away from the ra[ge]fins. Then the sidewalk com[edians] fell in each other's arms in a [par]ysm of laughter at the evident [mis]fiture of the poodle worshiper[s].—New York Press.

Bryan's Story of Himself.

"My first ambition," said W. J. Bryan in a lecture at Topeka, Kan., "was to be a Baptist preacher. I dropped that ambition after I had seen a baptizing when I was still a boy, but my republican friends have been mean enough to say that my giving it up was due to the natural aversion of a democrat for water. My next ambition was to be a farmer and my third to be a lawyer. I fell into politics accidentally, but stayed there by choice. I had no intention when I went to Nebraska of going into politics. It is easily proved by the fact that at the time I went there the state was republican, the district republican, the county republican, the city republican, the ward republican, and I regret to add that there has not been so great a change in their political complexion as I would like."

Whist and Inventing.

Here is an incident illustrating how business problems pursue the inventor of the airbrake. A few years ago a game of whist was progressing smoothly, when after one of the deals Mr. Westinghouse did not pick his cards up, but kept drawing on a piece of paper before him. The others watched him curiously, remarked that they were ready to proceed, and then waited and waited, unable to understand why he should pay no attention to them. Suddenly, with a flash of triumph in his eye and exultation in his voice, he cried out, "Brown, I've got that natural gas meter fixed—here it is; it can not fail to work successfully," and picking up his cards he asked: "Whose turn is it to play?"

Ancient Timekeeping.

Ancient timekeeping has received new light from two remarkable stones lately unearthed by the German explorers on the site of the old Ionic port of Miletus. These stones are the remains of calendars, of which one is shown to date from 109 A. D. The year was divided into 12 zodiacal signs and against each month the motion of the remaining signs was given, with a note predicting the weather. On the left side were 30 holes, a wooden peg being moved forward one hole each day, thus giving the astronomical date.

Number of Suicides.

There were 5,340 suicides in the United States in 1899; 6,755 in 1900; 7,245 in 1901; 8,291 in 1902; 8,597 in 1903, and 9,240 in 1904. And all the fools are not dead yet by a long way.

Last year France produced 960,337,201 gallons of cider.

The Deepest Mine.

The deepest mining shaft has been sunk to a little more than a mile in Cape Colony and the deepest bore hole has reached the same depth in Silesia. It is said that there should be no insurmountable difficulties in carrying a shaft down twelve miles. An approximate estimate has shown that to reach a depth of two miles the cost would be $2,500,000. Ten years would be required and a rock temperature of 122 degrees Fahrenheit would be found; while to penetrate twelve miles would cost $25,000,000 and would take 85 years, the rock temperature expected being 272 degrees Fahrenheit.

A WOMAN'S MISERY.

Mrs. John LaRue, of 115 Paterson Avenue, Paterson, N. J., says: "I was troubled for about nine years, and what I suffered no one will ever know. I used about every known remedy that is said to be good for kidney complaint, but without deriving permanent relief. Often when alone in the house the backache has been so bad that it brought tears to my eyes. The pain at times was so intense that I was compelled to give up my household duties and lie down. There were headaches, dizziness and blood rushing to my head to cause bleeding at the nose. The first box of Doan's Kidney Pills benefited me so much that I continued the treatment. The stinging pain in the small of my back, the rushes of blood to the head and other symptoms disappeared."

Doan's Kidney Pills for sale by all dealers. 50 cents per box. Foster-Milburn Co., Buffalo, N. Y.

Rapid Progress in Japan.

Up to 1887 there was not a single public telephone in Japan. The first systems were installed in 1890. At the end of 1901 there were 179 public stations, with twenty-five city systems and 25,000 subscribers, while as many more were demanding telephone service. The Japs are capable of "hurricane fighting," but also capable of hurricane progress. In 1871 there were 19,000 telegrams sent; in 1881, 2,586,000; in 1891, 4,674,000, and in 1901, 16,221,000.

10,000 Plants for 10c.

This is a remarkable offer the John A. Salzer Seed Co., La Crosse, Wis., makes.

Salzer Seeds have a national reputation as the earliest, finest, choicest the earth produces. They will send you their big plant and seed catalog, together with enough seed to grow

1,000 fine, solid Cabbages,
2,000 rich, juicy Turnips,
2,000 blanching, nutty Celery,
2,000 rich, buttery Lettuce,
1,000 splendid Onions,
1,000 rare, luscious Radishes,
1,000 gloriously brilliant Flowers.

This great offer is made in order to induce you to try their warranted seeds—for when you once plant them you will grow no others, and

ALL FOR BUT 10c POSTAGE,

providing you will return this notice, and if you will send them 26c in postage, they will add to the above a big package of the earliest Sweet Corn on earth—Salzer's Fourth of July—fully 10 days earlier than Cory, Peep o' Day, etc., etc. [A. C. L.]

Jap Punishment.

In Japanese schools a mischievous boy is made to stand and hold a slender stick of lighted punk until it burns out. If he is caught breaking off the lower end of the stick a second punishment is added.

15 YEARS OF TORTURE

Itching and Painful Sores Covered Head and Body—Cured in Week by Cuticura.

"For fifteen years my scalp and forehead was one mass of scabs, and my body was covered with sores. Words cannot express how I suffered from the itching and pain. I had given up hope when a friend told me to get Cuticura. After bathing with Cuticura Soap and applying Cuticura Ointment for three days, my head was as clear as ever, and to my surprise and joy, one cake of soap and one box of ointment made a complete cure in one week. (Signed) H. B. Franklin, 717 Washington St., Allegheny, Pa."

Ancient Forks.

A London jeweler has made a collection of ancient forks used in England, which show some little known facts about the table manners of a few centuries ago. The forks, which are of solid silver, date from the sixteenth century. In many cases the designs in all this time have scarcely varied in any detail, and the forks look like those which might be bought today. The old forks were a great luxury in their time, and were only used by the aristocracy.

Last Cowhide Boots in Senate.

With the coming retirement of Senator Cockrell, of Missouri, will go the last pair of cowhide boots from the senate. When he first took his seat, twenty-nine years ago, he wore this ante-bellum footgear and he still clings to it.

Senator Cockrell is tall, broad-shouldered, but a gaunt, lean man. He stoops a little when he walks and bends his head forward, with a hand spread fan shape behind his ear when he desires to listen.

Studying Japanese.

Fifteen officers of the German army are at present studying Japanese in the Berlin Seminary for Oriental Languages.

Barrie has received more than $250,000 from his plays.

A Guaranteed Cure For Piles.

Itching, Blind, Bleeding or Protruding Piles. Druggists will refund money if Pazo Ointment fails to cure in 6 to 14 days. 50c.

There are 208 miles of railway in the Congo Free State.

H. H. GREEN'S SONS, of Atlanta, Ga., are the only successful Dropsy Specialists in the world. See their liberal offer in advertisement in another column of this paper.

Fifty-two billion dollars passed through the London Clearing House last year.

Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reduces inflammation, allays pain, cures wind colic, 25c. a bottle

Single eyeglasses are prohibited in the German Army.

A Curious Custom.

A curiosity in the matter of bell ringing is to be met with at Fulburne, near Cambridge. The church bells there not only ring the hours of the day, but at intervals also the date of the month. Thus, at 12 o'clock noon on the 31st there would be forty-three strokes.

Queen of Madagascar.

The queen of Madagascar, whom the French deposed in 1897, is about to marry M. Garnier. She has become accustomed to the ways of civilization during her long imprisonment, and has developed a love of fine clothes, which her government allowance allows her to gratify.

Lost Courage With Names.

Like Lieutenant Ellis, of the Russian Baltic fleet, there are many descendants of Scottish or English families in the Russian service, but most of them have Russianized their names, as in the case of the Hamilton whose name is now Humaroff.

Many Accidents.

Persons are killed at the rate of one for every day in the year in the New York city streets by vehicles.

PEARLS OF THOUGHT.

Many a shaft at random sent
Finds mark the archer little meant.
—Sir Walter Scott.

Be valiant, but not too venturous.—John Lyly.

Be wisely worldly, be not worldly wise.—Francis Quarles.

Remembered joys are never past.—James Montgomery.

He who serves well his country has no need of ancestors.—Voltaire.

To love one soul for its beauty and grace and truth is to open the way to appreciate all beautiful, true and gracious souls, and to recognize spiritual beauty wherever it is seen.

The earth shall drink of the heat before she knows her nature or her strength. Then shall she bring forth to the uttermost the treasures of her bosom. For there are things hidden far down, and the deep things of life, till the fire reveals them.—H. W. Beecher.

Every individual will be happier the more clearly he understands that his vocation consists, not in exacting service from others, but in ministering to others, in giving his life the ransom of many. A man who does this will be worthy of his food and not fail to have it.—Tolstoi.

One of the most curious bridges ever built, perhaps unique in the history of the world, was that made by the British troops in 1860. They were marching on Pekin, but found their progress barred by a flooded river of considerable width and depth. A timber party was formed, but found nothing to cut down or borrow suitable for a bridge. At last a huge store of coffins were discovered in the village, and with these the soldiers built their bridge and crossed alive over the receptacles for the dead.

An English naval cadet who, on his training ship, took 11 first prizes, and in the first examination obtained 97.6 percent, was rejected at the medical examination on account of a small defect in one little toe.

Parkman's Sense of Justice.

A friend met Francis Parkman walking along the street holding two street boys by their coat collars. In reply to his friend's request for an explanation Parkman said: "I found this boy had eaten an apple without dividing with his little brother. Now I'm going to buy one for the little boy and make the big one look on while he eats it."—St. Nicholas.

Deafness Cannot Be Cured

by local applications as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever. Nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars free. F. J. CHENEY & Co., Toledo, O.

Sold by Druggists, 75c.

Take Hall's Family Pills for constipation.

Some one has been figuring out the number of words a man utters in a year and finds the average to be 11,800,000.

Nineteen pianos, every one of which was a wedding present, are in the possession of the Prince and Princess of Wales.

WOMEN'S NEGLECT

SUFFERING THE SURE PENALTY

Health Thus Lost Is Restored by Lydia E. Pinkham's Vegetable Compound.

How many women do you know who are perfectly well and strong? We hear every day the same story over and over again. "I do not feel well; I am so tired all the time!"

Miss Kate McDonald

More than likely you speak the same words yourself, and no doubt you feel far from well. The cause may be easily traced to some derangement of the female organs which manifests itself in depression of spirits, reluctance to go anywhere or do anything, backache, bearing-down pains, flatulency, nervousness, sleeplessness, leucorrhœa.

These symptoms are but warnings that there is danger ahead, and unless heeded a life of suffering or a serious operation is the inevitable result.

The never-failing remedy for all these symptoms is Lydia E. Pinkham's Vegetable Compound.

Miss Kate McDonald, of Woodbridge, N. J., writes:

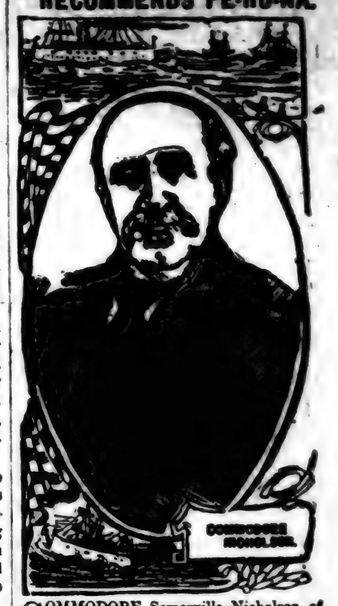
Dear Mrs. Pinkham:

"I think that a woman naturally dislikes to make her troubles known to the public, but restored health has meant so much to me that I cannot help from telling mine for the sake of other suffering women.

"For a long time I suffered untold agony with a uterine trouble and irregularities, which made me a physical wreck, and no one thought I would recover, but Lydia E. Pinkham's Vegetable Compound has entirely cured me, and made me well and strong, and I feel it my duty to tell other suffering women what a splendid medicine it is."

If you are ill, don't hesitate to get a bottle of Lydia E. Pinkham's Vegetable Compound at once, and write to Mrs. Pinkham, Lynn, Mass., for special advice—it is free and always helpful.

COMMODORE NICHOLSON RECOMMENDS PE-RU-NA



COMMODORE Somerville Nicholson, of the United States Navy, in a letter from 1837 R Street, Northwest, Washington, D. C., says:

"Your Peruna has been and is now used by so many of my friends and acquaintances as a sure cure for catarrh that I am convinced of the curative qualities and I unhesitatingly recommend it to all persons suffering from that complaint."

Our army and our navy are the natural protection of our country.

Peruna is the natural protection of the army and navy in the vicissitudes of climate and exposure.

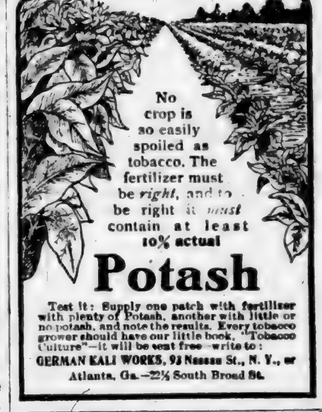
We have on file thousands of testimonials from prominent people in the army and navy.

We can give our readers only a slight glimpse of the vast array of unsolicited endorsements Dr. Hartman is constantly receiving for his widely known and efficient remedy, Peruna.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. S. B. Hartman, President of The Hartman Sanitarium, Columbus, Ohio, and he will be pleased to give you his valuable advice.

A Tobacco Grower's Profit

is dependent upon a properly balanced fertilizer.



No crop is so easily spoiled as tobacco. The fertilizer must be *right*, and to be right it *must* contain at least 10% actual

Potash

Test it: Supply one patch with fertilizer with plenty of Potash, another with little or no potash, and note the results. Every tobacco grower should have our little book, "Tobacco Culture"—it will be sent free—write to:

JAPAN'S NAVY PREPARED

Overhauling of Her Combined Fleet Has Been Accomplished.

VAST PREPARATIONS OF ARMY

All Able Bodied Men Under Forty Years of Age Have Been Called Out—Fleets on the Watch For the Russian Baltic Squadron—Repairing Captured Boats and Munitions.

London, England.—A despatch to the Telegraph from Tokio says the Government will immediately begin the building of a 19,000 ton battleship and two, perhaps three, armored cruisers of 12,000 tons each. These will be the first ships of this size and class to be built in Japan. None of their big guns will be less than ten inch. Many destroyers and torpedo boats will be added to the present number.

Negotiations were recently opened for the purchase of a Chilean cruiser. A navigating crew for this vessel has already left Japan. Fifteen submarine boats will be provided this year. Ten have already arrived with American instructors.

Japan's combined fleet has finished overhauling. Three cruisers and several destroyers are now in the neighborhood of Borneo, commanded by Admiral Shimamura. A cruiser fleet is now going south.

Admiral Togo is not well and for the present remains indoors. Admiral Kamimura will soon go south with the battleships. Three first class cruisers are patrolling Tsugaru Strait, and three unarmored cruisers and the former Chinese battleship Chinyen are guarding the Tsushima Strait. A declaration of the blockade of Vladivostok is expected.

It is now evident that the protected cruiser Takasago has been lost, as her officers and crew are gazetted as killed.

A fifth army, under command of General Kawamura, is being organized. The whole of General Nogi's army will have joined Field Marshal Oyama by the end of January. All men under forty years of age in Japan are now drilling.

The calling out of many more reservists and conscripts is contemplated. Japan is undoubtedly concentrating her vast resources for a decisive blow within the limits of next spring.

Only a hundred of the guns captured at Port Arthur are in a condition to be used. The salvaging of the warships there and the rebuilding of the forts have been begun. The Russian destroyer Retshiteiny, which the Japanese took out of Cheefoo harbor, is now being repaired at Saseo.

HELLO! FROM HERE TO 'FRISCO.

Also From Canada to the Gulf—Telephone Combination Plan.

Pittsburg, Pa.—The Pittsburg Press announces that the American Telephone and Telegraph Company will at its annual meeting in Boston next month make announcement of a combination of interests of forty-three leading telephone companies of the country, with a working capital of $250,000,000, the object being to give telephone service between New York and San Francisco and intermediate points, as well as from Canada to the Gulf. Among the companies named in the combination are the following:

Bell Company, Philadelphia; Central New York Telephone and Telegraph Company, Utica; Chesapeake and Potomac Telegraph Company, Washington; Delaware and Atlantic Telephone Company, Philadelphia; Empire State Telephone and Telegraph Company, Syracuse, N. Y.; Hudson River Telephone Company, Albany, N. Y.; New York Telephone Company, New York; New York and New Jersey Telephone Company, Brooklyn; New York and Pennsylvania Telegraph Company, New York; Pennsylvania Telephone Company, Harrisburg, and Providence Telephone Company, Providence, R. I.

TRAINMEN KILLED.

Four Deaths in a Collision in Tennessee.

Chattanooga, Tenn.—In a collision between a northound freight train and a southbound passenger train near Tullahoma, Tenn., on the Nashville, Chattanooga and St. Louis Railway, four trainmen were killed and several were injured. The dead are: Will Rea, engineer of the passenger train; Horace Suggs, fireman of the passenger train; Porter Burdell, of the passenger train, and Joe B. Suggs, engineer of the freight train. All lived in Nashville. Engineer Suggs was the father of Fireman Suggs. Both trains were running at a rapid rate. An express car and several freight cars were demolished and burned. No passengers were killed or seriously injured.

HUGE DIAMOND FOUND.

Largest Known—Valued in Johannesburg at $3,500,000 to $4,000,000.

Johannesburg, Transvaal.—The largest diamond known has been found near Pretoria. It weighs 3032 carats, and is said to be a stone of good quality. It is valued here at $3,500,000 to $4,000,000.

The famous Kohinoor, which is valued at $600,000, weighs 123 carats, though it is said to have weighed 900 before it was cut. There was great excitement here and at Pretoria as a result of the discovery.

Judge Thomas, of New York City, quashed the indictment against former Inspector of Boilers John W. Fleming in connection with the Slocum disaster. A similar motion in behalf of Henry Lundberg, Assistant Inspector of Hulls, was denied.

Sentenced For Bribery.

William Duke, said to have sold appointments and promotions in the New York City Fire, Police and Health Departments, was sentenced to six months in prison and fined $500.

MURDERED IN THEIR HOME

Florida Community Shocked by Horrible Outrage.

Tragedy in Polk County Just Like That Which Threw the State of Georgia Into a Turmoil.

Tampa, Fla.—A frenzy of excitement has seized upon the farming community of Wauchula, in Polk County, following the discovery of the mutilated bodies of John Kirby, his wife and four children in a bedroom in their house, which had been set on fire and partly consumed.

What has added to the feeling is the remarkable verdict of a Coroner's Jury, which found that the entire family came to their deaths "by fire or some other means unknown," although there isn't the shadow of a doubt that they were murdered, and the young wife assaulted before she was killed.

In all its aspects the crime is like the Statesboro, Ga., tragedy, which resulted in the burning of two negroes at the stake and the calling out of the militia to quell the mob spirit. It was believed by the people of Wauchula that a band of negroes murdered Kirby and his wife and children and then applied the torch to make it appear that they died in an accidental fire.

After the verdict was brought in three or four farmers who were not satisfied made a search of the half-burned house and found a hammer in the ruins. They then learned from the physician who had examined the bodies that the skull of each victim had been crushed with a blunt instrument. The most pitiful part of it was the finding of the baby, only a year old, in a crib.

She was a chubby little thing, and in her two fat fists was found clasped a rag doll. The fire had not touched her, and her dimpled face was calm and peaceful. The blow that killed the babe must have been delivered with great force, for the entire back of the skull was broken.

Near by lay the body of the farmer's oldest son, a boy of about twelve. The knob of the hammer fitted the hole in the side of the head. Beside him, in the same bed, was the body of a younger boy. His skull, too, was battered in near the temple. It was evident that both boys had been murdered while they slept, for there was not a sign of a struggle, and the hand of each stretched peacefully over his breast.

It was difficult to determine whether Kirby was roused from his sleep by the murderers after his wife was slain or whether he was subjected to the unspeakable torture of seeing her seized, assaulted and killed, but the position of his body indicated that he had arisen to defend his household against the invaders.

It is reasonably certain that at least three men were concerned in the crime, for it is not believed that one or even two ordinary men could have overcome John Kirby in a physical encounter, for he was rawboned and powerful.

He did not have a chance to get his shotgun, which hung over the mantel in the room adjoining. He must have been struck down from behind and then his brains beaten out with the hammer.

Mrs. Kirby was in her night dress. Its condition showed that she struggled fiercely before she succumbed to her assailants. The wound on her head was not as deep nor delivered with such savage ferocity as the blow which killed her husband and her children. It is barely possible that she was not struck on the head at all, but was strangled. Her body, as well as that of her husband, had been partly consumed by the fire.

The Kirby family came from Blount County, Ala., last October. They were quiet, home loving folk, and enjoyed the esteem of their neighbors. The house in which they lived was a small one, and it does not seem possible that at least one member of the family could not have escaped from an accidental fire.

FOUR KILLED IN GAMBLING DEN

Discharged Employe Shoots Two Dealers, the Proprietor and Himself.

Tucson, Ariz.—A tragedy in which four men lost their lives occurred in the border town of Nogales. William Walters, a gambler, entered the Palace saloon, owned by M. M. Conn, walked to a poker table, and, without a word of warning, drew a revolver and opened fire on the dealer, known as "Cowboy" Johnson, firing two shots through his head. Walters then turned on Conn, the proprietor, who was making his way toward the door, and shot him through the head and heart. The murderer then turned his weapon toward the monte dealer, shooting him through the back of the head. He fired a shot at George Bendle, a cattle man, which grazed the latter's face, and then sent a bullet through his own brain. All of the victims died before being able to make statements.

Walters had been employed by Conn, but had been discharged a few days before. It was said he was intoxicated at the time he entered the saloon. Conn was one of the best known sporting men in the Southwest.

ALLIANCE TO STAND.

France Faithful to Russia, the New Premier Says.

Paris, France.—In the Chamber of Deputies Premier Rouvier announced that France would remain faithful to her alliance with Russia.

The three-masted schooner Rodney Parker, of Lynn, Mass., Captain Randall, from Stonington, Me., to New York City, with a cargo of granite, went on the rocks at Simonton's Cove, Portland Harbor. A tug took off the crew.

In Dominican Waters.

As the result of a Cabinet meeting at the White House, in Washington, D. C., and the arrangements of the Naval Board, the entire Caribbean squadron has been detailed for duty in Dominican waters.

WORST BLIZZARD IN YEARS

Severe Snow and Wind Storm Sweeps Atlantic Coast.

NEW YORK CITY BADLY TIED UP

Railroad Trains Stalled on Nearly Every Line Running Into the Metropolis—Vessels Put Into Harbors All Along the Shore From Maine to Hampton Roads, Va.

New York City.—What all records prove to be the severest winter storm that ever swept over the Atlantic seaboard—that is, the most extensive ever known in the territory affected and the damage done—reached the end of its fury in the vicinity of New York City at 8 o'clock at night, and was followed immediately by a rapid fall in temperature, which at midnight was seven degrees above zero. The snowfall and the high winds, blowing from the northwest and then from the north, covered thousands of square miles, from beyond the great lakes to the ocean, and extending to the New England coast and the interior. New York City and its vicinity came in for the most furious swing of the storm's lash.

So great was the snowfall and so high were piled the drifts that that city practically was isolated from outside communication by rail. The New York Central Railroad, with the exception of three local trains to White Plains, was tied up completely. The famous Twentieth Century, drawn by one of the most powerful engines in the world, was stalled at Irvington on the Hudson.

The New York, New Haven and Hartford was in the same condition as the Central.

Not a wheel was turned on the Long Island Railroad. It was the most complete tie-up of that system on both its north and south branches ever known. The blocking was so complete that a mild famine in New York became imminent. The Pennsylvania, the Erie, the Jersey Central and the Lackawanna roads, while a little more fortunate than the roads whose tracks were covered with mountains of snow in New York State were hampered, and all their time schedules were disarranged greatly.

The entire coast line, from Hampton Roads north to the bleak shores of Maine, has been devastated. The crew of a schooner had a thrilling escape. Two British steamers were driven ashore in Chesapeake Bay. The wind was blowing at the rate of seventy-two miles an hour off Cape Cod, and hundreds of craft were in peril. All harbors from the Delaware capes to Portland were filled with stormbound fleets. The storm extended inland through Maine, where the mercury fell to a point lower than is remembered in twenty years.

On the Jersey coast the intense cold and the blinding, cutting snow made it impossible for the life-saving guards to make their regular patrol, so that grave concern was felt for the safety of a score of craft that might have lost their bearings in the great white pall, which spread far out to sea and closed them in.

HONDURAN REVOLT.

Advices to Mobile Indicate Danger in Puerto Cortez.

Mobile, Ala.—Advices received here by the steamer Espana, from Honduras, declared that a revolution was imminent in Puerto Cortez and other portions of Spanish Honduras. The Government at Tegucigalpa has taken steps to forestall an outbreak. The revolution is of an internal nature, and trouble was feared. At Puerto Cortez natives continuously engaged in revolutionary talk, and it was the impression of many persons that they were organizing for a revolt against the Government in the near future.

Secretary of War Baraona, a week ago, issued an edict requiring all persons, of whatever nationality, leaving the country to secure a permit from his department. When the steamer Espana left the port of Cortez the order had been somewhat modified, in that Commander Bulnes had authority to issue the passports.

GRIEF KILLS A RUSSIAN.

Didn't Hear From His Family in St. Petersburg and Feared the Worst.

Philadelphia, Pa.—The revolt in Russia so preyed on the mind of Joseph Kochenski, thirty-four years old, of 2566 Salmon street, as to undermine his health and cause his death.

Kochenski's wife and child are in St. Petersburg, and up to two months ago he heard from them regularly. Reading the newspapers of the shooting down of women and children by the Czar's soldiers in the streets of St. Petersburg, coupled with the non-arrival of his usual letters, increased his fears for their safety. At the Coroner's inquest the tale of the young man's misery was told by fellow workmen.

WITHDRAWING PART OF ARMY.

Rome Hears That Some of Kuropatkin's Force is Being Sent Back.

Rome, Italy.—A telegram received from Mukden said it was believed there that some of General Kuropatkin's best troops have been withdrawn and were now on their way to European Russia, to be used in suppressing the revolution that was believed to be impending.

POPE WARNS PRIESTS.

Severe Punishment For Those Who Join Russian Revolutionists.

Rome, Italy.—The Pope issued secret instructions to the Catholic clergy in Russia, threatening severe punishment to such of them as join the revolutionists.

Casualties at Riga.

The total casualties reported in the affray at Riga were seventy-six.

SEA SICKNESS KILLS TEN

Forty Other Passengers on the Vaderland in Hospital.

Steamship Arrives in New York City From Antwerp With Sad Tale of Losses on Her Trip.

New York City.—Ten persons died from seasickness during the voyage of the Red Star liner Vaderland, from Antwerp to this port, according to the statement of Dr. Waerserger, the ship's surgeon, which is supported by the stories of the passengers.

Forty more persons were so overcome by the rolling and pitching of the ship that they had to be removed to the steamer hospital. They responded to treatment, and but one was left in hospital when the vessel came in. He was able to walk ashore at Ellis Island. All who died were men—Hungarian steerage passengers, and all from the same province.

"Persons can die from seasickness," said Dr. Waersenger. "While these men technically died from congestion of the lungs, they really were the victims of seasickness. If we had made the trip in fair weather none of these persons would have died."

Only two bodies were brought to the port, the rest being buried at sea either at midnight or at 4 o'clock in the morning. Relatives were invited to witness the ceremony, but in no case did any one accept, and the officers and men attended to the simple rites of sea burial observed in every case, a prayer being recited before the body was allowed to plunge over the rail.

None of the cabin passengers, it was stated, had left their beds to witness the mournful scenes. The ship carried 955 steerage passengers, and those who died were quartered in the forward part of the vessel, where the motion was most severe. Those who succumbed were ill but a very short time as a rule. The fatal effect of the malady, according to the ship's officers and the doctor, was due to the half-starved condition in which the victims had left their native country. In spite of all the aids that medical science could bring to them they had not vitality enough to pull through.

Despite the very unusual death rate, there was very little alarm, according to the officers and cabin passengers, shown by the more fortunate of the steerage passengers, who did not suffer.

Among the passengers on the Vaderland were two physicians, and they aided the ship's surgeon, Dr. C. Waerseger, in every possible way. They frequently held consultations with him, and gave him their professional advice freely, in the interests of the whole steerage. Just before leaving the ship they drew up the following joint note:

"This is to certify that upon request of the authorities on board this steamer we, the undersigned, made an examination of many of the patients and an inspection of their quarters and found the latter in the best condition. To the best of our knowledge we believe the fatalities to be due to the exhaustion attending a rough voyage, and further wish to state that the patients received every attention possible.

"Dr. SIDNEY K. SIMON,
"New Orleans, La.
"Dr. WILLIAM ACKERMANN,
"Milwaukee, Wis."

Captain R. C. Ehoff, of the Vaderland, speaking of the sad trip, said:

"Those who died had been poorly fed for many years, and on arriving on the ship showed it plainly. Furthermore, they were poorly clothed, and in no condition to stand the cold weather of the trip, or the rough weather we encountered."

MIKADO SENDS THANKS.

Tells Minister Griscom He Appreciates Reception Given to Fushimi.

Tokio, Japan.—The Emperor gave audience to Minister Griscom and the entire staff of the American Legation. Through the Minister the Emperor sent a message to President Roosevelt expressing his appreciation of the courtesies shown Prince Fushimi by the President and the people of America upon the occasion of the Prince's recent visit.

Minister Griscom replied that Prince Fushimi's spontaneously cordial reception was the natural result of His Majesty's felicitous expression of interest in the St. Louis Exposition, to visit which was one of the chief objects of the Prince's visit.

JAPAN'S INTEREST KEEN.

Believe Russian Disorder May Have an Important Bearing on the War.

Tokio, Japan.—The keenest interest is felt here in the revolutionary movement in Russia. The Japanese readily understand what an important bearing it may have upon the progress and duration of the war and of the negotiations that will follow its close.

SEVASTOPOL ARSENAL CLOSED.

Naval Department Entirely Destroyed by Monday's Fire.

Sevastopol.—The fire at the Admiralty works here was undoubtedly of incendiary origin. The naval department was entirely destroyed.

The arsenal has been closed to forestall a strike.

Smoot Refuses to Testify.

Senator Smoot, before the Senate committee, at Washington, D. C., refused to testify concerning the endowment ceremony.

Yellow Fever on Battleship.

Commander Niles, of the United States cruiser Boston, has reported to the Navy Department the outbreak of yellow fever on the war ship, among those prostrated being a lieutenant, W. D. Leahy, and a paymaster and surgeon.

Bad Reports at Moscow.

Moscow has received alarming reports from Ivanovo-Voznesensk, the Russian Manchester, where there are said to be 200,000 workmen.

TUCKER DECLARED GUILTY

Decision in Notorious Murder Trial Reached After Long Debate.

Defendant, the Declared Murderer of Mabel Page in Weston, Mass., Last March—Counsel Overcome at Verdict.

Cambridge, Mass.—Chas. L. Tucker, of Auburndale, at 10.10 o'clock at night was found guilty of the murder, in the first degree, of Miss Mabel Page in her father's home, in Weston, on March 31 last. The jury were eight hours in reaching their decision. Tucker collapsed utterly when the verdict was announced, and his counsel were unable to revive him for some time.

A surprising feature was the effect of the announcement of the verdict upon the attorneys, not only for the prisoner, but for the Commonwealth. James H. Vahey, the senior counsel for the prisoner, was greatly affected, and when he left the courtroom he met Attorney-General Herbert Parker in the corridor. The leading counsel for the Commonwealth showed the result of the strain to such a degree that he threw his arms around Mr. Vahey's neck, and both men wept on each other's shoulders.

Philip Mansfield, one of the associate counsel for the youthful prisoner, became hysterical and fell into the arms of a reporter who had gone to the room of the defendant's counsel to secure an interview. Many spectators and friends of the prisoner wept bitterly when they realized the young man's fate.

The penalty is death in the electric chair at the State prison in Charlestown, about a mile from the scene of the trial. The convicted man will be sentenced later.

One of the dramatic incidents of the trial occurred in the morning when, Attorney-General Parker having concluded his argument, the young prisoner unexpectedly accepted his constitutional privilege of addressing the jury in his own behalf. Rising in his cage, he asserted, at first trembling and flushing deeply, but later with considerable confidence, his innocence of the crime. Judge Sheldon then delivered the charge to the jury.

Miss Mabel Page, who was forty-one years of age, lived in a small country dwelling house with her father, Edward Page, formerly a Boston merchant, and her brother Harold. She was stabbed to death with a knife on March 31, 1904. Basing his examination upon the appearance of the wound found in the neck, the only wound at first visible, the medical examiner reported that Miss Page had committed suicide, and it was not until an undertaker had discovered other wounds that it was established that the woman had met death at the hands of an assassin.

The Government's case against Tucker included the charge that a slip of paper bearing the address, "J. L. Morton, Charlestown, Mass.," found beside the body of Miss Page, was in the handwriting of the defendant; that a stickpin found in his pocket had been stolen by him from the Page home, and that broken pieces of a knife blade found in his home were parts of the knife with which he had stabbed Miss Page.

The evidence against Tucker was entirely circumstantial.

NEWS PASSED THROUGH.

Surprise Created by Reports the Russians Allow to Go Out.

London, Eng.—Amid the horrors of the recent massacre are certain features of the situation in St. Petersburg which have begun to receive calm consideration.

The elaborate accounts of the massacre which have been telegraphed by representatives of the German, French and English press confirmed a statement made a few days ago by an Englishman who had just left the Russian capital that the telegraphic censorship for some time has been in abeyance, and correspondents, if their names and addresses were known, were at liberty to telegraph what they pleased.

SAVES EDISON'S LIFE.

Abscess in Mastoid Process of Famous Inventor Removed.

Orange, N. J.—Thomas A. Edison, the inventor, rested comfortably at his home in Llewellyn Park after coming through a serious operation performed on him.

The operation was for the removal of a mastoid abscess behind the left ear. The abscess was close to the brain, and there was danger of blood poisoning. The discoveries made in performing the operation indicated that had it been delayed longer the consequences would have been serious.

Sultan Warns Foreigners.

The Sultan of Morocco, a special cable despatch from Tangier said, has warned foreign subjects to remove from districts to which he has sent a punitive expedition.

Singer Hangs Himself.

Fritz Tasch, a member of the chorus of the Metropolitan Opera Company, of New York City, hanged himself in a property room as the audience was gathering for a matinee.

Loubet Asks For Cabinet.

President Loubet asked M. Rouvier to form a new Cabinet. The retention of M. Delcasse at the head of the Ministry of Foreign Affairs is considered certain.

Yellow Fever Gaining.

Yellow fever is gaining hold in Panama in spite of efforts to check it. The public health report, issued at Washington, D. C., shows ten cases since December 1. One death only is reported. Havana reports three cases and two deaths.

Shot Wife by Mistake.

Ludwig Weisse, of St. James, L. I., shot at a chicken stealing cat and missed it, but the bullet passed through the wall and killed Weisse's wife.

AGREE ON COTT

Both the Acreage and Fertilizers to be Cut 2[illegible] Cent. This Year.

NO DISSENTION IN THE M[illegible]

Proposed That Farmers of Eas[illegible]ern District Sign Iron-Clad Contract on Reduction.

New Orleans.—The following [illegible]tion was adopted by an enthusiastic and unanimous vote of the cotton convention delegates:

[illegible]man Interstate Cotton [illegible]
[illegible]man Interstate Cotton [illegible]
Convention:

"We, your committee on a [illegible] the use of fertilizers, do [illegible] that the acreage to be plan[illegible]ton in 1905 shall be 25 per [illegible] than in 1904, and that there [illegible] reduction of 25 per cent. in [illegible] commercial fertilizers in gro[illegible]ton.

"We recommend the follo[illegible] for the accomplishment of [illegible]tion:

"First—That the vice-pr[illegible] this association for each st[illegible] call a meeting of all persons [illegible]ested in cotton on the 11th [illegible] February, 1905, at the county [illegible] each county, not already [illegible] on the plan hereinafter set [illegible] which meeting there shall be [illegible] a county chairman and a [illegible] chairman for each school d[illegible] other smallest political sub-di[illegible] the county.

"Second—That there shall [illegible] in each school district or othe[illegible] est political sub-division of th[illegible] on the 18th day of February, [illegible] 1 o'clock p. m., a meeting of [illegible]zens of said district or other [illegible] political sub-division, who are [illegible]ested in the growing of cotton [illegible] meeting shall elect a commit[illegible] three on acreage and member[illegible]

"Third—At said precinct m[illegible] the farmers and land owners [illegible] shall be asked to sign the fo[illegible] agreement:

"We, the undersigned farm[illegible] land owners, living in (school [illegible] (beat), (precinct), No. —, Co[illegible] ——, State of ——, hereby [illegible] ourselves to reduce the acreag[illegible] each time and then left and re[illegible]ed by us in cotton and to red[illegible] consumption of fertilizer in [illegible] cotton as shown by the statem[illegible] opposite our names.

"Fourth—That said commit[illegible] acreage and membership shall [illegible] diately canvass said district a[illegible] all farmers and land owners [illegible] district who do not attend sai[illegible] ing, to sign said pledge and [illegible] tee shall return said pledge [illegible] chairman of said precinct.

"Fifth—Said precinct chairma[illegible] preserve said pledges and the[illegible] immediately make a written r[illegible] the county chairman showing th[illegible] number of acres planted in co[illegible] said precinct in 1904, and the [illegible] number to be planted in cotton [illegible] precinct in 1905, the total amo[illegible] fertilizer used in growing co[illegible] said precinct and the total ama[illegible] be used in said precinct in said [illegible]

"Sixth—The county chairman [illegible] immediately forward to the st[illegible] president of their respective st[illegible] written statement showing the[illegible] number of acres planted in co[illegible] their respective counties in 1[illegible] the total amount to be planted [illegible] and shall make a like report as [illegible] fertilizer used and to be used [illegible] years.

"Seventh—The vice-presidents [illegible] such state shall, immediately w[illegible] ceiving the reports of the [illegible] chairman, forward to the presi[illegible] this association a report showi[illegible] number of acres planted in co[illegible] his state in the year 1904, and [illegible] amount of fertilizer used in sai[illegible] in growing cotton, and the [illegible] of cotton to be planted and for[illegible] to be used in 1905.

"Eighth—The president of t[illegible] sociation, upon receiving these r[illegible] shall immediately tabulate th[illegible] and send a copy thereof to the [illegible] chairman in the different cotton [illegible] and territories.

"Ninth—If any county not [illegible] organized should fail to organi[illegible] vice-president of the state in [illegible] the said county is situated, shall [illegible] to be organized as herein pr[illegible] and if any precinct should fai[illegible] ganize, the county chairman [illegible] county in which such precinct [illegible] ated shall cause such precinct [illegible] organized as herein provided.

"Tenth—It shall be the furth[illegible] of the officers of this associatio[illegible] port the names and addresses [illegible] persons who refuse to sign th[illegible] ment to reduce acreage for [illegible] gether with the number of [illegible] cotton planted by such persons [illegible] and the number of acres that t[illegible] probably plant in 1905, and [illegible] like report as to fertilizers."

Crossed Andes in Auto.

Santiago de Chile.—Ap[illegible] has just crossed the Andes at [illegible] vation of 25,000 feet above t[illegible] level.

Will Build a $15,000 Dormit[illegible]

Jackson, Miss.—The trustees [illegible] Baptist orphanage here ha[illegible] ed to build a fifteen thou[illegible] dormitory at once to replace [illegible] that was destroyed by fire [illegible] weeks ago.

T[illegible]

VOL. II.

HOT GROWS WORS[illegible]

[illegible]en are Killed on the Stree[illegible] of Warsaw—Troops to Que[illegible] the Outbreaks.

PROCURATOR'S DEATH CERTA[illegible]

Twenty Dead at Radow, While [illegible] Score Are Shot Down at Skarzh[illegible]

Disturbances at Lodz.

Warsaw.—Seven men were k[illegible] are by strikers in bakeries and c[illegible] there where attempts were mad[illegible] cease work. Many arrests [illegible] are made.

The prices of provisions having [illegible] the peasants are afraid to b[illegible] their produce.

Strikers attempted to bring out [illegible] employes of the electric plant of [illegible] asylum for lunatics, but the dire[illegible] succeeded in pacifying the men.

Other Towns in Poland.

Warsaw.—According to a [illegible] from Radom, twenty workmen [illegible] been killed or wounded in strik[illegible] orders there Tuesday, while at [illegible]ko, twenty-four have been kille[illegible] forty wounded.

Grave trouble is reported at K[illegible] Troops have been sent to Kutno [illegible] here.

The Strikers in Lodz.

Lodz, Russian Poland.—The [illegible] factories were opened Tuesday [illegible] scarcely any of the workmen appe[illegible] At one factory the men worked [illegible] much time and then left and re[illegible] to return, saying they did not w[illegible] be killed by a bullet from the [illegible] fired through the door. Anothe[illegible] factory abruptly ended work.

The situation appears to be gr[illegible] worse, and a critical time is ex[illegible] February 9, the date on which [illegible] the largest manufacturers ha[illegible] agreed to pay their employes th[illegible] advance of their wages, dismiss the [illegible] shut down the mills indefinitely.

The strikers are becoming m[illegible] aggressive. Tuesday morning they [illegible] forcibly entered a mill and destroy[illegible] machinery.

Procurator Assassinated.

Helsingfors, Finland.—The a[illegible] Soisalon Soininen, procurato[illegible] Grand Duchy of Finland, who was sh[illegible] in front of his residence by a you[illegible] dressed in an officer's uniform [illegible] was identified as Carl Elorord [illegible] a student at the [illegible] Alexander University here [illegible] Lonthal, who latterly had liv[illegible] Stockholm, returned to Finla[illegible] examination. Senator Al[illegible] who has assumed the duties [illegible] orator of the senate, is direct[illegible] investigation of the crime [illegible] wounds inflicted on the assa[illegible] son of Soininen are not of [illegible] serious character.

Strike Situation is Wor[illegible]

Batoum, Caucasia.—The stri[illegible] here is growing worse. [illegible] practically at a standstill, [illegible] steamers have succeeded [illegible] away. Food is becomin[illegible] scarce. The military governo[illegible] issued a proclamation warning [illegible] against assembl[illegible] crowds.

Uncle Sam's Books.

Washington.—The monthly [illegible] statement issued by th[illegible] controller of the currency shows [illegible] circulation of national bank[illegible] January 31, 1905, to have be[illegible] $3,853, an increase for the [illegible] $10,656,226, and an increase [illegible] month of $2,628,697. The ci[illegible] based on United States bonds [illegible] to $435,807,901, an increase [illegible] year of $48,150,170, and an [illegible] for the month of $3,966,116.

The circulation secured b[illegible] money aggregated $31,614,95[illegible] increase for the year of $7,584[illegible] decrease for the month of $[illegible] The amount of funds on dep[illegible] and circulating notes was $4[illegible] used to secure public deposits [illegible] $50.

THE UNION.

EQUAL RIGHTS TO ALL, SPECIAL FAVORS TO NONE.

VOL. II. CLANTON, ALA., FEBRUARY 9, 1905. NO. 46.

AGREE ON COTT

Both the Acreage and U
Fertilizers to be Cut 25
Cent. This Year.

NO DISSENTION IN THE ME

Proposed That Farmers of Each
ern District Sign Iron-Clad
tract on Reduction.

New Orleans.—The following
tion was adopted by an enthu
and unanimous vote of the cotto
vention delegates:

man Interstate Cotton Gr
man Interstate Cotton Gr
Convention:

"We, your committee on acrea
the use of fertilizers, do recom
the acreage to be planted
ton in 1905 shall be 25 per cen
than in 1904, and that there sha
reduction of 25 per cent. in the
commercial fertilizers in growi
1904.

"We recommend the following
for the accomplishment of said
ton.

"First—That the vice-preside
each state for each state
the income of all persons
cotton on the 15th
February, 1905, at the county
such county, not already org
county plan hereinafter set
ward meeting there shall be
county chairman and a
each school distri
the smallest political sub divi
the county.

"Second—That there shall be
in each school district or other
or political sub-division of the
on the 15th day of February, 19
o'clock p. m. a meeting of a
cers of said district or other s
political sub-division, who are
ested in the growing of cotton,
meeting shall elect a committe
three on acreage and members

"Third—At said precinct m
the farmers and land owners p
shall be asked to sign the foll
agreement:

"We, the undersigned farme
and owners, living in (school di
(beat), (precinct), No. —, Cou
—, State of —, hereby
ourselves to reduce the acreage
ed by us in cotton and to redu
consumption of fertilizer in g
cotton as shown by the statemen
opposite our names.

"Fourth—That said committe
acreage and membership shall
diately canvass said district an
all farmers and land owners i
district who do not attend said
ing, to sign said pledge and co
he shall return said pledge
chairman of said precinct.

"Fifth—Said precinct chairma
preserve said pledges and they
immediately make a written re
the county chairman showing th
number of acres planted in cot
said precinct in 1904, and the
number to be planted in cotton
precinct in 1905, the total amo
fertilizer used in growing cot
said precinct and the total amo
to be used in said precinct in said

"Sixth—The county chairman
immediately forward to the stat
chairmen their respective st
cotton statement showing the
number of acres planted in cot
their respective counties in 190
the total amount to be planted i
and shall make a like report as
fertilizer used and to be used i
years.

"Seventh—The vice presiden
each state shall, immediately up
receiving the reports of the c
chairman, forward to the presid
this association a report showi
number of acres planted in cot
his state in the year 1904, an
amount of fertilizer used in sa
in growing cotton, and the a
reduction to be planted and fert
to be used in 1905.

"Eighth—The president of th
sociation, upon receiving these r
shall immediately tabulate the
and send a copy thereof to the
chairman in the different cotton
and territories.

"Ninth—If any county not
organized should fail to organi
vice-president of the state in
the said county is situated, shall
to be organized as herein pr
and if any precinct should fail
ganize the county chairman
county in which such precinct
shall cause such precinct
organized as herein provided.

"Tenth—It shall be the further
of the officers of this association
get the names and addresses o
persons who refuse to sign the
ment to reduce acreage for 19
gether with the number of ac
cotton planted by such persons
also the number of acres that th
probable plant in 1905, and to
report as to fertilizers."

NOT GROWS WORSE.

en are Killed on the Streets
of Warsaw—Troops to Quell
the Outbreaks.

PROCURATOR'S DEATH CERTAIN.

Twenty Dead at Radow, While Two
Score Are Shot Down at Skarzko.

Disturbances at Lodz.

Warsaw.—Seven men were killed
ere by strikers in bakeries and else-
here where attempts were made to
sume work. Many arrests have
en made.

The prices of provisions having gone
, the peasants are afraid to bring
their produce.

Strikers attempted to bring out the
mployes of the electric plant of the
ylum for lunatics, but the directors
ucceeded in pacifying the men.

Other Towns in Poland.

Warsaw.—According to a report
om Radom, twenty workmen have
en killed or wounded in strike dis-
rders there Tuesday, while at Skar-
ko twenty-four have been killed and
rty wounded.

Grave trouble is reported at Kutno.
roops have been sent to Kutno from
ere.

The Strikers in Lodz.

Lodz, Russian Poland.—The fac-
ories were opened Tuesday, but
arcely any of the workmen appeared.
one factory the men worked until
noon time and then left and refused
return, saying they did not want to
killed by a bullet from the street
red through the door. Another fac-
ry abruptly ended work.

The situation appears to be growing
rse, and a critical time is expected
February 9, the date on which some
the largest manufacturers have de-
ided to pay their employes the bal-
nce of their wages, dismiss them and
n down the mills indefinitely.

The strikers are becoming more ag-
ressive. Tuesday morning they forci-
ly entered a mill and destroyed the
achinery.

Procurator Assassinated.

Helsingfors, Finland.—The assassin
Solsalon Soininen, procurator gen-
al of Finland, who was shot and
lled at his residence by a young man
ssed in an officer's uniform, has
en identified as Carl Elorord Hohen-
al, formerly a student at the Impe-
al Alexander University here. Ho-
enthal, who latterly had lived in
ockholm, returned to Finland Jan.
He maintains obstinate silence
nder examination. Senator Akerman,
ho has assumed the duties of pro-
rator of the senate, is directing the
vestigation of the crime. The
unds inflicted on the assassin by
on of Soininen are not of a dan-
rous character.

Strike Situation Is Worse.

Batoum, Caucasia.—The strike situ-
tion here is growing worse. Business
practically at a standstill, although
me steamers have succeeded in get-
g away. Food is becoming more
arce. The military governor has is-
ed a proclamation warning the in-
abitants against assembling in
owds.

Uncle Sam's Books.

Washington.—The monthly circula-
on statement issued by the comp-
oller of the currency shows the total
rculation of national bank notes
January 31, 1905, to have been $467,-
2,853, an increase for the year of
1,656,226, and an increase for the
onth of $2,628,697. The circulation
ased on United States bonds amount-
to $435,807,901, an increase for the
ar of $48,150,170, and an increase
r the month of $3,966,116.

The circulation secured by lawful
oney aggregated $31,614,950, a de-
ease for the year of $7,584,944, and
crease for the month of $1,338,419.
The amount of funds on deposit to se-
re circulating notes was $439,259,040
d to secure public deposits $105,474,-
0.

Jewel Casket Missing.

San Francisco, Cal.—E. M. Hol-
, a wealthy lumberman of Minne-
, who, accompanied by his wife,
s spending some weeks in this
y, started for home. When about
ard the overland train Mrs. Hol-
k discovered that a casket con-
ning jewels valued at $8,000 had dis-
ared on the way from the hotel to
railroad. The travelers placed
matter in the hands of the police,
t so far the detectives have not suc-
ded in finding a clue to the missing
ms.

Birmingham, Ala.—A. S. McClary, the general freight agent of the Birmingham Railway, Light and Power Company, with office at the freight depot at Sixteenth street and First avenue, sustained painful bruises Tuesday morning about 8 o'clock while attending to some work around a freight car.

Mr. McClary was thrown between two freight cars, which came together. Both of his limbs were badly bruised.

Fortunately at the time of the accident the cars were moving very slowly and Mr. McClary was able to get from between them before being dangerously injured. He was taken into his office and the ambulance of Shaw & Son was summoned.

Mr. McClary suffered very excruciating pain, but no serious results are apprehended. He was taken to St. Vincent's hospital, where his injuries were attended to.

It was stated at the hospital a short while after the accident that Mr. McClary was resting comfortably and would be able to be out in a short time.

Walks in Front of a Train.

Columbus, Ga.—Robert Harris, a white man 29 years old, was run over and instantly killed by a Central of Georgia switch engine at a crossing near the freight offices at the Union depot. His head was almost completely severed from his body, and his body was otherwise terribly mangled. It is said he was intoxicated and was staggering across the railroad tracks.

A call boy shouted to him that a train was coming as he stepped on the track, but he paid no attention to the warning. A brakeman shouted at him several times, but to no effect. It was impossible to stop the engine in time. He was so mangled that he was unrecognizable. People who knew him well saw him just before he stepped on the track, however. An inquest will be held. Harris clerked at various stores in the city.

Leaves Much to Charity.

Pittsburg, Pa.—The will of Charles Lockhart, whose estate is estimated at between $75,000,000 and $100,000,000, was probated February 1.

After providing for members of his family and friends, Mr. Lockhart bequeathes $360,000 for public benefits. Of this sum the United Presbyterian church is given $130,000, divided as follows:

Board of foreign missions, $50,000; board of home missions, $30,000; board of Freedmen's missions, $20,444; board of church extension, $10,000; board of ministerial relief, $10,000; board of education, $10,000. The Y. M. C. A., of Pittsburg, is to get $50,000, and the balance of the bequest is to be divided among the prominent local hospitals.

Urged to Commute Sentence.

Harrisburg, Pa.—So numerous have been the requests from all over the country from people who wnat Governor Pennypacker to commute to life imprisonment the sentence of Mrs. Kate Edwards, who is to be hanged at Reading on February 16, that it has been found necessary for the executive department to prepare a circular letter in answer to these requests.

The letter quotes the state constitution to show that the governor has no power to commute a death sentence to life imprisonment except upon the recommendation in writing from the board of pardons.

Old Man Jumps from Window.

Savannah, Ga.—H. C. Swift, 70 years of age, who came to Savannah from Stockton, Ga., eight months ago, jumped from the window of his home in this city and died Tuesday. He had been suffering from the grip. For several years Mr. Swift was a resident of New York, but came South seeking a warmer climate.

Demolished by a Train.

Scottsboro, Ala.—A passenger train on the Nashville, Chattanooga and St. Louis railway struck a team of mules at Bridgeport, this county, Saturday, literally demolishing the wagon and killing the mules. The driver, a negro boy, barely escaped death by jumping from the wagon just as the team was struck.

Denies Peace Settlement.

London.—The charge d'affaires of the Russian embassy informed the Associated Press that there is no basis for the renewed rumor of peace prospects. The Russian attitude, he declared, had not been changed. Peace could not be considered under the present conditions.

$1,000 Gift to School Fund.

Montgomery, Ala.—A check for $1,000 for rural schools in Alabama was Monday received by State Superintendent of Education I. W. Hill from Samuel A. Green, general agent of the Peabody fund of New York.

DIVERSIFICATION

Is the Keynote in an Address Issued by the Secretary: Wilson.

SOMETHING TO SELL EVERY DAY.

Will Make Farmers Independent of the Cotton Crop.—Place It on the Plane of a Surplus Crop.

The great cotton convention which was held in New Orleans last week has emphasized in no unmistakable terms that the prosperity of the South is dependent upon diversification; that the welfare and happiness of every farmer, every merchant and every banker is to have each farmer practice diversification, so that he may control his cotton instead of being controlled by it; that he must make it a surplus crop and not a sole dependent.

The South is rich in fertile lands and an equitable climate to produce all the great food crops of the world, and with live stock become the most independent and prosperous section. There is no other section of the Union that can produce as great a variety of crops as the South.

The National Cotton Association stands for the reduction of the cotton acreage and the consequent increase in diversification. Our plan is to have a community of interest between the farmer, the merchant, the banker and the local paper, for diversification along such lines as will be to the best interest of each individual community. And in this work the National Cotton Association has the support and indorsement of the farmers, the bankers, merchants, newspapers, spinners and the legitimate handlers of cotton. It also has in this the support of every friend and well-wisher of the farmer and those who are really working for the prosperity and upbuilding of the South.

There should be a community of interest and a close organization between the farmers, and bankers and the editor of each local newspaper of every school district of the south, not only as to cotton, but as to all other crops that can be raised with profit.

What Have We Done?

The National Cotton Association has received reports from the school precinct meetings that more than 400,000 farmers, bankers and merchants are pledged to a reduction of the cotton acreage and adoption of diversification. This work will be kept up through the local committee of each school precinct cotton association until every farmer in the southern states has been pledged to diversification and a reduction of the cotton acreage.

More than 2,000 editors of local papers throughout the South have replied to our personal letters and said that they will carry a department in each issue on "Diversification."

Diversification.

Diversification means, first, that every farmer should set aside a sufficient amount of land to produce all the food and forage he will need for his own consumption.

Second—Then plant a little more of such crops as he can sell for cash each month in the year in his local market, or, together with his neighbors, make up a shipment for the larger market, and in this each one wants the advice of his local banker, merchant and editor.

Third—When those two are provided for, then plant your cotton crop. Make cotton your surplus crop.

With the possible exception of Texas, there is not a southern state that raises enough corn, oats and other grains to supply the home demand, and every year your cotton money goes to swell the wealth of the western grain farmer.

The following shows the production in the various cotton states of corn in 1904:

State.	Bushels.
North Carolina	40,705,478
South Carolina	22,189,837
Georgia	47,334,713
Florida	6,640,334
Alabama	41,877,165
Mississippi	39,709,664
Louisiana	27,258,443
Texas	136,702,699
Arkansas	48,332,614
Tennessee	80,890,025

There is no reason why the South should import corn, but there is every reason why we should not only raise enough for our own consumption but make it an article of export. Every southern state is nearer the great export markets of the world than the great Central West, which is now supplying these markets.

Start a campaign in your school precinct association for more corn. There are farmers in every community who always make a success in raising corn; let them tell you how to do it. There is more money in corn at 50 cents a bushels than cotton at 6 cents a pound.

Resolution Adopted by the Southern Bankers at New Orleans.

"Resolved, That we, the southern bankers, heartily indorse the object of said association and promise our hearty co-operation.

"Second, That we believe that the bankers are amply able and willing to finance the holding of the surplus of the present crop, which we propose to do, provided the acreage of cotton for 1905 is reduced not less than 25 per cent. and the fertilizers in like proportion.

"Third, That we urge the necessity of a thorough organization and call on the various interests of the country to assist in keeping this question agitated from now until such time as a perfect organization shall have been affected."

Resolutions adopted at the Interstate Cotton convention, New Orleans, La.:

Reduction of Acreage.

"We, your committee on acreage and fertilizers, do recommend that the acreage to be planted in cotton in 1905 shall be 25 per cent. less than in 1904, and that there shall be a reduction of 25 per cent. in the use of commercial fertilizers in growing cotton."

Financing and Holding the Present Crop.

"Your committee concludes, after last night's exhaustive session and the morning's discussion, that each state and local section seems amply able to finance their present holdings. We believe the cotton now in the hands of the producer should remain at home on the farm or be stored in local warehouses, having same fully protected from the elements and dangers of fire. The banks and commission men evidence their willingness and desire to aid in marketing the balance of the crop, so as to hold in check any disposition to rush in their cotton unduly and break the market.

"We feel if the convention, as a whole, pledges itself and the respective states these delegates represent to an absolute reduction of 25 per cent. in cotton acreage for the year 1905 and 25 per cent. reduction in the use of fertilizers, the entire problem will be solved."

Recognizes New Officers.

Montgomery, Ala.—Attorney General Massey Wilson Friday furnished State Superintendent of Education I. W. Hill with an opinion which advises him to revoke his policy of the past and recognize the new elected county superintendents of education in lieu of the old officers.

To Make Tile Blocks.

Gadsden, Ala.—The Gadsden Tile Company is erecting a building on Locust street, opposite the Printup hotel, which will be used in the manufacture of the tile paving blocks. The building will be completed within the next day or two, when the work of making the blocks will be begun in earnest.

Buy Land to Erect Houses.

Gadsden, Ala.—The Coosa Pipe and Foundry Company has purchased through M. W. Bush, manager, forty acres of land known as the Riverview, lying just north of the Alabama Consolidated furnace. The land was purchased from W. M. Meeks as trustee, and the price paid was $100 per acre. The property will be used for the purpose of erecting 500 tenement houses for the employes of the pipe works. The company has an option on twelve acres adjoining the plant, and it is rumored that another large pipe plant will be erected on this land at some future time.

Gadsden, Ala.—As the eastbound local freight train of the Southern railway was nearing Heflin Wednesday evening a number of rocks were hurled into the caboose by three parties supposed to be tramps. One of the rocks struck Flagman Charles Holt and inflicted an ugly wound on his face. A man who gave his name as A. O. Davis has been arrested.

Alleged Larceny After Trust.

Birmingham, Ala.—W. R. McArthur was arrested here Friday night charged with larceny after trust, and his father, F. E. McArthur, was arrested in Knoxville on the same charge. They were both connected with a large piano company and are wanted in Atlanta, Macon, Knoxville, Chattanooga and Savannah on charges similar to those preferred here.

Huntsville, Ala.—The Huntsville Savings Bank and Trust Company has absorbed the Farmers' and Merchants' National Bank, and will continue the business under the name of the Huntsville Bank and Trust Company.

Man Blown to Pieces.

Gadsden, Ala.—News of an accident in which one man lost his life at the Tumlin gap tunnel on the Altoona extension, has reached here.

Ed. Payne, who was foreman, was loading a hole preparatory to making a blast, when in some manner four sticks of dynamite exploded, dashing Payne's brains all over the rocks, tearing off his arm and mangling his body. One hand was picked up some distance away. His remains were shipped to his home in Georgia. Foreman Sparks lost his life in a similar manner three weeks ago, and Mr. Payne succeeded him.

Work on Tennessee.

Huntsville, Ala.—Congressman William Richardson, of the Eighth Alabama District, writes from Washington that the amount of money appropriated for Colbert Shoals in the Tennessee river, about $400,000, is enough to carry on the work now in progress there until the appropriation of the Fifty-ninth Congress is at hand. Judge Richardson said he had to be content with appropriations for the Tennessee this session, and that the small appropriation of $15,000 for dredging in the river between Guntersville and Hobb's Island will remove the sand bars that interferred with low water traffic during the last summer.

Increases Capital Stock.

Anniston, Ala.—At a meeting of the stockholders of the Anniston Lime and Stone Company, the capital stock of the company was increased to $200,000, fully paid up. The increased capital stock was found to be necessary on account of the company more than doubling their former capacity, by the erection of a splendid battery of kilns at Tredegar, Ala., and the acquisition of large and valuable tracts of mineral and timber lands, as well as the building of new dwellings, warehouses, railroads, etc., as well as the acquisition of the Comer-Cobb Mineral Company properties.

Caught Stealing.

Birmingham, Ala.—Walter Whitfield was arrested Thursday on a charge of larceny from the person of A. O. Jones, of Adamsville, who was under the effects of intoxicants.

The officers had followed Whitfield and Jones from the union passenger station, where they had suspected Whitfield's intentions by his actions. They watched him carry Jones to a room and by standing on a box and looking over the transom they saw Whitfield take the money from Jones. The amount was about $10. Whitfield attempted to leave after making the "touch," but was caught.

Frauds by "Deaf and Dumb."

Anniston, Ala.—Two men, claiming to be deaf mutes, recently worked Anniston and secured considerable money from the benevolently inclined.

Since one has been arrested in Montgomery and the other in Birmingham and it developed that they were frauds. One had a letter of recommendation from Hon. W. B. Bankhead, of Huntsville, which proved to be a forgery. He was arrested on suspicion in the Capital City. The other man was arrested in connection with a shooting affray at a Birmingham boarding house.

New Fertilizer Company.

Abbeville, Ala.—The Howard Fertilizer Company, of Abbeville, filed with Secretary of State E. R. McDavid Saturday notice of the increase of its capital stock from $5,000 to $25,000.

The Howard Fertilizer Company has been very successful in its business. The stockholders are P. W. Roberts and son, E. L. Armstrong, Webb Riley, O. L. Dortch, T. H. Hatcher, W. J. Howard, R. M. Dudley, W. M. Chevirs, W. F. Chevirs, S. C. Hughes, J. D. Covington, I. V. Luens, R. J. Reynolds and A. S. Steagall.

Will Establish Station.

Florence, Ala.—The postoffice department will establish station No. 1 in East Florence, to be open for business by February 15th. Dr. A. C. Sullivan will be in charge of the station, which will be in his drug store on Royal avenue. Money orders, stamps, registered letters and all postal supplies will be kept at the new station.

Theater Destroyed.

Salem, Mass.—A moving picture apparatus exploded on a stage during the performance of the Mechanic Hall theater last night, starting a fire that drove an audience of 1,300 people in a panic from the place and destroyed the building, entailing a loss of $50,000. None of the spectators were hurt.

Steamer Burns.

Cincinnati, O.—The steamer Hudson, moored at the east end marine ways, was destroyed by fire Saturday night. Loss, $30,000. The boat is owned by the Cincinnati and Pittsburg Packet Company and has been out of commission for several months. The origin of the fire is unknown.

UNINTERESTING PEOPLE.

They live in a quiet sort of way,
In a quiet sort of a street.
They don't meet a great many people, nor
Impress the people they meet.
The newspapers never mention their names;
The world doesn't care what they do.
They never go in for anything much,
And their intimate friends are few.

He never has had a favorite club,
Though somebody said he might,
For a fat little nose on the window pane
Awaits him every night.
And eight little fingers and two little thumbs
Undo all the work of the comb
As he sits in the quietest sort of a way
In his quietest sort of a home.

She doesn't belong to a woman's club,
She hasn't a single fad.
She spends her time with a blue-eyed lass
And a mischievous little lad.
She never unraveled a Problem of Life;
She doesn't know lots of things;
She plays with the "kids" and works all day,
And most of the time she sings.

He isn't like most other husbands at all,
She isn't like most other wives;
And they never attempt to make a change
In the course of their quiet lives;
But once in a while they dress the "kids"
And go to spend the day
In a nice little, quiet country spot,
In a nice little quiet way.

—*Maurice Brown Kirby in Collier's Weekly.*

LIBBY THE UNLOVED.

Libby Anderson hung the dish cloth on its accustomed nail, and stood there surveying it. It was plain, from the way she looked, that she had determined to speak.

"Ma," she asked of the woman who was sitting before the little round stove, "what were those papers Dave put in his pocket as I came in?"

"Some things he was showin' me."

"Ma," she asked, quiveringly, "you didn't sign anything, did you?"

"I didn't sign your name to anything." And the needles clashed again.

She knew her mother too well to press further.

"I don't just understand Dave coming here this time of year," she ventured; "and I thought he acted queer."

The old woman was folding her knitting.

"I'm going to bed, and you'd better come along, too," was her reply.

A week went by, and although Libby had twice forgotten to feed the chickens, and had several times let the kettle burn dry, she was beginning to feel more settled in her mind.

She did up the work one morning and went to town.

Her first call was at the solicitor, and here she heard the worst. Ma had assigned their home to Dave. She did not make any fuss; she was too old-fashioned for hysterics.

It was not until the old place came in sight that she broke down.

"It's not fair," she cried out, "when I've stayed here and worked—it's not fair!" And, for the first time in many years, she was crying—passionately crying.

It was a feeling of outraged justice that made her speak, for she was just a woman—the daughter of pa.

"Ma," she said, "do you think pa would like to think of your assigning the place to Dave, when I've stayed here and kept it up the best I could for twenty years?"

"La, now Libby," she said, not unkindly, "don't take on. You'll never want for nuthin'!"

"I think you don't realize what you have done," she said; and turned to the bedroom to take off her things.

It was not until the next month, the blustering month of March, that all was made clear. It was early in the afternoon when Libby looked from the window and saw a man coming in at the gate.

"That friend of Dave's from the city is coming, ma," she said.

"Gracious!" exclaimed Mrs. Anderson, "and such a day as 't is!"

The stranger warmed his hands and disbursed a number of pleasantries.

"Well, Mrs. Anderson," he said finally, "your son wants me to make a little proposition to you."

Mrs. Anderson looked pleasantly expectant.

"Dave's always makin' propositions," she chuckled.

"He's been a good deal worried about you this winter—afraid you were not just comfortable out here—you two, all alone."

"Dave's always thinkin' of his mother's comfort," she asserted; and looked triumphantly over to Libby.

"Well," he resumed, turning back to the older woman, "it worries Dave to think of your being out here alone now that you're getting along in years, so he's rented a nice little place in town and he feels sure it would be better all around if you'd just go in and take it."

"If that ain't for all the world like Dave!—always some new idea in his head. But you just tell him, Mr. Murray, not to be bothering. We don't want to move to town—do we Libby?"

"Not if we can help it," she replied.

"Dave's been away from the place so long that he don't see just how 't is," ma explained. "Libby and me would not feel at home no place else."

"It's too bad you feel that way," he went on persuasively, "for Dave was so sure you'd like the idea that he's gone ahead and made all arrangements, and I'm afraid there might be a little trouble about unmaking them."

He turned to Libby.

"How soon do you think you could move? By the first of May?"

"I suppose so," she answered in a dull voice.

April came, and for the fiftieth time the old woman watched the white give way to the green on the hills that curved in and out around her old home.

"Ma," she began one morning, "I think I will have to be packing up this week."

"Packing up what?"

"Why, don't you remember, ma, we're going to town the first of May?"

"Oh, la, Libby, I've give that up long ago! I'm going to die on the old place."

"But you know, ma, the arrangements have all been made. I'm afraid we'll have to go."

She turned to her crossly.

"There's no use to argue wi' me, Libby Anderson. I ain't goin'!"

"But what about Dave?"

"You can jest write Dave, and say his mother don't want to leave the place. Dave won't have nothin' further to say."

She looked off at the meadowland as if it were all settled. Libby would have to tell her.

"Ma," she said, "it's no use to write to Dave."

"Why not?" she demanded, in a half-frightened, half-aggressive voice.

"He's sold the place, ma!"

"What's that you say? Something about Dave selling my place? Are you gone crazy, Libby?"

"You know you deeded it to him, ma. It was his after you did that. And he's sold it, and we'll have to move out."

Hearing no answer, she turned around, and it was then she coveted Dave's gift of saying things smoothly. The old woman was crouched low in her chair, and her face was quivering and looked sunken and gray.

"I didn't think he'd do that," she faltered.

"Never mind, ma," Libby said awkwardly. "Poor ma."

It was the nearest to a caress that had passed between them since Libby was a little girl.

Nothing more was said until after ma had gone to bed. Libby supposed she was asleep, when she called quaveringly to her.

"Libby," she said, "you mustn't be thinkin' hard of Dave. He must have thought it for the best."

Libby was used to caring for ma, and she needed care now.

"Yes, ma," she answered; "I'm sure he must."

It was not until the morning of the fourth day that the silence between them was broken. Libby got up to take down the clock, when she heard a strange noise behind her, and turning, she saw that ma's head was down low in her hands, and she was rocking passionately back and forward, and crying as though her old heart had broken.

She put down the clock, and again she wished for a little of Dave's silkiness of speech. But she did not have it, and the best she could do was to pull ma's chair out from the barren room into the sunshine of the porch. The hills, she thought, would still look like home.

Ma did not get up at all next day. Perhaps she was ill, or perhaps it was only that she did not want to go out in the sitting room and see how unlike home it looked. But the next day she did not get up either, and then Libby went to town for the doctor. He said the excitement had weakened her, and did not seem very certain she would ever get up again. That night Libby wrote a letter to Dave, asking him again to let his mother die on the old place. A week passed, and an answer had not come, and still ma had not left her bed. The packing was all done, it was the first of May, and she was just waiting—she did not know for what.

Her whole soul rose up against moving ma from the old place now, when her days were so surely numbered, and so she sent a telegram to Dave, telling him his mother was ill, and asking leave to stay a little longer. There came a reply from his partner, saying that Dave was away and would not be home for two weeks.

That night the old woman raised herself and sobbed out the truth.

"It's Dave that's killing me! It's to think that Dave sold the place and turned me out to die!"

And then the way opened before Libby, and she saw her path.

The disinherited child wrote a letter that night, and to it she signed her mother's name. Out in the world they might have applied to it an ugly word, but Libby was only caring for ma. She was a long time about it, for it was hard to put things in Dave's round, bold hand, and it was hard to say them in his silky way.

The doctor said next morning that it was a matter of but a few days at most, for ma was much worse.

"It ain't that I'm goin' to die," she said, when Libby came in and found her crying; "but I was thinkin' of Dave. I keep thinkin' and thinkin' of him when he was a little boy, and how he used to run about the place, and how pretty he used to look; and then, just as I begin to take a little comfort in rememberin' some of the smart things he said, I have to think of what he has done, and it does seem like he might have waited till—" But the words were too bitter to be spoken, and, with a hard, scraping sound in her throat, she turned her face to the wall.

Libby put her hand to something in her pocket, and thought of last night's work with thankfulness. About eleven o'clock she entered the room with the sheets of a letter in her hand.

"Ma," she said tremulously, "here's a letter just come from Dave."

"I knew it'd come—I knew it!" And the old voice filled the room with its triumphant ring. Then there crept into her face an anxious look. "What does he say?"

"He's sorry about selling the place, ma. He really thought you'd like it better in town. But he's fixed it up for us to stay. He says you'll never have to leave the place."

"I knowed it—I knowed it well enough! You don't know Dave like I do. But read me the letter."

She did read it, and the old woman listened with tears—glad tears now—falling over her withered cheeks.

"You can just unpack our things," she cried, when it was finished, "and get this place straightened out. The idea of your packin' up, and think we was goin' to move to town! Nice mess you've made of it! Jest as if Dave would hear of us leavin' the place. I always knowed you'd never 'preciated Dave."

Before morning broke ma was dead. Happy, because she had back her old faith in Dave—the blind, beautiful faith of the mother in her son. And Libby—the homeless and unloved Libby—was happy, too, for she had finished well her work of caring for ma."
—London Answers.

QUAINT AND CURIOUS.

Chess is still included in the curriculum of the Russian schools. It teaches the boys to move when young, and is a great advantage in times of war.

Women must have increased greatly in numbers in Arizona, for an anonymous man in Tombstone has entered the marriage market in a novel way. He offers to raffle himself off to women of his town at $1 a chance. With the money thus obtained he and the prize-winner in the raffle are to set up in housekeeping.

The Sakais, or tree dwellers of the Malay peninsula build their houses in forked trees a dozen feet above the ground, and reach them by means of bamboo ladders, which they draw up when safely housed out of harm's way. The house itself is a rude kind of shack, made of bamboo, and the flooring is lashed together piece by piece and bound securely to the tree limbs by rattan. These curious people are rather small and lighter in complexion than the Malays, though much uglier. They have no form of religion at all—not even idols—no written language and speak a corrupt form of Malay.

Probably no famous bird has a smaller habitat than the bird of paradise, whose beautiful feathers are so highly prized in the millinery trade. No one knows why the varieties of this beautiful bird are confined to the island of New Guinea and the neighboring coasts of Australia. There are many other islands not far away where the conditions would seem to be equally favorable to their existence, but they are not found among them, and if we should ever see a hunter of the bird of paradise we would know that he was a native of New Guinea or the neighboring mainland of Australia, or had visited those regions.

The railway across the Andes, between Chili and the Argentine Republic, which was projected twenty years ago, is at last to be completed, the Chilian congress having passed a bill for the purpose. The loftiest part of the pass, which lies not far south of the great Andean giant, Aconcauga, and which has an elevation of 31,000 feet, is to be penetrated by a tunnel, which will serve both to avoid snowdrifts and to decrease the maximum elevation of the road. The terminals of the railway on each side of the pass are now within one day's travel by mule caravan from each other. This will be the first rail line to cross the South American continent.

A £1000 Butterfly.

Schoolboys and children of larger growth were much excited recently at the news that Lord Rothschild had paid no less than £1000 for a butterfly. Collections hitherto regarded as worth a few marbles or a top suddenly assumed a value hitherto unknown.

Inquiry at the entomological branch of the British Museum considerably damped the prospects of a boom in butterflies.

"It is extremely unlikely," said the superintendent to our representative. "The highest price ever given for a butterfly was £16. That was paid by the Hon. Walter Rothschild, and was thought to very high. Of course, Lord Rothschild may have given £1000 for the whole expenses of the expedition to get this specimen, but I should say it was highly improbable."—London Daily News.

Good Manners.

The one true mark of good manners is absence of manner. The persons whose behavior, walk, talk and conversation are such as to attract instant attention by their peculiarities or by showiness, and to cause the ignorant and the low-bred to say, "What fine manners!" are very likely ill-mannered and underbred persons who would annoy persons of good taste very much. The basis of good manners is good nature, a spirit of deference, reasonableness, regard for others, the tongue and temper which distinguish very highly civilized people from the rude, rough and barbarous.—Philadelphia Ledger.

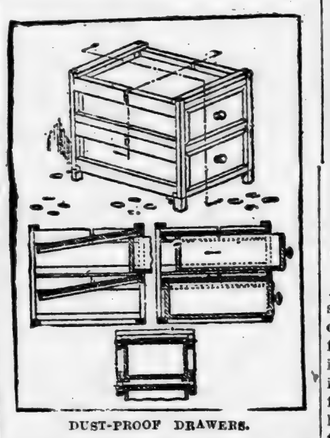
DUST CANNOT ENTER.

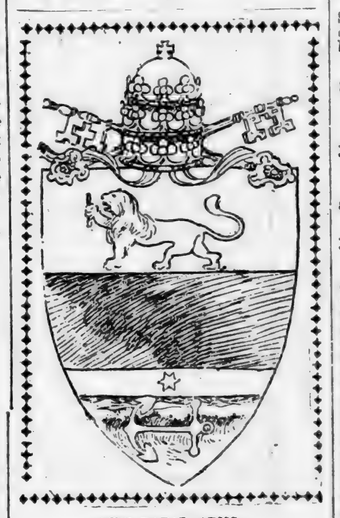
Many a housewife and museum curator has good reason to regret that drawers as a rule are neither dust nor vermin proof. To have your treasures, whether they consist of linens, books, or unreplaceable specimens ruined when they were apparently secure from anything less than a fire is disheartening to say the least. Two Swedish inventors of Providence, realizing the field that exists for a dust and insect proof drawer, put their ingenuity to work and have evolved a very simple but effective construction. The essential feature of the construction is a wooden or metallic cover for each individual drawer. Three edges of this cover, the sides and the rear, are provided with a downward extending flange, adapted to close in the sides and back end of the drawer. The front edge terminates under a flange forming an integral part of the supporting framework. This cover is pivoted at some nearly central point, and as a drawer is withdrawn beyond this pivotal point the cover drops down at the back and raises correspondingly in the front, allowing the drawer to be entirely withdrawn without displacing the cover. The drawers and covers may be made of wood, metal or any suitable material.



DUST-PROOF DRAWERS.

New Coat of Arms For the Pope.

The new coat of arms of Pope Pius X. has just been erected over the house of the Papal Nuncio, in Munich. The arms are absolutely new in more respects than one, for the Pope, being of democratic origin, has never had a family coat of arms, and on his entering office as Pontiff was compelled to invent arms for himself. The main feature of the new coat is the use of light colors. The shield is divided into three parts. The upper part contains the Lion of St. Mark on a silver field. The central division is a blue field. The lower division is a raging sea surmounted by an anchor. Above the anchor is a star with six points. The crest is the usual papal tiara and the crossed keys of St. Peter.



NEW PAPAL ARMS.

The capital invested in the railroads in Argentina amounts to $569,000,000, that of Brazil to $434,000,000, of Peru to $180,000,000 and that of Chile to $130,000,000.

There are four times as many words in the English language as in the French.

A Man Who Did Too Well.

A man may sell too much of the article which he is displaying to his customers, and I know of a case in point which happened to a friend of mine. My friend had a fine place offered him with an organ factory, and he accepted it, the salary being up in the four figures. He went out, and to his first customer sold the entire output of the plant. The customer agreed to take all that the factory could make. Having nothing more to sell, my friend returned to the house well pleased with his success, and for several days sat around smoking good cigars, while the firm patted him on the back. One day he came in, and the boss called him over, saying in this fashion: "I will have to give you the usual thirty days' notice. You have done so well that we have no further use for you or any traveling man. We are sorry to lose you but you sold too much at the first crack."—Louisville Courier-Journal.

UNINTERESTING PEOPLE.

They live in a quiet sort of way,
In a quiet sort of a street;
They don't meet a great many people, nor
Impress the people they meet.
The newspapers never mention their names;
The world doesn't care what they do.
They never go in for anything much,
And their intimate friends are few.

He never has had a favorite club,
Though somebody said he might,
For a fat little nose on the window pane
Awaits him every night.
And eight little fingers and two little thumbs
Undo all the work of the comb
As he sits in the quietest sort of a way
In his quietest sort of a home.

She doesn't belong to a woman's club,
She hasn't a single fad.
She spends her time with a blue-eyed boy
And a mischievous little lad.
She never unraveled a Problem of Life;
She doesn't know lots of things;
She plays with the "kids" and works all day,
And most of the time she sings.

He isn't like most other husbands at all,
She isn't like most other wives;
And they never attempt to make a change
In the course of their quiet lives;
But once in a while they dress the "kids"
And go to spend the day
In a nice little, quiet country spot,
In a nice little quiet way.

—*Maurice Brown Kirby in Collier's Weekly.*

LIBBY THE UNLOVED.

Libby Anderson hung the dish cloth on its accustomed nail, and stood there surveying it. It was plain, from the way she looked, that she had determined to speak.

"Ma," she asked of the woman who was sitting before the little round stove, "what were those papers Dave put in his pocket as I came in?"

"Some things he was showin' me."

"Ma," she asked, quiveringly, "you didn't sign anything, did you?"

"I didn't sign your name to anything." And the needles clashed again.

She knew her mother too well to press further.

"I don't just understand Dave coming here this time of year," she ventured; "and I thought he acted queer."

The old woman was folding her knitting.

"I'm going to bed, and you'd better come along, too," was her reply.

A week went by, and although Libby had twice forgotten to feed the chickens, and had several times let the kettle burn dry, she was beginning to feel more settled in her mind.

She did up the work one morning and went to town.

Her first call was at the solicitor, and here she heard the worst. Ma had assigned their home to Dave. She did not make any fuss; she was too old-fashioned for hysterics.

It was not until the old place came in sight that she broke down.

"It's not fair," she cried out, "when I've stayed here and worked it's not fair!" And, for the first time in many years, she was crying—passionately crying.

It was a feeling of outraged justice that made her speak, for she was just a woman—the daughter of pa.

"Ma," she said, "do you think pa would like to think of your assigning the place to Dave, when I've stayed here and kept it up the best I could for twenty years?"

"La, now Libby," she said, not unkindly, "don't take on. You'll never want for nuthin'!"

"I think you don't realize what you have done," she said; and turned to the bedroom to take off her things.

It was not until the next month, the blustering month of March, that all was made clear. It was early in the afternoon when Libby looked from the window and saw a man coming in at the gate.

"That friend of Dave's from the city is coming, ma," she said.

"Gracious!" exclaimed Mrs. Anderson, "and such a day as 't is!"

The stranger warmed his hands and disbursed a number of pleasantries.

"Well, Mrs. Anderson," he said finally, "your son wants me to make a little proposition to you."

Mrs. Anderson looked pleasantly expectant.

"Dave's always makin' propositions," she chuckled.

"He's been a good deal worried about you this winter—afraid you were not just comfortable but here—you two, all alone."

"Dave's always thinkin' of his mother's comfort," she asserted; and looked triumphantly over to Libby.

"Well," he resumed, turning back to the older woman, "it worries Dave to think of your being out here alone now that you're getting along in years, so he's rented a nice little place in town and he feels sure it would be better all around if you'd just go in and take it."

"If that ain't for all the world like Dave!—always some new idea in his head. But you just tell him, Mr. Murray, not to be bothering. We don't want to move to town—do we Libby?"

"Not if we can help it," she replied.

"Dave's been away from the place so long that he don't see just how 't is," ma explained. "Libby and me would not feel at home no place else."

"It's too bad you feel that way," he went on persuasively, "for Dave was so sure you'd like the idea that he's gone ahead and made all arrangements, and I'm afraid there might be a little trouble about unmaking them."

He turned to Libby.

"How soon do you think you could move? By the first of May?"

"I suppose so," she answered in a dull voice.

April came, and for the fiftieth time the old woman watched the white give way to the green on the hills that curved in and out around her old home.

"Ma," she began one morning, "I think I will have to be packing up this week."

"Packing up what?"

"Why, don't you remember, ma, we're going to town the first of May?"

"Oh, la, Libby, I've give that up long ago! I'm going to die on the old place."

"But you know, ma, the arrangements have all been made. I'm afraid we'll have to go."

She turned to her crossly.

"There's no use to argue wi' me, Libby Anderson. I ain't goin'!"

"But what about Dave?"

"You can jest write Dave, and say his mother don't want to leave the place. Dave won't have nothin' further to say."

She looked off at the meadowland as if it were all settled. Libby would have to tell her.

"Ma," she said, "it's no use to write to Dave."

"Why not?" she demanded, in a half-frightened, half-aggressive voice.

"He's sold the place, ma!"

"What's that you say? Something about Dave selling my place? Are you gone crazy, Libby?"

"You know you deeded it to him, ma. It was his after you did that. And he's sold it, and we'll have to move out."

Hearing no answer, she turned around, and it was then she coveted Dave's gift of saying things smoothly. The old woman was crouched low in her chair, and her face was quivering and looked sunken and gray.

"I didn't think he'd do that," she faltered.

"Never mind, ma," Libby said awkwardly. "Poor ma."

It was the nearest to a caress that had passed between them since Libby was a little girl.

Nothing more was said until after ma had gone to bed. Libby supposed she was asleep, when she called quaveringly to her.

"Libby," she said, "you mustn't be thinkin' hard of Dave. He must have thought it for the best."

Libby was used to caring for ma, and she needed care now.

"Yes, ma," she answered; "I'm sure he must."

It was not until the morning of the fourth day that the silence between them was broken. Libby got up to take down the clock, when she heard a strange noise behind her, and turning, she saw that ma's head was down low in her hands, and she was rocking passionately back and forward, and crying as though her old heart had broken.

She put down the clock, and again she wished for a little of Dave's silkiness of speech. But she did not have it, and the best she could do was to pull ma's chair out from the barren room into the sunshine of the porch. The hills, she thought, would still look like home.

Ma did not get up at all next day. Perhaps she was ill, or perhaps it was only that she did not want to go out in the sitting room and see how unlike home it looked. But the next day she did not get up either, and then Libby went to town for the doctor. He said the excitement had weakened her, and did not seem very certain she would ever get up again. That night Libby wrote a letter to Dave, asking him again to let his mother die on the old place. A week passed, and an answer had not come, and still ma had not left her bed. The packing was all done, it was the first of May, and she was just waiting—she did not know for what.

Her whole soul rose up against moving ma from the old place now, when her days were so surely numbered, and so she sent a telegram to Dave, telling him his mother was ill, and asking leave to stay a little longer. There came a reply from his partner, saying that Dave was away and would not be home for two weeks.

That night the old woman raised herself and sobbed out the truth.

"It's Dave that's killing me! It's to think that Dave sold the place and turned me out to die!"

And then the way opened before Libby, and she saw her path.

The disinherited child wrote a letter that night, and to it she signed her mother's name. Out in the world they might have applied to it an ugly word, but Libby was only caring for ma. She was a long time about it, for it was hard to put things in Dave's round, bold hand, and it was hard to say them in his silky way.

The doctor said next morning that it was a matter of but a few days at most, for ma was much worse.

"It ain't that I'm goin' to die," she said, when Libby came in and found her crying; "but I was thinkin' of Dave. I keep thinkin' and thinkin' of him when he was a little boy, and how he used to run about the place, and how pretty he used to look; and then, just as I begin to take a little comfort in rememberin' some of the smart things he said, I have to think of what he has done, and it does seem like he might have waited till—" But the words were too bitter to be spoken, and, with a hard, scraping sound in her throat, she turned her face to the wall.

Libby put her hand to something in her pocket, and thought of last night's work with thankfulness. About eleven o'clock she entered the room with the sheets of a letter in her hand.

"Ma," she said tremulously, "here's a letter just come from Dave."

"I knew it'd come—I knew it!" And the old voice filled the room with its triumphant ring. Then there crept into her face an anxious look. "What does he say?"

"He's sorry about selling the place, ma. He really thought you'd like it better in town. But he's fixed it up for us to stay. He says you'll never have to leave the place."

"I knowed it—I knowed it well enough! You don't know Dave like I do. But read me the letter."

She did read it, and the old woman listened with tears—glad tears now—falling over her withered cheeks.

"You can just unpack our things," she cried, when it was finished, "and get this place straightened out. The idea of your packin' up, and think we was goin' to move to town! Nice mess you've made of it! Jest as if Dave would hear of us leavin' the place. I always knowed you'd never 'preciated Dave."

Before morning broke ma was dead. Happy, because she had back her old faith in Dave—the blind, beautiful faith of the mother in her son. And Libby—the homeless and unloved Libby—was happy, too, for she had finished well her work of caring for ma."—London Answers.

QUAINT AND CURIOUS.

Chess is still included in the curriculum of the Russian schools. It teaches the boys to move when young, and is a great advantage in times of war.

Women must have increased greatly in numbers in Arizona, for an anonymous man in Tombstone has entered the marriage market in a novel way. He offers to raffle himself off to women of his town at $1 a chance. With the money thus obtained he and the prize-winner in the raffle are to set up in housekeeping.

The Sakais, or tree dwellers of the Malay peninsula build their houses in forked trees a dozen feet above the ground, and reach them by means of bamboo ladders, which they draw up when safely housed out of harm's way. The house itself is a rude kind of shack, made of bamboo, and the flooring is lashed together piece by piece and bound securely to the tree limbs by rattan. These curious people are rather small and lighter in complexion than the Malays, though much uglier. They have no form of religion at all—not even idols—no written language and speak a corrupt form of Malay.

Probably no famous bird has a smaller habitat than the bird of paradise, whose beautiful feathers are so highly prized in the millinery trade. No one knows why the varieties of this beautiful bird are confined to the island of New Guinea and the neighboring coasts of Australia. There are many other islands not far away where the conditions would seem to be equally favorable to their existence, but they are not found among them, and if we should ever see a hunter of the bird of paradise we would know that he was a native of New Guinea or the neighboring mainland of Australia, or had visited those regions.

The railway across the Andes, between Chili and the Argentine Republic, which was projected twenty years ago, is at last to be completed, the Chilian congress having passed a bill for the purpose. The loftiest part of the pass, which lies not far south of the great Andean giant, Aconcauga, and which has an elevation of 31,000 feet, is to be penetrated by a tunnel, which will serve both to avoid snowdrifts and to decrease the maximum elevation of the road. The terminals of the railway on each side of the pass are now within one day's travel by mule caravan from each other. This will be the first rail line to cross the South American continent.

A £1000 Butterfly.

Schoolboys and children of larger growth were much excited recently at the news that Lord Rothschild had paid no less than £1000 for a butterfly. Collections hitherto regarded as worth a few marbles or a top suddenly assumed a value hitherto unknown.

Inquiry at the entomological branch of the British Museum considerably damped the prospects of a boom in butterflies.

"It is extremely unlikely," said the superintendent to our representative. "The highest price ever given for a butterfly was £16. That was paid by the Hon. Walter Rothschild, and was thought to very high. Of course, Lord Rothschild may have given £1000 for the whole expenses of the expedition to get this specimen, but I should say it was highly improbable."—London Daily News.

Good Manners.

The one true mark of good manners is absence of manner. The persons whose behavior, walk, talk and conversation are such as to attract instant attention by their peculiarities or by showiness, and to cause the ignorant and the low-bred to say, "What fine manners!" are very likely ill-mannered and underbred persons who would annoy persons of good taste very much. The basis of good manners is good nature, a spirit of deference, reasonableness, regard for others, the tongue and temper which distinguish very highly civilized people from the rude, rough and barbarous.—Philadelphia Ledger.

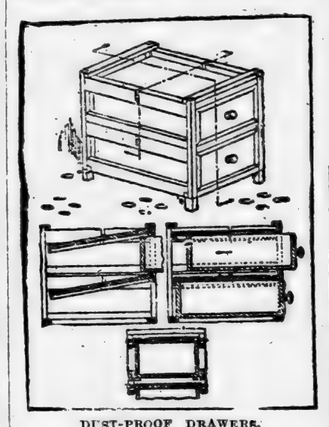
DUST CANNOT ENTER.

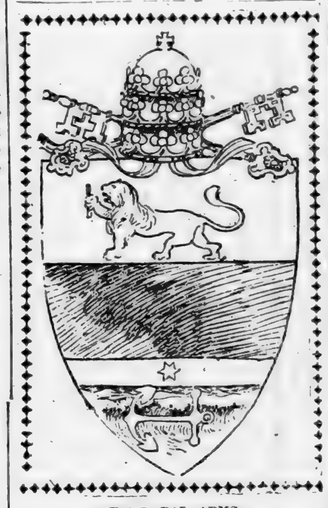
Many a housewife and museum curator has good reason to regret that drawers as a rule are neither dust nor vermin proof. To have your treasures, whether they consist of linens, books, or unreplaceable specimens ruined when they were apparently secure from anything less than a fire is disheartening to say the least. Two Swedish inventors of Providence, realizing the field that exists for a dust and insect proof drawer, put their ingenuity to work and have evolved a very simple but effective construction. The essential feature of the construction is a wooden or metallic cover for each individual drawer. Three edges of this cover, the sides and the rear, are provided with a downward extending flange, adapted to close in the sides and back end of the drawer. The front edge terminates under a flange forming an integral part of the supporting framework. This cover is pivoted at some nearly central point, and as a drawer is withdrawn beyond this pivotal point the cover drops down at the back and raises correspondingly in the front, allowing the drawer to be entirely withdrawn without displacing the cover. The drawers and covers may be made of wood, metal or any suitable material.



DUST-PROOF DRAWERS.

New Coat of Arms For the Pope.

The new coat of arms of Pope Pius X. has just been erected over the house of the Papal Nuncio, in Munich. The arms are absolutely new in more respects than one, for the Pope, being of democratic origin, has never had a family coat of arms, and on his entering office as Pontiff was compelled to invent arms for himself. The main feature of the new coat is the use of light colors. The shield is divided into three parts. The upper part contains the Lion of St. Mark on a silver field. The central division is a blue field. The lower division is a raging sea surmounted by an anchor. Above the anchor is a star with six points. The crest is the usual papal tiara and the crossed keys of St. Peter.



NEW PAPAL ARMS.

The capital invested in the railroads in Argentina amounts to $569,000,000, that of Brazil to $434,000,000, of Peru to $180,000,000 and that of Chile to $130,000,000.

There are four times as many words in the English language as in the French.

A Man Who Did Too Well.

A man may sell too much of the article which he is displaying to his customers, and I know of a case in point which happened to a friend of mine. My friend had a fine place offered him with an organ factory, and he accepted it, the salary being up in the four figures. He went out, and to his first customer sold the entire output of the plant. The customer agreed to take all that the factory could make. Having nothing more to sell, my friend returned to the house well pleased with his success, and for several days sat around smoking good cigars, while the firm patted him on the back. One day he came in, and the boss called him over, saying in this fashion: "I will have to give you the usual thirty days' notice. You have done so well that we have no further use for you or any traveling man. We are sorry to lose you but you sold too much at the first crack."—Louisville Courier-Journal.

... feed must be all clean... from one to two hours from ... of feeding, so that when the ... feed is put in the box clean ... the steers are ready for ... supper, and devour it eagerly ... with a relish.

By this method the stock have fresh ... twice a day, and are fed just ... they will eat up clean, and no ... more. By feeding this way the steer eats more corn; consequently he makes a greater gain.

The successful feeder sees to it that his corn is kept as clean as possible allowing no muddy, dirty or ratty corn in the boxes, if he can prevent it.—Indiana Farmer.

BENEFITS OF POTASH.

The urine of domestic animals contains ninety-five per cent. of the potash in the food they eat and about four-fifths of the total potash of their excrements. Therefore when the urine is allowed to waste the manure is poor in potash, and when manures are exposed to rains much of the potash, being soluble, is washed away. Nearly all the special fertilizers are rich in phosphoric acid and do not contain enough potash. When a farmer buys a fertilized he too often calls for a phosphate, whereas our soil seems to be quite generally in need of more liberal applications of potash. In the case of corn, the need of potash appears to be particularly prominent. For a good crop of corn the fertilizer used should supply 100 to 125 pounds of actual potash per acre; 200 to 250 pounds of muriate of potash or one ton (fifty bushels) of good wood ashes will do this. With ordinary stable manure it will generally pay to use some potash for corn; 125 to 150 pounds of muriate of potash has given profitable results. The liberal use of potash means more clover on the farm, more nitrogen taken from the air, more milk from the cow, a richer manure heap and big crops. It means also a sod which when turned will help every other crop. For the potato crop the sulphate seems to be much superior to the muriate of potash, promoting both yield and quality of much higher degree; 300 to 400 pounds of high grade sulphate of potash furnishes enough of this element. For oats, rye and grass, nitrate of soda applied just as the growth begins in the spring has proved very beneficial; 300 pounds per acre should be applied. Fodder crops, pasture grasses, corn stover and hay all remove large amounts of potash from the soil, and these crops occupy a large portion of our improved lands.—D. B. White in The Epitomist.

FEEDING HOGS.

(E. R. B. in Epitomist.)

A hog fed at fair profit until it reaches 200 pounds will give less profit with each additional pound, and a point can be reached at which further feeding can be done only at a loss. A reliable authority says that a certain amount of food being required to make a gain on a hog of 35 pounds, it will require four per cent. more food with a hog of 70 pounds to make the same gain, fourteen per cent. more with one of 125 pounds, twenty-two per cent more on hogs of 225 pounds and seventy per cent. more on those weighing 325 pounds. The tests upon which these figures are based were not official, but it is a well known fact that with increase of age more feed is required to effect a gain than at earlier age. But the light weights, those under 200 pounds, cannot be so well handled at packeries, and hence those who are feeding for market should bring them to that weight, smooth and well finished. At less weight or in bad condition, it will be found that the discrimination against them is strong, so that it will always be best economy to bring them to the most rigid requirements of the market.—E. R. B. in The Epitomist.

FOR FATTENING FOWLS.

In fattening poultry for market, be sure and produce, as nearly as is possible, the color of flesh desired. If the market demands fowls with white flesh, feed during the fattening period a mixture composed of two pounds of ground oats, two pounds of ground buckwheat and one pound of ground corn one pound of ground oats and make to the consistency of thin porridge. If a yellow flesh is wanted, feed rations of two pounds of ground cron, one pond of ground oats and one pound of ground buckwheat. In either ration a small quantity of salt should be added to give flavor.

In the absence of skim milk for mixing the ration, use water, but include with the ground food a little meat and a few finely chopped vegetables. No matter what the breed of fowl to be fattened, care should be used not to feed too much corn, for it will not be possible for the birds to relish it long, hence they will not eat greedily enough to fatten them quickly and profitably.

The Wedding Ring Finger.

The wedding ring was placed on the left hand, as nearest the heart, and on the fourth finger because that finger was supposed to have its own "private wire" (in the shape of a delicate nerve) to the heart. That finger, too, was called the medicine finger, and the belief was that by virtue of the little nerve it could detect a dangerous liquid. From that belief the idea that wedding rings—the rings worn on that finger—had special curative qualities, had its rise. To this day wedding rings are rubbed over an obstinate sty on an eyelid.—London Chronicle.

"BLUES"—TIRED NERVES

THE PEOPLE MOST SUBJECT TO THIS DREAD COMPLAINT.

The Blues Are Always from Within and May Be Thrown Off or Persevered in as the Sufferer Wills—Change of Scene a Good Prescription.

There are persons who deny ever having the blues, but as a rule they confuse the term with hysteria and womanish fits of sulks. They do not call their own fits of depression the blues, but fit them with some more high sounding name. But the blues, nevertheless, are a distinct mental affliction to which humanity generally is subject.

The blues have no special reason for being unless the old-time idea is right that they come from a disordered state of the liver. That the liver is closely connected with the mental attitude resulting from an attack of the blues is indicated by the fact that dyspeptics are as a general thing morose and given to brooding. But this does not hold good in all cases, for there are some notably cheerful dyspeptics, who joke over their enforced dieting and their lack of flesh.

The active grief that follows a bereavement or fit of illness or business trouble is in no way the same thing as the depression that comes up when there is a clear sky and envelopes everything in its fog. The one has a reason for being, the other is not so much a rebellion against conditions as a general tiredness of life, its duties, joys and sorrows. It is the condition which in many cases produces suicides otherwise unexplainable.

So says a clever woman doctor, who points out that, oddly enough, in hospitals the blues are not common among the patients and convalescents. There is too much of real suffering to admit of the brooding, self-analyzing condition that atacks people without reason in the world outside.

The weather, she says, is one of the principal inviters of blues. A week of bad weather increases suicides and fills people with despondency. In many cases it is inseparable from a despondent state of mind. The east wind has always been accused of producing low spirits.

But on the other hand people can inherit the brooding and gloomy temperament just as they inherit sharp wits or dull ones, kindly dispositions or the reverse. There are some who begin as children to complain and whine over their small troubles, and if the habit is allowed to grow they find that life is a bore to them before they reach maturity.

But to doctors, the blues are simply one of the symptoms of the general nerve tiredness from which Americans suffer so much. They come from overwork and very often follow periods of dissipation.

The entirely healthy person will suffer griefs, disappointments and discouragements without ever experiencing the hopeless, nerveless condition that people call the blues. People who eat improperly and live on a schedule which turns night into day are the ones that are most subject to this dread complaint.

People may worry over the troubles of others and suffer considerably on their account, but this is not the blues. The blues are always from within and they can be thrown off or persevered in as the sufferer will. As a rule the people most subject to them are women whose home duties keep them shut indoors.

Over sewing or household affairs they will allow their minds to follow up the same old rut of thought, and by evening they are in a mental state which approaches a mild form of insanity.

Doctors recognize the state of despondency as a symptom of various diseases. It is one of the invariable consequences of nerve ailments; but it is also a condition, which, like hysteria, can be greatly aggravated by the patient's giving in to it.

When people learn that it is quite possible to throw off an unwholesome mood there will not be so many people complaining of the blues—which usually consists of a fear of something about to happen, rather than what has happened.

There is an idea that only women have the blues, but men are quite often the sufferers, and when they suffer the attacks are very much more intense than the feminine sort and harder to get rid of. Gamblers regard the blues as a sure indication that their luck is going against them, and as a rule they cease to bet or make very small bets until the sun begins to shine for them again.

When the blues are of short duration, easily dispersed, they do not count for much, but when they seem to have come to stay and everything tends to make life seem less worth living, it is a pretty sure indication that something is wrong with the physical condition.

So it is a wise idea to find out if anything is wrong with the body which produces the mental disquiet. The end of some fits of this sort is an attack of typhoid fever or malarial fever leading to typhoid. Despondency is one of the surest symptoms of malaria in the system.

Grip is also succeeded by an intense depression of spirits in many cases, even with children who lose interest in their games and their companions after they have had an attack of this disease.

Change of scene is always a good prescription for low spirits, but when a trip to Bermuda or Europe is not possible, it is a good idea to change, as far as possible, the routine of the day. Eat different foods, travel by other routes, seek change in the manner of living just as far as circumstances allow.

The theatre is also considered a rather good remedy when the play is a musical comedy of the light and frivolous order. There is no doubt that such plays are aids in bringing people back to a normal mental state, although they may not relish this form of amusement ordinarily.—New York Sun.

CLIMATE IN MANCHURIA.

Frost at the End of October—Ten Months of Dry Season.

The climate of Manchuria plays an important role in the war between Russia and Japan. Up to the present we have had but little precise information upon this point. Mr. J. Ross has lately given some indications as to the climate of that region and the character of the different seasons. He states that in the months of March and April there are strong southwest winds which bring with them heat and moisture. At the end of March the winter season ends. The undersoil can be worked for agriculture. April appears to be the only month of spring. At the end of this month the sowing of wheat commences. Summer begins in May, and at the end of June or the beginning of July the wheat is cut. Up to the end of June rain is rare and the sky is generally clear, while cloudy weather is an exception. The heat reaches a maximum at the end of July and first part of August. Afterwards come heavy rains or storms. It often rains for several days and nights without stopping. The soil is completely saturated, and inundations are frequent. September is the harvest month, while October gives some of the finest weather of the year. At this time the heat is agreeable during the day and the sky is clear, with bracing air, while vegetation is at its height. At the end of the month the first night frosts begin to appear, and in November the cold weather commences and keeps up until March.

At Mukden, the temperature sometimes goes down as low as —33 degrees C. During the day, however, the cold is not excessive, and sometimes in the middle of winter the sun's rays become very warm, on account of the southerly position of that locality. The maximum temperature of summer is 98.6 or 100.4 degrees F. About ten months of the year are dry for the most part, and the excessive wet season only occurs during a month or so. At Niutschwang, on the north shore of the Gulf of Liao-tung, the mean winter temperature is 16 degrees F., and the mean for the summer 74.8 degrees. The mean annual temperature is 47.1 degrees F. The Russian maritime provinces have a very low mean annual temperature. Thus at Vladivostock the average fo rthe winter is 10.2 degrees F., and for the summer it is only 39.9 degrees F.—Scientific American.

An Old Man's Love.

An old Italian strolled into a Second avenue flower store yesterday afternoon and in an infirm voice asked the price of a large La France rose which was proudly rearing its head above a vase. He was roughly clad and did not look as if he were in the habit of buying La France roses, so the florist curtly answered, "Dollar each."

"Too mucha," said the old man in a wavering voice, as he stepped back to make way for a fashionably dressed woman who purchased a bunch at 25 cents apiece. After the woman had passed out of the store the old man again approached the florist, asking him why he charged the woman 25 cents for a rose and had asked him $1.

"What do you want with a rose?" asked the dealer sharply.

"I tella you," responded the voice, shaken with emotion. "My wifa she die two, tree year ago and leava me one little girl, nama Rosa. I lova ma leetle Rosa because she all I gotta left. When I go home froma work, leetle Rosa she runa an' meeta me. I lova Rosa. When she meeta me I placa her head against my breast, so, and cry, I am so lonesome for my wifa.

"one day, when I come home, there is no Rosa to meet me. She is vera sick. I'm not get moocha mon, but I getta da doctor, but it ees too late. My leetle Rosa die, and I bury her next by her mother; and tomorrow I lika to place a red rose on her grave."

By the time the old man had reached this part of his story tears were coursing down his cheeks, and with a gulp the florist took several large, fine roses from the vase and told him to take them to his Rosa's grave. The old fellow grabbed the flowers and with a "Mucha oblige" left the store.—Seattle Post-Intelligencer.

It Was Too Late to Change.

A member of the faculty of the Columbian Medical college at Washington is particularly fond of taking his students unawares in his "quizzes." To one student, whom it would not be uncharitable to call a dullard, the professor said one day:

"What quantity constitutes a dose of ——?" giving the technical name of croton oil.

"A teaspoonful," was the answer.

The instructor made no comment, and the student soon realized that he had made a mistake. After a quarter of an hour had elapsed, he said:

"Professor, I should like to change my reply to that question."

"I'm afraid it's too late, Mr. Blank," responded the professor, looking at his watch. "Your patient has been dead fourteen minutes."—Collier's Weekly.

Simple Fashions

New York City.—Waistcoats, both real and simulated, make a feature of the latest styles and are to be noted on many of the advance models. The

ETON WAIST WITH VEST.

very attractive waist illustrated is in Eton style and allows of many effective combinations. As shown it is made of shepherd's check trimmed with black velvet and combined with a waistcoat and cuffs of white pique which are made detachable, the waistcoat extending under the fronts only, but silk as well as cotton materials can be used and the vest and cuffs made permanent parts of the waist whenever preferred. The little chemisette makes a notable feature and can be of lace, as illustrated, or in lingerie style as may be liked. At the waist is a crushed belt which passes over the back and fronts, under the revers and over the vest to be closed at the centre front. The sleeves are the new ones which are gathered to form two puffs and are finished with flare cuffs above the plain ones.

The Eton is made with a fitted foundation, which is faced to form the vest, over which the pleated fronts and back are arranged. The chemisette is separate and closed at the back while the waist itself closes at the front. The sleeves are in one piece, arranged over fitted foundations to which the straight cuffs are attached, the circular ones finishing the lower edges.

The quantity of material required for the medium size is five and one-eighth yards twenty-one inches wide, four and three-quarter yards twenty-seven inches wide or two and a quarter yards forty-four inches wide, five-eighth yards twenty-seven inches wide for waistcoat and cuffs and one yard of velvet, and five-eighth yards of all-over lace for chemisette to make as illustrated.

The Fashionable Flounce.

Flounces on skirts are no longer plain. One broadcloth skirt with a flared flounce shows a box-pleat set in with a godet effect at intervals.

Round Yoke Waist.

Waists made full below round yokes that are finished with circular berthas are among the notable features of the season and are always graceful and generally becoming. This one is adapted to all the fashionable soft materials and can be combined with lace as illustrated, with embroidery or with any contrasting material that may be preferred. In the case of the model, however, the yoke, bertha, cuffs and collar are of lace and the waist of pale green crepe de Chine, the combination of materials being a peculiarly satisfactory one. When liked the lining can be omitted and the blouse attached to the yoke only, but where silk or wool is used the fitted foundation always means a better fit. The applied box pleat at the front is somewhat unusual and gives the long lines that suit the greater number of figures admirably well.

The waist consists of the fitted foundation, which can be used or omitted as preferred, the yoke and the blouse. The blouse is full at both back and front and outlining the yoke is a circular bertha. To the front edge is attached the box pleat and beneath that the closing is made. The sleeves are generously full above cuffs which are finished with frills of net top lace.

The quantity of material required for the medium size is five yards twenty-one inches wide, four yards twenty-seven inches wide or two and five-eighth yards forty-four inches wide.

A LATE DESIGN BY MAY MANTON.

ROUND YOKE WAIST WITH COLLARS.

With one and three-eighth yards eighteen inches wide for yoke, bertha and cuffs and two and one-quarter yards of lace for frills.

As to Panels.

Panels are seen in many guises. The figure is the shape of a waistcoat, and they are in the form of the entire front gore of a skirt. On a lovely princess dress there's the panel effect from top to toe.

A Wrinkle Anent Cape Coats.

Unless one be willing to have the line of the back obliterated entirely, the cape of a coat should stop short at the side back seams.

Umbrella Novelties.

The fashion of putting a hole through the parasol handle through which a ribbon is run and tied over the arm, will be transferred to the small umbrella, for autumn and winter convenience.

Novelty in Fur Coats.

In fur coats there is a novelty called reindeer. It is a nut brown, very useful, with fashionable shades, as well as pretty.

THE UNION.

Published every Thursday at Clanton, Chilton county, Alabama.

Wallace C. Edler, Ed. and Pub

Subscription price, in advance, per year, $1.

For advertising rates, call at the office, Seventh street, between First and Second avenues.

Entered April 15, 1903, at Clanton, Ala., as second class matter, under act of congress of March 3, 1879.

NOTICE TO CORRESPONDENTS.

All communications to the Union must be signed by the writer's real name as well as that name which they wish to put in the paper. Letters must reach the editor Tuesday morning to get in the same week. While we will publish any and all communications complying with these requirements that do not contain any improper language, we are not responsible for the opinions expressed. tf

UNION CLUBBING LIST....

The UNION and Yellow Jacket, **$1.00**

The UNION and Home and Farm **$1.00**

The UNION and Weekly Montgomery Advertiser, **$1.25**

The UNION and Weekly Atlanta Constitution. **$1.50**

The UNION and Semi-Weekly Globe Democrat **$1.50**

The UNION and Saturday News **$1.25**

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, leaves himself liable to arrest and fine, the same as for theft.—Ex. tf

COTTON RECEIPTS.

Up to and including January 31, 1905, there had been shipped from Clanton (according to the L and N. office figures) 5,544 bales of cotton, and at that there was in the warehouse 558 bales, making a total received here this season of 6,102 bales as against 6,523 bales for the previous season. The warehouse has weighed a few bales more, less than a hundred, which have been taken back to the farms for storage. To sum up, Clanton has received 322 bales less than it did a year ago, and has shipped 480 bales less for the same period. The banner has it that there has been received in Clanton 7,039 bales, 838 bales more than the facts justify. This statement at this time, when the speculators are doing all they know how to prove that the last cotton crop was by much larger than a year ago, is rank injustice to our farmers, and plays directly into the hands of the "bears," who are trying to break the price of cotton by the cry of "big crop." Read THE UNION and keep posted on the real state of the case.

BE ON YOUR GUARD.

The following letter from J. N. Dennis will explain itself, but we heartily endorse what he says:

"Clanton, Ala., Feb. 7, 1905.

"Brother Farmers:

"Do not be deceived by the BEAR Literature, now being circulated advising farmers not to organize, and cut down their cotton acreage, etc.; for it is the work of the speculators or bears, and done to try to get farmers to plant for another 13,000,000 bale crop, which would mean 5-cent cotton next fall. If we want 8 to 10 cents for our cotton, we must organize and cut down our acreage, but if we are satisfied with 5 cents, we may go ahead planting a full crop, and not organize. Now, which do you want? Remember this move for organizing and reduction of acreage is a move BY the farmers, FOR the BENEFIT of the farmer, and that those opposed to the movement are certainly against us or ignorant of the results.

"J. N. DENNIS."

CITY TAXES.

The present city administration is pushing the delinquent tax payers, and these same delinquents are "butting their heads against a stone wall," and if they don't pay now, will have the costs of court to pay in addition to their taxes. Alderman W. M. Wilson is doing a good work in collecting, having been appointed by the council to attend to that duty, and is backed by the best legal authority, as to the power of Clanton to collect the taxes due the city. "Step up to the captain's office and settle."

Clanton, Feb. 2, 1905.

Well, here I am again. Say, boys, wasn't the cotton meeting a success yesterday? The mill men had just as well come across. Ten cent cotton is the only thing that will satisfy the farmer now, and, by the way, the merchants would like it, too. I was well pleased with Mr. Hand's report of the New Orleans meeting, and it put one in mind of old times when the Farmers' Alliance would have their national meetings and send delegates and then all gather in a county convention to hear the report. Yes, it made me think of old Alliance days, but there were some faces there Wednesday that never went to Alliance meetings so farmers, if we can't do something now we'd just as well "call off the dogs and quit the drive," for men are helping us now that never helped us before. But, but let me whisper in your ears, don't let this business get into politics. I saw some fellows looking at Mr. Hand like they'd love to run him for the Legislature next time, so keep your eyes skinned and your finger on the trigger. Some man said let's get A. C. Smith on our side and run him; but I think he is already on our side. He is an honest man and the democrats have turned him down soul and body, and that is a good sign that a man is all "O. K." Look here. I looked around for L. H. Reynold and couldn't see him, so I slipped down to the Probate office and there I found him, busy with a habeas corpus case, so of course he couldn't get off, and you know when a crowd comes to town it makes more business for all the officers, but we've got to have him there next time. My! my! Were you at the city election a short time ago? One old fellow walked up and asked who was the candidates, and when some one told him, he says: "Well, there's no penalty for not voting." I enjoyed the two meetings that were held to nominate a ticket; in the first Mr. Chandler won out. The second was held in the Probate office, but I noticed that Judge Reynolds was not present, and when I saw a number that were at the first meeting it made me wonder and say to myself is some one going to be tricked here tonight? But, of course, I didn't think that democrats would trick brother democrats. Well, I got back in the corner and said nothing, but kept one eye on the gun, and after the targets were put up and the firing began and I saw how some fellows voted, I hid my face in shame and thought, fooled again; but it was democrat against democrat, so I kept my hands off; I watched some of these same fellows on election day to see how they voted, and they did not stick to their ticket by any means, but I reckon it will be a lesson to some folks in the future. I'm gathering dots for next year, and if I don't make the welkin ring when the next campaign opens I'll make some people smell the patching. I keep my scrap book, and I serve notice now that if I don't get an office next year I'll see to it that both tickets are defeated and then the governor will have to appoint; I must have an office, I tell you; people seem to do too well at the business for me not to want one. If I can't do any better I'll turn democrat and get a nomination, for if I was a democrat I might get a Postoffice, as it looks like they stand a better show than any one else. Did you notice how the banner crowed over Dudley's appointment as Postmaster? Well, they ought to think a heap of him. He has made a great sacrifice for them; but just show me the old pop or republican that is proud of him; I don't know of one. Do you know, I don't like this Referee business, but thank the Lord, you can't budge the people of Chilton county, for if the whole world was to turn democratic they would go on forever as they are. I wouldn't care for democratic postmasters so much if their measly old paper didn't crow so much over it. Say, by the way, we whiskey folks are having a little trouble right now, but as we are in the majority, we'll come out all right. The blowing up of Lyon's picture gallery was a shame to a civilized community, and it is the duty of good citizens to see that the perpetrators are brought to justice. I wish I was a good detective, but I'm not; I am just a natural politician by birth, and I believe in every one following his calling. I'll meet you all at the cotton meeting on the 16th and I am confident that cotton will be at least 8 cents by that time.

JUST A VOTER.

RANDOLPH.

Weather is still bad. Our noted teamsters, Messrs. Helton and Brown are bringing in fine logs from Mr. Waldrop's land in Chilton. S. L. Fant and family have moved on the Lightsey farm. Jim Denham has moved to Chilton. John Hatcher and family are on the Moses Payne farm. Misses Annie and Maggie MacMillan were in town Friday. F. J. Fitts, one of Chilton's leading citizens, and John Gibbons, another well-known citizen, were in town Wednesday. M. C. Crumpton went home sick one day last week, but is back again at his post at M. L. Cleveland's. J. M. Nix, of Macedonia, was in town Friday. Ab. Martin, of Jemison, visited his brother, Prof. John T. Martin, here last week. Rev. A. J. Lumpkin and son were in town Monday. John Wallace, our section foreman, has moved to Pletcher. John Payne, of Fenwood, was in town Monday. James Lightsey and John Hatcher were here Monday. We heard a man the other day say that "Chilton was one of the best counties in Alabama, and Judge Reynolds was one of the brightest men in the county." Quite correct. Come again, Nimrod, Mars Hillian, Observer and all other correspondents of THE UNION. Success to the PEOPLE'S CAUSE and THE UNION

"ONE OF THE BOYS."

MARS HILL.

We've been having some cold weather, and our farmers are enjoying their oak wood fires. The first of February has come and gone, let's get ready for the 11th and all try to do what will benefit us in the future; that is the day for us to organize our districts for our cotton association. Rocky Mount should be praised for her work in reduction of acreage. There is the least said about fertilizers around the towns that I ever saw, as a general thing the merchants and especially at Jemison have a lot on hand and a big lot coming. I haven't seen any yet except a car load that E. G. Cofer got last week. I've been standing round the stores and some old fellow would walk in, and the merchant don't wait for a man to start the subject, but says: "We just can't run more than two or three fellows this time, and in fact we already have all we can run now." Kind of scared some one is going to ask them for a barrel of flour, etc., on a few days' time. Now, brother farmers, if the merchants or anybody else will cause us to stop trading on time, there would be many of us would have more cash in the fall. Let's make at home what we've been buying in the stores and not depend upon cotton for everything, and get 12 or 15 cents for what cotton we do raise, with a big crop of cotton. Everything is high but cotton.

MARS HILLIAN.

BETH-SALEM.

The health of our community is rather poor at present, we are sorry to say. Our school is progressing nicely under the care of Prof. C. J. Elland, and our Sunday school is doing well under Superintendent R. N. Wilkins. C. C. Hathcock visited C. C. Vinson last Sunday. We are glad to say that Mrs. J. S. Popwell is up again through the able treatment of Dr. E. H. Downs of Billingsley. Johnson Scott and family visited his father Monday. Wishing success to THE UNION and all its readers I will close for this time.

"THE NEW CARPENTER."

AN ABSOLUTELY FREE OFFER.

The Union would like for everybody to accept from us a free complimentary gift—a year's subscription (which is 50c per year) to the Dixie Home, one of the largest, brightest and finest illustrated magazines in the world. It is full of good reading and is the very paper to go into every home in the south. Now, if you want to receive this family magazine a whole YEAR FREE, all you have to do is to pay amount you are in arrears, if any, and send us $1 for another year's subscription to the Union. The Dixie Home will come to you absolutely FREE.

This is one of the best and most liberal offers ever made by any publisher. So come on at once, and renew your subscription or become a new subscriber and secure this magazine FREE. tf

Board of Trade Shows Increase.

London.—The January statement of the board of trade shows increases of $8,169,500 in imports and $4,532,000 in exports.

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union, both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer. tf.

The State of Alabama, Chilton County. Probate Court.

To John O. Dunovan, Claud B. Dunovan and Robert Dunovan.

Whereas, Beulah Matthews, an heir at law of the estate of Jeremiah Dunovan, deceased, has filed her application in said court for a sale of the lands described in said application, belonging to the estate of said decedent, for the purpose of division, upon the ground that said land can not be equitably divided, and the 6th day of March, 1905, has been appointed for the hearing of said application, you are, therefore, hereby notified to appear before said court on said 6th day of March, 1905, to contest said application, if they think proper.

Witness my hand, this 31st day of January, 1905.

L. H. REYNOLDS,
2-2-05 3t Judge of Probate.

No. 1546.

NOTICE TO CREDITORS OF FIRST MEETING.

In the District Court of the United States, for the Middle District of Alabama. In Bankruptcy.

In the matter of Albert Headley, Bankrupt, Post Office Clanton, County Chilton, Alabama.

The aforesaid party having been adjudged a Bankrupt under the Act of Congress entitled "An Act to Establish a Uniform System of Bankruptcy throughout the United States," approved July 1st, 1898, a meeting of the creditors of the said Bankrupt is called at the office of the undersigned Referee, in the United States Court House, Montgomery, Alabama, on the 15th day of February next, at 10 o'clock a. m., to make proof of debts and for the election of a Trustee, and such other matters as are necessary and required by the Act of Congress aforesaid.

ASA E. STRATTON, Referee.
Montgomery, Ala., Feb. 2, 1905.

No. 1556.

NOTICE TO CREDITORS OF FIRST MEETING.

In the District Court of the United States, for the Middle District of Alabama. In Bankruptcy.

In the matter of Mrs. J. W. Taylor, Bankrupt, Post Office Cooper, County Chilton, Alabama.

The aforesaid party having been adjudged a Bankrupt under the Act of Congress entitled "An Act to Establish a Uniform System of Bankruptcy throughout the United States," approved July 1st, 1898, a meeting of the creditors of the said Bankrupt is called at the office of the undersigned Referee, in the United States Court House, Montgomery, Alabama, on the 15th day of February next, at 10 o'clock a. m., to make proof of debts and for the election of a Trustee, and such other matters as are necessary and required by the Act of Congress aforesaid.

ASA E. STRATTON, Referee.
Montgomery, Ala., Feb. 2, 1905.

The body of a stranger, recently run down and killed in Paris, was identified as that of Anthony M. Kelley.

Advices from St. Petersburg said that economic depression, caused by the stoppage of trade with Siberia and Manchuria, was the cause of the rising of workmen.

Russian officers at the Dogger Bank inquiry testified to the presence of torpedo boats in the North Sea.

More fishermen testified before the International Commission, at Paris, France. Russian officers began presenting their side of the case.

Poland joined Finland and the rest of the Russian empire began rising, and strikes and conflicts continued to spread over the interior.

From Wonson a special cable dispatch announced that the Russians on the east coast of Korea were retiring north.

In M. Rouvier's statement of policy before the French Chamber the discussion of the income tax was placed ahead of that on the separation of Church and State.

Time Table

In effect August 1, 1904.

Systematic Play For the Child

By *H. Foster Bain.*

THE distinction between play and work is an obscure which has puzzled the wisest; and, in the face of Tom Sa yer's famous experience in whitewashing, all rules are sp break down. The same occupation may be play or work cording to the conditions under which it is performed the attitude of the performer. Frobel long since show that systematic, well-directed play was of the highest edu tional value. All these occupations would be play, and p only, if left solely to the child. Rightly used, however, cooking affords many simple lessons in physics and chemistry, the textile w introduces history, and the measurements necessary in carpentry open doorway to mathematics.

"Learn to do by doing" is a good though narrow rule, since the mere do is not the vital element. It is what the child learns while doing which cou and it is for the sake of the learning that the doing is introduced. To one might still urge that occupations are not fit matter for a curriculum, it m be pointed out that in post-graduate work in physics courses are sometim given in manipulation, the bending and breaking of glass rods, and simi work. The occupations are after all but preparatory work for laboratory struction, in chemistry and physics the method is the same though instrume differ; and there is an increasing use of symbols and departure from concr to abstract. Less and less time is devoted to mere doing, and more and m to the learning.

Has Valuable Charm.

Anniston, Ala.—E. B. Roberts, of this city, wears a miniature horseshoe as a watch charm, which was manufactured from armor plate of the Merrimac which was sunk in 1862.

Capacity to be Increased.

Columbus, Ga.—The Eagle and Phenix mills are to double the capacity of their rope department. The machinery necessary for increasing the capacity of that department has just been ordered

Baby Found On Bishop's Door.

Jackson, Miss.—A white baby about one month old and in a weak and emaciated condition, discovered on Bishop Galloway's f door step Friday morning. No to the parents has been found, altho the police are making an investiga

Des Moines, Iowa.—Day Dun head of the wrecked Citizens' Ban Mount Ayer, Ia., was found guilty jury early Friday of fraudulent ing.

LOCAL AND PERSONAL.

P. R. Devaughan was in Clanton Friday.

T. J. Dupree was a pleasant visitor Saturday.

"Buck" Arledge was in town Saturday.

J. Hance Allred, who is at Massey's Business College in Montgomery, sends for THE UNION so as to keep posted on his home county news.

G. W. Melton was a pleasant visitor Monday.

J. A. Neeley was in Clanton Monday and reports Mrs. J. W. Neeley as improving in health.

J. M. Gray was a pleasant visitor Monday.

Y. O. Freeman was in town Monday.

W. G. Culp was a welcome caller Tuesday.

E. F. Varden was a pleasant visitor Tuesday.

Attorney J. O. Middleton spent Monday in Montgomery.

Mr. J. A. Duncan's daughter, Miss Lulu, was married to Mr. M. O. Culp on the 2nd inst. Rev. A. L. Foshee performed the ceremony. Best wishes to the young couple.

County Court was in session Monday, but no trials were had, the few complaints being waived to the grand jury.

W. M. Wilson represents the Avondale Laundry, which stands at the head of the laundry business. All laundry collected and delivered without extra charge. Just leave your address with Mr. Wilson.

J. A. Hester, station agent of the L. and N. railroad at Jemison, will take charge at Clanton shortly.

C. R. Mullins and Miss Clara Small were married last week. Miss Small was in charge of P. D. Wilson's millinery department for several seasons, and won golden opinion from all. We are glad to welcome her to Clanton for good.

Dr. G. C. Nix, of Thorsby, is now a full fledged M. D., having passed the examination of the state board and received his certificate. Success, doctor!

S. R. Letcher, of Riderville, was a pleasant visitor Wednesday.

MARRIAGE LICENSES.

W. J. Downs and Miss Mary Nellie Tunnell.

COLORED.

Jim Peoples and Estelle Morrow.
W. H. Thomas and Minnie Penfield.

SPORTING BREVITIES.

Walter Christie won the fifty mile automobile race in Florida in 1h. 11m. 20 1-5s.

Morris Wood, champion skater, won the half-mile race on Verona Lake in 1m. 31 2-5s.

W. K. Vanderbilt, Jr., was elected commodore of the Seawanhaka-Corinthian Yacht Club.

The Van Cortlandts and the Thistles won in the semi-final round for the Dewar Curling Cup.

Guy Lyman, of the New York A. C., won the two handicap skating races at West New York Field.

Charles S. Ross carried off the honors in the automobile races on the Ormond-Daytona Beach, Florida.

Columbia defeated Company K, of the Seventh Regiment, in a hockey game by a score of 8 to 1, in New York City.

Irving School defeated Columbia in the opening game for the interscholastic hockey championships by a score of 3 to 1.

F. S. Howell, of Albany, N. Y., won the final round in the handicap golf tournament at Pinehurst for the Berkshire Cups.

The Crescent A. C.'s hockey team defeated the Wanderers by 2 goals to 1 at the Clermont Avenue Rink, in Brooklyn, N. Y.

Lucien Merignac, the world's champion fencer, gave an exhibition with the foils in the Grand Central Palace, New York City.

The Drub and the Georgie, of the North Shrewsbury, won the first ice yacht race for the championship pennant of the North and South Shrewsbury Rivers.

Mike Bowerman, the Kentucky horseman, is credited with saying that really good brood mares in all sorts are scarcer just now in the United States than he has ever known them to be.

Engineer Killed on Southern.

Atlanta, Ga.—As the result of a head-on collision at McDonough, Ga., between two freight trains on the Southern railway, Engineer R. C. Wilhelm, of this city, was killed instantly, and Fireman Calvin Archer, also of Atlanta, received injuries which proved fatal a few hours later. Misunderstood orders, it is reported, was the cause of the accident.

In addition to our Complete Stock of DRUGS Etc.
You will find a full line of
SCHOOL BOOKS, STATIONERY, ETC. SEEDS. PAINTS OILS and GLASS.
We have purchased the JUDSON STROCK stock and ask for your trade.
CLANTON DRUG COMPANY

JOKES AND QUIPS

SATISFIED.

"Take back that heart you gave me,"
The angry Prep girl cried;
The butcher gave her liver,
And the maid was satisfied.
Ohio Wesleyan Transcript.

PENALTY.

She—In your bachelor clubs what is the penalty for marrying?
He—Marriage.—Illustrated Bits.

ALAS, YES!

Teacher—What changes takes place when water is converted into ice?
John Smart—A change of price, ma'am.—Smart Set.

SINGULAR EFFECT.

"How does it feel to be fired?" they asked the ex-salesman.
"It gives you a mighty chilly sensation," he said—Chicago Tribune.

SUPPLEMENT TO AN OLD SAYING.

His Friend—Money talks.
The Promoter—Yes, but sometimes it's mighty hard to get it to listen.—New York Press.

FAILED.

Dixby—Of course they gave you ether? So you didn't suffer any pain by the operation.
Bingley—Unfortunately I came to before the bill was presented.—Boston Transcript.

HIS IDEA OF LUCK.

"Been very lucky with your patients, haven't you, doctor?"
"Yes. I don't think I have more than $17 in unpaid bills standing on my books."—Cleveland Plain Dealer.

WILLIE.

Mamma—Fighting again, Willie? Didn't I tell you to stop and count 100 whenever you were angry?
Willie—But it didn't do any good, ma. Look what the Jones boy did while I counted!—Harper's Bazar.

A SUGGESTION.

He—I can never think of the right thing to say at the right time!
She—Why don't you try saying the right thing sometimes, even if you get in the wrong place?—Detroit Free Press.

SAVED HIMSELF.

"Jack, do you think I look like mamma?"
"Oh, yes, Marie—as your mamma's sweet face must have looked when she was just your age."—Chicago Tribune.

HER MISTAKE.

Nell—I told him if he dared to kiss me he'd be sorry for it.
Belle—And was he?
Nell—No, I was the only one who was sorry—sorry I told him.—Philadelphia Ledger.

BROKE A RECORD.

Mrs. Highmus—You kept one girl six weeks. How did you manage it?
Mrs. Upmore—I didn't manage it. She fell down the steps and broke her leg the first day, and of course she had to stay till she could walk out again.—Chicago Tribune.

HELPFUL.

"Having a minute to spare," began the bore, "I thought I'd devote it to you——"
"Thank you," interrupted the busy merchant, "I can use it, for I need all the spare minutes I can get."—Philadelphia Press.

EXPLAINED.

"Bliggins' wife thinks he is the smartest man on earth."
"No," answered Miss Cayenne, "she doesn't think so. She merely makes Bliggins thinks she thinks so."—Washington Star.

DUBIOUS.

"What do you know about his past?" asked Mabel.
"Just enough to make me a little suspicious about his present," said Maud, examining with a magnifying glass the diamond the young man had sent her.—Chicago Tribune.

A SLIGHT SATISFACTION.

"The cashier has absconded and cleaned us out."
"How much did he take?"
"Nearly eighty thousand."
"He did! Well, there'll be a little satisfaction for us in calling it eighty thousand."—Cleveland Plain Dealer.

THE USUAL WAY.

Beatrice—What did you get for Christmas?
Penelope—Horrors! Don't ask me.
Beatrice—Why, my dear, what's up?
Penelope—Writing a dozen letters, saying they were "just what I wanted."—Judge.

NEXT DOOR TO AN ATHEIST.

Lyles—Did you ever come across a more conceited fellow than Bulger? They say he is an atheist, and I believe he is.
Bonter—I wouldn't like to go as far as that, but I know that he doesn't recognize the existence of a superior being.—Town and Country.

HIS WEDDING GARMENT.

He (reading about the latest society wedding)—They have a lot to say about what the bride wears, but they have nothing to say about the poor bridegroom.
She—They have no need to, because it is a well known fact that he usually wears a worried look—Boston Globe.

He and She

"I fear," she said, "to love and lose,
To have and then to miss,
Pale lips unpress'd were mine to choose
Than feel a shadow kiss.

"I fear," she said, "for at a breath
The threefold cord doth strain,
And sure, and hid, lurks cruel death
To cut the corn in twain."

"Yet, love," he said, "and fearlessly;
Who love, triumphant sing.
O grave, where is thy victory,
O death, where is thy sting?"

—K. M.

THE LIGHT OF DAY

BY BENJAMIN F. NAPHEYS

(Copyright, 1904, by Daily Story Pub. Co.)

The Passageway of the Seven Steps, Chinatown's main thoroughfare, runs from the street into the Court of Supreme Felicity. On its way thither it passes the Court of Honorable Men, where dwell the bachelor laborers, and the Court of Transplanted Wisdom, where the old men come to air their opinions. But Chao Ying stopped at neither of these places; the Court of Supreme Felicity was the family quarter, and there Kiang Yeh was to be found.

He turned into the court and went slowly around it, under the latticed balconies of the second-story apartments. Kiang's family lived on an upper floor, but he never dared openly to visit her. He shuddered at his temerity in gazing at her chubby face through the interstices of the lattice. He had often heard Lee Kwi, the storekeeper and banker, and his own father, Chao Hai, the ivory cutter, condemn such practices, and call upon each loyal son to honor the home customs in all things, especially in allowing a parent to select a wife for his son.

Aiya, but the foreign way was much the sweeter. Kiang, as well as he, had been born in this land; they had learned much that was foreign. It was hard that they could not meet, and love, and marry, as the fan-qui (foreign devils) did. He remembered a company of players that he looked down upon, along with a band of shouting, peanut-eating foreigners. He understood but a sentence now and then, but one of the woman players was beloved by one of the men, and just before everybody went home the man received her in his arms and kissed her upon the forehead.

In such a manner he desired to receive Kiang Yeh. He would work for her; he would defend her; nay, more—he would brave his parents, and, stealing her from her home, he would draw the narrow knife and defy even the grim hatchet-men of the Suey Yep to take her from him. All this he would do if she were willing. She must first be willing.

The air-castles faded away when he came under the balcony of her family. He struck two blows upon one of the wooden supports, and presently in an upper room he heard her voice:

"Honorable mother, in a short time I will finish the task that you have given me. Then, while you rest, I shall go out on the balcony."

"Ai-ya," exclaimed another voice. "You need not speak so loudly. One would think that I stood across the court, gossiping with Loy Foo, instead of reclining here. Go out and welcome, Kiang Yeh."

Who but she could have thought so quickly of that design to let him know that she heard the signal? Never was there another who could do the like. She must be persuaded to be carried away by him before another learned how [illegible]. Then there was her father, beginning to spend of the money [illegible] to carry on ancestral worship. His honorable father would have a go-between arrange a match for him with some stupid, [illegible] woman from the Middle Kingdom. Kiang must be persuaded that very day.

Kiang came, and opening a tiny door in the wall of lattice, she beat a smiling face upon him.

Kiang Yeh.

"How kind you are to come!" he cried. "Before the night-damps of the miserable court arose and choked me, and I tottered in darkness. But now, O Light of Day, how changed is all!"

The girl tossed down a copper. "Take it, wandering player," she said, "and sing again. Sing sweetly for it; it is the last I have of the coins of home."

"It is not a coin of our home, pearly one," said Chao. "I have them; they are round silver yen. I have many of them—over four hundred. A wise one can do much with four hundred yen."

"One could almost become a banker with so great a sum."

"True, but I shall be a merchant. My store shall be in this court, and I shall sell tea and silk. My honorable father, too, shall supply me with carved jade and ivory. Every article shall have two prices—the larger for the fan-qui and the smaller for the cousins."

"And when I come," asked the girl, mockingly, "which price shall be mine? I am a native-born—I am a fan-qui."

"Sometimes you are very like them, Light of Day. When I was smaller

"Wait, Light of Day," Chao pleaded.

and went to their temple one of their women taught me. She, being of frail build, had a certain man to come with her, to carry a small book that she used. She mocked him, Kiang Yeh, as you mock me; but they were married."

Kiang stamped her slipper-shod foot. "You do me no honor in comparing us," she cried. "I am not such a shameless one; I follow the customs of the Middle Kingdom, and bow to the will of my honorable parents, as all should do. I shall go in now, Chao Ying."

"Wait, Light of Day," Chao pleaded, "I have something to tell you. Do not plunge the court into darkness yet."

Kiang's slipper was upon the threshold; she hesitated, and then came back to the opening in the lattice.

"Speak quickly," she said. "I should not have come out to you to-day; I am troubled at heart because of it, for since this morning I have been a promised woman."

"What devil has dared to send a go-between to your father? He shall never live to receive you as his wife!"

Kiang's face smiled serenely down upon him.

"You are a man of violence, Chao Ying," she said, "and Lee Kwi must be spoken to concerning you. I shall be a wife to this man, and, when the witnesses are assembled, and he and I sit down side by side for the first time, I shall contrive to have his robe of ceremony below mine, so that through life I shall be the ruler."

"You agree to this—you are pleased?"

"I am happy over it beyond all happiness, Chao Ying."

"There can be no mistake?" Ying asked, anxiously. "The thing is settled?"

"It is decided beyond all undoing. The go-between was no less a person than Ming Sang, the scholar, and what he arranges is arranged forever."

"Tell me the honorable man's name," he pleaded. "Ai-ya, I shall not harm him, now that I know the thing pleases you. I wish only to talk with him—to beg him to use you kindly. Tell me the name, Kiang Yeh."

"I should not; but we were children together, and the secret shall not be kept from you. He is Chao Ying, son of Chao Hai, the carver of jade and ivory."

A door slammed shut above him, and the balcony was empty. Chao, enveloped in a love-cloud of purple and gold, trotted home to "honor" his father, down the Passageway of the Seven Steps.

LAWS AS TO COST OF LIVING

Dr. Edward Everett Hale Discusses Those of Engel.

The Rev. Edward Everett Hale, lecturing in Philadelphia on "How to Regulate Expenses" and "How to Dress," said Engel had carefully studied expenses, according to the New York World, and his three laws are:

1. That the greater the income of any person or family, the smaller the relative percentage of the outlay for subsistence.

2. That the percentage of expense for clothing is approximately the same, whatever the income.

3. That the percentage of outlay for lodging, rent, fuel or light is invariably the same, whatever the income.

As to the clothing there must be a decent regard for the opinions of mankind along with a determination not to be wholly subservient to them. The cost of clothing to the workman is from 7 per cent to 19 per cent of his income, the average in Massachusetts being 15 per cent. In Germany the average is 18 per cent, and in Illinois 21.

Then there is the question of how much of one's income to devote to other people in the social life. That must depend on a person's own consciousness and circumstances. There is also the problem of contributions to charity.

Dr. Hale read the principle enunciated by Star King, that for every expenditure in amusements we ought to make a corresponding contribution to the improvement of society and in the interest of the offspring, for "when we do that we have a right to our amusements; otherwise we have no right to them."

LETTER MAIL THIEVES FEAR.

Business Man Sends Money in Novel Yet Safe Fashion.

"I send money by mail every week to my mother in Ohio," said the business man, according to the New York World. "I don't send it by money order or by check, or even by registered post. I just put my bills in an envelope along with my letter and send the whole thing by regular mail."

"But," urged the sane friend, "you take big risks of having your letter opened somewhere between New York and Ohio and the money pinched."

"On the contrary, I take no risk at all."

"But hardly a week passes that I don't read of letters being opened by dishonest mail clerks somewhere in the United States and cash stolen."

"Not letters sent the way I send mine. I put the money in the letter. Then I write in the lower left-hand corner in red ink:

"'This envelope contains $20 in two $10 bills numbered —— and ——.'

"Not a mail clerk on earth dares to open that envelope. They all take it for a 'trap' and the letter and money are as safe as if their trip was escorted by a regiment of infantry."

The Wish of the Small Boy.

I wish my clothes were pasted on my
back, jes' like a dog's,
Or like th' bark that's fastened on a
pile of hemlock logs;
Then every time I trimmed my kite, or
rigged my little boat,
An' started out, I wouldn't hear: "Oh,
Johnny, where's your coat?"

Th' fellers of my gang come up an' holler at our gate:
"Come on, we're goin' fishin', Jack!" but, gee! I got t' wait
Till ma has sewed a button on an' stitched a rippin' hem
'Fore I kin git my fishin'-pole an' foller after 'em.

One day when me an' Nell was huntin' berries down th' lane
Th' hired man rattled by—he had a wagonload of grain;
An' he'd 'a' taken me along, if Nell jes' hadn't said:
"He can't go into town without a hat upon his head."

In winter, when th' sleddin' an' th' skatin's comin' in,
I never leave th' house but what I'm scared back ag'in
T' bundle up "in something warm"—in' so I've got t' tote
A pair of skates an' rubber shoes an' gloves an' overcoat.

An' in th' mornin', when th' birds is singin' in th' trees,
I'm later gittin' out than all th' chipmunks an' th' bees,
Jes' 'cause I have t' sit around a-pullin' at a shoe
That won't go on for knotted string, or 'cause it's wet with dew.

That's why I wish my clothes were pasted on me, like a dog's,
Or like th' bark that's fastened on a pile of hemlock logs;
Then every time I wished t' have a swim or take a doze
I wouldn't have t' wait till I had shed my Sunday clothes.

—Aloysius Coll, in Buffalo News.

"He" Is a Girl.

A tired mother with two children, a baby of 2 years that sat on her lap and a bright-eyed boy of perhaps 4, who sat beside her, were trying to enjoy a little luncheon in a restaurant in the business section of the city. Two young ladies entered and sat down at the same table. Seeing the difficulty the woman had in eating lunch and holding her younger child at the same time, one of the young ladies leaned over and said in a propitiating tone: "What a sweet little boy! Won't you let me hold him until you finish lunch?" The mother gladly granted the request and was transferring her charge into the arms of the younger woman, when the little boy, with never a smile, raised his voice and exclaimed: "He ain't a boy; he's a little girl!"—Philadelphia Press.

Plan to Keep Rats from Ships.

British authorities are attempting a systematic destruction of rats for the purpose of stamping out certain diseases. To prevent rats from going on board ship at the great ports tin disks have been placed on the mooring ropes. Snap-shot photographs have been taken of the rats running along the ropes and jumping over the disks to get aboard the ships.

REGARD FOR THE THIRSTY.

One of the Attractions of Capital City to a Stranger.

"Among the thousand and one attractions of the national capital," said a New England man to a Washington Star Reporter, "are the little pumps with ladles attached to them that one finds scattered at various points about the city. This makes a favorable impression upon one, as it points out the fact that if a man wants a drink of water when he is perambulating the town he doesn't have to seek a whisky shop to get it.

"Now let me tell you something," continued the man from New England. "I was two days in New York this summer. Never had been there before, and they were very hot days. I started out to see the sights and walked a good bit. I'm no lightweight, as you see, and soon I wanted a drink of water. I never do drink anything but water and on this occasion felt as if I wanted a gallon or so, but I couldn't find any. I stopped a man on the street and said to him: 'My friend, do you know where I can get a glass of water?' He took me into a miserable groggery; we walked up to the bar and he asked the man in charge to give me a glass of water. I ought not to have gone into the barroom and would not if I had known where I was going, because I am opposed to giving them the slightest encouragement, even that of my presence. The man poured me out a big thimbleful of water when I wanted a celery-glass full, and it tasted of spirits to me. Same way all along. I couldn't get a drink without violating my principles and going into a gin mill, where I always got a second-hand taste of whisky or some other poisonous stuff.

"Therefore, you ought to be grateful for your pumps. A thirsty man walking along the street isn't obliged to patronize a rum shop to get a drink of water."

PLANS ODD FACTORY TOWN.

Ebenezer Howland Founds Garden City With House for Each Family.

An industrial town unlike any other in the world is about the rise near London. It is to be called Garden City, because every house will be surrounded by a Garden. Ebenezer Howard is the projector of this Utopia and he has, after many years, induced rich philanthropists to form a stock company and to furnish the large capital necessary to begin work.

There is to be one family to each house, flats and two-family houses being absolutely barred; the total population is not to exceed 30,000 and a maximum of one-sixth of the town area is to be given up to buildings. There are to be factories, but every window of these is to be a window garden. Meat is to be supplied direct from the surrounding farms; each family is to grow its own vegetables on its own land; cows to be pastured in the town and each house is to be hygienic and pretty. Garden City is to be governed by a board of managers and is to be managed strictly as a business enterprise. There is nothing socialistic about it and the residents will have little to say about the government of the place.

The projectors expect to scatter such Garden Cities all over England.

Gems Found in Maine.

The minerals of Maine are becoming of world-wide reputation. The great aqua-marine, found in Stoneham, and probably the most valuable gem ever found on the American continent, has recently been purchased as a valuable acquisition to the crown jewels of Germany. The German prince, while in this country, saw the gem at Chicago and admired it so much that the government has been negotiating for it ever since, and recently sent a man over to this country, who finally succeeded in closing the trade, taking the gem back to Germany with him. At the world's fair at Chicago the gem was valued at $30,000. It weighed 183 carats. One crystal taken at Paris, Me., this summer has been sold for $500.

Reminiscent.

The mother saves the baby's shoes
Which held the chubby feet.
In after years to hear again
Their halting patter sweet.

The bride her satin slipper keeps,
Reminder of the day,
To tread again in fancy's realm
The happy rose-strewn way.

The man recalls those red-topped boots,
When as a freckled boy
They filled him with a haughty pride
And swelled his soul with joy.

But those which stir my inmost heart
Are on the owner yet—
Four shining shoes of gleaming steel—
Ah, me, what vain regret!

—McLandburgh Wilson, in the Criterion.

Rejected Insinuation.

A young lawyer was sent from Edinburgh to a country north of the Forth to act as junior counsel in a licensing club case. He had to cross-examine the certifying justice, who was very diffuse and rather evasive in his answers.

"Speak a little more simply and to the point, please," said the counsel, mildly, "you are a little ambiguous, you know."

"I am not, sir" replied the witness, indignantly. "I have been strictly teetotal for a year."—Ram's Horn.

Cremation of Dead Soldiers.

Military critics say that the Japanese have a great advantage over Christian nations in the matter of sanitation because of their method of disposing of the dead by cremation. After the great battles of the civil war in the United States the soldiers slept in graveyards and drank the water tainted with the seepage from the graves of the dead. During that war one man in sixty-five was killed in battle, one in fifty-six died of wounds and one in thirteen died of disease.

The Gorilla in Histor

Gorillas have figured in the writings of historians, or at least of some of them, for thousands of years according to Andrew Wilson, the naturalist. The ancients, however, were apparently unable to distinguish them from savages. "In the sixth century before Christ," says Mr. Wilson, "we find Hanno, the voyager of Carthage, telling of his encounter with what seem to have been man-like apes. He speaks of a bay called the 'Horn of the South.' This was probably situated near the Gaboon, on the African east coast. Here the chimpanzee is met with to-day, the gorilla being found, as a rule, farther inland. 'In the bay,' says Hanno in his 'Periplus,' 'was an island of great size, having a lake, and in this another island full of wild men. Much the greater part were women with hairy bodies, whom the interpreters called gorillas. We were unable to capture the men, who escaped by reason of their great agility. They climbed precipitous rocks and trees and defended themselves by throwing stones at us. We took three women, who bit and tore those who caught them and were unwilling to follow. We were obliged, therefore, to kill them, and took their skins off, which skins were brought to Carthage, for we did not sail farther, prov[illegible] becoming scarce.'

"Thus far Hanno. There may [illegible] doubt regarding the identity of animals he saw, while the name 'gorilla' must not be regarded as [illegible] sarily applying to the real an[illegible] Purchas, of the 'Pilgrimages,' r[illegible]

Next the story of a native of L[illegible] in Essex, Andrew Battell by [illegible] Battell, it appears, was 'sent b[illegible] Portugals prisoner to Angola [illegible] 'lived there and in the adjoinin[illegible] gions neere eighteene yeers.' [illegible] chas tells us 'of a kinde of [illegible] Apes, if they might so bee term[illegible] the height of a man, but tw[illegible] bigge in feature of their limme[illegible] a strength proportionable, ha[illegible] over, otherwise altogether lik[illegible] and women in their whole shape.'

"Battell discourses of their [illegible] They sleep in trees and build [illegible] against rain. They walk on th[illegible] but carry their hands clasped [illegible] nape of the neck when on the [illegible] They are vegetarians, eating no[illegible] They have no speech, and [illegible] keep up a fire they have fou[illegible] cause they have no understand[illegible] lay fresh wood thereon. When [illegible] die, according to Battell, the sur[illegible] cover the dead with heaps of [illegible] and wood."

Billions in the Crop

The cotton crop of a single year is valued at $600,000,000. This would be nearly $40 for every family in the United States.

The corn crop is even greater. The value of the corn raised in a single year could pay the national debt, says the New York World, with interest for one year, and leave enough to help out President Roosevelt on governmental expenses so that there need be no deficit for four or five years.

The American hen lays enough eggs in one month to pay the interest on the national debt. The one and two-thirds billion of eggs laid in one year would reach 30,000 miles, or ten times across the continent, if placed side by side in a continuous line.

The automobile is all very well, but horses and mules are still worth a trifle of a billion and a third of dollars. That is an average of $65 worth of horseflesh for every family in the land.

The total products of the farm in 1904 are $5,000,000,000. That is nearly equal to the total capital stock of all American railroads befor[illegible] "boom" of 1900.

This sum is more than six [illegible] the capital stock of all the na[illegible] banks. It is three times the [illegible] earnings of all the railroads. [illegible] nearly as great as the value of m[illegible] facture in 1900, less cost of raw [illegible] terial.

In two years the farmers have [illegible] duced wealth exceeding the outp[illegible] all the gold mines of the world [illegible] Columbus discovered America.

In six years the deposits in a[illegible] banks of three farming states [illegible] increased as follows: Iowa, 10[illegible] cent; Kansas, 219 per cent; M[illegible] sippi, 301 per cent.

Even rice, which few families [illegible] much use of, is grown to the e[illegible] of 650,000 pounds. Macaroni wh[illegible] a novelty in this country, [illegible] year's crop of it would fill a bl[illegible] feet high and completely cover [illegible] city "long block."

The increase alone of farming [illegible] tal in four years, aside from th[illegible] preciation in the value of the [illegible] would build sixty subways like [illegible] of New York city.

Books in Corner Stone

It has lately been recorded that the late Dr. Samuel Smiles caused to be buried under the foundation stone of a house that he built at Blackheath a copy of his own world-renowned work, "Self-Help," but it may here be said that all the books that have during the last few decades been similarly buried were to be disinterred a considerable library would be the result.

That clever dramatist, the late H. J. Byron, who wrote "Our Boys," had a mania for removing from house to house, and on one occasion, when he built a new house in the north of London, he placed beneath the foundation stone the original "script" of several of his plays. When this house was afterward sold, just at the time when the dramatist's fame was at its zenith, the land agent in charge of the transaction cited the buried manuscript as giving additional value to the premises.

In the north of England, and especially in Yorkshire and Lancashire, it was found that coins and other [illegible] able deposits between the found[illegible] stones of new public buildings [illegible] only too frequently appropriat[illegible] cunning workers—and this despi[illegible] efforts of contractors and their [illegible] men—and it then became the cu[illegible] always to deposit the volume w[illegible] formed the current local directory [illegible] scores of these lists of the inhabi[illegible] of towns at given time have been [illegible] placed.

In many cases copies of the w[illegible] of authors whose names have [illegible] identified with a given locality [illegible] been placed beneath the found[illegible] stones of public buildings in such [illegible] tricts, cases in point being furni[illegible] by Dickens, Harrison Ainsworth [illegible] others. Near New York a gentle[illegible] built a mansion upon the site [illegible] dwelling formerly in the occup[illegible] of Laurence Sterne, and he place[illegible] neath it a complete set of the w[illegible] of that author, one of these be[illegible] valuable autograph copy.—L[illegible] Tit-Bits.

Place We Call To-Morro

There's a place we call To-morrow—just a step beyond the day;
You may see its spires and towers in the twilight's dim half-gloom.
'Tis the land beyond the sunrise, where the time is always May,
When the fragrant buds of promise are just bursting into bloom;
Hope, the wanderer, finds haven there, and sorrow's hollow eyes
Seek to see beyond the starless night the twinkling lights that play
From its towers that like beacons to the shadowed heavens rise.
'Tis a place we call To-morrow—just a step beyond the day.

There's a place we call To-morrow—just a step beyond the Now.
'Tis the summit of endeavor, lying further up the hill;
'Tis the place where Glory waits with garlands fashioned for thy brow;
Where thy hopes find full fruition and thy longings all are still;
'Tis the biding place of dreams, and sunset streaks its gorgeous skies
With an ebbing sheen of splendor; for the twilight, growing gray,
Dulls the crimson glow of promise and the luster dims and dies.
For 'tis always over yonder—just a step beyond the day.

There's a place we call To-morrow, its clustered groves are fa[illegible]
With their dells and rills and [illegible]
And its echoes rich with sot[illegible]
Fame bides there, and Love and [illegible]
And the heart of Joy is fu[illegible]
With a heavenly completeness [illegible]
way seems overlong;
But the feet grow weary, weary, a[illegible]
toiler's yearning eyes
See its towers always rising [illegible]
hilltops; for the day
Of the setting sun with splendor [illegible]
the arch of distant skies.
But the place we call To-morrow [illegible]
step beyond the day

Though the days be cold and [illegible]
and the ways be thick with [illegible]
Yet we see its towers and spires [illegible]
grandly over there
Where the fragrant buds of prom[illegible]
just bursting into bloom.
And the lights like flaming beac[illegible]
the heavens with their glare;
Hope, the wanderer, finds haven [illegible]
and sorrow's sigh is stilled
And the brow of Toil is garland[illegible]
roses of the May.
Like the rarest wine o'erflowing [illegible]
sparkling laughter spilled
In that place we call To-morrow [illegible]
step beyond the day!

—J. W. Foley, in New York T[illegible]

For Long, Useful Li

It is well to live many years; if we can provide we try at least to make the years useful. Each year means three hundred and sixty-five more days of possible effort; each day has its twenty-four hours in which a good thought or a noble ambition may be born.

But we devote altogether too much time to this mere thought of long life and good health. We should adopt some definite plan of self-control and self-denial with the hope of living to be old.

But the plan thus adopted should become a matter of constant habit, working without any thought or effort on our part, as the heart works in its lifelong pumping.

Once our physical plan of life is mapped out, our thoughts should be diverted from it. From that mo[illegible] every particle of energy we p[illegible] should be devoted to the task of [illegible] ing ourselves useful.

We should concentrate our [illegible] upon some form or upon many f[illegible] of mental activity. We should [illegible] pel ourselves to know the impo[illegible] work that is being done aroun[illegible] as well as the great things that [illegible] been done in the past.

We should resolve to add [illegible] thing, no matter how little, to the [illegible] work that men have done. If we [illegible] not create, we can at least a[illegible] knowledge. If we cannot do the [illegible] things, we can talk about them [illegible] telligently, in a way that will st[illegible] ambition in the minds of those [illegible] are younger and abler.—New [illegible] Journal.

Women in Our Hospitals

Appalling Increase in the Number of Operations Performed Each Year—How Women May Avoid Them.

Going through the hospitals in our cities one is surprised to find such a large proportion of the patients lying in those snow-white beds women and girls, who are either awaiting or recovering from serious opera-

Why should this be the case? Simply because they have neglected themselves. Ovarian and womb troubles are certainly on the increase among the women of this country—they creep on them unawares, but every one of the patients in the hospital beds had had a day of warning in that bearing-down feeling, pain at left or right of the womb, nervous exhaustion, pain in the small of the back, leucorrhœa, dizziness, flatulency, displacements of the womb or irregularities. All of these symptoms are indications of an unhealthy condition of the ovaries or womb, and if not heeded the penalty will be paid by a dangerous operation. If these symptoms manifest themselves, do not drag along until you are compelled to go to the hospital and submit to an operation—but remember that Lydia E. Pinkham's Vegetable Compound has saved thousands of women from surgical operations.

Such women are troubled with irregular suppressed or painful menstruation, weakness, leucorrhœa, displacement or ulceration of the womb, that bearing down feeling, inflammation of the ovaries, backache, bloating (or flatulency), general debility, indigestion, dizziness, nervous prostration, or are beset with such symptoms as dizziness, lassitude, extreme nervousness, irritability, nervousness, sleeplessness, melancholy, "all-gone" and "want-to-be-left-alone" feelings, they should remember there is one tried and true remedy.

The following letters cannot fail to bring hope to despairing women.

Mrs. Fred Seydel, 413 N. 54th Street, West Philadelphia, Pa., writes:

Dear Mrs. Pinkham:—

"I was in a very serious condition when I wrote to you for advice. I had a serious womb and ovarian trouble and I could not carry a child to maturity, and was advised that an operation was my only hope of recovery. I could not bear to think of going to the hospital, so wrote you for advice. I did as you instructed me and took Lydia E. Pinkham's Vegetable Compound; and I am not only a well woman to-day, but have a beautiful baby girl six months old. I advise all sick and suffering women to write you for advice, as you have done so much for me."

Miss Ruby Mushrush, of East Chicago, Ind., writes:

Dear Mrs. Pinkham:—

"I have been a great sufferer with irregular menstruation and ovarian trouble, and about three months ago the doctor, after using the X-Ray on me, said I had an abcess on the ovaries and would have to have an operation. My mother wanted me to try Lydia E. Pinkham's Vegetable Compound as a last resort, and it not only saved me from an operation but made me entirely well."

Lydia E. Pinkham's Vegetable Compound at once removes such troubles. Refuse to buy any other medicine, for you need the best.

Mrs. Pinkham invites all sick women to write her for advice. Her advice and medicine have restored thousands to health. Address, Lynn, Mass.

Lydia E. Pinkham's Vegetable Compound Succeeds Where Others Fail.

MACON, GEORGIA.

MANSON MEETS THE ENEMY.

What He Said When He Saw His Torturer Face to Face.

"It is unbearable!" declared Mr. Manson. Then he threw down his paper and remarked to Mrs. Manson that she must be devoid of nerves. "If you think for one minute," she replied, "that I enjoy being tortured all day long and most of the evening by that dreadful tooting, you're entirely mistaken, Archibald." The Chicago News gives some further account of Manson's experiences.

"Somebody ought to stop it," Manson said, gruffly.

"So you have said before," Mrs. Manson remarked, sweetly.

The perpetual, maddening, amateurish playing of a peculiarly shrill fife was destroying domestic harmony not only in the Manson flat, but in every house in the block. It began early in the morning. The scales were an accompaniment to the breakfast coffee, from which the men of a dozen families fled, leaving their wives to be tormented by a repertoire that wavered through "Suwanee River" to "Yankee Doodle."

Nobody was quite sure from which house the fife shrilled forth, but by calling in the aid of distracted servants and comparing notes, the neighborhood finally settled down on the Grahams' as the fatal spot.

"They have a ten-year-old nephew living with them now," a feminine detective triumphantly announced. "He must do it."

"Chloroform him," promptly said all the husbands, especially Manson.

The fife was most annoying on hot days. On a certain broiling Saturday afternoon Manson's nerves gave way.

"Any human being," he said, "who will deliberately torture, or allow any one to torture, the rest of the world with such outrageous, ear-splitting racket ought to be driven off the street. I can't see why some of you women don't complain about it to Mrs. Graham. You could lead up to it, gracefully, you know."

"Has it ever occurred to you," asked his wife, crisply, "that some of you men might speak to Mr. Graham? I don't even know his wife by sight. if I did I might be tempted to say something."

"Maybe the boy will swallow the fife," suggested Manson, hopefully. "Possibly both Graham and his wife are deaf, and that's the reason they don't mind it themselves. People with as little consideration for other folks' feelings ought to have a few good plain truths hammered into them. If I ever get a chance I'll do it. You watch!"

Then there came an evening when Manson was met on his return by an excited wife.

"What do you think!" she cried. "Mrs. Graham called today, and she is the dearest old lady you ever saw. She spoke so sweetly of her nephew, Bob, and said he was such a comfort to them! His parents are dead. She said he just loved music—"

"Music!" snorted Manson.

"Just loved music," went on Mrs. Manson, hastily, "and nearly broke his heart till they got him the fife. She —she wanted to know—she said she hoped it didn't annoy us."

Manson breathed hard.

"Wh—what did you say?" he asked, feverishly. "You told her?"

"I just couldn't, Archibald," Mrs. Manson confessed. "She was so placid, and had such a sweet way—and—"

"You had the chance and let it go by," said Manson, with cold dignity.

It was three nights later—72 hours, 36 of which had been enlivened by the shrilling of the fife—that Mr. and Mrs. Graham and the demon Bob himself passed by and stopped on the Mansons' door-step. Manson looked at Bob curiously. He was a singularly prepossessing child. There was a fascination in merely gazing at him. He approached Manson confidently, and his dark eyes were very winning.

"Do you like music?" he asked. "I do. I have a fife, and I practise lots. Maybe you've heard me. Don't you think it's pretty?"

Mrs. Manson gripped her chair arms and waited for the worst.

There was a silence, during which Manson gazed into the eager, appealing face of the author of his daily torture. His duty was plain, but he had not counted on the boy's eyes. At last he spoke.

"Yes, indeed, it's great!" he said.

Campaigning in Missouri.

Senator Cockrell and Joseph W. Folk of Missouri were to make campaign addresses in the same town on the same day. They left St. Louis together, and until a late hour chatted in the smoking compartment. When they finally decided to retire Mr. Folk noticed the senator remove his shoes and then carefully place them under the covers at the foot of his berth. He could not restrain his curiosity.

"Why do you place your shoes in bed with you?" he asked quizzically.

"Sh-h-h! Not a word!" said the senator. "I am to address a peculiar class of my constituents tomorrow. They are gentlemen from the tall timber. Now, do you understand?"

"I must confess that I do not," replied Mr. Folk.

"Well," said the senator, "if I left those shoes out the porter would polish them, would he not?"

"Most assuredly he would," said Mr. Folk.

"Well, down in this part of the country the people don't stand for statesmen with polished shoes."—Sunday Magazine.

After a juror in a Sydney (Australia) court had been fined $10 for two days in succession for absence it was discovered that he was dead.

BISHOP OWES HEALTH AND LIFE TO PE-RU-NA.

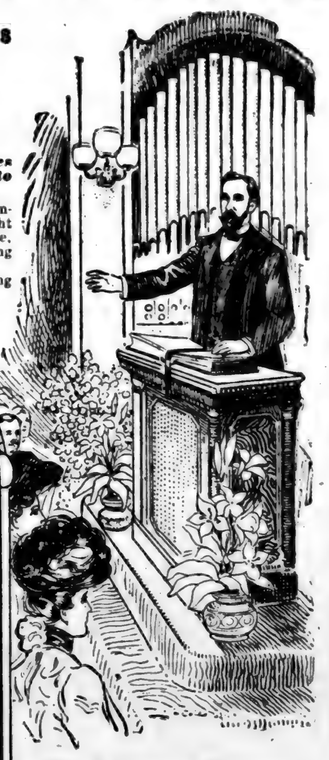
Ministers of All Denominations Join in Recommending Pe-ru-na to the People.

Public speaking especially exposes the throat and bronchial tubes to catarrhal affections.

Breathing the air of crowded assemblies, and the necessary exposure to night air which many preachers must face, makes catarrh especially prevalent among their class.

Peruna has become justly popular among them.

BISHOP L. H. HALSEY.



The Friends of Pe-ru-na.

Despite the prejudices of the medical profession against proprietary medicines, the clergy have always maintained a strong confidence and friendship for Peruna.

They have discovered by personal experience that Peruna does all that is claimed for it.

The Bishop's Strong Tribute to Pe-ru-na.

L. H. Halsey, Bishop C. M. E. Church, Atlanta, Ga., writes:

"I have found Peruna to be a great remedy for catarrh. ***I have suffered with this terrible disease for more than twenty years,*** until since I have been using Peruna, which has relieved me of the trouble.

"I have tried many remedies and spent a great deal of hard-earned money for them, ***but I found nothing so effectual in the cure of catarrh as the great medicine, Peruna.***

"I feel sure that Peruna is not only a triumph of medical science, but it is also a blessing to suffering humanity.

"Every individual who suffers with respiratory diseases will find Peruna a magnificent and sovereign remedy."—L. H. Halsey, Bp. C. M. E. Church.

Peruna is the most prompt and sure remedy for catarrh that can be taken.

Many a preacher has been able to meet his engagements only because he keeps on hand a bottle of Peruna, ready to meet any emergency that may arise.

We have on file many letters of recommendation like the one given above. We can give our readers only a slight glimpse of the vast number of grateful letters Dr. Hartman is constantly receiving, in praise of his famous catarrh remedy, Peruna.

Could Not Agree.

It was at one time arranged that Dante Gabriel Rossetti, his brother William and Swinburne and George Meredith should live together in a certain house. Meredith happened to see Dante Gabriel Rossetti at breakfast and changed his plans. Meredith himself tells the story: "It was past noon," he says. "Rossetti had not yet risen, though it was an exquisite day. On the breakfast table on a huge dish rested five thick slabs of bacon, upon which five rigid eggs had slowly bled to death. Presently Rossetti appeared in his dressing gown, with slippers down at heel and devoured the dainty repast like an ogre." That meal was too much for Meredith—and he sacrificed three months rent rather than see it repeated."

MORE QUIET IN EAST

The Russians are Successful in an Attack With the Japanese. Small Loss.

SEVERAL SMALL SKIRMISHES.

Reports from General Kuropatkin Show That Both Sides are Preparing to Get Busy.

St. Petersburg—According to General Kuropatkin's latest reports, which indicate the wounding of a third general, Domdoski, the operations at Sandiapu and the fighting at Shakhe have been momentarily suspended. The Russians successfully repulsed the last attack of the Japanese eastward with heavy loss. The cold is still intense, there being 24 degrees of frost. There are indications that the Japanese are preparing to break the inactivity on their own account as soon as the weather moderates.

The war office is closed and no further facts regarding the reports that General Kuropatkin is about to give up his command can be obtained.

General Kuropatkin Reports.

St. Petersburg—General Kuropatkin, in a report to Emperor Nicholas says:

"No fighting was reported on February 4th. At present activity is confined to operations by our volunteers which harass the enemy. There is artillery firing on both sides, and a hasty strengthening of positions by both the Russians and Japanese."

General Kuropatkin on Friday reported the repulse of the Japanese advance guard on the left flank toward Saosyr and Chansan, with slight losses, the Japanese leaving 50 dead on the field.

Number of Skirmishes.

Tokio—There were a number of serious skirmishes along the Shakhe and Hun rivers Friday and Saturday. The Russians shelled portions of Japanese lines Friday night and small bodies of Russians attacked Waittao and Titi mountains, and places in those vicinities. Reports received from Japanese Manchurian headquarters say that the attacks were repulsed.

Friday afternoon Russian batteries stationed at Liuchientun and Wanpao mountain, north of the Shakhe river, and at other places shelled the Japanese positions. Saturday morning 600 cavalry, comprising one force, and two companies of infantry and one battery of another, simultaneously attacked Chitaitse, on the right bank of the Hun river. The Russians appeared to have reserves. The Japanese garrison at Chituitse was defending the place when the report of the attack was forwarded.

Three hundred Russian cavalry with two guns occupied Songchin on Plaksin bay, northeastern Korea, January 24th, but abandoned the town January 28th and retired northward.

Russians Hold Japs.

Mukden—During the night of February 1st the Japanese artillery facing the Russian right opened a terrific fire on the Russian positions southeast of Sandiapu, in preparation for an outbreak. The Russian artillery replied and the cannonading lasted until after noon.

During the night of February 2 the Japanese attacked the village of Schantan and adjoining Russian positions, but by daylight of February 3 they had been defeated along the entire front. The Russians even advanced slightly. The Russian losses were about 300 and those of the Japanese were heavy.

Japanese prisoners believe that an important movement is pending.

Tachimi Bore Brunt.

London—According to the Tokio correspondent, Lieutenant General Tachimi, in command of the Eighth Japanese division, bore the brunt of the fighting in the battle of Hoikoutai. He was constantly opposed by superior forces, but continued fighting till the last, with a total loss of 162 officers and 5,500 men killed or wounded.

General Matsumara Dies.

London—General Matsumara has died at the front from congestion of the brain. He commanded the operations at 203 Meter Hill, and was decorated and promoted for heroism.

Will Repair Furnace.

Gadsden, Ala.—The work of making the necessary repairs on the old charcoal furnace will be commenced in a few days and will be pushed as rapidly as possible, as the new owners are anxious to get it into commission. The stack will be rebuilt and other improvements made.

Several Buildings Destroyed By Fire.

Athens, Ala.—Athens had a severe fire last night, which did a considerable amount of damage. The fire originated in the Haggard building, and spread rapidly, destroying several buildings. The loss is unknown.

Belgian Miners Strike.

Mons, Belgium.—About 14,000 coal ers struck for higher wages. The national congress of miners will meet shortly to discuss a general strike.

Shooting Over Domestic Affairs.

Memphis, Tenn.—A special from Dresden says: B. B. Atkins, a prominent farmer residing in the twenty-fifth district of this county, and his wife and her sister, Miss Mary Nanny, are in jail here charged with assault on T. D. Atkins, son of the first named, who lies at death's door from two shotgun wounds, inflicted at the hands of his father. They were arrested on warrants sworn out by the son after the shooting occurred.

Domestic affairs caused the shooting.

Two Men Killed.

Dennison, O.—Two men were killed and one seriously injured in a wreck on the Baltimore and Ohio near here. The dead are:

J. Henry Muelhoffer, of New Philadelphia.

James Lambright, of Roanoke.

Injured: James Marshall, of Uhrichsville.

The men were "pinching up" a car on a siding when a freight train left the track and crashed into the car the men were working on. A broken rail was the cause.

Einstein Locked Up.

Chicago, Ill.—Abbot Lewis Einstein, husband of Dorothy Russell, daughter of Lillian Russell, was locked in a cell at the Harrison street police station. His wife several days ago instituted proceedings against him for divorce.

Saturday night Mrs. Einstein and her husband met on the street and he threatened to kill her, it is said. Mrs. Einstein went to the police station and reported the alleged threats. She charges Einstein with threats to kill her.

Hobson Denied the Pulpit.

Kansas City, Mo.—During the absence of the pastor of an Iola, Kans., church, a committee of the church arranged to have Captain Richmond Pearson Hobson fill the pulpit.

The minister returned and promptly vetoed the plan, refusing to give way to Hobson. His usual services will be conducted in the church, and the nearest Captain Hobson can get to the pulpit will be a front pew.

Huntsville Mill Will Start.

Huntsville, Ala.—The West Huntsville cotton mill will resume operations at an early date after an idleness of nearly two years. The mill is the property of Tracey W. Pratt, one of the organizers of the Southern Textile Company, and was closed down a short time after the trust began business. All of the former operatives of the mill are now employed in other factories about the city and new hands will have to be imported from other mill towns.

Child Scalded to Death.

Florence, Ala.—A most peculiar and a horrible accident occurred at the home of Mrs. McClanahan, in East Florence, which resulted in the death of her 14-months-old grandchild. The child and its mother, Mrs. George Ramsey, were visiting her mother, while the father was in Texas. The little fellow was playing at some distance from the stove, on which a pot of potatoes was boiling. One side of the stove was propped up on a wooden peg that became misplaced, tipping the pot over. The entire contents were precipitated on the child. It lived but a few hours, dying in great agony. Mr. Ramsey was telegraphed for and is now hastening home to attend the funeral of his baby.

Want Gorky Released from Prison.

Paris.—The imprisonment at St. Petersburg of Maxim Gorky, as a result of the part which he took in the reform movement in Russia, creates an impression in French literary circles, which are signing a petition for his release. Among the signatories are Mm. Rodin, Anatole France, Juares, Charpentier, Ciartie, Marcel Prevost, Ludovic Halevy and Claude Monet.

Nine Injured in Collision.

Plattsburg, N. Y.—Nine persons were injured, some of them seriously, in a head-on collision between a passenger train and a freight train on the Delaware and Hudson railroad Saturday. The collision was caused by the crew of the freight train leaving a switch open. The injured were from small towns in the northern part of the state.

Must Remain Single One Year.

Austin, Tex.—The lower house of the state legislature passed the senate bill forcing persons giving ground for action in divorce cases to remain single for three years, the other party to the divorce to remain single one year. This action of the legislature is the culmination of the crusade which has been waged against divorce throughout the state for some time past.

Rutson, La.—Fire Friday destroyed nine buildings and contents, including the Lincoln hotel. Loss estimated at $40,000, with insurance of $25,250.

Montgomery, Ala.—Governor Cunningham has authorized the advertisement for bids on approximately $8,500,000 of the state's bonds. The advertisements go into the newspapers now and bidders are allowed until April 4 to put in their bids. By this means the state's bonded indebtedness will be refunded. The governor recently made a trip to New York for the specific purpose of looking into this matter and the advertisement for bids comes as the result.

Ten Millions Are Saved.

Brownwood, Tex.—The following signed statement has been issued by C. H. Jenkins, of the executive committee of the Southern Cotton Growers' Association:

"Since the first call was issued for the farmers to organize for the purpose of securing a 25 per cent. reduction of acreage, and fertilizers, cotton has advanced $2.50 per bale. Upon the basis of four million bales being still in the hands of the producers, this means a gain of $10,000,000 to the cotton growers of the South. If the farmers and business men of the South will stand by the program agreed upon at the New Orleans convention, this gain will amount to forty millions of dollars on the crop in hand by June 1, and the gain on the next crop will be at least one hundred and twenty-five million dollars. Can we afford to pay something in labor and in money for such a consummation as this?

"The essentials are reduction in the next crop, and holding the present crop. The present crop cannot be held economically without warehouses; therefore, my advice is to build warehouses and do it now. Let the farmers and business men of every country get together at once and raise the necessary fund to build a warehouse.

"C. H. JENKINS,
"Member of the Executive Committee Southern Cotton Growers' Association."

Cut Each Other.

Birmingham, Ala.—"Rube" Preddy and Albert Irwin, two well-known young white men about town, cut each other pretty badly Friday night about 7 o'clock in the pool room in the Florence hotel. The fight was the result of a dispute over a game of pool which, it is said, Preddy tried to break up.

As the result of the fight Preddy is at St. Vincent's hospital with three long cuts across his shoulders and down his back, and Albert Irwin is cut, but less dangerously. Irwin is employed in the pool room. Neither has been arrested.

Preddy was drinking and came into the pool room and interferred with a game. Irwin asked him to stop and he replied with profane language. The two commenced fighting and drew knives.

The physicians had to take thirty-six stitches in one of the cuts in Preddy's back, and a few less in the other two cuts. The wounds are not fatal.

Unknown Man Killed.

Elmore, Ala.—The body of a white man killed by a Louisville and Nashville freight train at Elmore station was taken to Montgomery Friday night.

Conductor Brooks says that he noticed the young man just before the train went into the Elmore sidetrack. The man, he says, was neatly dressed, his overcoat and clothes well fitting and wore kid gloves. In fact he looked as if he had been to a dance at Deatsville, where it is thought that he boarded the freight train to come to Montgomery.

Conductor Brooks says that there were no papers or means of identification of any kind on the man, but it was supposed that he was a Montgomery boy who had been to a country dance and was trying to get home quickly.

Unless something is heard from the family or friends of the dead man this morning the body will be buried by the Louisville and Nashville railroad.

Wenobee Ordered Sold.

Roanoke, Ala.—Chancellor Whiteside has made a decree ordering the sale of the Wenobee cotton mills, which are located near Roanoke, in Randolph county. Mr. J. A. Williams, of LaFayette, is the receiver and he will advertise and sell the property, which is valued at $15,000. The chancellor reserved his decision on other questions in the case.

City Flooded With Water.

London.—The forty-two-inch main supplying Liverpool with water burst at Eton, Terpoley, Saturday morning and twenty million gallons of water was liberated. The surrounding country is inundated and roads changed into deep channels. Enormous damage but no fatalities.

Two Men Killed in Jasper County.

Jasper, Ala.—There was a killing at Horse Creek late Tuesday afternoon. The particulars are not known further than that a man by the name of Wiley Burns killed an Italian whose name is not known. Coroner Mose Newburger went over to hold an inquest, accompanied by Sheriff Moore and County Solicitor Ernest Lacy.

Arrested for Starting Fires.

Charleston, S. C.—The police arrested Raymond Bowman, a young white man, on the charge of starting a series of fires in hay warehouses duirng the past few weeks It is said that he has practically confessed to all the charges.

Leaped Into Burning Oil.

Maritta, O.—After shooting his wife near Wick, W. Va., Saturday, Lindsay Owens committed suicide by burning himself in an oil well. Believing his wife was fatally wounded he went to an oil well near by and having set fire to the gas fumes he leaped headlong into the flames. His charred body was taken out later. Mrs. Owens will recover. Jealousy was the cause.

CZAR SEES WORKINGMEN

Grants Thirty-four Delegates an Interview at Tsarkoe Selo.

PROMISES TO RELIEVE TROUBLES

After a Dinner the Representatives Were Driven to the Railroad Station in Royal Carriages—Leaders Announce Their Faith in the "Little Father" as Being Unshaken.

St. Petersburg, Russia.—In Tsarkoe Selo Palace Emperor Nicholas met thirty-four workingmen, representatives of eleven trades assemblies in St. Petersburg, declined to hear their grievances, but informed them that his Ministers were awake to the conditions existing in the empire, partly caused by the depression in trade following the declaration of war between Russia and Japan. He announced that all the promises formally made by him on December 26 of last year would be carried out, but that the people must be patient.

Having said this informally to the workingmen, the Emperor read from a printed copy an address to the delegation. When he had ended he caused a copy of his speech to be handed to each person, suggested that they go to a neighboring church to pray, and that after the religious service General Hesse, Minister of the Imperial Court and commandant of the palace, would conduct them to dinner in one of the wings of the imperial building. The workingmen, overcome with the kindness of the Emperor, simply bowed their thanks.

They meekly followed their orders by going to the neighboring church, where they prayed, kissed the ikons, and placed candles before the shrines. Then General Hesse, accompanied by Grand Duke George Mikhailovitch, attended the labor committee to a building formerly used as a high school near the palace, where a sumptuous dinner was set. The leading members of the workingmen's deputation proposed the health of the Emperor and drunk it several times as they cheered for his happiness and safety.

Emperor Nicholas received the workingmen in the audience hall of the Alexander wing of the palace. After an informal talk he read an address.

After their dinner the delegates were conducted to the main road of Tsarkoe Selo, where the royal carriages were awaiting them at a point near the Imperial Pavilion, whence they were driven to the station and took a train for St. Petersburg. The men were wholly overcome by this interview with their "Little Father," and on their return trip said their faith in him had not been shaken by the bloody events of Sunday, January 22. They announced that they would advise the workingmen to accept the present situation and await the action of the Emperor and his Ministers.

At night it was announced that the imperial family had given $25,000 to aid the relatives of the victims, and further good feeling was made when the employers distributed a statement announcing that, while they did not do it as a matter of justice, they would pay, as a matter of charity, all workingmen who went on strike and who needed for the necessities of life the wages lost. The employers also made public the statement that wages would be increased, but that the question of regulating the hours would have to be settled by the Government, as it would be unfair for one employer to compete in a nine-hour day with another employer having a ten-hour day.

MACHEN MUST GO TO JAIL.

Supreme Court Decides Against Post-office Conspirators.

Washington, D. C.—The Supreme Court took away the last hope that A. W. Machen, Dr. Lorenz, Diller B. Groff and Samuel Groff, his brother, may have cherished that they would escape punishment for conspiring to defraud the Government in the sale of letter-box fasteners to the Postoffice Department. The Court unanimously denied the petition for a writ of certiorari to the Court of Appeals of the District of Columbia.

This action affirms the decision of the Court below and removes all possibility of delay or interference with the operation of the sentence of the four defendants to imprisonment for a term of two years in the prison at Moundsville and the payment of a heavy fine each. All the defendants are now in Washington on bail to the amount of $20,000 for each. The attorney for Machen said there would be no further effort to secure any mitigation of the sentence.

In the case of Samuel Groff, the inventor of the box fastener, who was formerly a Washington policeman, there will probably be an effort to secure a pardon.

MORE SHIPS FOR BALTIC FLEET.

Five to Sail at Once to Join Admiral Rojestvensky.

St. Petersburg, Russia.—Orders have been issued at Libau that the battleships Admiral Oushakoff, Admiral Senavine, Admiral Napraxine and Vladimir Monomach, and the cruiser Russ shall at once sail to join Admiral Rojestvensky's fleet in Eastern waters. Niebogatoff has been appointed Captain and Kross Chief of Staff of the battleship. Alexander II., which will not be able to leave Libau for a month yet.

Large Engine Received.

Anniston, Ala.—General Yardmaster Fred O'Rouke received from the Alexandria shops a mammoth switch engine to be used in the local yards. The engine is as large as some of the largest engines now in use on the Birmingham division of the Southern, and it will assist materially in handling the business at this point. It weighs 117 tons.

KILLED IN SLEIGH CRASH

Hornellsville, N. Y., Plunged Into Mourning by Horrible Accident.

Railroad Train Hits Sleigh at Full Speed Containing Large Party of Women—Seven Die Instantly.

Hornellsville, N. Y.—Seven women were instantly killed when a train struck a sleigh on the Stephens' crossing of the Pittsburg, Shawmut and Northern Railroad. Three others were so terribly hurt that they soon died. The dead are Mrs. B. Moore, Mrs. L. Shaw, Mrs. J. Hallett, Mrs. C. C. Graves, Mrs. C. Thomas, Mrs. M. Gillette, Mrs. J. Coates, Mrs. Fred Green, Mrs. Fred Boughton and Mrs. D. Patchen; the injured are, Mrs. S. Rowley, Mrs. E. Bond and Mrs. W. Clarke. All were of this city.

Shortly after 2 o'clock in the afternoon two sleigh loads of women members of the Universalist Church left this city as the guests of Mrs. C. C. Graves for a sleigh ride to Arkport, there to spend the afternoon with Mrs. Baldwin, an out-of-town member. They started on their return shortly after 7.30 o'clock in the evening.

Stephens' crossing is about a mile from the home of Mrs. Baldwin, where the afternoon had been spent. It is a dangerous crossing at any time, but especially dangerous at night. The first sleigh approached it cautiously and crossed safely. But while crossing the occupants saw a train coming. They motioned to the driver of the second sleigh to remain behind.

The driver is an old man and failed to understand them, for he kept coming along. However, as the sleigh neared the track he saw the headlight of the approaching train and jumped, but the horses continued on pulling the sleigh and its occupants directly in front of the train. The locomotive struck the sleigh squarely, hurling the women through the air and into the snowbanks. Every woman in the sleigh was killed or injured.

The other members of the party hurried back to the assistance of their unfortunate companions, and the train was stopped and backed up to the crossing. The sight was appalling. It seemed impossible that any occupant of the sleigh could have escaped death. Bodies lay alongside the track for a distance of 100 yards.

The dead were placed upon the train and the injured were laid upon improvised cots in the baggage car. The train then proceeded to Hornellsville. The news of the accident had been telephoned to the city from a farmhouse near the crossing, and hundreds of friends and relatives of the unfortunate women were waiting at the station. The scenes there were heartrending.

At the hospital shortly before midnight it was thought that one of the injured would die. Engineer W. J. Johnson was in charge of the engine and J. J. McLaffiin in charge of the train that struck the party. No arrests were made. Coroner Sutton will hold an inquest.

SLOCUM JURY DISAGREES.

Discharged After Ten Hours' Deliberation—Six to Six, Report Says.

New York City.—After ten hours' deliberation the jury in the case of Henry Lundberg, ex-Assistant Inspector of Hulls under the local Board of Steamboat Inspectors, who is under charges growing out of the Slocum disaster, failed to agree. The case was given to the jury at 11 o'clock in the morning.

Judge Thomas, before leaving the Federal Building, told the jury he did not want to force a verdict, but announced himself against all-night juries. United States Marshal Henkel said the Judge told him to go to the jury room at 9 o'clock, if nothing had been heard from the jurors by that hour. Mr. Henkel went to the jury room at 9 o'clock, and knocked on the door.

"We cannot agree," the foreman replied.

Mr. Henkel then said that he had orders to let the jury go as discharged. The men filed out. It was said that the jury stood six to six. Lundberg was paroled in the custody of his counsel, A. S. Gilbert.

GORKY'S LIFE IN NO DANGER.

His Release Expected in a Few Weeks —Causes That Led to His Arrest.

St. Petersburg, Russia.—The report that Maxim Gorky may be hanged for high treason is without the slightest foundation. Even his friends declare the rumor to be absurd. The expectation is that he will be released within a few weeks. He was a member of the deputation of editors and literary men who called on M. Witte, President of the Committee of Ministers, on January 21, all of whom were arrested, but several of whom have already been released. The only other charge against Gorky is that he was a member of the Committee of Three which was appointed to collect funds for the strikers.

ALARM AT CRONSTADT.

A Demonstration by Armed Strikers Against Fortress.

St. Petersburg, Russia.—A body of strikers, armed with rifles taken from the Sestrovetsk rifle factory, advanced across the ice of the Gulf of Finland upon the fortress of Cronstadt. Admiral Birileff, the commander of the fortress, called out the sailors to protect the place. They were marshalled in front of the arsenal.

Drug Company Fails at Anniston.

Anniston, Ala.—The Live Love Drug Company was thrown into involuntary bankruptcy here Saturday and J. C. Moore was appointed receiver. The Doster-Northington Drug Company, of Birmingham, is the largest creditor. The assets of the firm are said to be about $2,500, and the number of open accounts and the liabilities are placed at $5,000.

BLOW TO THE BEEF TR

Supreme Court at Washington Sustains Judge Grosscup.

PROSECUTIONS MAY FO

Decided Unanimously Against the ers—Effect Will Be to Prohibi bination to Suppress Compe Statement by Attorney-General —Case Begun in March, 1902.

Washington, D. C.—Without the Supreme Court sustained tention of the Government in against the Beef Trust, affirm decision by United States Circu Grosscup, of Chicago, Ill., gra injunction against Swift & other packers in the Beef Tru opinion was written by Justice H and the decision was expected torney-General Moody, Solic eral Hoyt, and Assistant Atto the Department of Justice wa present.

Attorney-General Moody wi to indicate the consequences decision said that it was a ma such importance and delicacy relation to administrative actio he was peculiarly desirous of ing interviewed. However, in v the great interest throughout the try in the subject, he consented the following analysis of the de

"First—It prohibits the conti of a combination to suppress c tion in the purchase of cat slaughter. This branch of the tion will redound to the benefit cattlemen and farmers.

"Second—The injunction forbid binations to maintain uniform pr selling meats. This section of junction will more directly affe consumers.

"Third—It forbids combinatio tween parties to obtain discrimi rates from the railroad companies branch of the litigation will be o efit to the cattlemen and cons alike."

Mr. Moody refused to state wh or not criminal prosecutions wou low the decision because of th ance of the packers in their ref obey the injunction. It is stated ever, on good authority, that this of the matter has been carefully sidered, and that the decision ha reached by the President and t torney-General to make such cri prosecutions.

District Attorney Bethea, of Ch Ill., was in Washington week l last, and had several conference the Attorney-General and the Pre on this part of the case, and it derstood that Mr. Bethea re definite instructions how to act decision was favorable to the G ment and that a part of these in tions related distinctly to cri prosecutions.

Of very great importance was declaration of the Court that a ment by injunction is unjust a legal. No man, according to this can be restrained by injunction violating the law. This sustain contention of labor organizations strikers cannot be restrained b junction and then punished for tempt of court. It radically con trusts and great corporations, as most potent weapon in recent has been the injunction gr against organized labor.

A brief summary of the prose of the case is here given in a cl logical form:

March 28, 1902—The existence o Beef Trust was shown and the was begun.

April 3—It was shown that the was able to control railroad ra rates so as to stifle competition.

April 5—Proof was offered that "squeezing" Americans the trust selling beef cheaper in England at home.

April 6—The secret agreemen tween the trust packing houses published in full.

April 13—Attorney-General Kn gan active proceedings agains trust.

April 15—State Attorney-Gene ries began preparation of suit to the trust declared illegal in New

April 25—Attorney-General Kn cided that he had sufficient evid obtain an injunction to restrai trust from further proceedings its agreements.

April 28—Announcement that Government would proceed again trust in Chicago.

May 18—Letter book of Armo Co. adds greatly to the strength case against the trust.

May 21—Temporary restraining issued by Judge Grosscup agains trust.

August 5—Demurrers to the i tion filed by the trust.

February 19, 1903—Demurrers ruled and injunction continued a the trust by Judge Grosscup.

May 15—Trust permanently en by Judge Grosscup.

January 7, 1905—Case argued b the United States Supreme Cou

January 30—Final decision a the trust by the Supreme Court.

POLICEMAN GETS 20 YE

Devanna is Sentenced For Killin in Cold Blood.

New York City.—Policeman L. Devanna, attached to the bridge station, was sentenced to years in State's prison by Judg ter. He had been convicted of slaughter in the first degree for shot and killed George Dowr the Morris Heights Hotel, on N ber 22. Devanna was intoxica the time.

TH

Vol. II.

STATE HAPPENINGS

Of General and Local Interest as They Occur.

Two Highwaymen Arrested.

Birmingham, Ala. Two of Bir m's youthful highwaymen h ave fallen into the clutches of w.

Saturday the authorities in Besse er arrested two young white men Langford, aged 19 years, and rout, aged 17 years, and the la ls pair was identified by E. I. Simon he well known liquor dealer.

One of the knives stolen from Mr imon was found in Langford's pocket nd Mr. Simon positively identified it

When searched at Bessemer the au horities found a pistol on Langford nd a slung shot on Trout. They had me money, three or four knives, bet ething else.

B. M. Brazeal, who was held up and obbed last week by three young men, ill go to police headquarters and see f these are the same men who held m up. There is also a negro who as held up and robbed, and a young hite man whose name is not known.

Spinning Mill in Receiver's Hands.

Huntsville, Ala.—The Madison spinning mill of this city has been placed in the hands of James R. Boyd, cashier of the Huntsville Bank and Trust Company, as receiver, by bankruptcy proceedings in the district court of the United States. A petition in bankruptcy was filed against the company late Friday afternoon by Cooper & Foster, attorneys for the petitioners all of whom are non-resident corporations. The bankrupt company is capitalized at $300,000, and their mill represents an investment of nearly that amount, has 16,000 spindles and employes 250 people. The receiver will probably continue to operate the plant for the benefit of the creditors.

Ore Contract Closed.

Bessemer, Ala.—The Tennessee Co has closed a contract for the delivery of a large quantity of red ore for South Flitsburg, Tenn., the order calling for 380 cars, or about 10,000 tons, the shipments being made daily, a good train of ore going forward each day. The ore will be taken from Fossil Mines, near Bessemer. This is an addition to the demand of the company to supply its own works in this district, and is an advertisement of the growing demand for the rich ore of Red mountain. All of the company's mines on Red mountain are being run to their fullest capacity.

New Telephone System.

Albertville, Ala.—Albertville is to have a new telephone system, F. E. Ladd and Fred G. Warde, of Atlanta, representing the Southern Bell Telephone Company, have been in Albertville several days and have succeeded in securing enough subscribers to justify them in putting in a new exchange. The company will commence at once the construction of a new metallic line from Gadsden to Albertville and will later go on to Huntsville. Albertville is to have direct connection with the long distance system.

To Build New Market House.

Tuscaloosa, Ala.—At a meeting of the board of mayor and aldermen the contract was awarded for building the new market house. The firm receiving the award was Thomas & Galligan, of Birmingham, who are at present engaged in remodeling the city prison, and who built the Leland Hardware Company's handsome building. The bid was $2,073. The work is to begin at once and will be pushed to a speedy conclusion.

Orchards Injured.

Valley Head, Ala.—In many places especially on Lookout and Sand mountains, a great many orchards were entirely destroyed over large areas. In the last day or two, since the weather turned warmer and snow has melted largely and the ground has thawed and wagons have commenced running again. The roads, where unobstructed by fallen timbers are cut up into a thin mud and holes a foot or two deep.

Died from Burns.

Gadsden, Ala.—Mrs. Dan Shepherd, of Crossville, was so severely burned a few days ago that she succumbed to the wounds and died in great agony.

Loses His Arm.

Birmingham, Ala.—W. H. Wilson, a well-known machinist in the Sixteenth street yards of the Louisville and Nashville railroad, met with a horrible accident here Saturday afternoon about 4 o'clock, resulting in the loss of his arm, which was forcibly pulled from his body.

THE UNION.

EQUAL RIGHTS TO ALL; SPECIAL FAVORS TO NONE.

VOL. II. CLANTON, ALA., FEBRUARY 16, 1905. NO. 47

STATE HAPPENINGS

Of General and Local Interest as They Occur.

Two Highwaymen Arrested.

Birmingham, Ala.—Two of Birmingham's youthful highwaymen, it seems, have fallen into the clutches of the law.

Saturday the authorities in Bessemer arrested two young white men, T. Langford, aged 19 years, and J. Frost, aged 17 years, and last night this pair was identified by E. I. Simon, the well known liquor dealer.

One of the knives stolen from Mr. Simon was found in Langford's pocket, and Mr. Simon positively identified it. When searched at Bessemer the authorities found a pistol on Langford and a slung shot on Trout. They had some money, three or four knives, but nothing else.

B. M. Brazeal, who was held up and robbed last week by three young men, will go to police headquarters and see if these are the same men who held him up. There is also a negro who was held up and robbed, and a young white man whose name is not known.

Spinning Mill in Receiver's Hands.

Huntsville, Ala.—The Madison spinning mill of this city has been placed in the hands of James R. Boyd, cashier of the Huntsville Bank and Trust Company, as receiver, by bankruptcy proceedings in the district court of the United States. A petition in bankruptcy was filed against the company late Friday afternoon by Cooper & Foster, attorneys for the petitioners, all of whom are non-resident corporations. The bankrupt company is capitalized at $300,000, and their mill represents an investment of nearly that amount, has 16,000 spindles and employes 250 people. The receiver will probably continue to operate the plant for the benefit of the creditors.

Ore Contract Closed.

Bessemer, Ala.—The Tennessee Co. has closed a contract for the delivery of a large quantity of red ore for South Pittsburg, Tenn., the order calling for 380 cars, or about 10,000 tons, the shipments being made daily, a good train of ore going forward each day. The ore will be taken from Fossil Mines, near Bessemer. This is an addition to the demand of the company to supply its own works in this district, and is an advertisement of the growing demand for the rich ore of Red mountain. All of the company's mines on Red mountain are being run to their fullest capacity.

New Telephone System.

Albertville, Ala.—Albertville is to have a new telephone system, F. E. Ladd and Fred G. Warde, of Atlanta, representing the Southern Bell Telephone Company, have been in Albertville several days and have succeeded in securing enough subscribers to justify them in putting in a new exchange. The company will commence at once the construction of a new metalic line from Gadsden to Albertville and will later go on to Huntsville. Albertville is to have direct connection with the long distance system.

To Build New Market House.

Fuscaloosa, Ala.—At a meeting of the board of mayor and aldermen the contract was awarded for building the new market house. The firm receiving the award was Thomas & Galligan, of Birmingham, who are at present engaged in remodeling the city prison, and who built the Leland Hardware Company's handsome building. The bid was $2,073. The work is to begin at once and will be pushed to a speedy conclusion.

Orchards Injured.

Valley Head, Ala.—In many places, especially on Lookout and Sand mountains, a great many orchards were entirely destroyed over large areas. In the last day or two, since the weather turned warmer and snow has melted largely and the ground has thawed and wagons have commenced running again. The roads, where unobstructed by fallen timbers are cut up into a thin mud and holes a foot or two deep.

Died from Burns.

Gadsden, Ala.—Mrs. Dan Shepherd, of Crossville, was so severely burned a few days ago that she succumbed to the wounds and died in great agony.

Loses His Arm.

Birmingham, Ala.—W. H. Wilson, a well-known machinist in the Sixteenth street yards of the Louisville and Nashville railroad, met with a horrible accident here Saturday afternoon about 4 o'clock, resulting in the loss of his arm, which was forcibly pulled from his body.

May Start Canning Factory.

Florence, Ala.—Morris Cohen, representing the Memphis (Ind.) Canning Company, is in Florence with a view of starting a canning company in this locality. Mr. Cohen will organize a stock company with a capital stock of $30,000, provided the citizens of Florence will subscribe $8,000 of that amount, and he promises to pay 18 per cent. dividends in two years. The factory will can fruit, tomatoes, corn, pork and beans and every other suitable product of the county.

Railroad to Build Extension.

Demopolis, Ala.—On account of the increasing traffic here the Southern railway is arranging to put in additional switches. They will place one at Spocari 3,000 yards long, in order to properly handle the output of the cement factory. Demopolis is rejoicing over the fact and the people of Alabama have reason to be proud of it, that the cement manufactured here took first prize at the Louisiana Purchase exposition.

His Two Sons Burned to Death.

Anniston, Ala.—The fourteen-year-old son of Mr. William Broom, one of the three boys burned at Alexandria a few Sundays ago, died from the injuries sustained at that time. Of the three boys two were sons of Mr. Broom, and they were the two to sustain fatal injuries. The elder, nineteen years of age, was so badly burned that he died a short while afterward.

Fatal Wreck on M. and O.

Mobile, Ala.—A fatal freight wreck occurred at 6 o'clock Saturday morning on the Mobile and Ohio thirty miles south of Meridian, Miss. A southbound freight train ran into a washout, the engine turning over and derailing the entire train. Engineer Hein was instantly killed, a colored fireman, name unknown, fatally injured, and Joseph Arata, who was learning the road, severely scalded.

Held to Grand Jury.

Cullman, Ala.—City Marshal Wm. Schneider was given a hearing Saturday before Justice A. A. Griffith on the charge of assault with intent to murder John Mauder, and was bound over to the grand jury on a $1,000 bond, which he made. The shooting occurred last Saturday in Frank Arndt's saloon. Mauder is not fatally injured, but is suffering from pneumonia brought on by the wound.

Mines Inspected.

Birmingham, Ala.—Assistant State Mine Inspector Hillhouse has just returned from the western portion of the county, where he has for two weeks been on a tour of inspection. He reports a number of mines as hampered by water, some of them being compelled to temporarily shut down, while others were forced to work only on half time.

Two Negroes Shot.

Centerville, Ala.—Sook Woolley, who lives about seven miles from here, was called to his door Wednesday night and shot. Anderson Clark is under arrest for the shooting.

An old negro, named Cornwell, was shot Friday night by Frank Risinger. It is claimed the shooting was accidental.

Electric Lights and Waterworks.

Sylacauga, Ala.—The city council of Sylacauga has disposed of city bonds for about $20,000 and as soon as practicable the work of putting in an electric light and waterworks plant will be commenced.

Negro Found Murdered.

Decatur, Ala.—Mose Coffee, an 18-year-old negro boy, was found lying in a cotton field near Trinity, seven miles west of here, shot to death. Who his slayer was is unknown.

Iron Strong.

Birmingham, Ala.—The iron market is very strong at $14 for No. 2. One of the largest makers is quoted as saying to inquirers for large lots this week that nothing under that price would be considered.

Flood Stage is Reported.

Mobile, Ala.—The flood stage is reported on several rivers in Alabama. The Warrior at Tuscumbia is 55 feet deep and 60 feet are expected by night. People living in the lowlands are moving out. Much damage is reported at interior landings.

Child Dangerously Burned.

Guin, Ala.—Etma McCrary, the 4-year-old daughter of Dr. and Mrs. W. J. McCrary, was dangerously burned at her home while playing before an open grate.

Boy Dies from Injuries.

Decatur, Ala.—Willie, 12-year-old son of W. A. Brown, who fell under a freight train Saturday, cutting off both legs, died last night.

VARIETY OF CROPS.

The Farmer Should Diversify His Planting—Plant Different Things.

CORN AND COW PEAS IN SOUTH.

Suggestions As to the Cultivation of These Crops Come from Secretary Wilson, of Fort Worth.

It has long been recognized that corn and cow peas are two of the most valuable food crops for stock in general use by southern farmers. Their hardy character, vigorous growth and wide adaptation to climates and soils place them in the first rank of plants for general farm use. In the improved system of agriculture which the south must adopt to meet boll weevil conditions corn and cow peas must occupy a more important position than in any previous period, because soil conditions must be improved to successfully make good cotton crops, and this can best be accomplished by the alternate planting to corn and cow peas and to cotton.

CORN.

The soil should be prepared for the corn crop the same as for cotton by deeper fall plowing (or breaking) of the land and winter cultivation. Breaking for corn ought to be eight inches deep, but where the previous breaking has only been three or four inches, it will not do to go down to eight inches at once, hence it will be advisable in such cases to break only about six or seven inches so as not to stir up too much crude soil, but reach a depth of eight inches or more as soon as practicable. The winter cultivation referred to is simply harrowing or discing the land at intervals of twenty to thirty days so as to put it in the best of condition for planting. Plant early as the season will permit in rows, six feet apart on rich land, and five feet apart on hill lands and worn bench, bottom or prairie lands. Where corn is planted five and six feet apart in rows, it will bear a little crowding in the row. It may be single stalks once in ten to twelve inches, according to the fertility of the land, or it may stand two stalks in a place once in twenty to twenty-four inches; the single stalk is preferable. The wide rows allow the sunshine to penetrate to the soil and gives a better ear than where the planting is done in narrow rows.

SEED CORN.

In the selection of seed corn better results in bushels will be reached by selecting promising varieties, grown not more than 200 miles north of the field to be planted. It should not be understood that it is necessary to secure corn grown one to two hundred miles north. Promising varieties grown in the immediate neighborhood, if they have been carefully selected, will undoubtedly give the most satisfactory results. The objection to corn grown in the immediate vicinity is that it has not as a rule been selected with care, and hence it is almost impossible to get pure bred corn except from some seedsman who has taken unusual pains to keep it pure.

The ears should be of medium length with kernels deep and firm, well filled at the ends and with small cob. Above all it should be corn specially selected and carefully housed, and not taken at random from a crib.

In planting reject the irregular kernels at each end, and use plenty of seed.

FERTILIZERS.

The use of a small amount of fertilizer on corn land until the soil can be improved and filled with cow peas is of great importance to the planter. The continued use of fertilizers year after year is not specially recommended, but at the commencement in order to stimulate the corn and the cow peas it is necessary if the best results are expected. On light soils and uplands that have been considerably worn, use 400 pounds of fertilizer per acre, compounded as follows: 160 pounds of 14 per cent acid phosphate, containing 2 per cent of potash, and 240 pounds of cotton seed meal, thoroughly mixed. Distribute in the rows where the corn is to be planted two to three weeks before planting and follow with the cultivator to mix the fertilizer with the soil. On rich prairie or bottom lands use only one pound of cotton seed meal to three pounds of phosphoric acid and potash, applying only 200 pounds of the mixture per acre. In general reduce the proportion of cotton seed meal used in the mixture and the total amount of fertilizer applied per acre as the fertility of the soil increases.

As soon as the corn is up use the harrow, then cultivate once in ten days till the corn is too large. The first cultivation may be deep—all later cultivations should be shallow. Many use only the plow in cultivation. It is not the best implement, but will answer a good purpose if thoroughly used. More depends upon the thorough use of an implement than upon the special form of the implement; however, the two-horse cultivator does better and more rapid work, but it is a little difficult to use this implement where there are many stumps. Thin the corn in the rows to a stand of one stalk each to ten to twelve inches on poor lands and to fifteen inches on very rich lands. The greater width of the rows allows a closer stand in the row.

COW PEAS.

As the time of the last working of the corn plant four rows of cow peas in each space between the corn rows, using about two bushels and a half of the peas per acre. In case the land is poor it will be well to use 100 pounds of cotton seed meal per acre at the time of planting the cow peas—this will help the corn and insure a crop of peas. In selecting peas for planting in corn, it is well to use a variety that produces the most vine so as to thoroughly cover the land with the crop. Some use the clayed cow pea and some the black Carolina. Both are good, and will answer the purpose if planted with care.

It may be urged that too much expense is put upon the corn crop by this method. The cost of fertilizer is placed at $5.50 per acre, the additional work upon the land at $2.00, and the cow peas at $3.50, making a total of $11 per acre extra. The return should be, and will be under average conditions, an increase of 40 bushels of corn per acre, worth $20 and at least one ton of cow peas, worth $12—Total $32. Nor is this all, the effect of good cultivation and the cowpeas on the cotton crop to follow the next year should be equal to a quarter of a bale of cotton, of $10.00, which added to the $32.00, gives a total of $42.00 for an expenditure of $11.00 in labor and fertilizer.

S. A. KNAPP.

Steamer Nueces Is Floated.

Galveston, Tex.—The Mallory line steamer Nueces, from New York for Galveston, which went ashore Tuesday night about thirty miles west of here, was floated without serious damage to the vessel or cargo.

Woman Held for Murder.

Birmingham, Ala.—G. W. Herron, a miner living near the Weller mines, fourteen miles south of Birmingham, was shot twice and almost instantly killed. His wife is under arrest charged with the crime and she claims that she shot in self-defense, the weapon being discharged while her husband was abusing her. Weller was well known in the Blue Creek region, in this county. Deputy sheriffs went to the scene this morning while Coroner Paris left for the scene this afternoon to hold an investigation. The woman will be held in the county jail here until the matter has been thoroughly investigated.

Four Killed.

New Brighton, Pa.—A man and three boys were killed, one boy is dying and three more were slightly injured as the result of a bobsled carrying sixteen boys dashing into a train. All the others on the sled miraculously escaped with hardly a scratch.

Gunboat Newport Safe.

Newport News, Va.—The gunboat Newport, which had been adrift at sea for several days, was towed in Feb. 10 by the tug Wahneta. The gunboat's propeller was missing.

Roads Resume Service.

Jackson, Miss.—Regular train service has been resumed on all railroads running out of Jackson. Nearly all trains are running on their accustomed schedule. The service on the Queen and Crescent road from Jackson to Meridian was interrupted about eighteen hours by washouts, but the regular passenger trains managed to go through yesterday afternoon. All washouts have been repaired.

Battle House Burns at Mobile.

Mobile, Ala.—At 10:45 o'clock Sunday night fire was discovered in the Battle house, the largest hotel in the city and at midnight the handsome building was in ruins.

An alarm from box 13 called the entire department. Within fifteen minutes it was seen the immense building was doomed. The entire fire fighting force got busy and used every effort to stem the flames which at 11 o'clock were entirely confined to the top floor. The steamers worked hard and the aerial truck was used to no avail. The location of the fire made it very difficult for the department to handle.

Immediately after the fire was discovered, the alarm was given to all the inmates of the hotel and all escaped, many, however, leaving their effects behind them.

It had been raining all day and was raining when the fire was discovered, but this did not appear to have any effect on the flames, which rapidly ate their way downward into the heart of the handsome structure.

A stiff wind was blowing from the north and fears were at once entertained for the entire block.

The indications were that the house had been burning some time when discovered. The flames were discovered by the cook in several empty rooms of the big hotel which had been used for storage purposes. The cook at once notified Night Clerk Cherry, who began the work of arousing the guests, of whom there were 147. This work was accomplished by operating an annunciator in his office connected with bells in all the rooms, and by the bell boys who ran from room to room crying the dread news.

The new Battle house, recently rehabilitated at an enormous cost by William Vizard, of New Orleans, was a total wreck. The large five story building which for more than a half century has occupied nearly three-eighths of the block bounded by Royal, Water, Dauphin and St. Francis streets is a ruin. The fire was discovered in the upper part of the building, and before the fire department could respond to the general alarm the whole roof was in flames.

The Battle house, since the many improvements were made, was valued at $450,000. With the new appurtenances it was considered one of the finest hotels in the south.

$400,000 Fire Loss.

Mobile, Ala.—Fire starting at 10:30 o'clock Sunday night in the Battle house, Mobile's leading hotel, was under control at daylight Monday. The Battle house is a total loss, as is also the following:

Commercial hotel adjoining on Royal street, loss thirty thousand; Graham Printing Company, thirty thousand; Rosenfield Tailoring Company, ten thousand; Gulf City Pressing Club, fifteen hundred; J. C. Hensch, tailor, five thousand; John W. Scheible, insurance, three thousand; W. M. Provost, wood and coal, five thousand; Gaillard Johnston and Company, wood and coal, five hundred.

Many offices on St. Francis street, opposite the Battle house, were flooded. Chief Price and Fireman Frank McMahon were slightly injured during progress of fire. Battle house loss is total, estimated at $300,000, with insurance of $150,000. Other losses will foot up $100,000; partially insured. Origin of fire has not been placed.

Three Men Killed.

Brewton, Ala.—A disastrous wreck on the logging road of the Florida and Alabama Land Company, between Wing and Falco Junction in Covington county. A section crew, Shelby Hartly, Walter Clark and Tom Dauphin, all white, were killed outright. Their homes were in Walton county, Florida.

Warren Haskell, fireman, had one leg cut off, and the other broken; Dock Cook, section foreman, was slightly injured. The engineer and conductor escaped without injury. The men were riding on the engine, backing out ahead of the cars, when the tender jumped the track, struck a tree, demolishing the locomotive, and tearing up the track.

The cars remained on the rails.

Captain James Lee Dies.

Memphis, Tenn.—Captain James Lee, president of the Lee Line Packet Company and one of the most widely known river men south of St. Louis, died at his home here Sunday, aged 72. Captain Lee became identified with river interests in 1877 with his father, and has been actively engaged in the business since.

Cruisers Driven from Waters.

Zanzibar.—Russian cruisers from Dares-Salam anchored in Germany waters Sunday morning. Maj. Von Goetzen, governor of German East Africa, who was going to Zanzibar on board a yacht, discovered the Russian vessels and requested them to leave. They complied with the request and the governor's yacht followed them.

Wedded Sixty Years.

Huntingdon, Tenn.—Mr. and Mrs. G. D. Cox celebrated the sixtieth anniversary of their wedding at their home near Hollow Rock. This is one of the most interesting old couples in Carroll county and number their friends by the score. Mr. Cox is 81 years old and hale and hearty, and his wife is 76 years of age.

Brothers-in-Law Fight.

Gainesboro, Tenn.—A shooting affray occurred in the tenth district of this county near the Putnam county line Saturday night in which John H. Garrison was probably fatally wounded by a young man named Morris. They are both well-to-do citizens and are brothers-in-law.

Home Grown Fruit Trees

I have for sale a fine assortment of fruit trees, particularly adapted to this climate. Peaches, Plums and Apples, of the best varieties for this section, and all guaranteed true to name. Prices Reasonable. J. L. Winslow, Pine Hill Nursery, Thorsby, Ala.

Edna Wallace Hopper is to endow a home for newsboys. The star deserves a star in her crown.

PURE GOODS

The following SPECIAL BRANDS always in stock

Big Rock	I. W. Harper
Rose Valley	Upper Crust
Upper Ten	Kentucky Taylor
Joe Gideon	American Malt
Murray Hill	Budweiser Rye
Pleasant Hill	Deep Springs
Green River	AAAA Lincoln County
Jack Daniel No. 7	Wilson
Old Spring	Good Wood
Shaw's Malt	Club House Rye, 10 years old.
Jefferson County Rye	Cascade, 14 years old.
Old Harvest Corn, 5 years old	

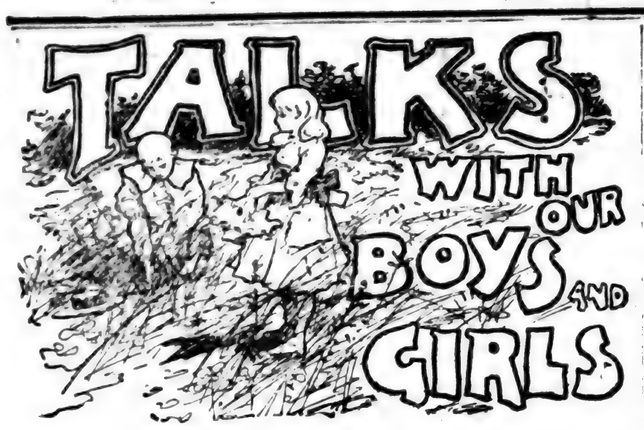
I carry a Full Line of Barrel Goods which I sell in Jugs from half gallon up. Mail orders promptly filled.

A. STEIN,
Bank Saloon. Calera, Ala.

Going to Plant

Fruit Trees of any kind this season? write me a postal for my new manual "How to Plant and Cultivate an Orchard" and price list, now ready and free to all.

P. C. Smith, [illegible]



THE BABY'S EYES.

Listen close, that you may surprise
Part of the secret sweet that lies
Buried deep in the baby's eyes.

Wise is the baby with eyes of brown,
  Clenching each little hand,
Wrinkling its forehead into a frown,
  Trying to understand.
Sweetest and wisest in all the town,
Thoughtful baby with eyes of brown.

Mischievous babe with the eyes of blue,
  Laughing at other folk,
Planning and plotting the whole day through
  Some little baby joke.
Laughing and happy and cleves, too,
Mischievous baby with eyes of blue.

Calm is the baby with eyes of gray,
  Dear little stay-at-home.
Near to the mother in work and play—
  Never will care to roam.
More of a comfort from day to day,
Calm little baby with eyes of gray.

Wilful the baby with eyes of black,
  Ruling us more and more.
Sunbeams follow the storm-cloud's track
Brighter than those before!
Heart is fonder when smiles come back—
Wilful baby with eyes of black.
—Burgess Johnson, in Harper's Magazine.

"INASMUCH.

They were waiting in the only strip of shade the dirty old depot afforded. Father, mother and five children; tired, hot, travel-stained, and strangers. No one spoke to them. They spoke to nobody. They were, evidently, waiting for a train that would take them further on their journey. Not one word of all that was going on about them was intelligible to them, and after repeated efforts to make themselves understood, they were content to be quiet, or to speak occasionally to each other.

The busy train-master at last found them, and after consulting a greasy-looking strip of paper, taken from an equally greasy-looking envelope, out of a pocket closely resembling both, which the father handed him, he began explaining when their train would arrive. The look that greeted his kindly-given information, as well as the interrupting exclamations and questions of the mother, told "Doc" that he was not understood. He looked around for help. He consulted his watch. He found the stranger could read its face. A bright thought seized him. He ran into the office, and, producing a little alarm clock, he set the hands at the hour the expected train would arrive, and by means of wild gesticulations succeeded in telling the father that he was on the right road, and all he needed to do was to settle himself to wait.

The group exchanged a few remarks and prepared themselves comfortable while they waited. The father lighted a fresh pipe and strode stolidly up and down. The mother took the baby on her lap. She herself, looked as if she needed someone to hold her to prevent her dropping with exhaustion. Their clothing told plainly that they were from some cold country, and the warm spring day added to its enervating influence to the untoward surroundings.

Many kindly glances were cast in their direction by well-meaning people who passed them in the hurry of exchanging trains. Not a few wondered how to brighten the wearisome hours.

Several trains stood on the side-tracks waiting for their human freight and for the hour to strike which meant they must move. Passengers crowded into them singly and in groups, some chatting gaily; others serious-faced, with the pain of the "Good-by" still alive under their coat pockets.

No one noticed a handsome woman, who entered a Pullman coach, carrying a small satchel, and a large bunch of rare flowers. Her appearance, manner, and dress showed her to be refined and cultured. Seating herself near a window, she at once took a book from her satchel and began to read with such earnestness that she was soon fully absorbed in it.

A commotion outside caused her to look up at a passing train. As the smoke cleared she caught sight of the stranger. Seemingly taking in the situation at a glance, looking around and up and down for a way to help them, she caught sight of the beautiful flowers she had laid on the seat in front of her. She had intended them for dear ones at home. Just a shade of regret came over her face, followed quickly by the question, "Will these be any comfort to those lonely ones, strangers in a strange land?" Like many another whose heart is pure, she was building better than she knew. Her lovely flowers, exotics here, were door-yard favorites in the dear homeland of the wanderers.

She picked up her flowers, and crossed the five railroad tracks between her car and the depot; mounted the steps and walked quickly toward the family.

By this time they had seen her, and, as she neared them, wonder seemed almost changed to fear; so surprised were they to see such a beautiful lady coming toward them. Not a word could she speak that they could understand, but they could read her heart very plainly, as she divided her flowers, and gave each one of the five children a bouquet.

Such a chattering and gabbling; such bowing and smiling, yes and laughing, the hearty, wholesome laughing of merry childhood—as the lady, all smiles herself, distributed her favors. Shaking hands with father and mother, she walked quietly back to her seat, picked up her book and read on as if nothing had happened.

Had nothing happened? A long, hard day had suddenly grown bright and glad. One dear life was made stronger, deeper, richer, by having given her best. A despondent father and mother saw a life, which though far from theirs in tongue and class was very near in heart. Five little children had seen an angel, heard her voice, touched her hand, felt her love and held her gifts. More than four score men and women had seen the kindly deed, the evidence of sisterhood, and in it each had shared a part. For one short minute, all the depot was lifted heavenward, and learned a sweet lesson from the dear old story of "Inasmuch." Matt. 25:40.
—Augusta C. Brainbridge, in Ram's Horn.

CARRY BABY IN BOOTS.

Gypsies carry their babies in old shawls slung over their shoulders and tied about the waist. North American Indians carry their babies on the backs of squaws—cradle and all. But the Eskimo women of Labrador carry their babies in their boots. These boots come up to the knee, and are wide at the top with a flap in front. In these the little brown babies live and are happy.

SPIDERS LOVE MUSIC.

A violinist says spiders are notoriously and historically fond of music. At a performance in Missouri the concert hall was made disagreeable by a sudden invasion of spiders, which were drawn by his violin from the cracks and crannies of the ancient building. They crawled about the floor and on to the stage, and he could see the annoyed audiences stamping on the insects.

Engineer's "Jump Fever."

In a party of locomotive engineers, who were talking about old-time fellowcraftsmen, reference was made to one old-timer who had come to his death through "jump fever." "What's 'jump fever?'" inquired an outsider who was interested in the conversation. "Jump fever," explained an engineer, "is a sort of hallucination that affects some engineers and leads them to leap from the cab to escape a supposed impending collision. It's mostly freight engineers that are affected. On long runs out West a freight engineer may be thirty-six hours at the throttle without much chance for rest, owing to mishaps. He gets sleepy and dozes in the cab. All of a sudden he wakes up, but his faculties are scattered, and what with lightness of the head and the motion of the cab he gets an idea that a collision is about to happen. In a semi-conscious state he dives out of the window, and the chances are he's a goner when he lands. The engineer we referred to had done the trick twice, but he was killed the third time, out on the Santa Fe road."—Philadelphia Record.

Goldwin Smith's Model Homes.

Prof. Goldwin Smith, whose deep interest in humanitarian movements is well known, has undertaken a practical reform for the benefit of the working men of his adopted city. He has just purchase a block of land to the east of the Don river, the eastern suburb of Toronto, and will construct thereon a number of homes with modern improvements and affording breathing space, to be leased upon moderate terms to deserving workingmen. This measure of relief, it is understood, will be placed upon a sound business basis.—Toronto Telegram to the New York Sun.

A watch taken to the top of Mont Blonc will gain thirty-six seconds in twenty-four hours.

PEARLS OF THOUGHT.

Faith makes fit.

Life is all a lesson.

Frost leads to fruits.

The world hateth the hampered person.

"Forgetting the things behind" is no reason for ingratitude.

The more of a gas works a man is the less light he gives.

There never was a bad man that had ability for good service.

It takes an admirable quality or two to float some despicable personalities.

Eighty years hence it will matter little whether we were peasants or peers; but it will matter much whether we did our duty and played the man.—Stopford Brooke.

MAINE'S BIG GAME SEASON.

About 4350 Deer and More Than 200 Moose Were Killed by Hunters.

The big game season in Maine has ended and no more deer can be killed legally until Oct. 1, 1905, and no more moose until Oct. 15. Notwithstanding the fact that weather conditions have been very unfavorable the sportsmen have killed nearly as much game as in 1903, the receipts at Bangor having been 4253 deer and 217 moose, compared with 4457 deer and 232 moose for the season of 1903. Deer will continue to arrive from distant points for some days yet, and the total for the season will probably foot up about 4350.

Deer are now more numerous in Maine than at any time in the last ten years, and the same may be said of moose, although most of the moose are young bulls, scarcely fit for trophies. In another season or two there should be plenty of good sized bulls with fine antlers, in Maine. There is some talk of asking the legislature to make a law providing for a close time of several years on doe deer and forbidding the killing of bucks whose horns have less than a specified spread, but there is really little need of such a law.

The deer are plentiful enough, and the fact that fewer were shot this year than in 1903 is accounted for by the weather conditions, which, during a good part of the season were very unfavorable. Heavy rains filled the swamps and flooded the lowlands, so that the game took to the ridges and hills, where none but experienced hunters could follow them.

This season about 30 persons have been wounded by accidental shooting in the woods and 15 killed, six of those killed have been "mistaken for deer." The law provides a heavy penalty, fine or imprisonment, or both, for reckless shooting in the woods, but as yet none of the men who mistook others for deer have been prosecuted, and it is not likely that any of them will be punished.—New York Sun.

English Words Good Enough.

Why do people persist in using French words when there are good old English words to serve the purpose? It is a habit that is growing daily. For instance, at dinner people give you "menu" instead of "bill of fare," though the items are such English dishes as boiled cod, roast beef and apple tart; one is accommodated with a serviette instead of a napkin (an English word, but originally of French origin), as is the Scotch word napery, used for household linen. When you enter a shop you are served with corsets instead of stays, costumes by a costumiere instead of dresses by a dressmaker; "blouses" take the place of shirts, or waists, as the Americans have it; and hose are offered for stockings. The former word is, however, English. At the theatre we have programs instead of playbills, and matinees in place of afternoon performances; toques are adjusted with as much ease as hats, and we eat in a restaurant as cheerfully as in a dining-room. There are, of course, untranslatable words which must be used, but our good old English language is rapidly becoming a hotchpotch of foreign words, while telegraphy is doing its best to oust all the crisp and racy Saxon speech. Whenever possible let us determine to use an English instead of a French word, both in literature and conversation.—Lady Violet Greville, in the Graphic.

Literature in the French Navy.

There seems to be something in the French navy which makes for literature. Pierre Loti is still a naval officer, and his collaborator in the translation of "King Lear," Mr. Ernest Vedel, was a lieutenant until the state of his health compelled him to give up the service. He once commanded a small warship charged with the duty of preventing the entrance of foreign vessels into a Siamese harbor. A Scandinavian ship, with a Siamese commodore who called himself Armand Duplessis de Richelieu, no less, attempted to enter by the alleged authorization of the French minister at Bangkok. M. Vedel wrote a note in these terms: "If you don't desist, I shall open fire;" and learning that Mme. Richelieu was with her husband, he tied the note to a magnificent bouquet. The commodore with the illustrious name desisted, and thanked the polite lieutenant profusely for the flowers.—London Chronicle.

The Cussedness of Things.

McFlub—Bilkins is working on a boat that looks as if it will never go down.

Sleeth—Gee! That would be quite a thing, wouldn't it?

McFlub—He don't seem to think so.

Sleeth—Why not?

McFlub—Probably because it's intended to be a submarine boat.—Houston Chronicle.

ENGINES KILL THE BIRDS

MANY DESTROYED BY LOCOMOTIVES GOING AT HIGH SPEED.

Interesting Experiences of Engineers During Night Runs—Collisions With Feathered Travelers—All Hate to Hit the Songbirds—Tragedy of a Dove Family.

"How many people realize," said an old Missouri Pacific engineer at the Union depot a few nights ago, "that in limited trains, they are going faster than a bird flies? And how many of them know that the run of a fast train for a trip of 300 miles causes the death of from one to six birds?"

Not a trip is made across Missouri by any of the fast trains that one or more birds are not killed in its flight. When the fast mail trains come in from their runs frequently one of the little feathered tribe is found lodged in some nook upon the engine. A little tuft of feathers, clinging to the iron monster, tell where a life was taken. Engineers say that if they get within ten feet of a bird before it rises from the roadway it will be killed. The noise and speed of the train, they say, bewilder it.

"I was bringing the fast mail, the government train, from St. Louis one day," this Missouri Pacific engineer said, "and if I killed one bird I'll bet I killed fifty. It was one of those foggy mornings in the early spring, just after a big rain. The country all around had been soaked, and the little path down the middle of the railroad track was one of the dryest pieces of ground the birds could find. The crows, the sparrows, the doves and the quail were settled all along this walk in the track. We left St. Louis forty minutes late and I was trying to make time. I had one of our big 1100 engines, and she was working as smooth as a sewing machine.

"Down in the lowlands, between Washington and Jefferson City we were sliding along with an easy sixty-mile clip. The smoke settled and hung along over the train and the suction from behind brought it into a hurried roll as we ran from beneath it. It was nearly daylight, and the birds were out on the dry railroad track feeding. A man couldn't have heard that train more than a hundred yards and it seemed we fairly jumped on those birds. One big crow raised slowly in front of the engine and 'bang' he went into the headlight. A smaller, bird, which I judged was a sparrow, plunked against the window pane in the cab. All along that run, clear to Sedalia, we hit the birds.

"When they took my 1100 to the roundhouse we found several birds, including the crow, lying on the engine. There were enough feathers there to fill your hat. Of course, this was an exceptional trip. But take a clear day, let a bird fly straight in front of your engine, and you'll hit it hard enough to knock its life out every time. Birds through here don't fly a mile a minute, but these big engines do, and they often fly faster than that. A dove is the fastest of all the birds, and there are few of them killed. In the first place, a train rarely gets close to one. In the second place, doves usually fly in a circle, and it is a race with one to run it down. A quail will make a short, quick flight, but will not last long. Its body is too heavy in proportion to its wings, for a long flight. The English sparrows suffer the most from trains. These birds become so tame they will let an engine get close on them before they try to fly. A little blood spot tells of the finish."

Owl Fooled Him.

"Not long ago," said G. M. Jaques, the engineer who pulls the Alton Chicago Limited, "I was knocked clear from my seat in the cab by an old hoot-owl, one of the variety that flies in the woodland. It was one of the prettiest nights you ever saw, a full moon, the air was soft, and we were running on time. I was bringing a special into Kansas City and had an open track clear into town. We were bowling along about fifty miles an hour, when some dark object darted in the side cab window, struck me in the breast, and all was darkness. I fell by the side of my seat and lay there. It was but a moment, however. My fireman jumped over to my side of the cab and helped me up.

"In my fall I had jerked the throttle wide open, and that engine was fairly burning up the tracks, going round curves like a rocket. We closed her down a little, and I looked down to see what hit me. There on the floor, with an occasional gasp from its crooked beak, was a hoot-owl that would weigh five pounds. But 'twas all over for Mr. Owl. I dropped him out into the ditch by the side of the railroad track. It was a week before I got over the soreness in by chest. The owl had come out of the woods near Independence. I never pass there now that I don't think of that devil bird that hit me."

"It's the birds that fly in the night that bother me," said Harry Norton, who brings the Wabash fast mail in from Moberly. "They fly into the headlight and into the cab, and have broken more than one window for me. The big headlight attracts the birds at night and causes many to be killed. In the early spring of last year I had the headlight on old '656' ruined by a big white goose. It was up near Carrollton. We were late out of Moberly, and with this engine I had nearly made up all lost time, and I intended getting into the Union depot here on the dot. I didn't have a stop between Corrollton and Kansas City, sixty-six miles.

"We just got out of there and were going easy, fast enough to get here on time, when this old white goose came flying straight toward us. Away down the track I saw him, his white feathers glistening like silver. His mouth was open, and his great white wings drove him straight toward us. He didn't seem afraid of an accident, but drove into the headlight like a catapult. There was a flutter of feathers and the goose fell to the side of the track. A stream of blood trickled down over the broken headlight glass and dried and hardened before we pulled up at the end of the run. If that goose hadn't hit the rim of the headlight I think he would have knocked the whole works out of it."

Killing Songbirds.

"Lou" Ward, who takes the Frisco fast mail out of Kansas City at 2.10 o'clock every morning, perhaps strikes more birds with his train than does any out from Kansas City. His little flyer is made up of only the mail car, a chair car and the engine. With the light engine he uses he goes down through Southern Kansas at a speed no other train equals. He makes only one stop in the first ninety-eight miles. Much of his run between Kansas City and Fort Scott is through wooded country, where the hawks and the owls are flying. At the roundhouse this little mail train is known as the "Rabbit."

"In the early mornings," said Ward, a few nights ago, "I sometimes hit the songbirds, and I hate this. I have made a pet out of my engine, and I hate to have a pet of mine hurt the birds that sing. But my little 'favorite' is an owl exterminator. There's a world of them down between Paola and Fort Scott, and they will get in front of my train. One night I hit one down near LaCygne, and he stuck by his head in a niche on the headlight. He dropped after a while and the feathers flew as he skated along the ground in the bottom of the railway ditch."

The enginemen regret especially to kill a dove, and, above all, in the spring, at mating time. "It seems that all doves are lovers," one engineman said. "You can see them together feeding, wallowing in the dust or sitting by each other's side. There are always two, especially when they are feeding. Down on the Wabash this year, just at the time when spring was opening and the grass was turning green, I killed a dove, one of a pair. I remembered it because as it rose the edge of the boiler struck it and knocked it high in the air. A little fluff of feathers showed where it hit and I turned to watch it.

"Next day when I passed that spot I thought of the little dove. There, by the side of the feathers, close to the piece of body, sat the mate. It fluttered to one side as we passed. The next day the little dove was sitting there, and so it was the third. I never saw it again. Since then I have watched the doves. One will mourn for its mate, and it seems to realize what has happened when its mate is killed."—Kansas City Star.

QUAINT AND CURIOUS.

The last of the old-time convicts transported from Great Britain to Tasmania is dead. His name was Frederick Clarke, and he was sent to the colony in 1847 under a ten-year sentence. In a short period he did bushranging, bank robbing and enough other amusing little things to pile up over eighty-five year's worth of sentences.

They have curious methods in Persia of insuring law and order. A failure of the crops had resulted in a dear loaf, which much enraged the populace. In order to quell the tumult, the shah ordered a number of bakers to receive several hundred strokes with a rod, besides a few minor little attentions, such as the amputation of an ear or two.

Milan was recently the scene of a remarkable "rain" or downfall of butterflies or moths. They settled in tens of thousands on almost every available inch of space on the ground and on the buildings of the central quarters of the city. The insects are described as perfectly black and marvelously active. Their presence is ascribed to an air current swept along in front of a hurricane.

"Conscience money" in Great Britain now amounts to thousands of pounds annually. The first sum noticed was on March 30, 1789, when $1800 was carried to the public account in consequence of a note received by the chancellor. The writer with troubled soul implored him, "as an honest man, to consider the money the property of the nation, and to be so just as to apply it to the use of the state in such a manner that the nation may not suffer by its having been detained, and thus to ease the conscience of an honest man."

The railway across the Andes, between Chili and the Argentine Republic, which was projected twenty years ago, is at last to be completed, the Chilian congress having passed a bill for the purpose. The loftiest part of the pass, which lies not far south of the great Andean giant, Aconcagua, and which has an elevation of thirteen thousand feet, is to be penetrated by a tunnel, which will serve both to hold snow drifts and to decrease the maximum elevation of the road. The terminals of the railway on each side of the pass are now within one day's travel by mule caravan from each other. This will be the first rail line to cross the South American Continent.

Rubber is now successfully being cultivated on the gold coast of Africa. Several companies have recently started work on a large scale.

The Gourd Fiddle

I done make her out of an old soap go'd
(Oh, my fiddle dat sing so sweet!),
Eff I goes hungry, an' my coat's to'ed.
She sing to me whilst I's a-ridin' on de
loud.
She sing to me drivin' de cows down de
road,
An' de chunes putts a hop-hop-hoppin'
in my feet.

When de cotton laid by, an' de crab
grass mowed
(Oh, fiddle dat sing so sweet!),
Den de niggah git paid what he been
owed.
An' you'll see me a-settin' up high on er
boa'd,
Wid de niggahs all a-hoppin' like er ol'
hop-toad,
'Cayse my fiddle putts a hop-hop-hop-
pin' in dey feet.

... of his hands clasping hers, ... and soft.

... was true that Chumpsky was ... susceptible to feminine charms. ... if his blood had been colder ... the coldest, it would have thaw... to warm living wine when he felt ... from her shoulder, pressing ... his breast, steal slowly, yet ... over his whole being.

... be it was the wine he had ... before leaving Blackwell's ... may be it was the spirit of the ... may be it was the rich, ... of roses that wafted up to ... every time the long black ... swing and clasped itself ... superb creature he held in ... arms—be that as it may, Chump... sky was intoxicated with a divine in... toxication. And from the fullness of his heart his lips spoke. Heavenly sen... sation! He felt her shoulder press closer to his, and her fingers tighten their clasp.

Even when the music stopped, and they promenaded the long hall or sat in the shelter of fern and palm, Chumpsky dwelt in a state of semi-heavenly rapture. With each breath he drank in the rich, heavy perfume of roses and his eyes feasted on every graceful movement and posture. He felt that he would have given his right hand just for one glimpse at the face so well concealed by a mask which not only hid her features but even her hair, and prevented her voice from reaching him except in the low-est, sweetest murmur Chumpsky had ever heard.

The evening passed. Couple by couple the dancers deserted the floor. It was with a feeling of barbaric rage that Chumpsky saw the tall chevalier, her first partner, coming toward them.

"When shall I see you again?" Chumpsky panted in his eagerness to finish before the man arrived.

"I—I rather overtaxed myself at the lodge—lodge election."

"To-morrow." So well did the mask hide even the voice he could just catch the word.

"How shall I know you?"

She caught up a fold of her skirt and swayed it gently. Again the rich, heavy perfume of roses billowed up to his nostrils.

"But where? When? At what place?" Chumpsky gasped.

Before she could answer the man was at her side. With a low bow he offered his arm. And when Chump-sky, dazed, stumbled to his feet, it was to feel Blackwell's hand upon his shoulder and to hear that gentleman saying in his suavest accents:

"Been looking for you everywhere, old boy." Then as he caught Chump-sky's eye on the couple disappearing from the hall. "Quite swell, old fel-low. Saw you with her all evening."

Chumpsky murmured something that sounded like an invitation for Blackwell to descend to the regions of darkness. Then he followed sulkily into the cloak room.

All the way to Blackwell's room Chumpsky's mind ran on the woman in the black domino, and the "night cap" he took there only made it whirl and dance the faster.

When he reached his own house all was dark except for a light burning in the hall. This Chumpsky turned out and, lighting a match, climbed softly up the stairs. He opened the bedroom door and stepped in. To his credit let it be said that Chumpsky staggered back only two paces. The air in the room was heavy with the rich perfume of roses.

"Is that you, dear?" came Mrs. Chumpsky's voice sweetly from the pillow.

Chumpsky weakly acknowledged that it was. Then he sat down in a chair, as if exhausted.

"This perfume, Agnes," he stammered "it—smells like roses—where—where did it come from? It's so oppressive—and I—I rather overtaxed myself at the lodge—lodge election."

"Perfume, dear? Why, yes; isn't it delicious? Cousin George brought it all the way from France to me. If you hadn't been so impatient to get off to that old lodge, you would have met him. You had scarcely left the house when he came. And—oh, he has grown into such a handsome man, so tall. He wanted me to go round with him to look on at the big mas-querade ball. Said it would be a gor-geous sight. But of course I couldn't go unless you went, you know."

Chumpsky thought that he heard a titter somewhere in the room. But, like a wise man, he kept his thoughts to himself, and went to bed without asking any more impertinent ques-tions. And it was the "love of a bon-net" that Mr. Chumpsky generously paid for the next day.

HE KNEW THE LADY.

Why Col. Billups' Companion Was Not Unduly Interested.

Happening to have a few moments to himself Col. John Billups of Ari-zona decided to take a street car ride, and see the various beauties of the capital, says a dispatch from Wash-ington.

He entered a car, took a seat, and devoted himself to looking at the places of historical interest he passed. Coming to an uninteresting stretch he looked around the car and discovered a very beautiful woman sitting in a seat with an ill-favored man. Directly behind the woman sat another man, looking intently out of the window.

Col. Billups was attracted by the beautiful woman just as any Southern gentleman is attracted by a great pic-ture or a fine horse. He looked at her in open mouthed admiration, paying the tribute the real Southern gentle-man pays to beautiful women wher-ever found.

Suddenly, to the great amazement of Col. Billups, the lady turned and winked roguishly at the man behind her. It was a full-sized, enticing wink. The man looked out of the window without noticing. Col. Billups watched. Three times the lady turned and winked at the stolid citizen be-hind her, and three times the man re-fused to notice the advance.

This was too much for Col. Billups. He moved across to the seat where the man was sitting. They rode for a square, and the lady turned again and winked.

"Sir," said Col. Billups to the man looking out the window, "it is a beau-tiful winter's day."

"It is," he replied, still gazing out on the street.

"Sir," said Col. Billups, "have you remarked that extremely beautiful lady who sits in the seat directly in front of us?"

"She's good looking enough," re-plied the stolid one, still looking out of the window.

"Sir, said Col. John Billups, "I am a Southern man and an admirer of all that is beautiful in nature. I say to you that that lady is fair game. That man with her is not her husband."

"I know it," replied the person who was gazing out of the window. "I am."

Immortality.

When I was grass, perhaps I may have
wept
As every year the grass-blades paled and
slept;
Or shrieked in anguish impotent, beneath
The smooth, impartial cropping of great
teeth—
I don't remember much what came to
pass
When I was grass.

When I was monkey, I'm afraid the trees
Weren't always havens of contented ease;
Things killed us, and we never could tell
why;
No doubt we blamed the earth or sea or
sky—
I have forgotten my rebellion's shape
When I was ape.

Now I have reached the comfortable skin
This stage of living is enveloped in,
And hold the spirit of my mighty race
Self-conscious prisoner under one white
face—
I'm awfully afraid I'm going to die,
Now I am I.

So I have planned a hypothetic life
To pay me somehow for my toil and
strife.
Blessed or damned, I some way must
contrive
That I eternally be kept alive!
In this an endless boundless bliss I see—

Eternal me!
When I was man, no doubt I used to care
About the little things that happened
there.
And fret to see the years going by,
And nations, families and persons die.
I didn't much appreciate life's plan
When I was a man.

—Charlotte Perkins Gilman.

Seemed Barred from Everywhere.

"Look here," said Senator Crane of Massachusetts to Senator Knox of Pennsylvania. "Let's go and get something to eat."

They are new members and they de-cided to flock together. They went to the Senate restaurant. The head waiter, usually quick on the trigger as to new senators, did not recognize them, and gave them seats in the room given over to the common peo-ple.

Knox and Crane sat down. Looking through the doors they saw many of their colleagues feasting in state in the inner room. They tried to get a waiter, but none came at their call. Finally a newspaper reporter who knew them both came by.

"Say," he said, "you do not eat here."

"Great Scott!" said Knox, "can't we get anything to eat anywhere?"

Ha! The Frigid Fist!

In a recent effort of a certain lady novelist, whose books are to be found in the possession of factory girls on their way to work, or in the kitchen regions, but seldom above stairs, were discovered the following extraordinary similes:

The hands of the heroine, in an emo-tional moment, "burned like those of a volcano"; the villain's, on the con-trary, were "cold and clammy as those of a serpent."

Fortunately the class of readers to whom these novels appeal are not crit-ical and do not stop to question the phenomena of volcanoes and serpents endowed with hands.

MET WITH TRAMP'S FAVOR.

Custom of Leaving "Stranger's Sheaf" Had His Entire Approval.

A tramp said, as he slapped his arms with his hands to warm them:

"Durin' harvest I found myself in Sassy-fras, Kent county, Md. Sassy-fras is a farm kentry. I seen many a fine farm down there.

"Harvestin' was finished on these farms, and yet in every field I seen a sheaf of grain standin'. I stopped and looked at one o' them sheaves, and a young woman wot had been comin' up the road stopped beside me.

"'The stranger's sheaf,' she said.

"'Wot?' I said.

"'The stranger's sheaf.'

"I didn't know what to make of her. I examined her closely. She was pret-ty, with a white skin and good clothes, and I says:

"'Wot's all this about the stranger's sheaf?'

"'Why,' says she, 'all the farmers hereabouts leave in each field, when they harvest, one sheaf called the stranger's sheaf. This belongs to the first stranger that comes along. He can do what he pleases with it—sell it, or cart it off, or give it away. But it's hissen.'

"'Then,' says I, 'does this here sheaf belong to me?'

"'Sure,' says she.

"'Wot's the idea of the thing?' I says.

"'It's for luck,' she explained. 'The farmers think the stranger's sheaf gives them good luck. It's a French custom. All over France, in harvest time, you'll find strangers' sheaves waitin' for the strangers to come and take them. My father's a Frenchman. He interduced the custom here.'

"Well, sir, I made over a dollar out of them strangers' sheaves in Sassy-fras. You bet I go to Sassy-fras again next year."—Boston Post.

Pork and Beans.

'Tis not a dainty the gods would relish—
Those feasting gods of mythology—
The name would never with grace em-
bellish
The menus of high society,
But nothing can get more proper action
On the hungry spot 'neath a feller's
jeans.
Can give more comfort and satisfaction
To a yearning stomach than pork and
beans.

When the inner man for feed is craving
And the system is wrapped in a flame
of yearn.
When the stomach rebels and is misbe-
having
And the teeth in anxiety seem to burn,
How the gay, glad light of anticipation
Through a fellow's optics in joy ca-
reens,
When on the air of the feeding station
He sniffs the odor of pork and beans.

When the purse is flat from a dearth of
boodle,
When but a dime is reposing there,
When a fellow feels he could eat a poodle
And try to imagine it Belgian hare,
When a reg'lar dinner, with pie and pud-
din',
Is 'way up yonder beyond his means,
One feast is his, and a mighty good 'un—
A man's size platter of pork and beans.

Chicago, mart of the hog, we bless you,
With wreaths of gratitude deck your
name,
And Boston, in love we'd fain caress you
For the succulent truck you've given
fame.
No combination de culinary,
From the dainty dishes of kings and
queens
Clear down to poverty's commissary,
Can hold a candle to pork and beans.

—Denver Post.

Slightly Confused.

When Senator Deboe was elected from Kentucky from Joe Blackburn's district, an ovation was given him upon his return to his little mountain town, a barbecue for which several fatted calves and other animals were killed.

Much impressed he made a speech of some length and eloquence. That is, he began all right, but he made a slight miscue at the finish.

That was what he said:

"Friends and Fellow Citizens: I feel this to be the greatest occasion of my life. I am deeply gratified—more deeply than I can say—by this honor you have done me in sending me as Senator to the capital from the most splendid state in the Union, from the magnificent Blue Grass country, from the only state that can boast of the finest whisky, the loveliest horses and the fastest women in the world."—Pittsburg Dispatch.

Youngster's Keen Rebuke.

It was at Newport, where gossip is rife and too often repeated before children, that little Johnny, aged five, showed his early appreciation of the meanness of tattling. The mother of his chum had died, and the same night when his mother put him to bed he cried. On his mother anxiously inquiring as to the cause of his tears, he said he was weaping for his chum's mother.

"But you mustn't cry for her," she said. "Arthur's mother is quite happy now; her soul has gone to heaven."

Looking up in astonishment, he cried:

"What! buried, already?"

"Oh, no," replied the mother, "her body is here, but her soul has gone up to God.")

"Oh, mamma," he exclaimed, "isn't it a mean trick if her soul has gone up to God to tittle-tattle about the sins of the body?"

How Thackeray Worked.

When Thackeray was in Richmond, Va., during his visit to the United States, John Esten Cooke asked him if he ever dictated his words to an amanuensis. Thackeray answered that he composed a good deal in this way. The whole of "Esmond" was dictated, he said, an assurance that will surprise most admirers of that finished work. Thackeray added:

"I also dictated all of 'Pendennis.' I can't say I think much of 'Pendennis'—at least of the execution. It cer-tainly drags about the middle, but I had an attack of illness about the time I reached that part of the book, and could not make it any better than it is."

He Understood Mules

On a street corner in the northwest-ern section of the city last Saturday forenoon quite a large crowd had collected. It had formed a ring, or, rather, a square, about some object in the center, two sides having con-gregated on each side of the curb, while the others made a rather thin line on the other side of the square. The on-lookers to whatever was going on did not seem in the least excited, but there was every indication of much interest in the situation.

"Drunken women fighting," said one of two young women who were pass-ing near by. "It's most disgraceful, and those people placidly looking on. If they were men they'd stop it," she said to her companion. "It's degrad-ing."

An old gentleman in the same lo-cality was explaining to another one that a man had been stricken with an epileptic fit. "Poor fellow," he said; "and no one knows what to do for him."

It was evident that the gathering was an inactive one, and the reporter whose duty it is to investigate every-thing hastened to the scene and found out that a stout, well-proportioned mule had slipped on the pave-ment and was apparently well satis-fied with his recumbent situation. The fact was that he resented every well-meant attempt to hoist him from his contact with mother earth, while his disgusted driver, a colored boy about 20 years old, was actually sobbing with anger and vexation of spirit. All sorts of suggestions were hurled at him, but nobody seemed to want to help him in his distress. There was danger in it. The mule was wild-eyed and vicious, and used both fore-legs as a battery to keep folks away from him, until at last the driver sat down on the shafts of the cart, which had been drawn away from the ani-mal, and indulged in long, bitter thought.

Just then an old colored man, wear-ing an old-fashioned blue army over-coat and a red worsted comforter about his neck, stepped into the open space, walked bravely up to the now quiet quadruped and took hold of both of his ears. He seemed to whisper to the beast, but whatever he did act-ed like magic. The mule got upon his feet, permitted himself to be hitched again to his cart, and the crowd went away.

"You seem to know how to deal with mules," said the reporter to the old fellow. "'Deed I does, suh," was the reply. I knows all about mules and they does me. 'Fore Gawd, boss, I wasn't brought up in old Missouri for nothing. Yass'r, muels and me is kinfolks, sho's you bo'n. En I think dat job's wuff ten cents. Don't you, boss?"

The crowd had melted away, and as there was no one else by to re-spond to this palpable hint the report-er did so. And thus the chapter end-ed.—Washington Star.

Thorough Work of Japs

One of the most unique and inter-esting features of the Japanese plan of campaign is the importance of the tasks assigned to the doctors. Maj. Louis Livingstone Seamon of the Unit-ed States army says in his recently published book: "The medical officer is omnipresent. You will find him in countless places where in an Ameri-can or British army he has no place. He is as much at the front as in the rear. He is with the screen of the scouts with his microscope and chemi-cals, testing and labeling wells so that the army to follow shall drink no con-taminated water. When the scouts reach a town he immediately insti-tutes a thorough examination of its sanitary condition and if contagion or infection is found he quarantines and places a guard around the dangerous district. Notices are posted so that the approaching column is warned and no soldiers are billeted where danger exists. Microscopic blood tests are made in all fever cases and bac-teriological experts, fully equipped, form part of the staff of every di-visional headquarters.

"The medical officer also accompa-nies foraging parties and, with the commissariat officers, samples the va-rious foods, fruits and vegetables sold by the natives along the line of march, long before the arrival of the army. If the food is tainted or the fruit is over-ripe or the water requires boiling, notice is posted to that effect, and such is the respect and discipline of every soldier, from the commanding officer to the file in the ranks, that obedience to its orders is absolute. The medical officer is also found in camp lecturing the man on sanitation and the hundred and one details of personal hygiene—how to cook and to eat and when not to drink or to bathe—even to the paring and cleans-ing of the finger nails to prevent dan-ger from bacteria.

"Long before the outbreak of hos-tilities he was with the advance agents of the army, testing provisions that were being collected for the troops that were to follow. As a con-sequence of these precautions he is not found treating thousands of cases of intestinal diseases and other con-tagion and fevers that follow improper subsistence and neglected sanitation—diseases that have brought many campaigns to disastrous termina-tions."

Oddities of South Africa

"Though the days of the long treks over trackless wastes of South Africa are past, life in this country still has little diversities peculiar to itself," writes a correspondent. "For in-stance, a farmer named Long was re-cently troubled by a leopard that had been destroying his cattle. The na-tives surrounded it one day in the long grass and sent for the white man to kill it. While searching for the brute in the tangle of vegetation Mr. Long came across him sooner than he expected and the leopard got the jump on him. There was a fierce struggle and the white man was a good deal torn up. One of his negroes got in a lucky shot and killed the leopard just before the latter got at the man's throat.

"Odd things happen in the mines, too, once in a while. A miner named Wonacott recently passed through a most exciting experience at Dutoit-span. He had charged four boreholes with dynamite in the usual way and then endeavored to signal to the en-gine-driver, but failed to establish communication. He concluded, how-ever, that everything was all right, and he lit the charges, expecting to be hauled up in the bucket. His sec-ond signal not being answered, he be-gan to climb the rope in a hurry to get away from the dynamite. He was too slow and the concussion of the discharge knocked him off. He fell into the bucket, where he remained until all the charges had exploded. He was only slightly hurt.

"And there was a curious incident near Harding recently. A native was riding along a pathway at sunrise, when he saw the head and arms of a man sticking out of the ground, the arms waving wildly in signal of dis-tress. The fellow was imprisoned in an ant-bear hole and wah half dead. When he was resuscitated he told how he had been coming back on foot from Johannesburg with some friends when he was taken ill. His friends thought he was going to die and stuck him in the ant-bear hole and deserted him. When he recovered he prosecuted his friends and they went to prison."

When the Worm Turned

Hers was the modern mania for "beauti-
fying" things;
She went in strong
For the Chinese gong,
And statues without wings;
Her walls were hung with draperies of
curious design,
And her pictures rare,
Arranged with care,
On no particular line;
And all her friends who saw the place,
Declared that it was "Fine!"

Her husband was a business man, on
"just plain comfort" bent;
He furnished the "mun,"
And let her run
The place, without dissent;
Great stacks of "beaten brass" she
bought, and sticks of scented punk;
In his secret soul
Each brazen bowl
He classified as "Junk."
Although he never told her so.
He didn't have the spunk!

And then the "Sanitation" craze pos-
sessed her for a while;
She routed germs
In medical terms
That only made him smile;
She "sterilized" the whole darn place
and everything they ate,
Such "rules" observed
That steak was served
On an anti-microbe plate!
And still he never said a word,
But let her navigate.

She took down all the draperies and
painted all the walls,
Until the rooms
Resembled tombs
And whitewashed stable stalls;
Then she declared that hygiene prescribed
the proper "rest";
She bought "twin" beds
And turned their heads
Exactly "nor'-nor'west,"
And still her lord and master
Hadn't courage to protest.

But then at last she hit upon a bigger,
brighter fad;
She was elate,
So up-to-date
The new idea she had.
She moved the beds out on the porch,
to sleep in open air;
The scheme was bold—
'Twas bitter cold—
She thought he would not care;
But Gee! When he came home that
night,
You should have heard him swear!

—Anna Marble.

Two Forms of Sutures.

There are two forms of sutures for drawing the edges of wounds togeth-er. They are the interrupted and con-tinuous. The former is employed when only one or two stitches are used; the latter when the wound has to be regularly sewed, like a seam. By the continuous suture with each stitch, which is independently fast-ened, if the thread should break in one stitch the wound would be held. An irregularity of seam is often seen in the continuous suture owing to the fact that, although the needle has passed at right angles to the incision at each stitch, there is an oblique pull upon the lips of the wound when the suture is finished. This is avoid-ed by passing the needle after each stitch through the lop of the preced-ing one, thus making a sort of con-tinuous chain called the "Glover su-ture," and making each stitch partly independent of the rest.

THE UNION.

Published every Thursday at Clanton, Chilton county, Alabama.

Wallace C. Edler, Ed. and Pub

Subscription price, in advance, per year, $1.

For advertising rates, call at the office, Seventh street, between First and Second avenues.

Entered April 15, 1903, at Clanton, Ala., as second class matter, under act of congress of March 3, 1879.

NOTICE TO CORRESPONDENTS.

All communications to the Union must be signed by the writer's real name as well as that name which they wish to put in the paper. Letters must reach the editor Tuesday morning to get in the same week. While we will publish any and all communications complying with these requirements that do not contain any improper language, we are not responsible for the opinions expressed. tf

UNION CLUBBING LIST....

The UNION and Yellow Jacket, $1.00

The UNION and Home and Farm $1.00

The UNION and Weekly Montgomery Advertiser, $1.25

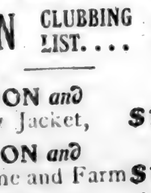
The UNION and Weekly Atlanta Constitution. $1.50

The UNION and Semi-Weekly Globe Democrat $1.50

The UNION and Saturday News $1.25

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?



A WISE CITY.

Scottsboro elected a Republican mayor last week, which will, no doubt, insure a good municipal government up there.

COMMISSIONERS' COURT.

The County Commissioners held the February court the first three days of this week. Present, Messrs. Conway, Glasscock, Robinson and Kendrick, Judge Reynolds presiding. The court had a busy session, as there were not only the usual business that comes up, but some cases carried over from Judge Adams' incumbency.

SOME CHANGES.

Our readers will notice that we have altered our circuit court calendar. The supreme court having knocked out the 15th circuit, Chilton goes back to the 5th circuit, with the old dates for holding court, but a new judge and solicitor. According to the supreme court, all court work since Judge Denson left us is null and void. If only the judges had been changed and not the time for holding court their work would have stood. Pastors and church clerks who wish their churches to be represented in our Church Directory will please send in their notices. There are so many changes of pastors and meeting days that our list simply had to be revised.

FROM THE OTHER SIDE.

J. H. Willoughby called on THE UNION office the other day with a couple of English printed papers from the other side of the world that he had received from his son, who is a sailor on Uncle Sam's cruiser Baltimore, now in service with the Asiatic squadron. One paper is published at Hong Kong, China, and is called the South China Morning Post, price for the weekly $12 per year. The other is the Che Foo Daily News, $2 per month, or $20 for a year. The Che Foo paper looked sort of familiar, as over three-fourths of it was advertisements, which always makes one wonder what people take such a paper for. When young Willoughby returns home he no doubt will have many stirring tales to tell of the sights he saw at the Antipodes.

The fact that most of the great men of history were of lowly birth may be encouraging to the average man, but it is no less a fact that most of the small men of history were, too.

RANDOLPH.

How glad we are to see the sun shine after so many days of rain and snow. Clay Horne, who has been with Mahan & Son for several months, has returned to his home near Six Mile. John Crumpton, H. H. Armstrong and S. E. Waldrop were in town Thursday. J. F. Anderson, of Pletcher, was here on Friday. Mrs. McKerrall has been sick several days, but is now improving. Miss Eva Abney was in town Friday. W. D. Nix was a visitor here Friday. Many complain of colds. G. T. Duke, Doc Woolley and William Romager are all on the sick list. O. P. Scott, of Mars Hill, was in town Friday. John Helton has moved into the Sewell house. Rev. J. C. Harrison is putting some improvements on the parsonage. J. F. Armstrong was in town Saturday. John Fancher was in town Friday. Mrs. J. C. Harrison was quite ill last week. J. M. Merchant, of Maplesville, was in town. C. W. Brand went to Centerville Monday. Presiding Elder Abernathy was here last week. Rev. A. J. Lumpkin was a visitor here Saturday. A. J. Smitherman lost his pocket book containing cash and papers to the amount of $69. Those who are truly interested in the people's cause" will support in every way the paper that stands for the "people's rights," regardless of personal matters, because they love the "cause." So let us, the people of Chilton, stand firmly together and fight for our rights. Our county officers are really our leaders, let us work with them for true reform and progress. Come again, "Just a Voter."

"ONE OF THE BOYS."

SCHOOL DISTRICT NO. 28.

In spite of rain and cold a few of us met on the 11th and organized. Secretary J. C. Grimes enrolled 12 paid up members. The following officers were elected: W. F. Culpepper, chairman; J. C. Grimes, secretary; W. J. Watson, treasurer; J. J. Gallman, M. F. Lett and J. C. Grimes, committee on acreage and membership. Now, brother farmers, those who have not joined, do so as soon as possible, cut your acreage and let's practice diversification, plant corn, oats, peas, potatoes, peanuts and everything that we can use at home. By doing this our cotton will be a surplus crop, and we will have some surplus money next fall. The writer would like to see a few columns of our valuble UNION set apart for diversification, but for fear of these remarks going into the waste basket, he will not say any more this time. Hoping that every school district in Chilton will be fully represented at Clanton on the 16th, and wishing success to THE UNION and the Cotton Growers' Association.

PEA PATCHER.

SALEM-PROVIDENCE.

In all our short experience in life we don't believe we've ever seen such a continuous spell of bad weather—just rain, rain, and snow. We're glad to say that Mr. and Mrs. E. B. Calloway's little son, who was severely burned several days ago, is very much improved. J. M. Robinson is having a dwelling erected here. Our farmers are talking over the cotton situation in these parts. Miss Dora Kicker, of Maple Springs, is visiting the family of W. H. Robinson. We're sorry to learn of the sickness of our rural carrier, T. S. Pyron. The Wadsworth Lumber Co.'s log train turned over one day last week and the fireman, Thos. McDaniel, colored, was badly scalded. Owing to so much rain, the Coosa river is on a boom, causing a temporary suspension of work at W. L. Co.'s mill. Our literary school is moving along nicely under the able care of Prof. E. J. Calloway. Our Sunday schools are doing well, though attendance is small on account of the bad weather. Rev. M. J. Parrish filled his appointment at Providence Saturday and Sunday. Success to THE UNION and its many readers.

C. A. L.

MARS HILL.

A good deal of sickness in our community at this writing. Cleveland Langston is dangerously ill with pneumonia. He had been to Eutaw, and was taken sick immediately after his return home. We all hope for his speedy recovery. Mr. and Mrs. J. N. Scott went to Jemison Tuesday. Those of our farmers that have got their land bedded are lucky, but they are mighty few. We heartily indorse what "Just a Voter" says in regard to keeping politics out of our organizations. Columbus Scott is trying hard to learn music, and we believe he will be successful. A. D. Gentry went to Jemison Thursday and from his appearance he must have been going to see his best girl. Say! here young men and ladies, I notice that Judge Reynolds is not issuing many licenses here of late. Maybe it's because they haven't sold their cotton or their fathers haven't. Walter Abbott is a very regular visitor at O. P. Scott's. It is mighty nice to have an entertaining visitor to talk with this stormy weather. Our farmers are all talking about organization, most all are sure it is a good thing, but a very few say they don't believe it will work. Well, let us all try it a year or two and see the result. We can't lose anything by that course. We farmers need something, and in my opinion that something is organization.

MARS HILLIAN.

LIBERTY HILL.

People are feeling blue over so much bad weather, rain or snow most all the time, about two inches snow fell Monday. M. T. Headley visited J. M. Maddox Sunday. Mrs. J. M. Maddox is on the sick list now, but we hope she will soon recover. T. W. Atchley, an old neighbor, who went to Kellerman before Christmas to work, is back here on a visit to friends and relatives. The farmers' meeting at the Littlejohn school house Saturday was pretty successful considering the weather. Twenty-nine members on the roll and I hear that several have joined since. Florence Mims is here on a visit to his brother John. Sunday weddings are all the go now.

"ESTELLE."

LIBERTY HILL.

The health of our community is not very good. Little Esther Vickers is hardly any better. Mr. and Mrs. W. A. Littlejohn were made glad by the arrival of a young lady. Hope she has come to stay. The farmers' meeting Saturday; 29 out of 32 present enrolled and paid their 25 cents. Come along, brothers three, or you will be out in the cold. It was a "hurry up, boys," at J. M. Maddox's grist mill Friday by cheerful customers for bread. It was who should and who would get their turn, but some were so late they could not get their turn till Saturday at noon. At least 150 bushels of corn was carried, but try him again, boys. He's all right. P. D. Wilson's saw mill is shut down on account of the weather, the roads being so bad he can't get his lumber to the railroad. Frank Littlejohn and his fair bride are visiting her parents near Lily. Monday morning brought us a blizzard from the northwest with quite a heavy fall of snow. Here, brother farmers, let's all have the faith and stickability to us that Bro. John Littlejohn showed Monday. He is one of the committee on acreage and on Monday he comes along with his lists, just as if it was a bright sunny day, with his banks to catch the 5c cotton men, that did not show up at the Saturday meeting. Brothers, if we all work for our organization that way, we've got 10-cent cotton in our reach. It was a bright smile on a young lady's face near here that met Hugh Thompson as he arrived Sunday evening in the rain and cold. Look out. "Wedding bells will be ringing soon." Goodby till next time.

"ONE AT HOME."

BEAT 10 ITEMS.

The health of the community is good, but owing to the very wet weather farmers are not doing much toward a new crop. I don't know of any guano being bought yet. All are organizing to cut down the acreage and the fertilizer bill, which means 10-cent cotton next fall. Mr. and Mrs. Jesse A. Davis had a bouncing boy born to them on the 9th. Mother and child both doing well under the able treatment of Dr. J. P. Hayes. Miss Dora Kicker has returned from a pleasant visit to relatives near Providence. School is doing nicely under the enthusiastic management of Prof H. A. Harris. H. M. Shaver was a welcome guest at J. H. Ingram's Sunday. Success to THE UNION and its many readers.

A FARMER.

BEAT NINE ITEMS.

Saturday was the day set apart for the farmers to meet at the Cross Road school house to discuss the cotton question, but owing to the inclemency of the weather there were but few that came, but they seemed to be of those who never know fail, so they appointed a committee of five to visit those who were unable to attend and see how they stood with regard to cutting the acreage and the commercial fertilizer for the coming cotton crop.

We are enjoying (?) the coldest spell of weather we have had in some time. We had snow to fall the 13th to a depth of two inches.

If there is anything in the old saying we will have an early spring, as the badger can see his shadow today, Feb. 14, i. e., if he is not frozen so stiff he can't crawl out of his burrow.

The new pulley has arrived and when the weather is fit you can hear the hum of the Mims Bros.' saw mill and we wish them great success. Success to the UNION.

NIM ROD.

AN ABSOLUTELY FREE OFFER.

The Union would like for everybody to accept from us a free complimentary gift—a year's subscription (which is 50c per year) to the Dixie Home, one of the largest, brightest and finest illustrated magazines in the world. It is full of good reading and is the very paper to go into every home in the south. Now, if you want to receive this family magazine a whole YEAR FREE, all you have to do is to pay amount you are in arrears, if any, and send us $1 for another year's subscription to the Union. The Dixie Home will come to you absolutely FREE.

This is one of the best and most liberal offers ever made by any publisher. So come on at once, and renew your subscription or become a new subscriber and secure this magazine FREE. tf

Coming Events

A National Paper.

The News company of Joliet, Ill., proprietors of one of the largest and best printing plants in the state outside of Chicago, are publishing the Saturday News as a third edition of their paper. The Saturday News is devoted exclusively to the interests of the people's party and is national in scope. Each week it contains matters of interest regarding the progress of the party from all parts of the nation.

Being published at the headquarters of the party and the chairman of the national committee being president of the News company and one of the editors, it is peculiarly favorably located to give general news of the movement.

The People's party has long felt the need of a national paper and it is cause for congratulation that one has been started and by a concern that is so strong that its success is assured from the start while the names of such well known workers and writers as Hon. James H. Ferriss, Charles Q. De France, Jo A. Parker and R. E. Bray is a guarantee of its character and loyalty.

The regular subscription price of the Saturday News is 50 cents per year, but we have arranged with the publishers to furnish it and the Union both papers one year for $1.25.

Call at our office and see a sample copy and take advantage of this offer tf.

The State of Alabama, Chilton County
Probate Court.

To John O. Dunovan, Claud B. Dunovan and Robert Dunovan.

Whereas, Beulah Matthews, an heir at law of the estate of Jeremiah Dunovan, deceased, has filed her application in said court for a sale of the lands described in said application, belonging to the estate of said decedent for the purpose of division, upon the ground that said land can not be equitably divided, and the 6th day of March, 1905, has been appointed for the hearing of said application, you are, therefore, hereby notified to appear before said court on said 6th day of March, 1905, to contest said application, if they think proper.

Witness my hand, this 31st day of January, 1905.

L. H. REYNOLDS.
Judge of Probate.

2-2-05 3t

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, leaves himself liable to arrest and fine, the same as for theft.—Ex.

LOCAL AND PERSONAL.

F. M. Littlejohn was a pleasant visitor Thursday.

W. Y. Nix was in Clanton Thursday on a visit to his daughter, Mrs. B. H. Jones. Mr. Nix is meeting with great success in raising fine fowls and hogs.

'Squire Alf Childress was in Clanton Friday.

G. O. Foshee, now of Dothan, was a pleasant visitor in the UNION office last week. He is introducing the "J. A. Dollar Pump" in Houston county. It's something that every home should be provided with.

Presiding Elder Abernathy preached at the Methodist church Sunday morning. Owing to the rain there were very few present, but they heard a very able sermon.

L. A. Calloway was a pleasant visitor Saturday.

Lee Vickers was in town Saturday.

J. M. Hill was a welcome visitor Saturday.

Anderson Baker, Sr., of Verbena, was a pleasant visitor Monday. He carries his many years lightly.

J. M. Connell was a welcome caller Monday.

J. P. Cost and son Everett were pleasant visitors to our office Monday.

J. R. Hammell was a welcome caller Monday.

W. A. Martin was a pleasant visitor Tuesday.

J. M. Maddox was in Clanton Tuesday.

J. P. Rushing was in town Tuesday.

C. C. Swint was in Clanton Tuesday.

R. A. Hancock is back from Etowah county. He says Chilton is good enough for him. Welcome back, Bro. Hancock.

More than 700 pair Shoes yet to select from at Downs'. Come and get them.

Victor Goodman and Miss Lucy Candler were married by Judge Reynolds Sunday at the bride's residence.

J. Wiley Smith is seriously ill.

Deputy United States Marshal Goodgame is "hot on the trail" of all violators of the revenue laws, whether distillers or sellers.

Judge Reynolds united a colored couple at the court house Wednesday. Ben Tyus and Julia Belle Kinney. The bride is a grade school teacher and the wedding caused a good deal of a stir among the colored citizens.

Save a dime on every barrel flour, matters not from whom you purchase. Downs will tell you.

MARRIAGE LICENSES.

S. A. Henley and Miss May Vance.
J. W. Johnston and Miss Laura Wright. Victor Goodman and Miss Lucy Candler.

COLORED.

Ed Singleterry and Ola Nix. Ben Tyus and Julia Belle Kinney.

NEWSY GLEANINGS.

Over $1,000,000 worth of diamonds are stolen every year from the South Africa diamond mines.

In Mexico the Department of War is studying a project to establish night schools for the soldiers.

In Prussia the price of medicine is regulated by the State, a new price list being published every year

When an unmarried woman dies in Brazil the coffin, hearse and livery of the conchman are all scarlet

A battalion of Chinese soldiers, to be headed by a Chinese band, is being recruited from residents of New York City.

The Government of Venezuela has decided to give no titles to coal mines in the future, but to exploit all such mines under its own supervision and ownership.

Henry Hollenback, of Boulder Creek, Cal., was kicked over a 200-foot precipice by a mule. He only fell fifty feet and was rescued comparatively uninjured.

At the annual meeting of the Commercial Travelers' Association, of Canada, the proposal to reduce the mortuary benefit fund was defeated by an overwhelming majority.

The Postoffice Department of Great Britain has announced that it will hereafter accept wireless messages for transmission to ships at sea at the rate of thirteen cents a word.

An ingenious thief who secreted himself in a trunk addressed to the freight station at Smichow, in Austria, was captured after he had filled the trunk with miscellaneous valuables from other luggage.

Dormitory Burns.

Lansing, Mich.—Wells hall, used as a dormitory for the students of the Michigan Agricultural College here, burned Saturday. There were 110 students in the building, and all escaped safety.

Coal Strike Ended.

Essen, Prussia.—The coal trike is entirely ended. Full shifts went in the mines Monday.

—WANTED—

Intelligent man, single or married, no children, to work by month or year on fruit and truck farm. Will make it permanent and profitable for right man. Call on or write at once, Agent L. & N. R. R., or P. C. Smith, Thorsby, Ala.

WANDERINGS.

I'm oft' inclined to wonder if
An angleworm, when frozen stiff,
Would meet with any luck at all,
Supposing that it tried to crawl.

Then, too, I often wonder whether
A man who set about to tether
Ten tigers in a field like cows,
Could make the striped creatures browse.

And then again, I wonder which
Is stickiest—tar, glue or pitch.
Perhaps each, all or either are.
But I should say pitch, glue or tar.

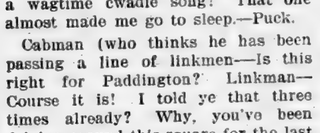
And, furthermore, I wonder why
A normal person such as I
Can't walk about upon one hand—
Some things we never understand.

But most of all I wonder how
A man can tell just when is Now,
For Now keeps going back to Then,
While Soon is straightway Now Again.

'Tis useless, though to wonder what
Is meant by this impressive rot.

P. B., in Life.

JUST FOR FUN



Bacon—Where do you suppose that 203-Meter Hill got its name? Egbert—Oh, I guess that's where the Port Arthur Gas Works are located.—Yonkers Statesman.

Ferdy—What's the best time for me to propose to Ida?. Algy—Right after Christmas; she will be so used to accepting things she doesn't want, she may accept you.—Judge.

Inquisitive Girl—Why do you stand in front of that kettle ringing a bell all day? Salvation Army Captain—I'm practising "Frenzied Finance."—Cincinnati Commercial-Tribune.

"And this," said the foreign visitor in the Senate chamber, "is where your statesmen assemble?" "Oh! no," replied the native, "only the senators meet here."—Philadelphia Press.

Cholly—D'ye know, Miss Pepper, I deahly love horses! Miss Pepper—I imagined so when I saw how you hugged the neck of the one you were riding yesterday.—Cleveland Leader.

"I'm engaged in the dairy business, now," said the lawyer. "You don't say!" exclaimed his friend, the doctor. "Fact," rejoined the legal light. "I'm milking an estate."—Chicago Daily News.

"Cholly says he doesn't patronize one tailor only. He goes to the best, wherever he finds them." "Huh! It's evident that less than nine of them have had a chance to work on him so far."—Philadelphia Ledger.

The Little Sister—What was that you played then, Effie? The Larger One—That was a cradle song, my pet. The Little Sister—Well, can't you play a wagtime cwadle song? That one almost made me go to sleep.—Puck.

Cabman (who thinks he has been passing a line of linkmen—Is this right for Paddington? Linkman—Course it is! I told ye that three times already? Why, you've been driving around this square for the last 'arf hour!—Punch.

"How is your daughter progressing in the study of languages?" "Beautifully," answered Mrs. Cumrox. "Has she a good foreign accent?" "Yes. Her teacher says that she speaks German with a French accent and French with a German accent."—Washington Star.

"So you come from Chicago, eh?" finally remarked the quiet passenger. "That's what!" proudly replied the Windy City man, who had been boasting about his town. "Well, you're lucky. Think of the poor fellows who have to stay there."—Philadelphia Press.

Clarence—I don't believe in this—telepathy, y' know. A professional mind readah experimented on me today and the fellah positively got no wesults at all, bah Jove! Florence—That doesn't prove anything. But it certainly corroborates something I've long suspected.—Cleveland Leader.

Patient—Great Scott! Doctor, that's an awful bill for one week's treatment! Physician—My dear fellow, if you knew what an interesting case yours was and how strongly I was tempted to let it go to a post-mortem you wouldn't grumble at a bill three times as big as this.—Chicago Tribune.

"I have called, doctor, to settle that dental bill, but I think it's a good deal higher than it ought to be." "But you will remember, madam, that the tooth required a good deal of treatment, and I took the greatest care to make every operation painless." "I remember it didn't hurt me a particle. That's why the bill seems so outrageous."—Chicago Tribune.

The Benefit of Fairy Tales

It is very reasonable to argue that no creation of human fancy could last as fairy tales have lasted through no one knows how many hundreds and thousands of years unless it was very good. For that which is not good and not sound must surely die, and only that which is good and sound shall last through the grinding of the ages.

So I believe that parents could fill their children's imaginations full of fairy tales if they would make those imaginations strong and healthy. As for that man or woman who has not these bright and joyous things flying like golden bees through the dim recesses of his memory, I can only say that I think his or her parents must have been neglectful of the earlier training of their child, and that I am sorry for that poor soul who has lost so much pleasure out of its life.—Howard Pyle in Book News.

A large deposit of copper has been discovered in the State of Santa Catharina, Brazil. Work on exploitation will soon begin. The concession is in the hands of a German syndicate.

Do Animals Reason?

By John Burroughs.

WHEN a bird selects a site for its nest, it seems on first view as if it must actually think, reflect, compare, as you and I do when we decide where to place our house.

I saw a little chipping sparrow trying to decide between two raspberry bushes. She kept going from one to the other, peering, inspecting and apparently weighing the advantages of each. I saw a robin in the woodbine on the side of the house trying to decide which particular place was the best site for her nest. She hopped to this tangle of shoots and sat down, then to that; she turned around, she readjusted herself, she looked about, she worked her feet beneath her, she was slow in making up her mind. Did she make up her mind? Did she think, compare, weigh? I do not believe it. When she found the right conditions she no doubt felt a pleasure and satisfaction, and that settled the question. An inward, instictive want was met and satisfied by an outward material condition.

In the same way the hermit crab goes from shell to shell upon the beach, seeking one to its liking. Sometimes two crabs fall to fighting over a shell that each wants. Can we believe that the hermit crab thinks and reasons? It selects the suitable shell instinctly, and not by an individual act of judgment.

Instinct is not always inerrant, though it makes fewer mistakes than reason does. The red squirrel usually knows how to come at the meat in the butternut with the least gnawing, but now and then he makes a mistake and strikes the edge of the kernel instead of the flat side. The cliff swallow will stick its mud nest under the eaves of a barn where the boards are planed so smooth that the nest sooner or later is bound to fall. It seems to have no judgment in the matter. Its ancestors built upon the face of high cliffs, where the mud adhered more firmly.—Outing.

Witte Denies Peace Rumors.

Paris—The Petit Parisenne's correspondent at St. Petersburg says that in the course of an interview M. Witte, president of the committee of ministers, stated emphatically that he has not been charged with the mission of drawing up a preliminary report regarding a convention of peace.

Canoe-Foot Mail Service.

Ashville, Ala.—Ashville has been cut off from the outside world about one-third of the time for the last month, and the only way to get mail back and forth to Whitney was to go in a canoe part of the way and walk the balance of the way.

Struck By Big Passenger Train.

Rock Island, Ill.—A southbound double-head passenger train on the Chicago, Milwaukee and St. Paul railroad, collided head-on with a switch engine at Moline Monday, killing Engineer William Doolin, of Chicago, and fatally injuring Charles Steepleton, of Rock Island. No passengers were hurt.

Bessemer Giant Dead.

Birmingham, Ala.—Emmett Roberts, of Bessemer, the "giant," died at St. Vincent's hospital Monday morning at 10 o'clock, aged 21 years. The deceased had been confined to the hospital for three weeks. Roberts was seven feet six inches in height and weighed between 175 and 200 pounds.

Engineer Killed in M. and O. Wreck.

Mobile, Ala.—A Mobile and Ohio freight train ran into a washout at DeSoto Monday morning. Engineer Helm was killed and his colored fireman is reported missing. Joseph Arrata, an extra fireman, was seriously injured.

Turkey is Arming.

London—The rapid progress of Turkish military preparations attracts attention here. War material is being constantly dispatched from Constantinople to Salonica and Adrianople. Fifty guns recently arrived at Monastir. Large supplies of uniforms have been ordered at reserve.

Rest Only in the Grave

I rode till I reached the House of Wealth;
I was filled with riot and blighted health.

I rode till I reached the House of Love;
I was vocal with sighs, beneath and above.

I rode till I reached the House of Sin;
There were shrieks and curses without and within.

I rode till I reached the House of Toil;
Its inmates had nothing to take or boil.

I rode in search of the House of Content,
But never could reach it, far as I went.

The House of Quiet, for strong and weak,
For poor and rich, I have still to seek.

That House is narrow and dark and small,
But the only Peaceful House of all.

James Clarence Mangan.

THE SENORITA

BY CHARLES W. CUNO

(Copyright, 1904, by Daily Story Pub. Co.)

Inez opened her eyes lazily to another day, but suddenly her listlessness gave way to an excellent exhibition of activity. With a wild shriek she sprang from the couch, for there on the snowy covers, magnified to twice its size by her imagination, crouched a dreaded Mexican tarantula.

She rushed from the room of the low *hacienda*, all of whose apartments opened on the wide veranda that extended all the way around it, and rushed unwittingly into the arms of the tall American officer that happened to be passing. She was benightgowned, it is true, but not a whit heeded the officer. He strode hastily into the room, crushed the huge spider beneath his heel, and then, willy-nilly, raised the still trembling bit of humanity and kissed her on the cheek, saying, "Niña (my child)—there, little girl, do not be frightened," and walked unceremoniously away.

Inez's cheek burned, not because he had kissed her, for, truth to tell, she had been kissed before, but at his words.

"Child, little girl, am I!" she exclaimed, and her black eyes flashed. The idea of calling her a little girl, who had but yesterday refused the heart and hand of Don Juan Dorado, the richest ranchero in Santa Cruz! Little girl, indeed! She would show him! And in that moment she resolved to bring the tall, handsome American to her feet.

The American officer, on leave of absence, was visiting Santa Cruz with the object, so, at least, it was noised about, of buying a silver mine. Oh, yes! When it came to buying silver mines, they all had one to sell in Santa Cruz. He was feasted and entertained to his heart's content. Even the uncle of Inez, the prosperous Don Alvaro, invited him to a dinner in the bosom of his family.

He came, with his gold epaulets, jingling spurs and glittering sword—a very Apollo in regimentals. The Donna Alvaro was dressed in her best for the occasion, but Inez surpassed herself in the chic, telling manner in which she displayed her charms.

Oh, yes! The captain was impressed. He admired openly and almost overstepped even Spanish bounds in the manner in which he complimented her from head to foot. The American could make love. No doubt of it! He sat listening, enraptured, while Inez twanged her mandolin and sang plaintive Spanish songs of love to him. And he sighed deeply when she had finished.

"Ah," he murmured softly, "if you only meant it when you sang."

Decidedly the American was already ensnared. Inez's eyes flashed with triumph. She would bring him to her feet yet.

But at that moment Don Alvaro came to talk "mine" and Inez had to be content with languishing and coquettish looks.

After that he came many days, for Don Alvaro still wished to talk "silver mine" to the captain. Inez and her

A dreaded Mexican tarantula.

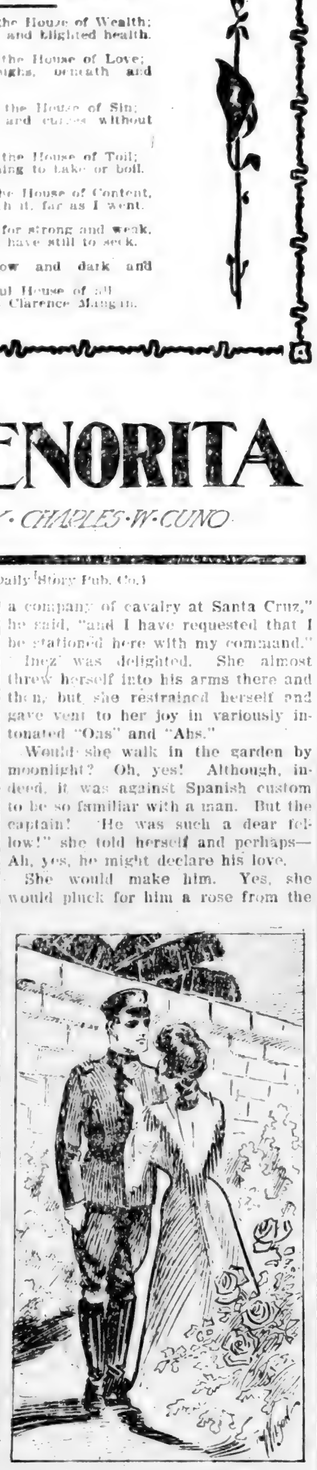
affair began to progress finely. Each day he grew more sentimental and she felt that every visit enmeshed him more and more in her toils. Poor girl, she could not play with fire without burning her own fingers—or, to be more correct, scaring her own heart. One day her captain, as she began to call him, came with news.

"The government is going to station a company of cavalry at Santa Cruz," he said, "and I have requested that I be stationed here with my command."

Inez was delighted. She almost threw herself into his arms there and then, but she restrained herself and gave vent to her joy in variously intonated "Oas" and "Ahs."

Would she walk in the garden by moonlight? Oh, yes! Although, indeed, it was against Spanish custom to be so familiar with a man. But the captain! He was such a dear fellow!" she told herself and perhaps—Ah, yes, he might declare his love.

She would make him. Yes, she would pluck for him a rose from the



Her lips are dangerously near his.

tree in the far, dark corner of the garden.

Now he is bending down for her to put it in his button hole. Her lips are dangerously near to his. He could kiss her before she could get away, but he does not. Fool that he is, does he not see that he may? She is disappointed, but never mind.

"Oh, my captain," she gurgles, leaning closer to him, and pressing his arm to her as they walk slowly down the pathway, "is it not delightful? So still and lovely and the moon so silvery bright!"

"Ah," laughs the captain, "is it not just a night for a lover," and he presses her arm tenderly.

Inez looked at him coquettishly and, laughing a gleeful, heart-free laugh, she plucked a scarlet daisy from its stem.

"See," she cried, bewitchingly, "I will test my lover's love. Unos, dos, tres," she counted, "one two, three—he loves, he loves me not, he loves—Ah, he loves," she cries, dancing with glee, but in a moment she was quiet. Looking up soulfully she asks, "Ah, my captain, tell me, do you think he loves?"

"To be sure," the captain answers, laughing and tilting her little chin up with his hand, "how could he help loving you?"

At that moment there was a cry, "Inez, Inez!" It was Donna Alvaro calling her.

"Oh," thought Inez, "how provoking." But before they went into the house she whispered, "you will come to see me to-morrow?"

"Oh, yes," the captain whispered in return, but he reckoned without his superior at the Post.

In the morning Inez almost wept when she heard that her captain had been suddenly called back to the Post. "He did not even say farewell to me," she wailed to herself. But the news had a mitigating element. Cascaro, the town gossip, brought it.

"Ah, does the Senorita know," he said insinuatingly, "the Gran Capitan has bought himself the Hacienda Dolores but yesterday. No? Oh, but he has. And he told me, yes, to me, myself, that he is going to live there alone. 'Perhaps some Senorita,' the Captain said to me, 'will take pity upon me before long and be my wife. Quien sabe? At any rate,' he had said, yes, he took me into his confidence, he said, 'I have one in view, and perhaps—who knows.'"

Cascaro threw his arms out in expressive Spanish way and the heart of Inez beat loudly within her breast.

"He is going to have everything ready." she said to herself, "before he asks me." The fire that she had played with burned deep, for she no longer thought of him in the vengeful spirit of that morning when he had kissed her and called her "Nina."

Two weeks later, there was a great commotion in Santa Cruz. The whole town turned out to welcome the coming of the cavalry company.

"Ah, there comes the train," someone shouted. People craned their necks and every one was excited. The train puffed and snorted into the station and the platform was soon bright with blue uniforms and clanking sabres.

There was the "Gran Capitan." Inez ran forward to meet him, extending both hands as welcome. The captain took but one of them.

"Ah, Inez, delighted to see you," he said. Turning to a beautiful girl by his side, he continued, "Alice, this is the Senorita that I was telling you about."

"This is my wife," he added to Inez. "We were married yesterday. You—both of you, must be good friends."

"Oh," murmured Inez stiffly, "I am—glad—to meet—your wife.

The words choked her and she hurried away to hide her chagrin.

The next issue of the weekly Clangor, a newspaper of Santa Cruz, and, in fact, the only paper of southern New Mexico, contained the following announcement:

"We take pleasure in announcing that the bans have been published for the marriage of Don Senor Juan Dorado and Senorita Inez Alvaro. The Senor is one of our prosperous Spanish citizens, while the Senorita is considered the belle of Santa Cruz. We wish them luck."

GROWTH OF THE TELEPHONE.

Number of Messages in 1904 Estimated at 5,000,000,000.

From a modest beginning, twenty-five years ago, to the place which the telephone occupies in the world's life to-day, says Cent Per Cent, is a growth of which the mind can form no adequate conception from mere figures, but it is a low estimate to place the number of messages exchanged in the United States in 1904 at 5,000,000,000, for that was the amount of 1902. The Cleveland Finance cuts that number in half in order to exclude all but business messages, and then estimates the time saved on 2,500,000,000 messages, over all other forms of communication, at ten minutes each, in order to ascertain the amount of time saved in the year 1902, and reaches a total of 25,000,000,000 minutes, or 416,666,666 hours, or 17,361,111 days, or 4,830 years.

The profits on the telephone business in America are placed approximately at the annual figure of $50,000,000, one-half of which at least will be saved by the semi-automatic telephone exchange that is now being introduced; but in order to get a just conception of the value of such an invention, we must add the enormous amount of additional time which will be saved at each end of the line, that is, by the doing away with the services of so many operators in the exchange, and the elimination of the now necessary waiting by the subscriber in his office.

Is Life Worth Living.

Is life worth living? How can you
Look up into yon skies of blue,
In heaven's sunshine smile and bask,
And such a question dare to ask?

At blossom time, how can you hear
Blithe messengers with notes, high, clear,
From branch and bough proclaim His might,
Without a thrill of glad delight?

How can you know the gentle press
On cheek and brow of wind's caress,
And not within your bosom feel
An earnestness, a new born zeal?

Is life worth living? How can you
Gaze lovingly in eyes so true,
And not within their depths behold
The light that blends each hour with gold?

How can you, the one's who wear
The crown of motherhood, bright, fair,
Re-query thus, when 'gainst your breast
Two little Warm, red lips are pressed?
—Kathleen Kavanagh in New Orleans Time-Democrat.

Fighter Fond of Candy.

Melton Prior, the London war correspondent, says Gen. Fukushima is one of the hardest workers in the Japanese army, neither smokes nor drinks and has an unconquerable love for sweets. Mr. Prior called upon him to protest against the manner in which correspondents were being kept away from the fighting line. The general mildly replied that this was according to strict rules, whereupon Prior lost his temper for a moment and indulged in some emphatic remarks. The Jap warrior looked at him blandly, and with a smile held out a small box, saying: "Have a sweet, Mr. Prior." Whereupon the humor of the situation appealed to the correspondent and a pleasant chat followed.

Plans to Aid Poor Litigants.

Judge A. B. Dissette retired from the common pleas bench of Cleveland last week, his term having expired He intends to devote the remainder of his life to giving legal advice and aid to those who are unable to pay for such service. "Ten years on the bench," he says, "have shown me the necessity of such a practical philanthropy. The poor man undoubtedly is at a great disadvantage in court because of his inability to engage competent counsel, and I know of no way in which a lawyer can do more good than in remedying this unavoidable defect as much as lies in his power."

Countess Is Actress.

Countess Margaret Cassini, niece and adopted daughter of the Russian ambassador to this country, will devote her energies to amateur theatricals in Washington this winter. She is a born actress, graceful, beautiful, clever, with a good voice which she knows how to use, and she has taken up acting with her usual zeal, energy and taste. Her favorite character is Judith, although she is at home in comedy as well as tragedy.

THREE WORDS OF VALUE.

They Cost a Railroad $10,000 and Were Cheap at That.

It has been said on good authority that the highest price ever paid for a writing was given a lawyer in this immediate vicinity, says the Philadelphia North American. A certain railroad company had lost enormous sums of money through damage suits instituted by those injured in grade-crossing accidents. This company had been most particular in the matter of erecting signs at each crossing, but jury after jury decided that these were of small moment, since the warning they conveyed was to "look out for the cars" or "look out for the engine," and in almost every instance it was conclusively proved that the damage was caused by that part of the train not mentioned. So in desperation the railroad commissioned a lawyer of wide depute to compose a sign that would "hold" in court. After some days the following sentence, written on a large sheet of paper, came from the man learned in the law:

"Stop! Look! Listen!"

Following this came a bill for $10,000. So when you hear some long-tongued individual boasting about a dollar a word Mr. Kipling gets, or the surprising sum paid Richard Harding Davis for articles describing the war he didn't see, dismiss the being as a dealer in ant-hills, for the lawyer aforementioned got a check for the amount named, and so far as history enlightens us, no one ever before received so much as $2.500 a word.

Before the end of a year the lawyer was informed by the president of the road that the new sign had saved many times its cost.

"A Wise Woman."

Many women wear thin linen underclothing in winter and then they illogically complain of red noses, enlarged veins in the face, rough, red hands and a dry, ill-nourished skin. Now, the way to maintain a soft, supple skin and a clear and pinky complexion is to keep up a plentiful supply of blood near the surface all over the body. A wise women knows that nothing is more destructive to a lovely skin than cold feet. Therefore, even if she indulge in the vanity of spun silk or perforated hose, she uses cork soles in her shoes so as to keep up the circulation of the blood, upon which the skin depends so largely for its softness and luster. Lack of warmth in the abdomen leads to a congested state of the liver and the huge network of blood vessels which control the supply of nourishment to the skin are situated in the abdomen. The middle of the body should be kept warm and free from the chills which cause contraction of the blood vessels. —Chicago News.

Congressman's Strenuous Fight.

Congressman Van Duzer of Nevada holds that about the most strenuous contest last fall was that waged in his district. His political enemies engaged a New York pugilist to scare him out of the campaign, and the man made haste to announce that he intended to "wipe Van Duzer off de eart'." The candidate arrived in Reno ignorant of the fellow's existence and was welcomed by a lot of friendly miners. Two of them, each of them over six feet tall and neither afraid of anything, walked with him to his hotel, where the fighting man was waiting. The miners passed Mr. Van Duzer into his room and then went over to where the "scrapper" stood. He looked them over carefully and then backed away. The next train East carried him out of danger.

The Maid's Lament.

I loved him not; and yet, now he is gone,
I feel I am alone.
I checked him while he spoke; yet could he speak,
Alas! I would not check.

For reasons not to love him once I sought,
And wearied all my thought
To vex myself and him; I now would give
My love, could he but live
Who lately lived for me, and, when he found
'Twas vain, in holy ground
He hid his face amid the shades of death!

I waste for him my breath
Who wasted his for me; but mine returns.
And this lone bosom burns
With stifling heat, heaving it up in sleep,
And waking me to weep
Tears that had melted his soft heart; for years
Wept he as bitter tears!

Merciful God! such was his latest prayer,
These may she never share!
Quieter is his breath, his breast more cold
Than daisies in the mould,
Where children spell, athwart the churchyard gate,
His name and life's brief date.
Pray for him, gentle souls, whoe'er you be,
And, O, pray, too, for me!
—Walter Savage Landor.

Heiress Fine Candy Maker.

In the slightly improbable event that Miss Gladys Vanderbilt, already popular among New York's debutantes of the season, should ever find herself in an impecunious condition, she would be able to make a fair living as a bonbon cook. Every school girl can make taffy of course, but the Vanderbilt bud named looks on that as a rudimentary affair. She is learned in the construction of nougats, cream almonds, chocolate creams, caramels and even candied fruits, all of which she is able to manufacture with the skill of a French confectioner. And she delights in preparing such confections, the result being that her chums revel in all sorts of toothsome things without squandering their allowances in sweetshops.

Lese Majeste.

In Tilsit, Prussia, a man who had used a derogatory expression about the Kaiser was denounced to the police by his fellow-workmen and has been sent to prison for two months.

Draft Long Mislaid

For fifteen years and more a draft for $50 has rested in seclusion among the papers of the late Jacob Kreiss, in Cardington, Ohio. Meanwhile a Kansas farmer watched and waited and could not understand why the money he had sent for did not come. The draft was delivered Thursday in Goshen to Attorney J. G. Gattschall, a brother of the man for whose benefit it was originally issued.

Wayne Gattschall in 1884 went from Ohio to Kansas to farm. The drought cleaned him up. Want stared him in the face. He wrote to Warsaw to J. B. Gattschall, his borther, for $50. The compliance was immediate. He wrote to Ohio to his aged mother and asked her also to send him $50. The mother gave J. Kreiss the amount. He went to the First National bank in Cardington, Ohio, and bought a draft of F. B. Hills, the cashier. But the man in Kansas received not the money. The assistance sent from Warsaw never reached him and he has never seen the draft issued in Cardington.

In 1897 the aged Mrs. Gattschall died, and the children came from their homes in other states to attend her funeral. Wayne Gattschall and them. J. B. Gattschall reached bedside before the mother died. she wanted Wayne charged in set up her estate with $50 that she advanced. J. B. Gattschall was pointed administrator.

He spoke to Wayne about the The Kansas man insisted that he never received it. J. B. Gatts paid the amount out of his own po But the Kansas man wanted the ter settled in the courts.

Two weeks ago J. Kreiss, the n bor who bought the draft. Among his papers was found a J. Kreiss had forgotten to s The $50 sent from Warsaw by J Gattschall was stolen by a post clerk who was sent to the peniten for other thefts. Wayne Gat was notified of the discovery of draft and his happiness at the ing up of the matter is complete. after years of coldness the fam reconciled.—Columbus Evening patch.

Travel Stopped by Mu

"About twenty miles north of Jujuy, in the Argentine Republic, there is a place locally known as El Volcan," writes a traveler. "It is reputed to be a mud volcano, flowing across and down the valley. As I passed I examined it with some interest, but found it was not a volcano at all. There the valley was about one and one-half miles wide. To the left or west there was a chain of hills, rising perhaps at their highest point 2,000 feet above the river bed. One of the highest of these peaks, a very massive mountain on the eastern side, was mainly composed of fine, pasty, argillaceous matter that in wet weather held water like a sponge. The side of the mountain nearest the valley had broken away and slid through a somewhat narrow gorge into the main valley and poured its flow of mud completely across it. Always in wet weather vast masses of this stuff slide down the hollow, conelike sides of the mountain into the valley, and, together with millions of tons of the mud already in the valley, all take up water and tremble and shake with the vibration like a jelly on a hot day

"Of course, while in that cond the bed of the valley is quite im able. The mud-slide can only be ed by keeping up the hillsides, o extremely difficult and very br road situated on the opposite sid the valley. Usually no one atte to travel while the mud-slide is bad condition. The place pres some terrors to the natives, and w tales are told about the sudden with which the volcano works; if the tales be analyzed they wi found to be connected with he rainfalls.

"Long after the surrounding c try is quite dry this spot retains moisture. The damp mist that the valley with greater or less sity, according to the amount of n ure drying out of the mud-slide is erally referred to as smoke from volcano. But there is no volcano this I was fully satisfied after ri over the mud-slide and examining mountain sides with a powerful g from a distance of about a mile

Tobacco a Good Poultic

"Last summer I was taking a spin one day in a light trap out in the country, and in attempting to pass a farmer's wagon on a narrow road my trap was overturned and I was thrown heavily to the ground, sustaining a badly sprained ankle," George Maxwell says.

"The farmer came running up to assist me and when he found what was the matter returned to his wagon and came back with a few tobacco leaves under his arm. 'If you'll let me make a poultice out of these and place it on your ankle it will be all right in the morning,' he said, and as I was about five miles from a doctor's office, with the pain in my ankle something fierce, I told him to go ahead. It couldn't do me any harm, I thought, and it might have a slightly cooling effect while I was driving back to town.

"He dipped the leaves in the water of a creek near by, then bound them tightly around my ankle, with the aid of a handkerchief, and assisted me into my vehicle. When I reached my rooms I was surprised to find that the pain in my ankle was much lesse and decided to give the poultice a trial. In the morning when I aw there was absolutely no pain in ankle whatever and only the slight suggestion of a swelling. I was a to don my shoes without trouble that day attended to business as nothing had befallen me.

"Since then one of my friends s fered a sprain and consented to h a leaf tobacco poultice applied wh resulted in his case just as it did mine. I have also tried it in ot instances of slight injury, where th was pain and danger of swelling, have found that invariably it relie the pain within a remarkably sh space of time and generally preven any swelling. A friend of mine cla to have tried it with good results a slight attack of rheumatism an have no doubt that it actually did w he claims for it, but, at any rate, sprains or similar injuries I am no firm advocate of the simple, hom remedy to which I was introduced my accident in the country a months ago."—St. Louis Globe-Dem crat.

Odd Bets on Electio

Several very peculiar bets, which were made in this county as to the outcome of the recent elections, have come to light, and not a little inconvenience is being occasioned the losing party in some instances. Here is one, that the Liberals should not get a majority in the Maritime provinces. A young man agreed with his friends to use a hemp sack as a night shirt for one week. If the other lost he was to lie down for the same length of time. The young man with the hemp pajamas is down with nervous prostration, but the doctor hopes to save his reason if election is not spoken of in his hearing for the next five years.

Another young man got stuck on the whole Dominion, and was obligated by his agreement to carry a rat in his pocket for nine days. There was nothing said as to whether it was to be a live rat, but as cold storage was, under the circumstances, out of the question, a carcass seemed likely to prove objectionable. The rat showed itself a veritable "Brindamour," and could not be kept muzzled or handcuffed. Finally a small cage was vised which, worn in a specially structed pocket, lends the appeara of a mammoth tumor to a limb oth wise Apollo-like in symetry of m

In yet another instance two yo men of contrary political opini who were paying attention to same girl, and found each other dre fully in the way, agreed that the whose party lost in the election sho give ground and allow the other clear field. Up to that time the ject of their regard had shown ab lutely no preference. The young L eral on the night of the election tu ed up smiling, but found her sy pathy with the banished Conserva and that he could make no head with his suit. Revealing, in an guarded moment, the compact ente into between the two, he was prom ly ordered to the right about for m ing her favor the subject of a Now neither of the lovelorn you venture near the house, except night, when they watch the shadow their lady love as it flickers on window shade.—Halifax Mail.

Loved Ones Gone Befor

O hearts that never cease to yearn!
O brimming tears that ne'er are dried;
The dead, though they depart, return
As though they had not died!

The living are the only dead;
The dead live—nevermore to die;
And often, when we mourn them fled,
They never were so nigh!

And though they lie beneath the waves,
Or sleep within the churchyard dim,
(Ah! through how many different graves
God's children go to him!)

Yet every grave gives up its dead
Ere it is overgrown with grass;
Then why should hopeless tears be shed,
Or need we cry, "Alas"?

Or why should Memory, veiled in gloom,
And like a sorrowing mourner draped
Sit weeping o'er an empty tomb,
Whose captives have escaped?

'Tis but a mound—and will be mossy
Whene'er the summer grass appears
The loved, though wept, are never lo
We only lose—our tears!

Nay, Hope may whisper with the dead
By bending forward where they a
But Memory, with a backward tread,
Communes with them afar.

The joys we lose are but forecast,
And we shall find them all once mo
We look behind us for the Past,
But lo! 'tis all before!

$100 Reward. $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials. Address

THE PULPIT.

A BRILLIANT SUNDAY SERMON BY THE REV. A. C. DIXON, D. D.

Subject: The Book of Wisdom.

New York City.—The following sermon was contributed to the Union Gospel News by the Rev. A. C. Dixon, D. D. It is entitled "The Book of Wisdom," and is an appreciation of Proverbs. He took for his text, "The proverbs of Solomon, the son of David, king of Israel." Proverbs 1:1.

To preach a sermon on the whole book of Proverbs may be a difficult task, but I shall attempt it this morning in order that, if for no other reason, I may impress upon you the importance of reading the whole book at a sitting.

If we should read a part of a friend's letter and another part to-morrow, and another part the next day, we should have at the close a very confused notion of what he had written to us. The method which many have of reading the Bible by piecemeal may impart important instruction, but it does not give us the setting of the books nor a view of the Bible as a whole.

Readers of fiction think little of sitting up late at night that they may finish a thrilling story. If the lovers of God's Word would spend the same time reading it consecutively they would find it more thrilling than any book of fiction.

To a superficial observer, reading the book of Proverbs may be like reading the dictionary. The subject changes so often. And yet there is a plan in the book which a closer study shows to be an orderly arrangement.

The first nine verses are the preface, in which we have the use of proverbs. They enable us to "know wisdom and instruction, to perceive the words of understanding, to give subtlety to the simple, to the young man knowledge and discretion." If he hears and heeds then they will be an ornament of grace unto his head and chains about his neck. Each proverb is a jewel of wisdom more precious than rubies.

From the tenth to the nineteenth verses there is described the socialism of sin, and the young man is warned against it. "My son, if sinners entice thee, consent thou not." If they say, "Cast in thy lot among us, let us all have one purse;" "Walk not thou in the way with them; refrain thy feet from their path; for their feet run evil, and make haste to shed blood." The social element in sin is one of its most dangerous features. The habit of social drinking has made many a drunkard. The social nature carries the young man to the saloon, the pool room, the gambling den, and entices him to destruction. Men and women go in flocks like sheep to the slaughter, and, when one tries to escape, the social nature becomes a lasso with which Satan drags his victim to the slaughter pen. It is so hard to tear away from congenial company. The social club has wrecked many a Christian for time and eternity. Watch, therefore, against the socialism of sin. When sensualists say, "Cast in thy lot among us, let us all have one purse," go the other way. Such a community of goods means a federation of death, which sooner or later will lead to destruction.

Beginning with the twentieth verse of the first chapter there is revealed to us the mission of wisdom. Many expositors believe that wisdom here refers to Christ, as He "is made wisdom for us." And He is certainly the incarnation of wisdom. But the simplest and most natural definition of wisdom, as it seems to us, is common sense. Common sense crieth without, she uttereth her voice in the street; she crieth in the chief place of concourse, in the openings of the gates. Wherever a man goes his common sense appeals to him to fear God and keep His commandments.

If he refuses he will sooner or later see his mistake, and the Common Sense that called upon him will laugh at his discomfiture: "Because I have called, and ye refused; I have stretched out my hand, and no man regarded; but ye have set at naught all my counsel, I will also laugh at your calamity, I will mock when your fear cometh."

I do not believe that God in this passage is represented as laughing at the calamity or mocking at the fear of anyone. Our Common Sense laughs at us and mocks us when distress and anguish come upon us. We saw what we ought to have done and did it not. We appreciate opportunities lost, never to return, and in such a condition we call upon our Common Sense, but get no answer, for it has no remedy to supply. We seek the resources of wisdom, but we cannot find them, for that we hated knowledge and did not choose the fear of the Lord. "Therefore they shall eat of the fruit of their own way and be filled with devices." The mission of wisdom calling to us from every quarter, is to lead us to do right, to trust God and walk in His ways, and if we fail to hear this voice and heed its counsels there will come a time when this very wisdom will be our greatest distress.

The first eighteen verses of the third chapter establish the fact that godliness pays, even though chastisements come with it. And this chapter furnishes a motto which every Christian ought to adopt as the rule of his life: "Trust in the Lord with all thine heart, and lean not unto thine own understanding. In all thy ways acknowledge Him, and He shall direct thy paths. Be not wise in thine own eyes; fear the Lord and depart from evil. It shall be health to thy navel, and marrow to thy bones. Honor the Lord with thy substance, and with the first fruits of all thine increase; so shall thy barns be filled with plenty, and thy presses shall burst out with new wine."

The man whose trust is in the Lord, with entire lack of confidence in himself, God will direct, and the man who honors the Lord with the first fruits shall have an increase of wealth. This, of course, applies to the Old Testament dispensation, when wealth was the result of faithfulness. But under the reign of grace there is something better than money promised. There may come poverty and persecution, and with this true prosperity. We are not to expect pay in money for services rendered to God, but if we are faithful we can plead the promise that He will "supply all our need according to His riches in glory by Christ Jesus."

With this four-fold introduction as to the use of proverbs, the socialism of sin, the mission of wisdom, and the reward of godliness, we now come to a classification of the proverbs. It is not exhaustive, but I think it will be suggestive and enable us to finish the classification as we carefully read the book.

The application of the Proverbs of Solomon to the family life will make a perfect home. "He that spareth the rod hateth his son, but he that loveth him chasteneth him betimes." Modern sentimentalists pronounce this old-fogyish, and inveigh against its cruelty, but you will notice that the homes in which disobedience has become associated with punishment, and disobedience with reward, send forth into the world the manliest sons and most womanly daughters. To refuse to administer loving chastisement to a child is to train him in a life of disobedience that will unfit him for citizenship in the State or usefulness in the church.

Let there be no anger, for anger only provokes anger. Love can administer chastisement with regret and tears, but it must not shrink from the duty.

"Keep thy heart with all diligence, for out of it are the issues of life." This proverb expresses the teaching of Jesus Christ. The heart is the source of good or evil, and if the heart is right the life will be right. Let Jesus Christ fully occupy the heart, and you may be careless about everything else. Over the archway in the old Tombs prison in New York were the words: "The way of transgressors is hard," and every criminal who passed beneath it needed no argument to prove its truth.

On the walls of every store should be hung the words: "A false weight is abomination to the Lord, but a just weight is His delight." Our God believes in fair dealing. The man who gives good measure pleases Him; and we need to know that honesty in trade is as holy a thing as prayer.

And when you hear anyone laughing at an oath, a vulgar remark, or a wicked deal, quietly repeat the words: "Fools make a mock at sin." The man who plays with the poisonous adder is wise compared with him who sports with sin or treats it lightly.

If you are tempted to surrender your convictions in order that you may further your interests, social or financial, recall the words: "Buy the truth and sell it not." They will give stiffness to your moral backbone and stamina to your character. No man can afford to hold the truth for sale. It is the most priceless thing that he can possess, and whatever the father of lies may offer him for it, he should scorn the price with contempt.

There are so many of these that barely to mention them would take the time of a sermon. "A merry heart doeth good like a medicine." If, therefore, you would save the doctor's bill, be merry in heart, and if you have true heart merriment, let Christ the Lord of joy reign there. Link with this proverb its opposite: "He that loveth pleasure shall be a poor man." The pleasure-seeking spirit brings poverty of soul and purse. The man and woman whose sole object in life is to have a good time rarely have a merry heart. Their laughter is hollow, because their very pleasures have become a burden. "The fear of the Lord prolongeth days." If, therefore, you wish to live to a ripe old age, cultivate the fear of God, which will cast out all other fear. "He that walketh uprightly walketh surely." The position of stability is not in prostrating yourself, or crawling, or creeping after the world's fashion, but in the upright walk of a manly, conscientious life.

The man who has wandered from God needs only to hear the words: "The backslider in heart shall be filled with his own ways," to realize that they apply to him. God's way is the way of light, peace and joy. Our way without God is the way of darkness, turmoil and despair. The backslider who has turned from God's ways to his own ways is truly to be pitied. When our hearts seem unprepared and our tongues are not right for service, let us recall the fact that "The preparation of the heart and the answer of the tongue is from the Lord." We will then give the heart to the Lord that He may prepare it, and surrender the tongue to him that he may use it.

And then we will experience the truth of the other proverb, "Whoso trusteth in the Lord, happy is he." And in hours of conscious weakness we will repeat with triumph, "The name of the Lord is a strong tower, the righteous runneth into it and is safe."

All these proverbs make a mosaic of rare beauty. They form the parts of an oratorio, every note harmonizing with every other note, and filling the life with sweetest music. And yet we may be saved the trouble of committing them all to memory and remembering them in emergencies, if we will but realize that Jesus Christ, who is the truth, lives and is with us every day.

If we need wisdom, we ask Him and He gives liberally. If we are tempted, we turn to Him for succor. If we are weak, we rely upon Him for strength, and after every conflict we can say, "Thanks be to God who giveth us the victory through our Lord Jesus Christ."

Prayer a Mighty Power.

There are those who ridicule the idea that prayer can actually accomplish anything, because they cannot understand how prayer can either affect God's action or change in any way the current of events on earth. Such reasoning is extremely shallow. The wisest man cannot tell the why or the wherefore of some of the commonest facts of natural science; is it not childish then for any man to undertake to limit spiritual truth by the measure of his capacity to see the reason for it or the reasonableness of it? Facts are facts whether they agree with any system of logic or not. And the fact that prayer is a mighty power is attested by abundant and incontestable facts.

Watch For Opportunities.

Watch, lest those duties of kindly benevolence which God puts in the way of all be left unnoticed, unfulfilled, while each one doubts whether it can be his business to step forward and meet them. Watch, for we know not how soon our means of earthly usefulness, our opportunities for faithful service of God on earth, may end.—J. Edwin Odgers.

Be True to the Best.

There is but one failure, and that is not to be true to the best one knows.—Dean Farrar.

DANGERS TO BE AVOIDED IN FEBRUARY.

Intense Cold Breeds Catarrh. **Sudden Changes Breed Catarrh.**

February is a month of severe storms and intense cold.

Even in the South where the prevailing temperature is much above wintry latitudes, February brings sudden changes of temperature.

Mercury sometimes drops 20 degrees in a single night.

Therefore, the following health hints are applicable to the whole of North America:

Ventilation.

The sleeping rooms should be well ventilated, but so as to avoid direct currents of air.

Bathing.

Those in vigorous health should take a cold water towel bath every morning before breakfast. Those in feeble health should take a brisk dry-towel-rub every morning.

Diet.

The diet should be a generous one, including meat, and occasionally fresh vegetables.

Sunshine.

The nights being long and the days short, as much sunshine as possible should be let into the house during the day.

Clothing.

The head should be kept cool at all times. The feet should be kept warm and dry, day and night.

Pe-ru-na.

When unavoidably exposed to cold or wet, a few doses of Peruna will avert bad consequences.

Precaution.

When seized with a chill, or even slight chilliness, a dose of Peruna should be taken at once.

As much sleep as possible should be obtained in the forepart of the night.

Catarrh of Head.

Mr. Frank Cobb, 175 Summit Street, Deering, Me., writes:

"I was troubled with catarrh in my head. I wrote to Dr. Hartman for advice and he prescribed Peruna.

"I took it and am happy to say it helped me at once. I feel better than I have for years."

Bronchial Trouble.

Mr. J. Ed. O'Brien, Pres. American Pilot Ass'n, Pensacola, Fla., writes:

"I heartily give my endorsement to Peruna as an effective cure for catarrh and bronchial trouble."

Throat and Lungs.

Frank Battle, Jr., 111 N. Market St., Nashville, Tenn., writes:

"Peruna has cured me of chronic bronchitis.

"It is the grandest discovery of the age for the throat and lungs."

Pneumonia.

Mr. A. C. Danforth, St. Joseph, Mich., writes:

"I contracted a severe cold, which settled on my lungs. I was threatened with pneumonia.

"Peruna gave me relief within a couple of days. Three bottles saved me a large doctor bill and a great deal of suffering."

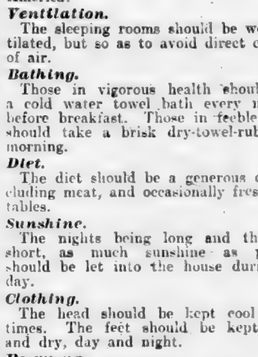
Thousands of Testimonials.

We have on file thousands of testimonials like the above. We can give our readers only a slight glimpse of the vast array of unsolicited endorsements Dr. Hartman is constantly receiving.

Address Dr. S. B. Hartman, President of The Hartman Sanitarium, Columbus, O.

Truths that Strike Home

Your grocer is honest and—if he cares to do so—can tell you that he knows very little about the **bulk** coffee he sells you. How *can* he know, where it originally came from, how it was blended—**or with what**—or when roasted? If you buy your coffee loose by the pound, how *can* you expect purity and uniform quality?



LION COFFEE, the LEADER OF ALL PACKAGE COFFEES, is of necessity uniform in quality, strength and flavor. For OVER A QUARTER OF A CENTURY, LION COFFEE has been the standard coffee in millions of homes.

LION COFFEE is carefully packed at our factories, and until opened in your home, has no chance of being adulterated, or of coming in contact with dust, dirt, germs, or unclean hands.

In each package of LION COFFEE you get **one full pound** of Pure Coffee. Insist upon getting the genuine. (Lion head on every package.)

(Save the Lion-heads for valuable premiums.)

RATI NAL VIEW OF EATING.

DISCOVERY OF SANER IDEAS CONCERNING DIETS.

The Dickens Era of Gorging With its Tendency to Premature Death, Happily Gone by—Human Body Maintained Upon Small Amount of Food.

Few things can be more curious than the change which has been passing over the public mind in the course of the last few years with reference to food and feeding, says The Hospital. Much has been made from time to time of the tendency to glorify intoxication which rollicks through the pages of Dickens, while it has to some extent escaped notice that his types of character are as a rule quite as much given to over-eating as to overdrinking, and that the meals at Manor Farm are as much in evidence as the beverages. Underlying the whole fabric of his fiction is an assured belief that to eat a great deal of food is an action not only meritorious in itself, but certain to be rewarded by good health, high moral tone and enhanced physical vigor; and it is not too much to say that these were the prevailing convictions of the time in which he lived.

The late Sir Henry Thompson, in the interesting volume upon "Food and Feeding," which has now passed through many editions, was among the first to insist forcibly upon the fact that the amount of food consumed should be much diminished in advancing life, and Prof. Clifford Allbutt has lately written to the Times, on his return from a tour in America, to say that wholly new ideas about diet are beginning to prevail there, and that American men of science have obtained demonstration of the fact that the amount of food consumtual requirements of the body is a source of weakness instead of a source of strength, nervous force which might be better employed being consumed in its partial digestion and in its ultimate removal from the system. He tells us that this is especially true of nitrogenous material, while hydrocarbons can be burnt off in respiration with comparative facility.

A considerable amount of evidence has lately been brought forward from one source and another tending with remarkable uniformity to show that the human body can be maintained in full vigor and activity upon a much smaller amount of food than is usually consumed, and the question is one which calls for the serious attention of physicians and physiologists. It has unfortunately been very much left up to the present time in the hands of minorities who may without gross exaggeration be described as faddists, and hence it has not received the consideration due to its manifest importance.

A non-medical contemporary has lately described a "vegetarian Christmas dinner," held at a restaurant in Furnival street, as "a strange and horrible orgy," apparently on no other ground than that no meat entered into its composition, and predicted that its chief effect upon the guests would be "an exceptional display of vigor in attacking chops and steaks" on the following day. We can feel for the distresses of a writer who is compelled to furnish his daily tale of "copy" without assistance from the very binding form of straw which is commonly denominated knowledge, but where was the editor? The question of the kind of food consumed is, however, a different one from the question of quantity, and our present object is to suggest that the majority of people eat a great deal too much, and fall short of their highest attainable standard of mental and bodily activity in conquence. There must obviously be a limit to the needs of the body, and when the supply exceeds this limit it must obviously be removed or disposed of in some way.

It can scarcely be doubted that the American view quoted by Prof. Clifford Allbutt is essentially correct, and that the disposal of the superfluity is a tax upon the organism by which it is effected. It is at least not doubted that the period of gorging, of which the Dickens era was perhaps the termination, was also a period of premature decease among the well-to-do, or that a great increase of longevity has been a characteristic of more recent times. Fifty years ago an octogenarian able to take part in the activties of life was at least regarded as a remarkable exception to the common rule; today this position could hardly be sustained.

AMERICANS WILL HAVE BEST BRAINS.

Dr. Spitzka Says Mixture of Races Will Bring That Result.

That future generations in the United States will probably possess the largest and best brains of all mankind was the interesting suggestion made before the American Association for the Advancement of Science by Dr. Edward A. Spitzka, fellow and anatomical demonstrator at Columbia University, New York. Dr. Spitzka said:

"Nowhere in the world is the mixture of races—chiefly the Teutonic, Celto-Roman and Savonic—going on so actively as in this country. If we may judge from the present indications of the formation of an American family of the Aryan race, the conditions governing the population of this continent seem to have been peculiarly advantageous to the preservation and restoration of the best types, characterized by greater energy, motility, and culture. We may, therefore, expect to find bigger and better brains here, eventually, and researches of this kind should be encouraged by a greater accumulation of the requisite material."

Dr. Spitzka, as he spoke, displayed in jars the brains of the six scientists spread out before him. These scientists who willed their mental seats of thought and wisdom to the cause they long had served were Dr. Philip Leidy, Prof. Joseph Leidy, Dr. A. J. Parker, Prof. Harrison Allen, Prof. E. D. Cope and Dr. William Pepper.

Dr. Spitzka adduced a new cerebral theory when he said:

"The relative importance of the white and gray matter is often misunderstood. Were it not for the manifold connection of the nerve cells in the cortex by the tens of millions of fibres which make up the underestimated white matter, such a brain would be useless as a telephone or telegraph station with all interconnecting wires destroyed."

Dr. Spitzka also handled and discussed the brains of criminals. He ridiculed the idea that the criminal brain was of a decidedly different type from that of the ordinary mortal. "In all brains," he said, "there are certain variations due to the personality of the individual, and this is especially to be noted in the brains of the great scholars. Persons possessing great intellect and a capacity for excelling in the creative arts and also in the sciences are generally likely to have heavier brains than the ordinary individual. Arguing from this we might expect to find a corresponding lightness in the brain of the criminal, but this is not always the case, and one might just as well set up a type of brain individual to insanity as to set up a 'criminal type.'

"Many criminals show not a single anomaly in their physical or mental make-up, while many persons with marked evidences of morphological aberration have never exhibited the criminal tendency.

"Every attempt to prove crime to be due to a constitution peculiar only to criminals has failed signally. It is because most criminals are drawn from the ranks of the low, the degraded, the outcast, that investigators were ever deceived into attempting to set up a 'type' of criminal. The social conditions which foster the great majority of crimes are more needful of study and improvement.

"From the study of known normal brains we have learned that there is a certain range of variation. No two brains are exactly alike, and the greatest source of error in the assertions of Benedict and Lombroso has been the finding of this or that variation in a criminal's brains, and maintaining such to be characteristic of the 'criminal constitution,' unmindful structure may and do exist in the brains of normal, moral persons. It were as justifiable to set up a 'criminal brain type' as to speak of an 'insane brain type, and the classes of criminality are quite as numerous as the kinds of insanity."

Superfluous History.

The family considered it a fine thing when young John Robinson was sent to Korea to represent the principal daily paper in his State. His relatives gave him much advice, many parting injunctions and numerous keepsakes.

Just before John started for the train his stately old grandfather said, in his deep, sonorous voice, which always made everything doubly impressive:

"My boy remember you are going to make history. That the words you send to your paper will go down to future generations a part of the history of this war between Russia and Japan; so weigh your words well."

All the members of the family were tearful at the moment of John's departure, but small Katherine, aged ten, wept so uproariously that the others forgot their own grief in attempting to assuage her's.

"Don't cry, dear," comforted her older sister. "John is such a cautious chap that he'll be sure to take good care of himself. It probably won't be long, either, before he's home againg, simply covered with glory."

"'Tisn't John I'm worried about," sobbed Katherine. "It's that horrid old history that he's gone to make. There's more history now than I can learn!"—New York Tribune.

Antipathies of Animals.

The circus actor sat in the winter training quarters. Under his supervision a thin boy was learning to ride erect on a quiet horse with a broad, flat back.

"In some towns they won't let us show," said the man, "unless we have no camels with us. Camels are a serious drawback to shows. Horses are so much afraid of them that lots of towns won't let a camel enter their gates.

"A horse won't go near a piece of ground a camel has stood on. The very smell of a camel in the air will make a horse tremble and sweat. And this fear isn't only found occasionally in a horse here and there. It is found in every horse all over the world. Queer, isn't it? I often wonder why it is. Cattle hate dogs in the same way, and cats hate dog so, too. Here, though, we can account for the hatred. Dogs in primitive times fed on cattle, no doubt, and even today, here and there, they kill and feed on kittens.

"Horses love dogs. I'm sure I don't know why. Dogs fear no animals but pumas and leopards. You can take a dog up to a lion's or a tiger's cage, and he will show no fear; but take him up to the cage of the puma or a leopard and he will tremble and moan and slink away out of sight.

"All very puzzling, isn't it?"—Philadelphia Bulletin.

CONGRESS COUNTS VOTES

Declares Roosevelt and Fairbanks to Be Officially Elected.

DESCRIPTION OF THE CEREMONY

Much Hilarity Among Senators and Representatives During the Reading of the Credentials—Both House and Senate Meet Jointly—Mrs. Roosevelt, Son and Daughter Present.

Washington, D. C.—Assembled in joint convention, the two Houses of Congress observed the last formality required to assure the election of Theodore Roosevelt to the Presidency and Charles Warren Fairbanks to the Vice-Presidency. They canvassed the votes cast by the so-called electoral colleges. That is, a committee of Senators and Representatives solemnly read the official documents declaring the facts known on the evening of Election Day.

The ceremony was begun at 1 o'clock in the afternoon, Senator Frye, in accordance with the terms of the statute, occupying the chair, with Speaker Cannon on his left. He announced that unless there was objection the reading of the formal parts of the credentials would be omitted. There was none.

"If there is no objection," said Mr. Frye, "the chair will now open the credentials from the State of Alabama, and the tellers will count and make a list of the votes from that State." There was no objection, but Mr. Frye had forgotten to announce the tellers. An awkward pause occurred at that point and continued until Mr. Frye ordered the tellers to come forward. His admonition brought Senators Burrows, of Michigan, and Bailey, of Texas, and Representatives Gaines, of West Virginia, and Russell, of Texas, to the clerk's desk.

Cries of "Louder!" greeted the effort of Senator Burrows to announce that "the credentials of the State of Alabama appear to be regular in form and duly authenticated." When Senator Bailey, in a rich, clear and sonorous voice announced the vote of Arkansas there was a scattering round of applause.

At the announcement that Maryland cast one vote for Roosevelt there was spirited applause, but there was a greater volume of hilarity when it was proclaimed that the State cast seven votes for Parker and Davis.

A prolonged demonstration occurred when the vote of Missouri was read and recorded. The reading fell to the lot of Representative Gaines. As soon as he announced that the State voted for Roosevelt, the Republican Representatives applauded with great vigor. The Senators sitting to the right of the presiding officer, as required by law, looked on with amazement written on their faces. Representative Loudenslager pounded the desk in front of him so as to make a din that could be heard above a cackling laugh coming from the vicinity of Representative J. Adam Bede.

The demonstration was renewed when the votes for Fairbanks were proclaimed. By this time the manifestation had become so boisterous that Theodore Roosevelt, Jr., sitting with his mother and aunt, Mrs. W. S. Cowles, and sister, Miss Alice, in the first row of the Executive gallery, permitted himself the luxury of a smile that by easy stages in a very short time overspread his entire face. Before that time he had been the most solemn faced person in the crowded galleries.

At 1.45 p. m., forty-five minutes after the convention was called to order, the canvass was finished. Then Mr. Frye said: "The credentials of all the States have been read. The tellers will now make final ascertainment of the result and report the same to the president pro tempore of the Senate."

Five minutes later Senator Burrows reported to President pro tempore Frye that of the 476 votes cast Roosevelt and Fairbanks had each received 336 votes and Parker and Davis 140 votes.

Then the presiding officer, after repeating the report made by the tellers, said:

"This announcement by the President of the Senate shall be deemed a sufficient declaration of the persons elected President and Vice-President of the United States, each for the term beginning March 4, 1905, and shall be entered together with lists of the votes on the journals of the Senate and House of Representatives. Gentlemen, the purpose for which this joint convention has been called having been accomplished, the presiding officer dissolves the joint convention. Senators will return to their chamber."

The Senators withdrew, and the House and galleries were speedily emptied.

A GOVERNOR GENERAL.

New Title For Luke E. Wright, Head of Philippine Government.

Washington, D. C.—General Luke E. Wright of Tennessee, is the first American citizen to bear the title of Governor General in the Philippines, the Philippine bill signed by the President, authorizing the change of the title he now holds, Civil Governor of the Philippines. Secretary Taft sent the following cable dispatch to the new Governor General:

"I salute and congratulate the first American Governor General of the Philippine Islands, and wish for him the same success which has attended his administration as Civil Governor."

Heavy Damages For Collarbone.

John J. Harkins, of Montclair, N. J., has sued John H. Kent for $20,000, alleging that Kent built a scaffolding from which Harkins fell and broke his collarbone.

According to Egyptology it took 120 years and $500,000 to build Noah's ark. Thus you will observe that there were grafters even in those days, remarks Puck.

VESSEL FOUNDERS AT SEA

The Furness Liner Damara Goes on Rocks Near Halifax, N. S.

Sinks in Few Minutes, But Two Boatloads of Crew and Passengers Get Off in Safety and Reach the Shore.

Halifax, N. S. — The Furness Line office here was advised of the arrival at Point Pleasant of the missing boat from the steamer Damara, which ran on the rocks at Musquodoboit, thirty miles east of here, early the previous morning. The boat contained Capt. Gorst and four passengers, and ten of the crew. They suffered little ill effects from their experience. The steamer carried thirty-four persons in all. The first officer and eighteen men landed at Pleasant Point the afternoon before after a terrific struggle with wind and sea.

Word was received from Capt. Harrison, marine superintendent of the Furness Line office, who left at midnight on a tug for the scene of the wreck, that the steamer had sunk in ten fathoms of water.

The first officer, H. J. Nuttall, who sent the first news to this city by telephone, said that it was 2.30 a. m. when the steamer struck on the ledges. The weather was thick, with a heavy snowstorm in progress and a gale blowing off the shore. The steamer passed entirely over the ledges, and tore a large hole in her bottom. As soon as she cleared the reefs the pumps were sounded, and it was found that she was making water fast. The pumps were kept going, and it was hoped that the ship would make some point of land where the crew could beach her with safety. This was found impossible, however, as the water gained so fast that the pumps could not keep the steamer free. The water rose rapidly, and the fires were extinguished, so orders were at once given to launch the lifeboats.

Nuttall, with eighteen of the crew, went off in the first boat, and soon afterwards the second boat was put over the side. The captain, four passengers and the remainder of the crew (ten men), entered the boat and pulled off a short distance from the Damara. When they left the steamer there was fourteen feet of water in the hold, and she was dipped heavily by the bow. Nuttall said that it was daylight when they started for the land, and a short time afterward, a snow squall, thicker than any of the preceding ones, shut out their view of the captain's boat. After that they did not catch a glimpse of the liner, which was then on the verge of foundering. When the weather cleared slightly, the steamer was not in sight.

Nuttall said that the men in his boat were so exhausted from cold and hunger that they never would have been able to make the land had not the people of Pleasant Point come to their assistance and dragged their boat ashore. They were cared for by residents of the settlement, who showed them every attention. Two of the engineers were in the boat which made the land.

KING OSCAR UNABLE TO GOVERN

Again Turns Over Authority to Crown Prince, on Account of Illness.

Stockholm, Sweden. — King Oscar, who is seventy-six years old, is indisposed and unable to transact State business. At a session of the Council of State he handed over the reins of government to Crown Prince Gustaf until further notice.

This is not the first time that King Oscar has entrusted the Crown Prince of Sweden and Norway with the government. He was compelled by ill

KING OSCAR OF SWEDEN.

health to do so in January, 1899, and it was reported at the time that the people of Norway and Sweden wished him to abdicate. The King reassumed power in January, 1901, after visiting England and France.

King Oscar was born January 21, 1829. Crown Prince Gustaf was born June 16, 1858, and was married in 1881 to Princess Victoria of Baden. They have three sons.

Navy Refuses Armor Contract.

The Navy Department refused a contract for eight thousand tons of armor plate to the Midvale Steel Company, and gave it to the Carnegie and Bethlehem companies.

Boy Kills Little Sister.

Playing with a rifle, twelve-year-old Alfred Burk, of Tawas City, Mich., killed his ten-year-old sister and seriously wounded a four-year-old playmate.

The Halls of Congress.

The Senate considered the Statehood bill.

The House considered the Postoffice Appropriation bill.

The Postoffice Appropriation bill was under consideration by the House.

Two battle ships are the only new navy vessels to be authorized by Congress this session.

TWO NEW STATES ADMITTED

Oklahoma and Indian Territory Come Into Union as One State.

NEW MEXICO THE OTHER ONE

Debate of Many Hours in the Senate—Amendment Succeeding Amendment to Original Bill Proposed Before a Definite Agreement Could Be Settled Upon—Will Be Known as Oklahoma.

Washington, D. C.—At the end of a continuous debate that lasted almost nine hours, the Senate at 8.45 o'clock at night tentatively added two stars to the American flag by passing the joint Statehood bill admitting Oklahoma and Indian Territory to the Union as one State, to be known as Oklahoma, and elevating New Mexico to the dignity of another State, to bear the name of the present Territory. Arizona was eliminated from the provisions of the bill, so far as statehood is concerned. The action of the Senate must be concurred in by the House before it can become effective.

The long session was characterized by exciting incidents and many surprises. Beginning promptly when it convened at 12 o'clock, the Senate proceeded to consider the various amendments which had been suggested by the Committee on Territories and which had been passed over. One of the first of these taken up was the amendment prohibiting the sale of intoxicating liquors in what is now Indian Territory for the next ten years, and this was displaced with a substitute offered by Mr. Gallinger, which extended the amendment to the entire State for twenty-one years. The substitute was adopted.

The first surprise of the day came when the committee accepted Mr. Foraker's amendment, providing for a separate vote by each of the Territories of Arizona and New Mexico on the Constitution to be adopted by the proposed State of Arizona.

That provision had, scarcely been made a part of the bill, when Mr. Bard presented his amendment, which had been originally offered by Mr. Patterson, and which provided for the admission of New Mexico as a State without the addition of Arizona. This amendment proved to be the point around which all the subsequent proceedings of importance revolved.

It was at first adopted by the close vote of forty-two to forty. This vote was taken when the Senate was sitting in committee of the whole, and was reversed in the Senate proper by the tie vote of thirty-eight to thirty-eight.

Subsequently the Senate decided by a vote of thirty-eight to thirty-six to eliminate New Mexico and Arizona entirely from the bill, and this result had hardly been announced when Mr. Bard, in slightly changed form, renewed his proposition for the admission of New Mexico as a State, and this, in the form of the amendment, prevailed by the vote of forty to thirty-seven. One of the affirmative votes was, however, cast by Mr. Beveridge, in charge of the bill, for the purpose of moving the reconsideration of the vote.

He was prompt in entering this motion as soon as the result was announced, but the motion was laid upon the table by a vote of thirty-nine to thirty-eight. The effect was to eliminate Arizona from the bill and to establish a State of New Mexico and another of Oklahoma and Indian Territory. In this form the bill passed.

The defeat of the Bard amendment in the Senate after it had been adopted in committee of the whole gave rise to some interesting incidents. Mr. Bailey intimated that there had been a "trade" regarding the adoption of an amendment adding a portion of Arizona to Utah.

The Mormon question also received an airing during the day. While the provision for the separate admission of New Mexico was under consideration Mr. Burrows, Chairman of the Committee on Privileges and Elections, announced his opposition to the bill, and stated that it was due to the practice of polygamy in that Territory to such an extent that he considered it unwise to take the administration away from the Federal authorities.

Mr. Dubois, Mr. McComas and Mr. Platt, of Connecticut, referred to the question of polygamy and to the revelations before the committee. The bill originated in the House and will go to conference.

Oklahoma City, Okla.—The announcement that the United States Senate had passed the Statehood bill providing for joint admission of Oklahoma and Indian Territory, created great enthusiasm here. Public demonstrations of rejoicing took place in nearly every city and town of both Territories.

PROCURATOR OF FINLAND SLAIN

Assassin Shoots Czar's Ruler in Helsingfors.

Helsingfors, Finland.—J. M. E. Soisalon-Soininen, Procurator-General of Finland (who before he was ennobled was known by the name of Johnsson), was assassinated by a young man whose identify has not been determined.

The assassin and Soininen's son were both wounded in an exchange of shots immediately afterward.

The motive for the killing apparently was political, the slain official being a prominent member of the Government party.

Labor World.

In Norway there are 232 locals affiliated with the National Federation of Labor.

The Building Trades Council, of Boston, will establish a hospital for consumptives.

There are more than 140 national and international affiliated unions in the American Federation.

During the past year 125 unions have affiliated with the California State Federation of Labor.

KING EDWARD'S NEW

Is of Steel Instead of Silver All Previous Great Se

King Edward, at the meeting of the privy council held the [illegible] Buckingham palace, [illegible] lord high chancellor was [illegible] Great Seal of the Empire, [illegible] place of the one which has [illegible] use for the last 16 or 18 [illegible] which, bearing the heraldic [illegible] the late queen, with her [illegible] effigy, has now been set [illegible] en" or "defaced" by [illegible] has become the perquisite [illegible] chancellor. The last name [illegible] ance with usual custom, [illegible] converted into a salver [illegible] own arms and those of the [illegible]

This is the last occasion [illegible] Great Seal of England can [illegible] to such a use after being [illegible] for the new one which has [illegible] confided by King Edward [illegible] high chancellor is construc[illegible] ly tempered steel, instead [illegible] heretofore. The Great Seal [illegible] of a pair of dies more than [illegible] in diameter, and when made [illegible] these dies were three-quarters [illegible] inch thick. When requiring [illegible] completion of any state dies [illegible] dies are closed, melted wax [illegible] in, and in due time the Great [illegible] ready for attachment. The [illegible] shape of the Great Seal has [illegible] being occasionally devoted to [illegible] uses, and when the eccentric [illegible] Brougham was lord high chan[illegible] the realm he on one occasion [illegible] visiting the Duchess Dowager [illegible] ford in the country, permitted [illegible] silver disks constituting the [illegible] to be used for frying pancakes [illegible] kitchen by some of the young [illegible] bers of the house party.

Yet so great is the importance [illegible] tached to the emblem of the [illegible] ereignty that there are also [illegible] ancient laws, still unrepealed, [illegible] ing for the custody of the Great [illegible] Thus, one old statute declares [illegible] may not be taken out of the [illegible] Kingdom. In fact, one of the [illegible] for which Cardinal Wolsey was [illegible] peached and punished during the [illegible] of King Henry VIII was that [illegible] violated the law by taking the [illegible] Seal out of the kingdom with [illegible] France in his capacity as lord [illegible] and high chancellor. The law [illegible] it high treason to counterfeit the [illegible] Seal, and a lord high chancellor [illegible] allows the Great Seal out of [illegible] custody renders himself liable [illegible] ly to removal from office, but [illegible] to still more serious pains and [illegible] alties.

In olden times the Great Seal [illegible] it went out of use, was broken [illegible] earnest, usually in the house [illegible] by the means of a sledge [illegible] wielded by a sturdy blacksmith [illegible] in these modern times the [illegible] or "defacing" is of a purely [illegible] ical order, and consists in a [illegible] with a small hammer by the [illegible] during a session of the privy [illegible] summoned for the purpose. [illegible] facement" being entered upon [illegible] them to draw nitrogen from the [illegible] and restore it to the soil. Any[illegible] that hastens and increases this [illegible] ency in these plants is of course [illegible] cial.

The fact that Queen [illegible] Great Seal should have been [illegible] til now, despite the fact that [illegible] ward has been on the throne [illegible] four years, is in accordance [illegible] cedent the new Great Seal [illegible] reign being rarely completed [illegible] after he has been on the throne [illegible] several years. It is this that [illegible] considerable uncertainty [illegible] ords of ancient days," since [illegible] years after the demise of a [illegible] they are nevertheless found [illegible] his seal.—New York Tribune.

Gas Versus Electric

The incandescent mantle [illegible] the gas industry, and not only [illegible] it but placed it in such a [illegible] that gas-lighting by modern [illegible] of high-pressure incandescent [illegible] verted burners, and so forth, [illegible] to outstrip electricity for general [illegible] ing purposes. This is no exaggeration [illegible] when we reflect that invariably [illegible] finest streets in the great cities [illegible] Europe are now lighted with [illegible] descent gas burners, and if the [illegible] pressure incandescent lamp [illegible] pared with the electric arc [illegible] some of the busy street crossings [illegible] London there can be no question [illegible] the great superiority of the [illegible] cent gas system. In fact, [illegible] places the electric arc light [illegible] well not be in use in the first [illegible] brilliant penetrating light of [illegible] candescent mantle. This [illegible] gas exhibition held in the [illegible] buildings at Earl's Court many [illegible] incandescent gas burners were [illegible] der pressure with the light [illegible] the electric arc light cannot [illegible] with the brilliancy, steadiness [illegible] trating power or tone. Not [illegible] the large scale alone that [illegible] ously rivalling electricity. [illegible] ed incandescent gas burners [illegible] distinguishable in appearance [illegible] the incandescent electric light [illegible] artistic lighting of domestic [illegible] London Lancet.

Absent Minded.

A minister's wife, a doctor [illegible] and a traveling man's wife [illegible] day recently and were talking [illegible] the forgetfulness of their [illegible] The minister's wife thought [illegible] band was the most forgetful [illegible] ing, because he would go [illegible] and forget his notes and not [illegible] make out what he was trying [illegible] about. The doctor's wife [illegible] husband was the most forgetful [illegible] for he would often start out [illegible] patient and forget his medicine [illegible] and travel nine miles for [illegible] "Well," said the traveling [illegible] "my husband beats that. [illegible] home the other day and patted [illegible] the cheek and said: 'I believe [illegible] seen you before—what is your [illegible] —Brownwood Banner Bulletin.

ch congressman earnestly re- ts every progressive farmer in his ict who is willing to make the experiment on a small scale and to write him for this nitrogen bacteria, stating the quantity desired and for what plant, the preparation being different as to each. The request should be made not longer than two or three weeks before the bacteria is needed. It will, of course, take a few days after receipt of it to prepare and mail out, but it ought to be used just as fresh as possible, as it loses its strength after being prepared. They will promptly attend to all requests and would be glad to hear the result of the experiments.

U. S. Department of Agriculture,
Washington, D. C., Jan. 28, 1905.

On March 2, 1904, I wrote a letter setting forth the relation of beneficial bacteria to soil improvement with special reference to the nitrogen-fixing organisms associated with leguminous crops. At that time our Laboratory of Plant Physiology had devised a means for growing these organisms in pure cultures, and it was believed that these cultures could be placed in the hands of farmers with directions for use, so simplified that any one of average intelligence could inoculate seed or soil with desired bacteria. These bacteria introduced into the soil in sowing clover, peas, beans, alfalfa, vetch, etc., form upon the roots of these plants mall knot or nodules commonly called "nitrogen knots" or "nitrogen traps," from the part they play in securing nitrogen from the air. The nodules are necessary to a vigorous growth of legumes in any but the very richest soils, and absolutely essential in every case where such crops are sown for green manuring. The failure to get a catch on new ground is often due to the absence of these organisms and even in cultivated coils the bacteria adapted to particular crops, as alfalfa, soy beans, vetch, etc. may be lacking, although peas, in the same soil, are well supplied, as shown by the nodules upon the roots.

To test the method of inoculation by pure cultures, the department has sent out during the past year to every part of the United States a large number of packages for use with all the common legumes and, as a result of these experiments, we have evidence based upon the reports of practical farmers that inoculation (1) results in largely increased yields, where the bacteria are lacking, and (2) renders it possible to grow some valuable crops in sections where it was thought they could not be grown.

Very truly yours,
(Signed) B. T. GALLOWAY,
Chief of Bureau.

Bank of Sulligent.

Sulligent, Ala.—The new two-story brick building of the Bank of Sulligent is now completed and is an ornament to the town. The fixtures have arrived, and the carpenters are busy getting everything into position, which will bedone in three or four days.

Came Near Being Drowned.

Opelika, Ala.—F. T. Hudson, Jr., the rural mail carrier on Route No. 4, had a narrow escape from drowning Thursday morning. About four miles from Opelika he had to cross the Frazer bridge, which is a covered structure. While crossing it the horse attached to his buggy became frightened at a piece of paper on the bridge and backed over an eight-foot embankment. The horse, wagon and Mr. Hudson got out of the cold water with his conveyance and the mail.

Bakery Burned; Loss $5,000.

Montgomery, Ala.—The larger portion of May's bakery, at No. 2 South Court street, was destroyed by fire at 5:50 o'clock Thursday morning. The total loss is approximately $5,000, covered by insurance. The bakery was owned by Duncan May, and the building by Mrs. E. T. Bragg. The fire originated in the bake room.

Deputy Shoots Six Times.

Johns, Ala.—Bob Story, a negro, has been shot and killed by Deputy Sheriff Greenwood. The negro, it appears, in resisting arrest, knocked the officer down. While on the ground the deputy sheriff drew his pistol and fired six shots, all of them taking effect in the negro's breast. Mr. Greenwood was released after a preliminary trial before Justice of the Peace Parson.

State Fight on Standard Oil.

Topeka, Kan.—Governor Hoch at noon Friday signed the bill passed Wednesday appropriating $200,000 for the erection and maintenance by the state of an oil refinery with a capacity of 2,000 barrels a day.

The signing of this measure will make it possible for Kansas to begin in earnest the fight started in this state recently against the Standard Oil Company. In signing the bill Governor Hoch sent a lengthy message to the legislature reviewing the fight which has ended in the present legislation and giving his reasons for signing the refinery bill.

HUNDRED ENTOMBED.

An Explosion in the Mines at Virginia City, Near Birmingham Monday

VIRGINIA CITY IN SORROW.

All Available Men Are at Work Trying to Rescue Those Who Met Death in the Ill-fated Mine.

Bessemer, Ala.—By a "dust" explosion in the Virginia mines, 17 miles southwest of Birmingham, at 4 o'clock Monday afternoon, between 110 and 135 miners, negroes and whites, are entombed 700 feet below the surface, and probably none will live to tell the story of the disaster.

At midnight every available man is being sent into the mine in relays as rescue parties, but rescuers are at least 100 feet from the imprisoned miners.

Hundreds of anxious people are gathered around the mouth of the shaft uttering silent prayers for those below, and the rescue parties are straining every effort to reach the entombed men in time to give them a breath of the life-giving air from above before it is too late.

The only hope now is that a few of the number who were in the mine when the explosion occurred may be alive and may be saved.

The mines are the property of the Alabama Steel and Wire Company, known as the Schuler property.

Monday afternoon the day shift prepared the last shot, which is at 4 o'clock, and some one below the third level made the fatal mistake of overcharging or undercharging a shot. Either of these will cause the dust accumulated about the shot to ignite and result in the explosion. From the little beginning the explosion came, dealing death and destruction.

All of the miners were below the second level, which is about 600 feet from the surface. The rescuers have succeeded in going a little below the second level, and they are rapidly going further and further down.

There has been considerable delay as the rescuers have had to rebuild the props which support the roof of the main slope. The force of the explosion tore away these props.

The rescuers are closing up the mouths of the various rooms as they reach them in order that the air may be controlled and turned down the main shaft.

Most of the miners are supposed to have just left the rooms and to have started up the shaft or to have been in the entries when the explosion occurred. All are supposed to leave the mines before this last shot.

Rescuers late Monday night had almost reached the third right entry and they expect to find some of the entombed miners when they reach this entry. It is about 250 feet to the next lowest entry and it will be several hours before they get into this entry.

The force of the explosion was so great that rocks, rafters, sticks and other missiles were hurled 350 to 400 yards from the mouth of the shaft. The tracks leading into the mines were covered with dirt and rafters which formed the props.

It is stated by witnesses that the flames from the explosion leaped more than a hundred feet into the air.

At frequent intervals members of the rescue party are brought to the mouth of the shaft overcome by the gases and fire damp at the place where the rescuers have reached.

State Mine Inspector Gray Monday night explained the probable cause of the explosion. He stated that a "windy shot" and a "dust" explosion were similar. A windy shot is when the force of the explosion blows outward and creates a great deal of dust and also raises all the dust in the room. In this dust there is more or less gas and this all explodes. The explosion spreads from room to room with awful rapidity, overtaking in a few seconds any one who might attempt to escape.

"I do not suppose there is a living man in the mine. The after damp is fearful and a man could not live in there five minutes.

"The explosion was evidently due to a 'windy shot.' This mine is one of the best ventilated mines in the district and this very fact, added to the intensity of the explosion. I do not think the bodies will be brought to the top until nearly daylight, although we may find some at any time. In my opinion there were at least 135 men in the mine at the time of the disaster, of this number at least 100 were white miners."

Lynched for Murder.

Greenville, Ala.—Wicks Grimes, a well known white farmer of Butler county, was shot and killed by Tom Watts Saturday afternoon near Pine Flat, sixteen miles west of Greenville. Watts, who was wounded in a pistol duel with Mr. Grimes, is generally believed to have been lynched. He was last seen in the hands of a mob, and he has been reported "lost" or "missing."

After killing Mr. Grimes, Watts made an attempt to burn the body, but was unsuccessful. He was seriously wounded over the heart by a bullet from the pistol of Mr. Grimes and was forced to go to the house of a white man for aid.

While the word of the tragedy went abroad and a mob came for the negro. He was last seen as the mob was carrying him away. Although the negro's body has not been found and nobody has admitted knowing anything of a lynching, it is not doubted that Watts has been lynched.

Suicide Over Love Affair.

Grenada, Miss.—John E. Gayden, Jr., a member of one of the oldest and most prominent families in the state, committed suicide here by inhaling chloroform and taking a large quantity of strychnine. His body was found in his room at Hotel South by a servant who went there to awaken him. Around his nose was tied a handkerchief, on which still lingered the faint traces of chloroform, and in one hand he grasped an empty bottle which had contained strychnine.

A misguided love affair caused the rash act. The young man left a letter to a young lady in Water Valley who was well known as his sweetheart. Just the nature of the trouble is not known. Letters were also left to his father at Winona, and to a brother who lives at Greenwood. An open note was found with these asking that his brother be notified of his death.

The remains of the suicide were taken to Winona, the family home of the deceased, for interment.

Negro Killed by Mob.

Smithville, Tex.—A negro charged with criminally assaulting Mrs. Powell Tiffany has been captured and shot to pieces by a mob. He was identified as the man wanted and made a full confession. He was run to earth at Upton, a small town about six miles from here. In his confession the negro implicated three others, and it is also said that there are three women involved in the crime. Two of those persons have been arrested and the third is now being sought. While searching for the negro the Smithville mob found hanging to a tree the body of a Mexican taken from officers at Dale and lynched.

Anti-Trust Law Upheld.

Washington, D. C.—The validity of the Kansas anti-trust law was upheld by the supreme court of the United States in an opinion by Justice Brewer in the case of Edmund J. Smiley, plaintiff in error, vs. the state of Kansas.

Smiley in 1900 was secretary of the State Grain Dealers' Association, and the allegation in the case was that he organized the wheat dealers in the town of Bison, Rush county, into a trust to control the price of wheat at that place. The supreme court of the state sustained the prosecution against him and Justice Brewer's opinion upholds that verdict. He based his decision on the ground that the law was in harmony with the power of the state to control its own police affairs, and therefore not antagonistic to the federal constitution.

Kicked His Eye Out.

Decatur, Ala.—Davie Chunn, an employee of the Louisville and Nashville railroad shops, is about to lose an eye on account of a rabbit hunt the other day. While hunting rabbits in the "Black Bottoms" he shot and wound a large swamp rabbit and when he went to pick the rabbit up the rabbit kicked him in the left eye, nearly putting it out.

Train Runs Into Open Bridge.

Columbia, Tenn.—The engine and tender of train No. 13, from Smithville to Hartford, ran into an open bridge at the Chattahoochee river at 6:30 p. m. Monday evening. The baggage car is left suspended on the end of the approach. Engineer E. Tate and Fireman Bates and an extra engineer are in the river with the engine.

Explosion Kills and Injures Many.

St. Clairsville, O.—Twelve men were badly injured Monday by the explosion of a boiler at Mine No. 1 of the Providence Coal Company, near here. Two of the injured have since died and four others are believed to have been fatally hurt. One, Eric, was blown out of the building and badly scalded. The others were Slavs.

KILLED BY A BOMB.

Duke Sergius a Most Influential Member of the Czar's Council the Victim.

DOOMED IN DECEMBER TO DIE.

Assassins Are Arrested, and One of Them Coolly Says, "I Don't Care, I Have Done My Job."

Moscow—Within the walls of the far-famed Kremlin palace, and almost underneath the historical tower from which Ivan the Terrible watched the heads of his enemies fall beneath the ax on the famous Red Square, and within a stone's throw of the great bell of Moscow, Grand Duke Sergius, uncle and brother-in-law of Emperor Nicholas, and the chief of the reactionaries, met a terrible death shortly before 3 o'clock Friday.

The deed was committed by a single terrorist, who threw beneath the carriage of the grand duke a bomb charged with the same high power explosive which wrought Minister von Plehve's death. The missile was packed with nails and fragments of iron, and its explosion tore the imperial victim's body to ghastly fragments, which strewed the snow for yards around. Every window in the great, lofty facade of the palace of justice was shattered, and bits of iron were imbedded deeply in the walls of the arsenal, a hundred yards away.

Belongs to Noted Fighting Group.

The assassin belongs to the noted Fighting Group of the socialist revolutionary party, which has removed other prominent officials, and long since passed sentence of death upon Grand Duke Sergius. The grand duke knew that he stood in the shadow of death. He was the recipient of repeated warnings and elaborate precautions were taken to insure his safety.

It was the irony of fate that Sergius, after taking refuge in his country villa during the strike troubles of a month ago, and later feeling even more secure in the palace within the Kremlin walls, should be killed while proceeding to the governor general's palace beyond the walls which he had abandoned to enable the police to better protect him.

Grand Duchess Elizabeth, when she heard of what had befallen the grand duke, was driven in haste to the scene of the tragedy and knelt hatless and coatless on the blood-stained snow and murmured prayers for the welfare of the soul of her slain consort.

Emerged in a Carriage.

The scene of the crime was the great open triangle within the Kremlin, bounded by the arsenal, treasury and courts of justice.

There a man clad in workman's attire stepped forward from the sidewalk and threw a bomb which he had concealed beneath his coat. A terrible explosion followed and a hail of iron pelted the grim stone walls of the arsenal and courts of justice. A thick cloud of smoke, snow and debris arose. When it had cleared, a ghastly sight was presented. On the snow lay fragments of the body of Grand Duke Sergius, mingled with the wreck of the carriage. The grand duke's head had been torn from his body and reduced to a shapeless pulp, and the trunk and limbs were frightfully mangled. A finger bearing a rich seal was found lying several yards away. Only a few fragments of clothes indicated that the body had been once clothed.

Doomed to Die.

St. Petersburg—The sentence of death on Grand Duke Sergius was contained in a proclamation issued by the social revolutionists of Moscow after the demonstration of December 11th of last year at St. Petersburg was put down. It read: "If our demonstration at Moscow (December 18th and 19th) is crushed in as bloody a manner as that of our brothers of St. Petersburg then the guilt therefor is upon the head of Grand Duke Sergius and General Trepoff, and we, the committee, in that event, have ordered their death."

Causes Tremendous Sensation.

St. Petersburg—The news of the tragedy in which Grand Duke Sergius was blown up created a tremendous sensation in St. Petersburg, where the announcement by telephone from Moscow arrived during the afternoon. Owing to the intense excitement prevailing at Moscow few particulars are ascertainable. The tragedy in reality was no great surprise, as it was known that the terrorists had already condemned the grand duke to death, and ever since the affair of January 22d the inauguration of a bomb throwing campaign had been anticipated.

Professional Cards.

Attorneys.

William M. Adams,
Attorney-at-Law,

Home Grown Fruit Trees

I have for sale a fine assortment of fruit trees, particularly adapted to this climate. Peaches, Plums and Apples, of the best varieties for this section, and all guaranteed true to name. Prices Reasonable. J. L. Winslow, Pine Hill Nursery, Thorsby, Ala.

A French professor is the owner of a collection of 920 human heads, representing every known race of people.

PURE GOODS

The following SPECIAL BRANDS always in stock

Big Rock	I. W. Harper
Rose Valley	Upper Crust
Upper Ten	Kentucky Taylor
Joe Gideon	American Malt
Murray Hill	Budweiser Rye
Pleasant Hill	Deep Springs
Green River	AAAA Lincoln County
Jack Daniel No. 7	Wilson
Old Spring	Good Wood
Shaw's Malt	Club House Rye, 10 years old.
Jefferson County Rye	Cascade, 14 years old.

Old Harvest Corn, 5 years old

I carry a Full Line of Barrel Goods which I sell in Jugs from half gallon up. Mail orders promptly filled.

A. STEIN,
Bank Saloon. Calera, Ala.

Going to Plant

Fruit Trees of any kind this season? write me a postal for my new manual "How to Plant and Cultivate an Orchard" and price list, now ready and free to all.
P. C. Smith, Thorsby, Ala.

A Pretty Girl

She's not particularly bright.
At school they called her dull.
A boy in such case would bemoan
The thickness of his skull.
But now when young men look at her,
Their brains are in a whirl.
She's no Minerva—what of that?
She's such a pretty girl!

She hasn't very much to say,
And doesn't say it well.
And yet, men readily admit,
She weaves a wondrous spell.
No man denies her facile charm,
Unless he is a churl.
She's slow and stupid—what of that?
She's such a pretty girl!

—Somerville Journal.

THE EXCLUSIVE MR. WALKER

BY J. C. PLUMTER

(Copyright, 1904, by Daily Story Pub. Co.)

A carriage rolled by the Harp coming from the sea. Captain Stover lay down his pot of beer and looked at a very commonplace countenance peering with a wistful expression at the inn. Mr. Twitchett had no pot to lay down, but he looked and so did the landlord.

"That's 'im," said the landlord, "never notices nobody."

"He's rich," explained the captain, "he could put down a pun for every farden in Portham. He's above poor people."

"Why do they call 'im 'onorable?" inquired Mr. Twitchett, winking at the landlord as if he had propounded a poser to the captain.

"Because he's made his money clean," replied the skipper," when a man's rich and didn't steal his money the king lets 'im call hisself honorable."

Dazed at this sudden solution of the problem Mr. Twitchett subsided.

"E's a stuck up, nasty haristocrat," snapped the landlord.

"I'm goin'," announced the skipper. "I sail on the ebb and I've lots to do. Next Monday week Elizy gets married."

And the captain gulping down his beer, hastened toward the wharf.

Mr. Adolphus Walker had leased Penn Lodge for an indefinite time. Portham at once dubbed him "Honorable," and bowed down to him. The nearest approach the town had had, hitherto, of talking about its aristocratic citizens was to allude vaguely to a marquis who lived thirty miles inland and who had carefully avoided setting his foot in the town. But Mr. Walker was exclusive. He spake to no man and naturally no man in Portham dared to speak to him. Portham boasted of him and, in its heart hated him for the haughtiness of which it boasted. Very little was known of Mr. Walker. The servants, brought from London, were creatures of rigid stateliness and never came to the Harp. Portham, as a dire necessity, wrote the history of Mr. Walker to suit itself.

"I'm goin' to have Ned Butts to the weddin'," remarked the skipper, as the schooner dropped down Portham Bay, bound for London.

"'Ow, when your people won't 'ave 'im?" inquired the mate, who had been addressed.

"He's comin'," retorted the skipper, resolutely, "I've a printed invite in my pocket to send him."

"E'll get drunk and 'owl," expostulated the mate.

"Let him," replied the skipper, "a weddin's a place for enjoyment."

Eliza Jane, the pretty daughter of Captain Stover, was to be married on the next Monday a week, and the startling innovation had been made of inviting Portham to the ceremony by printed invitations. The family, however, made a stand at Mr. Butts, but the skipper secretly resolved that he should grace the occasion.

When the schooner was discharging

Mr. Walker was exclusive.

in London the skipper dropped into the owner's office one afternoon.

"I'm sending a letter to your town, captain," said the clerk.

"Who to?" asked the skipper, without interest.

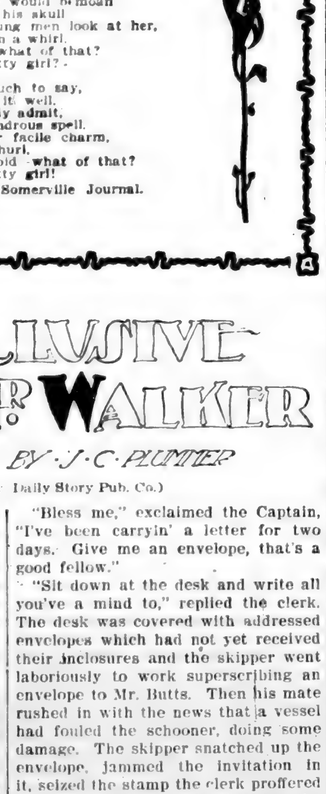
"Mr. Adophus Walker. He has some shares in our steamship line," answered the clerk.

"Bless me," exclaimed the Captain, "I've been carryin' a letter for two days. Give me an envelope, that's a good fellow."

"Sit down at the desk and write all you've a mind to," replied the clerk. The desk was covered with addressed envelopes which had not yet received their inclosures and the skipper went laboriously to work superscribing an envelope to Mr. Butts. Then his mate rushed in with the news that a vessel had fouled the schooner, doing some damage. The skipper snatched up the envelope, jammed the invitation in it, seized the stamp the clerk proffered and rushed to his craft, dropping the missive in a post box as he ran.

* * * * *

"Hif I could see people like Mr. Walker at my daughter's weddin' I'd die 'appy," said Mrs. Stover to her husband, as the guests gathered. Captain Stover was watching for Mr. Butts and



"He's comin'," retorted the skipper.

preparing to weather the family storm which would follow, so he said nothing.

A timorous knock sounded at the door.

"It's Ned," muttered the skipper, and he opened the portal guardedly.

But he started back, petrified, for Mr. Adolphus Walker stepped in. He was most fashionably attired, but grasped the skipper's hand with unction. "Many thanks for your invitation, Captain," said he, "all my folks are in London, so I came alone."

In a dense cerebral fog the skipper gasped, "Come in."

Portham assembled, turned green with jealousy. The wealthy aristocrat of Portham, refusing to notice even the landlord, at the skipper's house a guest. Was Stover a traitor, or had he discovered a tree of nobility? Trembling with exultation, the skipper and his wife introduced the aristocrat to the assembled guests. He shook each hand heartily and showed no trace of haughtiness.

"Try a glass of punch," said the emboldened skipper, "I brewed it myself and it has green tea in it."

Not only one, but five glasses did Mr. Walker quaff with relish, then a most remarkable change came over his speech.

"Hi've never been so 'appy for six months," he said to the skipper, "you see, Hi'd a green grocery shop hover Pentonville way in Lunnon, and Hi 'ad my friends in hafter supper to a pot o' beer and a game o' checkers. Then my brother in Hamerica dies and leaves me a lot of money and Hi've never been 'appy since. My wife and daughter make me stick in the 'ouse lest Hi'd talk common."

It was a fall of the idol from its pedestal but then only a few heard him and the skipper and his wife guarded him closely until Captain Stover carried home a very drunken aristocrat at a dreary hour in the morning.

* * * * *

"A fellow named Butts came in here with some shares of steamship stock belonging to Mr. Walker," said the clerk to the skipper on his next visit to London, "he was a saucy devil, too. He said he'd stock in the Cunard line and didn't want any second class stock. He was in rags, too."

"Bless me," murmured the skipper, "I picked up the wrong envelope in my hurry and sent the invite to Walker instead of Butts."

But the Stovers' social position was now assured in Portham.

THE WRONG KIND OF LOVE.

Youngster's Recitation of Text Showed Bent of Thought.

William H. Maxwell, the superintendent of the public schools of New York, believes that free meals should be provided for such school children as get insufficient nourishment at home, on the ground that a child suffering from hunger cannot learn its lessons.

Mr. Maxwell was describing the other day the free-meal system of the Paris schools. Suddenly he paused and smiled.

"When this system was introduced in Paris," he said, "a teacher at an English Sunday school explained it to her pupils, and told them that love had caused the system's adoption, and without love the world would be a poor place for children and for all helpless and infirm persons.

"'Next Sunday,' she said, 'I want each of you to come prepared to recite a scriptural verse about love.'

"The next Sunday duly arrived and the children had all prepared their verses. One had 'Love your enemies;' another, 'Little children, love one another,' and so on.

"Finally a small boy with red hair arose. He began in a loud, shrill voice:

"'Song of Solomn, second chapter, fifth verse.'

"And then he recited:

"'Stay with me, flagons, comfort me with apples; for I am sick of love.'"

Willow Culture in New York State.

One of the crops that has for some time been attracting attention to Lyons and Galen is that of the basket willow, which has grown to considerable dimensions in these two towns. The crop has just been marketed and Clyde and Lyons have the distinction of being two of the most important shipping points for this commodity.

In the two towns named it is estimated that there are nearly three hundred acres devoted to the culture of these willows. An average yield this year was six tons to the acre, and an average price of about $17 per ton was received for the crop that has been sold. Syracuse is the market to which all of the willows grown in this vicinity find their way. When the willows are stripped of their bark and otherwise prepared for manufacturing purposes they are worth about $125 per ton.

It is said that the first willows grown in this part of the country were planted by John A. Blackburn in 1862. Mr. Blackburn came from the South and gained some knowledge of willow culture near his former home in Maryland.—Clyde Times.

In Choate.

When Ambassador Choate was leader of the New York bar many a fledgeling lawyer had a fling at him. There was scarcely an attorney who was not afraid of him in open court, but elsewhere an occasional display of courage and impudence would be made. One day in the Lawyers' club a budding pundit, now a highly successful practitioner, observing Mr. Choate, at a neighboring table, asked in a voice meant for others to hear:

"Ah, counsellor, why was your luncheon so rudimentary?"

"Perhaps you can explain," said the legal light, dryly.

"Because it's in Choate," was the reply.

"Your play upon my name," returned Choate, drawing out the words with keen emphasis, "painfully exposes the profoundness of your ignorance. The luncheon, sir may be in Choate, but your right to address me is IN-ko-ate."

There was a general laugh as the offender departed with a bad case of dry grins.

Rondel.

That love is dead I know not who to name
For censure now. I sometimes think, instead
Of my own self, you are the one to blame
That love is dead.

The rose for me will never be as red,
Now that we separate; no more the same
The pomp of summer on the hills be spread,
That love is dead.

And grief above enjoyment now will claim
The noon of night, when dimmer overhead
The silver crescent hides in mist, for shame,
That love is dead.
—Alonzo Rice, in Lee's Magazine.

Belmont Is a Sportsman.

August Belmont has always been an enthusiast about all kinds of sport. He now owns a stable of racehorses and a kennel of dogs, keeps several hunters and owns and races a yacht during the season. He used to ride in some of the meetings of the hunt clubs, and "Mr. Blemton's" name was often hung up as the rider of the winner. It is hard to say what Mr. Belmont's favorite sport is, because he patronizes so many.

Execution Checks Outrages.

The execution of two of their leaders has put a temporary check to the machinations of a new Chinese sect named Tsai-Yuan, in Honan, whose program was to destroy all railways and all foreigners on a day to be announced. They hate the present ruler of China, declaring that the real emperor is now residing on the "Mountain of Nine Dragons," and will make his appearance in due time.

Predicts Defeat for Lawson.

James R. Keene, the veteran speculator, was asked his opinion regarding recent performances of Thomas W. Lawson, the Boston sensationalist. Said Mr. Keene: "It does not pay to hunt game in Wall street with a brass band, and whenever a man gets up on the fence and crows he makes a target of himself, and you can bet your last dollar he will end in the ditch."

NO, HE WASN'T BUNCOED.

But Oregonian's First Experience With Cabbies Scared Him.

"As it was my first visit in New York, and as no first visit there is complete without some pea-and-shell experience, I was prepared to have something happen during my stay," said a local web-footer, lately returned from a trip east.

"But I hadn't expected to be buncoed before I'd got away from the depot.

"I carried a suit case which had cost me a week's salary, to say nothing of the tooth brush and pajamas I hoped to use during my stay at the Waldorf Astoria. I hadn't taken more than two sniffs of the genuine New York air before a chap dressed like a hack driver ran up to me with, 'Have a cab, sir?'

"I thought I would better have one to keep from getting lost in the great city, and so handed him the suit case. You can guess my feelings when I saw that chap take it and run like the devil.

"He was a real sprinter, and I realized that I could not hope to overtake him. I could only stand and stare after him as his figure rapidly diminished with the perspective of distance.

"'Well, I'll be hornswoggled!' said I. At that moment one of his confederates, also dressed like a hackman, approached and tried to reassure me by saying that the fellow hadn't stolen my 'grip'; that he had only hurried off to get his place in the line of hacks. I noticed that the line was about a quarter of a mile long.".

"Did you get your suit case?"

"Just wait. I suppose they saw I was not the man to be trifled with, or else there was nothing in the case that they really wanted. At any rate, after I had resolutely waited for some time, my man drove up. It may have been fool-hardy, but I committed myself to his care, and was safely driven to my hotel."—Oregonian.

Tea Growing in South Carolina.

Dr. Charles A. Shepard of South Carolina has proved on his own plantation at Summerville, 20 miles out of Charleston, that the growing of tea can be carried on successfully and profitably. He has been doing this for the past 12 years with such good results that the secretary of agriculture and the congress of the United States highly approves his deeds, and both are extending him liberal assistance.

"My idea from the start," said Dr. Shepard, "was to add an additional crop to the farm products of the country. The road to agricultural supremacy is through diversifying. My friends seem to think I have been successful, and I have every reason to be gratified with what has been accomplished. Tea raising in the United States is certainly practicable. It is no new thing in this country, for in the old days a French priest planted tea on the banks of the Ashley river. But owing to the difference in the cost of labor the United States cannot compete with the orient in low grade or cheap teas. It will pay us to produce only that of the highest quality and which brings a high price in market. The tea grown on my place in South Carolina compares with the best that is imported from the eastern lands."—Washington Post.

What's the Use?

We stew and fret and toil and sweat
And try to win a name.
We strive for years with many tears
To win a little fame,
And by and by we up and die
And all is just the same—
So what's the use?

We all grow old in search of gold
And slave our lives away.
We sell our souls for greenback rolls
And barter love for pay,
And by and by we up and die
And then we turn to clay—
So what's the use?

For love we cry, for love we sigh,
To love we fondly cling.
For eyes that shine we peak and pine
And wince at Cupid's sting,
And by and by we up and die
And everything takes wing—
So what's the use?

We join the race for social place
And hope at last to shine
And spend our cash to cut a dash
And when we get in line,
Why, by and by we up and die,
We're planted 'neath the vine—
So what's the use?

Just do your best and leave the rest
To fate or what you will.
Go play your parts and break your hearts
And drink of life your fill.
For by and by you'll up and die,
And all your hopes be nil—
So what's the use?

Suggesting a Variation.

Fifteen minutes after the prodigal son returned, his father, axe in hand, started for the barnyard.

"Now, look here, dad," said the boy, hurrying after him, "I don't want you to kill any fatted calf on my account."

"Yew always wuz a thoughtful boy," muttered the old man, huskily.

"And do you remember, dad, how I always used to prefer turkey to veal?" inquired the naive youth.—Puck.

Expects Much From China.

Ng Poon Chew, managing editor of the Chung Sai Yat Po, a San Francisco Chinese daily, lectured there in English on the "Far Eastern Crisis." He justified Japan in making war and said: "But China will eventually be a great and grand nation and will enjoy her heritage. She has a grand future, a future of prosperity, for they are not all fossils and old fogies there, as is sometimes thought."

Referred to Authority.

Congressman Cooper of Texas tells about a distinguished army officer who on one occasion offered prayer before a regiment. He summed up the causes and objects of the war—the war with Mexico—and asserted that it was no war of conquest, but annexation only, concluding his supplication to the throne of grace with: "I refer you, good Lord, to Polk's message on this subject."

Holy City Topsy-Turv

Life in Jerusalem, according to Miss A. Goodrich Freer, the author of "Inner Jerusalem," is one of anomalies and anachronisms. The street arab speaks three or four languages. Apart from the tourist, who are representatives of half of the nations of the world, there are Jews, Mohammedans and Christians. The streets of Jerusalem are unspeakably filthy. One can buy anything he wants in the city. There are even French dressmakers who will follow out the latest Parisian fashion. Water is scarce and mainly derived from cisterns. The rainfall averages only thirty or forty inches. There is a trade in good water which comes from the village of Ain Karim, some three miles distant from Jerusalem. There is a most unpleasant wind, the sirocco, which is fatal to vegetation, "exhausting to the nerves, irritating to the temper, parching the skin and ruinous to the hair and complexion." The dews are heavy. Jerusalem has its special diseases, but the cure is found in quinine.

Insect pests are the mosquitoes and most particularly the sand flies. One may keep out the mosquito, but the sand fly is at home everywhere. Clothing affords no protection. Fleas are overabundant. Winter is more pleasant than summer. Sometimes a winter evening a fire is necessary. After all it is a land of perpetual sunshine the mean annual temperature being 63 degrees. With all its sacredness, Jerusalem is described as a "topsy-turvy land." In a holy place the native takes off his shoes and wears his hat. The men sport petticoats and the women expose their legs, while hiding their faces. Carpets are hung on the walls and pictures on the ceiling. There is no word of parent gratitude, for in Arabic there is no word the equivalent of "Thank you."

Living is cheap. A good cook can be had by the month for $6. Mutton is worth from 8 to 10 cents a pound, chickens about 25 cents a pair. Fruit is plentiful and reasonable. Considering the economy of living, the author expresses her surprise that few English live in Jerusalem, the number being insignificant when compared with the American residents. The population of the city is put at 60,000, of which 40,000 are Jews.

Land for World's Felons

What is the logic of keeping criminals at the public expense? Why should the community give a man free board and lodging for his life because he has broken the law? asks the San Francisco Bulletin. If a man is unfit to be at large in society, then, if self-preservation is the first law of nature, society has the right to eliminate him. This it does, foolishly, at present, by locking him up for a term of years or life. In a few cases society kills the criminal, and thus gets rid of him irrevocably and cheaply; but this is hard on the criminal who may not be incorrigible. Hence capital punishment would be too severe for crimes less than the most heinous.

The maintenance of prisons, however, is a heavy drain upon the taxpayers. Moreover, prisons are not reformatories, but rather colleges for education in the criminal arts and for the formation of the professional criminal character. Therefore, they are menaces as well as burdens to society.

Some nations have made a compromise with logic by establishing penal colonies, where felons are permitted in a measure to shift for themselves. But these colonies are only half way measures. The logical, humane and most effectual solution of the problem would be the setting apart of some great territory—say the heart of Africa or some large island, not too fertile—as a general dumping ground for the criminals of all nations.

There the outlaws could set up a society of their own. Necessity would compel them to dig and build for themselves. They would have to work or starve. The frontiers or coasts of the felons' land could be policed by a patrol composed of detachments from the armies and navies of all the nations in order to prevent escapes. Summary death should be, of course, the penalty for breaking bounds. The powers, however, could refuse to take any part in the internal administration of the territory thus set up. The criminals could do what they pleased, have anarchy or a communism, a republic or an autocracy, whichever suited them.

He Stopped Alarm Clock

Patrons of an uptown hotel were startled early in the morning of a day last week by a fusilade of pistol shots, the sound of breaking glass and the crashing of some heavy object as it struck the floor. The proprietor was notified, and, followed by several clerks and a number of men from the office, he went to the door of the room where the noise had occurred. They could still hear a voice swearing volubly, and the odor of smoke filtered through the cracks of the door. Receiving no immediate answer to his knock, the proprietor of the hotel put his shoulder to the door and, aided by those who followed, burst into the room.

The crowd had expected to see a bloody corpse at the very least, for the room was filled with smoke from a six-shooter. But, instead of a desperate-looking man fighting for his life, they saw a tall, bronzed and bearded Westerner, clad in gay-colored pajamas, lying on the bed with a big pistol still in his hands. The mirror of the bureau was smashed, and bullets had plowed the walls and the floor.

"That's all right," said the Westerner, waving his pistol to emphasize his remarks. "No trouble intended, and no offense taken at the way you break into my room. I was just stopping that durned alarm clock. I bought it down on Sixth avenue to wake me up, but when it went off this morning I kept on going so long that I got tired and just shot it up a bit."

On the floor lay the shattered remains of one of the cheap alarm clocks that may be purchased for a dollar.

"I don't blame him a bit," said one of the men, as the party backed away. "I frequently feel like doing that very thing when my alarm clock goes off in the morning."—New York Press.

At the Beautiful Gate

Lord, open the door, for I falter;
I faint in this stifled air;
In dust and straitness I lose my breath;
This life of self is a living death;
Let me into Thy pastures broad and fair,
To the sun and the wind from Thy mountains flee;
Lord, open the door to me.

There is a holier life, and truer,
Than ever my heart has found;
There is a nobler work than is wrought within
These walls so charred by the fires of sin,
Where I toil like a captive blind and bound;
An open door to a freer task
In Thy nearer smile I ask.

Yet the world is Thy field, Thy garden;
On earth art Thou still at home,
When Thou bendest hither Thy hallowing eye
My narrow work-room seems vast and high.
Its dingy ceiling a rainbow dome;
Stand ever thus in my wide-swung door,
And toil will be toil no more.

Through the rosy portals of morning,
Now the tides of sunshine bow;
O'er the blossoming earth and the glistening sea,
The praise Thou inspirest rolls back to Thee;
Its tones through the infinite arches go;
Yet crippled and dumb, behold me wait,
Dear Lord, at the Beautiful Gate.

I wait for Thy hand of healing—
For vigor and hope in Thee.
Open wide the door—let me feel the sun—
Let me touch Thy robe; I shall rise and run
Through thy happy universe, safe and free.
Where in and out Thy beloved go,
Nor want nor wandering know.

Thyself art the Door, Most Holy!
By Thee let me enter in!
I press toward Thee with my failing strength;
Unfold Thy love in its breadth and length;
True life from Thine let my spirit win;
To the saints' fair city, the Father's throne,
Thou, Lord, art the way alone.

From the deeps of unseen glory,
Now I feel the flooding light,
O rare sweet winds from Thy hills that blow!
O river so calm in its crystal flow!
O love unfathomed—the depth, the height;
What joy will Thou not unto me impart,
When Thou shalt enlarge my heart!

To be made with Thee one spirit,
Is the boon that I lingering ask,
To have no bar 'twixt my soul and Thine;
My thoughts to echo Thy will divine;
Myself Thy servant, for any task;
Life! life! I may enter through Thee, the Door—
Saved, sheltered forevermore!

Gold Leaf in Bibles

"James," said the English gold manufacturer, "we are hout of Bibles. Go down town and buy six dozen."

James in due course returned with the Bibles in a hand cart. They were taken from him by three men, their covers were torn off and the pages were trimmed with sharp knives down to a certain small size. Then these little reduced papers were sewed together into a multitude of small books.

The small books were distributed among the hands and in them the firm's output of gold leaf was packed—between every two Bible leaves a leaf of gold.

"It seems irreverent, not to say sacrilegious, I know," said the head of the firm, "but we halways do so. We have done so for generations. Gold leaf is halways put on the market in little books made of Bibles.

"Why? I'll tell you why. Gold leaf must be packed between printed instead of plain pages, for the reason that it would slip out of plain pages, which are too smooth for it, whereas the indentations made by the types on the printed pages are just sufficient to hold the leaf in place firmly. That's why printed pages are used.

"We choose among all printed pages Bible ones, for the reason that the Bible is the best printed book a-going. The type is more evenly set and the printing is finer than in any other work, and we need the best typesetting and printing in our business, you know, for any roughness or uneveness is apt to tear the gold leaf.

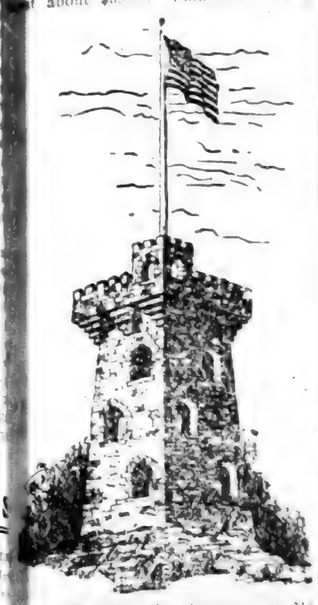
"That's why all English gold leaf is packed in Bibles. It's a necessary thing to do, but all the same, I've often wondered that the churches 'ave never gotten after us gold leaf manufacturers for our hirreverence."—Chicago Chronicle.

MONUMENT TO ETHAN ALLEN.

To Be Erected by Vermont Sons of American Revolution.

William J. Van Patten of Burlington, Vt., has given the Vermont State Society of the American Revolution a piece of land on the old military road at Ethan Allen Park, in that city, for the erection of a monument to Ethan Allen.

It is estimated that the work will cost about $3,000. Plans have been



prepared under the direction of W. J. Patten. The design will be of a military order and will be built of marble, to be quarried near the spot. The tower will be erected on a spot—the elevation of which is [illegible] feet, affording an extensive view of the surrounding country.

The history of Ethan Allen's farm is of much interest. Before the revolution it was owned by a Tory, who, on account of his loyalty to Great Britain was forced to leave the country. His estate was subsequently confiscated by the state of Vermont and the property turned over to the land commissioners of Vermont. By him it was sold to Gen. Ethan Allen, and he was living upon it at the close of 1789. The farm then became the property for Gov. Van Ness and was known for half a century as the Gov. Van Ness farm.

The land fronts on the beautiful Winooski river. The name Indian Rock was given to the spot by reason of the legend that it was an outlook of the Indians for long ages before the white man came to this country. The Indians of the Connecticut valley were wont to make long pilgrimages into this beautiful valley to forage, and when near this spot would disembark and send their scouts to the top of Indian Rock to keep an outlook for enemies. It is believed that the very old grove of chestnut trees on the Ethan Allen farm sprang from the seed sown by the natives when they brought nuts to eat from the Connecticut valley into Vermont.

The Daughters of the Revolution have placed a bronze tablet on the rock, marking the site upon the road side, as being the residence of Ethan Allen at the time of his death, which came from a fall as he was driving a load of hay.

Historic Inn Sold.

At this famous coaching house, the Milford Bridge hotel, which has just been acquired by the Surrey Trust Company, Nelson was staying when he received his last Admiralty sailing orders that sent him to sea and to Trafalgar.

World's Sugar Production.

The total production of sugar throughout the world is about 2,000,000 tons per annum. Of this quantity nine-tenths are afforded by the sugar cane, 25,000,000 tons of which are required to produce the above quantity of cane sugar. The total value of the sugar in the cane, if it could be extracted, would be about $200,000,000, one-half is lost in the process of manufacture.

Mink Caught With His Dinner.

While out looking over his traps one recently Uranus Stacy of Saco found two victims in one of them. They were a fair-sized mink, who had in his mouth an eel which he had just captured. The mink evidently got caught while trying to find a suitable location to eat his catch.

Ice Buried for Centuries.

Railroad men while digging gravel on Black Butte mountain, near Lisson in Siskiyou county, Cal., came recently upon an immense buried mass of ice, believed to have been there from time immemorial.

BELIEVE IN THE FATES.

Modern Greeks as Superstitious as Their Forefathers.

"Some of the superstitions of the old mythologic religion still prevail among the peasant classes in Greece," said Dr. George Horton. "Nor are the educated classes without such beliefs, such as that harm ensues from looking at the moon over the right shoulder, the belief in the three fates, the evil eye, the vampires and the nereids in general. Dressed in black and appearing as old women, the fates are supposed to come down from Olympus three days after the birth of a child, and to hold a meeting to determine its fate. Consequently, a table containing many dainties is set out for their invisible enjoyment. Especial care is taken lest the old ladies be enraged at not having enough good things to eat.

"No woman desires to be left alone after her child is born, believing that the ugly old women may become jealous and wreck some awful vengeance. Smut is therefore smeared on the faces of the youngsters so that this jealousy may not become excited.

"The young Athenian women frequently go to the ancient tombs near Athens, and, calling upon the fates, beg them to reveal the identity of their future husbands, singing: 'From the top of Olympus, where are the fates, where is my own fate?'"—Washington Post.

UMBRELLA THAT FOLDS UP.

Designed for Traveling Men and Good for Absent-Minded.

The earliest form of umbrella had the faculty of folding, but for a long time there has been an effort on the part of inventors to reduce the bulk of the rain shield when folded. This has been done in a measure in recent designs by making a handle which was detachable, and for the purpose of packing the umbrella in a trunk or suit case this device answered.

An umbrella capable of folding in such a space that it can be carried in the hand satchel, or even the pocket, has been more recently made. This had been arrived at by making

the handle, ribs and braces all telescoping. When the umbrella is closed after having been raised the extreme outside portion of the ribs close up under themselves and the braces break or fold so that the cover of the umbrella occupies a much less length than the ordinary umbrella, but the bulk is somewhat increased. When the parts are distended they are held firmly together by the spring bearing of the overlapping pieces.

When the umbrella is raised it differs from others of the ordinary type in only that it is neecssary to provide an opening at the points where the elbow in the rib is formed. These openings are covered with loose flaps, the presence of which are not obtrusive. The collapsing umbrella is especially designed for traveling people.

Fox Caught by Girl.

Hunters started a large gray fox on Longwood farm, belonging to the James Gordon estate. After four hours' chase old Reynard got in such close quarters that it ran under a pen near Waldrop. The hunters punched it out and the dogs had a sight race for some distance, but it was too cunning for the dogs. It finally dodged the dogs and hunters, some forty in number, and ran through W. J. Irby's yard while all the family were at dinner.

Mr. Irby's daughter Anna, 15 years old, saw it through the window of the dining room and gave it a sight race, hemming it off from the stable, and caught it by the head. She held it to the ground until her father got there and put it in a bag.—Richmond Times-Dispatch.

American Precious Stone Sold.

The great 133 karat aquamarine found in Stoneham, Me., and probably the most valuable gem ever found on the American continent, has recently been bought as a valuable acquisition to the crown jewels of Germany. The German prince, while in this country, saw the gem of Chicago and admired it so much that the government has been negotiating for it ever since. At the World's fair at Chicago the gem was valued at $30,000.

The First Americans.

Recent explorations of ruins in Yucatan bring to light wall paintings that show in a vivid way what kind of people the prehistoric Americans were.

Not Strong on Orthography.

A Cape Porpoise citizen received a letter the other day upon which was the address, "Cape Porpus," Me.

TO REMOVE THE CIGAR BAND.

Simple Device That Will Often Prevent Spoiling Good Smoke.

Only a few years ago the placing of a band around a cigar was unknown and when it appeared first the band of paper was to be seen only around the finest brands of smokers. At first it was a badge of excellence, but later was adopted by all cigar manufacturers who advertised their goods, and the band developed into a mere means of identification, which has often had the object of preventing substitution of inferior goods.

The use of the band has become so general that there seems to be a demand for some means of readily removing the same. One might think that this was a matter of no difficulty, but it is a well known fact to cigar smokers that most brands are placed on cigars so tightly that it is difficult to remove them. In attempting to re-

move the band with the finger-nail or with the point of a knife it frequently happens that the wrapper of the cigar is so punctured or torn as to injure the smoking quality of the cigar, if not entirely to destroy it.

To facilitate the removal of the band an inventor has conceived the idea of making use of a thread, string or cord under the band, having the ends thereof projecting beyond the edges of the band brought together and tied into a knot, forming a loop. This loop can be readily taken hold of by the thumb and finger and by pulling on it the band will be readily severed without marring the cigar wrapper in the least. This severing device may be placed under the band after the band is put upon the cigar, or it may be put on the cigar at the time that the wrapper is placed thereon.

Colored Folk Fear "Voodoo."

Colored folk in the Ninth ward of the city of Wilmington, Delaware, are in mortal terror over the finding by Michael Palese, a bridge tender, of a jet black cat with a "voodoo" bag tied around its neck with yellow ribbon.

The bag contained spices, matches, needles and other magic charms. The note read:

"Bell Smith, this day do I conjure that you must and shall leave these premises without delay on the ninth day from this day. And God have mercy on you. Amen."

The negroes in the neighborhood think the Bell Smith referred to is Mrs. Isabella Smith, a white woman living on East Twelfth street. She does not seem concerned by the "conjuring."

Thomas Hamilton, who has the bag, has been given different methods of getting rid of the conjure, the favorite being to burn it with three red peppers, and throw the dust into the river when the tide is flowing out. Meanwhile the black cat has escaped.

Literal but Deceptive Truth.

They had finished the parish tea and the curate stood up to say a few words to the recipients before they dispersed. He spoke in eloquent terms of the impecuniosity of curates in general and then went on to say in apparently touching tones: "Why, even as I stand before you now I have only half a shirt to my back." A few days later the reverend gentleman received a parcel containing half a dozen new shirts, accompanied by a card bearing the name of one of his fair parishioners. At the earliest opportunity he called upon the lady and thanked her for her gift and then proceeded to ask what had prompted the kind action. "Why," she replied, "you told us the other night that you only had half a shirt to your back." "True," answered he, "but the other half was in front."

Women Drudges.

The Khyberee women are the hewers of wood and drawers of water to their village communities.

Trick of Clever Swindler.

A man wearing the uniform of the city tramway department recently boarded a Glasgow car and told the conductor that he had been sent to relieve the latter. The conductor handed over his tickets, punch and cash, but on proceeding to the car barns he discovered that the story was false. The bogus conductor remained on the car for about ten minutes and then disappeared.

Hamburg Man Shrewd Advertiser.

There is a piano dealer in Hamburg who runs the following advertisement in a local paper: "To be sold, at greatly reduced prices, pianos, grand or cottage models, in rosewood, walnut and other cases. These magnificent instruments were manufactured to complete orders from Port Arthur, but have been taken into stock in consequence of the siege."

NAMES NOT GOOD ON CHECKS.

Are Recognized and Venerated Everywhere Except in Banks.

Though he carried checks aggregating more than $200,000, Julius Redmond of Granite Falls could not raise a cent in Minneapolis.

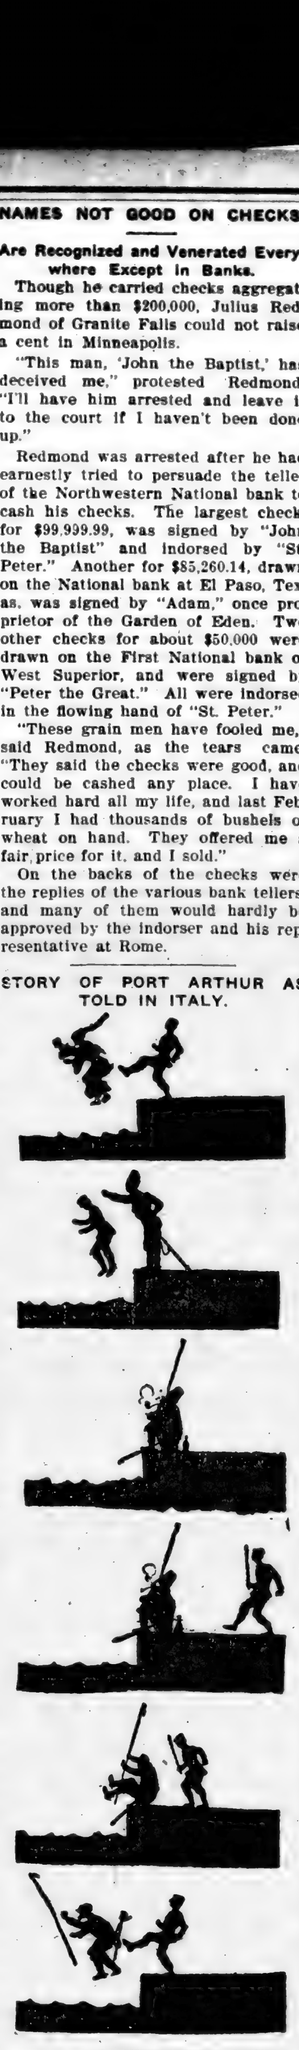
"This man, 'John the Baptist,' has deceived me," protested Redmond. "I'll have him arrested and leave it to the court if I haven't been done up."

Redmond was arrested after he had earnestly tried to persuade the teller of the Northwestern National bank to cash his checks. The largest check, for $99,999.99, was signed by "John the Baptist" and indorsed by "St. Peter." Another for $85,260.14, drawn on the National bank at El Paso, Texas, was signed by "Adam," once proprietor of the Garden of Eden. Two other checks for about $50,000 were drawn on the First National bank of West Superior, and were signed by "Peter the Great." All were indorsed in the flowing hand of "St. Peter."

"These grain men have fooled me," said Redmond, as the tears came. "They said the checks were good, and could be cashed any place. I have worked hard all my life, and last February I had thousands of bushels of wheat on hand. They offered me a fair price for it, and I sold."

On the backs of the checks were the replies of the various bank tellers, and many of them would hardly be approved by the indorser and his representative at Rome.

STORY OF PORT ARTHUR AS TOLD IN ITALY.



—L' Illustrazione, Italian.

Where Ignorance Is Bliss.

Of every hundred tourists who visit the Canary islands seventy-five are British. Naturally the natives of the Canary islands take a great interest in everything which affects England. Their general ignorance is appalling, but their very disregard for accuracy lends a certain charm to their conversation. A man in a barber's shop pointed to a dilapidated map of the world which was nailed to the wall and putting his forefinger upon Spain he exclaimed: "If war breaks out Spain must retake Gibraltar. Have no fear. The English ships may come down to us because it is all downhill, but after we have crippled them they will not find it so easy to get back to England, because it is all uphill."

Saved Horse With Broken Leg.

Prof. Ward, chief veterinarian of the University of California, has performed a distinct and valuable service to the animal kingdom by successfully setting the broken leg of a horse. Heretofore the only cure for a broken leg has been to shoot the horse. Dr. Ward and his assistants etherized the animal, set the broken bone and bandaged the leg in a plaster cast several inches in thickness. After the plaster set, the animal was allowed to stand up or lie down, as he chose. Six weeks sufficed to completely restore the limb. The bone has knit and the horse will be put to light work in a few days. When the plaster was removed, the animal was pronounced sound.

Takes Care of Valuable Document.

Town Clerk M. J. Houlihan of Newtown, Conn., has had the deed of the town given by the Indians in 1723 preserved by having it put on a silk back and inclosed in a substantial cover.

Mill Makes Only Wagon Hubs.

The hub mill at West Sebois, Me., is in full operation. The mill at West Sebois is one of the few of its kind in New England, nothing but wagon hubs being made.

WATER TOWER NEVER USED.

Intended for National Soldiers' Home Which Was Not Built.

Located far up on the hills to the west of Lake Assawampsett, in Lakeville, Mass., stands a water tower, built about twenty years ago. It is an imitation of the old stone mill at Newport.

About twenty-five years ago, according to the story, the national soldiers' home, located at Quincy, was to be moved to Lakeville. A tract of about

The Tower.

100 acres was secured there, occupying a beautiful position, from which every lake in the great chain was clearly visible. Plans were made for the erection of buildings.

The first requisite was water. Accordingly a 60-foot well was dug. A place to store the water was next needed, and this came in the form of the old tower. It was built of field stone, cemented together. Six columns were constructed with arches between, and a big column in the center to support the whole. Above these columns the massive stone tank was built, which would contain thousands of gallons of water. An arched roof was added and it was attractively set off with a weather vane.

Shortly after the completion of the tower, work on the home was stopped, and it has never been renewed.

PIGEON CAUSED HER DEATH.

Pet Missing Several Months Found Blocking Up the Stovepipe.

In the Wiltshire village of Zeals, England, a death has been caused by a pet pigeon. Two young women living at the rectory were found unconscious in their bedroom on Monday morning. One of the girls, Miss Maude of Southampton, was dead before the doctor arrived, but the other revived after some time.

It appears that a fire had been lighted over-night in a small stove which was connected with the main chimney by a flue. The girls retired to rest noticing nothing except that the fire smoked considerably. When the stove was removed for investigation the body of a pet pigeon, which had been missing for some months, was found blocking the pipe. The poisonous fumes had thus been driven back into the bedroom.

Newspapers of the World.

It has been calculated that, taking the population of the whole world, there is one newspaper to every 82,600 persons. The United States supports 12,500 newspapers, of which 1,000 are dailies, these being round figures. Germany has 5,500 journals, of which 800 are daily. England takes second place in the European record with 3,000 newspapers, of which 809 are daily. France has nearly the same number.

Prehistoric American Art.

One of the earliest examples of American designing is shown in the accompanying illustration. This interesting work of art is many centuries old; just what its age may be is a matter of dispute. Scientists believe they can trace in the motive of the design a relationship with Asiatic peoples.

Rabbit's Foot a Poor Charm.

A man gave to Frederick Staples of Farmstead, Conn., the left hind foot of a rabbit, solemnly vowing that the rabbit was shot in a cemetery at midnight.

Staples carried the rabbit's mystic foot constantly, but his luck did not improve. While he was dressing one morning the rabbit's foot dropped out of his pocket without his knowing it. His wife entered the room and stepped on the "mascot."

Feeling it soft, furry, yielding to her tread, she jumped in fright, shrieking, "Mouse! Mouse! Help, Fred! Mouse!"

Mrs. Staples fell and broke her leg. She will be in bed for six weeks at least. Staples threw the rabbit's foot into the stove.

Woolly Calf in Vermont.

John W. Averill of Barre, Vt., is the owner of a heifer calf whose hide is covered with a black wool instead of hair. The calf is a little over a week old.

HUNTER TREED BY WOLVES.

Hungry Pack Turn Tables on Minnesota Sportsman.

Henry Temfehr, a business man of Chisholm, Minn., came to the court house to-day to claim $20 as bounty for a wolf pelt in his possession. He had a harrowing experience getting his pelt, according to his story, which is vouched for by Judge Brady of Hibbing.

Mr. Temfehr was hunting north of Chisholm a few days ago, and while returning to town toward evening a pack of wolves assembled and threatened to attack him. He sought safety in a tree, and he thought it would be easy work to despatch the pack, one at a time, from his safe perch in the tree, but after firing one shot, at which he came near falling to the ground, he changed his mind.

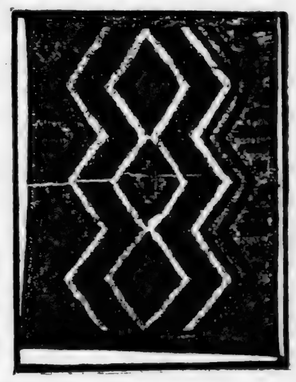
The wolves scattered about, realizing their danger, and watched from a respectful distance. All night the wolves kept their coveted prey in the tree, and Mr. Temfehr, although warmly cothed, came near freezing to death. During the first part of the night he fired a few shots at the beasts, and when, numb with the cold, he climbed down in the morning, he found one dead wolf.

It is supposed the other wolves hesitated to eat their dead companion for fear of meeting a like fate.—Duluth Correspondence St. Paul Pioneer Press.

BEAUTY OF NAVAJO BLANKET.

Fine Design and Exquisite Coloring and Workmanship.

Here is an original American design. It is a Navajo blanket, the beauty of which can only be faintly conveyed in black and white. The blankets are single ply, with the same designs on both sides. In the preparation of color the Indians use decoctions of various plants with ashes of the juniper as well as a crude native alum as a mordant. The principal colors are red and black, while yel-



low and green occasionally vary the almost endless number of groupings of bars, diagonals, diamonds and other designs. The best black color is made from the twigs and leaves of the sumac, into a decoction of which is thrown a mixture of roasted ochre or ferruginous earth ground and mixed with the gum of the pinon pine, the tannic acid of the sumac combining with the sesquioxide of iron in the clay and producing a blue-black color enriched by the carbon of the burnt gum.—New York Herald.

Spaniel Tossed on Locomotive Pilot.

Engineer George W. Jacques, who runs into Kansas City, has a pet which he secured in a very peculiar manner.

When about five miles this side of Oak Grove one morning the pilot of his engine struck a water spaniel. Instead of throwing the dog under the wheels, as is usually the case, the canine was lifted into the air several feet and came down safe and sound on the top of the pilot, where it remained, too badly scared to move, until the train pulled into the Union depot. Mr. Jacques found the dog crouched down against the head of the engine, shivering with the cold, and took it to his room.—Kansas City Journal.

Butterfly or Leaf.

There are imitations in nature far more artistic and effective than those that make a bid for our approbation on the dramatic stage. Nature so "makes up" some insects and birds that they cannot be distinguished from plant and foliage. This is to enable them better to avoid other inhabitants of the woods who would prey upon them. Here is one of the most remarkable of these woodland freaks. Its name is Kallima Paralekta and it is a butterfly. It resembles a leaf. The left hand figure is

the butterfly, and in shape and color it is so like the leaf that it would likely deceive the most experienced eye.

Baby a Hearty Eater.

Twenty-four meals a day is the newest record in the eating line. It has been established by a baby at the Bridgeport, Conn., hospital. The baby is less than seven inches in length and weighs exactly two pounds.

THE UNION.

Published every Thursday at Clanton, Chilton county, Alabama.

Wallace C. Edler, Ed. and Pub

Subscription price, in advance, per year, $1.

For advertising rates, call at the office, Seventh street, between First and Second avenues.

Entered April 15, 1903, at Clanton, Ala., as second class matter, under act of congress of March 3, 1879.

NOTICE TO CORRESPONDENTS.

All communications to the Union must be signed by the writer's real name as well as that name which they wish to put in the paper. Letters must reach the editor Tuesday morning to get in the same week. While we will publish any and all communications complying with these requirements that do not contain any improper language, we are not responsible for the opinions expressed. tf

UNION CLUBBING LIST. . . .

The UNION *and* Yellow Jacket, **$1.00**

The UNION *and* Home and Farm **$1.00**

The UNION *and* Weekly Montgomery Advertiser, **$1.25**

The UNION *and* Weekly Atlanta Constitution. **$1.50**

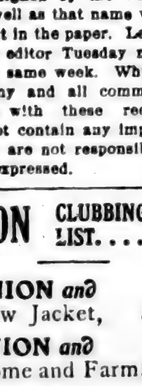
The UNION *and* Saturday News **$1.25**

Several hundred subscribers will get this paper with a big red cross on it. It means that you owe us a dollar and we owe it to some other fellows. Some small fellow will make a big kick about this red cross and will stop his paper, and some clever fellows will come in and pay up like a white man always does, and tell us they had just forgotten all about it. tf

DOES THIS STRIKE YOU?



BE SURE.

And read the article in this issue headed "Bacteria Bulletin." It is something that should interest all farmers.

NEXT TIME.

A number of communications received this week have to go over to our next issue. Our correspondents will please excuse us this time. We can't help it.

NOTICE!

The next county meeting of the Southern Cotton Association will be held at Clanton, March 16, at 11 a. m. Each school district organization is entitled to 3 delegates; all districts should meet on March 4th and elect these delegates and attend to such other business as may come before them. W. H. CONWAY,
tf County President.

TRY THIS.

Take a silver dollar, let it drop on the table and you will notice a ring. Wear the ring yourself or give it to a friend, and send the dollar to us and we will apply it on your subscription. Another nice experiment consists in taking a new dollar bill ond folding it several times and then unfolding it. You will notice it in creases. Use the creases for your Sunday trousers and then send us the original bill. When you have tried these experiments we will cheerfully put you onto another great scheme.—Exchange.

COTTON ASSOCIATION.

On February 16th the delegates from such of the school districts that had organized met at the court house in Clanton. On being called to order and temporary officers selected, a committee, composed of Judge Reynolds, Tipton Mullins, J. J. Grant, J. W. Sorrell and Ship Rasberry, was appointed on permanent organization. It reported as follows: "We recommend that this body organize strictly under the plan adopted by the Southern Cotton Association and adopt the constitution and by-laws furnished by said body. 2nd, we recommend W. H. Conway for President; F. A. Gulledge, Vice President; J. N. Dennis, Secretary; W. T. Callen, Treasurer. 3rd, we recommend that the order of business for today be: 1st, the election of three delegates to represent this county at the state organization. 2nd, miscellaneous business." The report was taken up by sections and unanimously adopted, the officers recommended being elected by acclamation. A number of names were then put in nomination for delegates to Montgomery on the 22nd. Judge Reynolds offered a motion, which was carried, that the nominees retire and select three of their number, the result being that W. I. Mullins, W. T. Hand and F. A. Gulledge were recommended to the convention which elected them by a unanimous vote. W. C. Edler offered a resolution, which was carried, that the farmers of the county be requested to keep their cotton in their own hands until further information is obtained from the central association. Treasurer Callen made a verbal report, which showed that he had received $156.25 for initiation fees from nineteen districts, showing a membership of 505. Secretary Dennis was instructed to furnish the county papers with a report of the meeting for publication. The convention then adjourned to meet March 16th.

NOTES.

The districts with paid up membership were represented by: No. 8, J. T. Chambers, J. N. Deason, 24 members; No. 10, J. W. Weldon, J. D. Sims, J. H. Carter, 19 members; No. 13, T. J. Griffin, Albert Williams, Wm. Courtney, 36 members; No. 17, J. W. G. Kicker, R. J. Downs, J. N. Dennis, 19 members; No. 26, R. E. Roper, W. W. Williams, A. L. Williams, 24 members; No. 28, M. F. Lett, W. F. Culpepper, W. J. Watson, 42 members; No. 31, W. A. Huckabee, J. T. Rockett, J. S. Jones, Jr., 20 members; No. 33, G. W. Thomas, W. L. Bates, W. W. Robinson, 37 members; No. 37, S. K. Rasberry, J. H. Rasberry, B. F. Calfee, 30 members; No. 38, T. C. Jones, J. A. Mims, H. W. Varden, 13 members; No. 39, G. L. Foshee, N. G. Ward, C. H. Hubbard, 57 members; No. 41, W. N. Price, A. F. Childress, A. H. Collins, 17 members; No. 43, M. A. Killgore, P. C. Weldon, D. A. Martin, 18 members; No. 44, W. S. Cox, W. H. Parrish, J. S. Dennis, 15 members; No. 46, J. M. Mims, T. J. Jackson, J. D. Collins, 54 members; No. 51, W. H. Conway, T. J. Littleton, J. W. Sorrells, 31 members; No. 55, W. N. Thomas, J. T. Blow, J. W. Davenport, 10 members; No. 56, G. P. Wilson, C. N. Cobb, C. H. Cobb, 9 members; No. 57, C. L. Glasscock, B. E. Coilum, J. N. Glasscock, 15 members, making 19 in all. There were 18 more districts who sent the following delegates: No. 11, E. B. Popwell, W. J. Vinson, W. J. Williams; No. 12, T. J. Deason, A. W. Powell, W. J. Fiquett; No. 14, J. J. Grant; No. 27, W. C. Roper, Oscar Durbin; No. 29, John Mims; No. 30, W. W. Devaughan, C. D. Higgins; No. 32, J. W. Cox, J. W. Oates, A. Williams; No. 34, T. L. Robinson; No. 40, W. Q. Sanders, John Gore, H. B. Rodgers; No. 42, J. R. Thompson, J. D. Grant, W. E. Thompson; No. 45, T. M. Driver, G. A. Dawson, M. C. Childress; No. 47, A. J. Davis, L. C. Robinson, M. Robinson; No. 52, R. G. Cofer, Thomas G. Cofer; No. 54, J. N Scott, W. R. Cofer, H. W. Gothard; No. 58, W. G. Conway; No. 61, J. F. Blankenship; No. 65, L. H. Reynolds, J. M. Potts, Tipton Mullins; No. 67, G. W. Shaw, W. A. Reynolds, Thomas Harrison. These districts had not for various reasons brought the money necessary to complete their membership, but will be in line before the next meeting. Thirty districts in the county were represented, but they are almost certain to get in the procession on the 4th of March, which has been appointed by President Conway as district day, and he makes a strong appeal to them in this issue. There seems to be a lack of knowledge in some districts as to where the money that is callected goes. Of every dollar that is taken in 50 cents is retained by the county organization, 25 cents by the state and 25 cents by the main or national organization. This money is to pay for literature and other necessary expenses. Each member is to have a copy of the constitution and by-laws, and from time to time, as necessity for it arises, necessary information as to the crop outlook, etc., will be sent out. As to this organization being a success, that is proven by the way some, who hung around the skirts of the first meetings, pressed to the front on Thursday trying to get a seat in the "band wagon." The convention ordered the payment to W. T. Hand of the railroad fare to New Orleans and back expended by him as a delegate from Chilton county.

Knee Cap Broken.

Calvert, Ala.—Mr. John Hurley, an employe of the Southern railway, met with a serious accident at Calvert, Ala., on the Mobile-Selma division, on Thursday. While walking on top of a freight car he fell, breaking his right knee cap. He remained on top of the car until he was able to signal and have the train stop. He was brought to Mobile that night, given attention and taken to an infirmary. His injury is serious and painful.

Hammond Remanded.

Andalusia, Ala.—The habeas corpus trial of Ab Hammond, charged with the murder of Bud Tucker at Florala, was completed Saturday, Judge Robinson remanding the defendant to jail without bail.

Blizzard in Oklahoma.

Lawton, Okla.—A blizzard prevailed in this part of Oklahoma Territory Saturday. The fall of snow was the heaviest in years.

Every father and mother of children will be glad to get one of those California machines that is guaranteed to answer questions.

STATE COTTON MEETING.

Pretty near a hundred delegates met in the State House at Montgomery Wednesday and perfected the state organization of the Cotton Association started at New Orleans. They were there for business, and our county association will hear from its President next week. Chilton county was well represented, not only by the regularly elected delegates, but by others who wanted to help along the good cause. Among other business, this resolution is of vital interest:

"Resolved, That we recommend to those who are holding cotton, in order to realize the benefit of the work of their Association, to continue to hold their cotton and to place their prorated share into the pool when organized."

PARTIAL LIST OF PROMINENT DELEGATES.

W. H. Conway, W. I. Mullins, F. A. Gulledge, Judge L. H. Reynolds, Wallace C. Edler, W. H. Sartor and others from Chilton county are in town today attending the cotton convention. Chilton county has over 600 paid-up members of the cotton association.—Montgomery Journal.

CHILTON COUNTY HAS THE BANNER CLUB.

Wallace E. Edler, of Clanton, in an interview with a Journal reporter today, said:

"Chilton county, at the meeting at Clanton on the 16th, had 505 paid up members from 19 school districts. Eighteen additional school districts were represented who did not pay up on that date, but have come in since, there being 67 school districts in the county. The outlook is good for a paid-up membership of 1,200 or 1,500 Chilton may not do everything right, but she sure does know which side her bread is buttered on."—Montgomery Journal.

CLANTON.

Well, we've had another cotton meeting and up went cotton, and down goes the speculator. But, didn't we have a good crowd considering the weather? All we have to do is to stick together.

Say, didn't the commissioners' court surprise you last week? Who'd have thought that the old officers would have left a couple of thousand dollars for the new officers to pay? About a thousand of that due on stationery that had been laid over from last spring, but, you see we had a campaign last year, and the democrats wanted to make a good showing, so they quit paying out money, and then talked about "the money we've got in the treasury." Say, it liked to have knocked Judge Reynolds off that revolving chair when these bills broke in on him. I believe the stationery men think they've struck a snag, and I guess they have. The Banner don't seem to like it because the stationery was not bought from it. I suppose "Frank" had forgotten that it was his own crowd that had bought all this stationery away from the county, so he hit the wrong fellow; but he does that anyway often. But here is the point: If his own crowd went away from him to buy stationery, how can be expect our people to patronize him? Well, hasn't Roosevelt done it this time? He says these office-holders must get off the executive committees, I say three cheers for Roosevelt, for when we get rid of these federal office-holders we'll build up a republican party in Alabama. I hear it whispered round that such and such a fellow will make a good officer, but no one seems to mention me. Now, I mean business, and if I don't get an office I'll disfigure the whole gang until you wouldn't recognize them.

Say, some folks are getting mighty thick around the court house. I admit our people are superstitious (and they ought to be, for we've not forgotten six years ago), and we old farmers keep our eye on the gun, and we don't calculate to let any one slip up on us, and "we'll meet you when the sun goes down."

Remember my scrap-book. I am yours for 10 cent cotton.

JUST A VOTER.

COLLINS' CHAPEL.

Dear Editor.

Here I come again. We've no spring greens yet, and it looks like we won't for some time. There is snow and ice yet, but I hope that March sunshine will drive it away. We are anxious to sow oats, but we can't get weather fit. You will see by the following that we expect to plant something besides cotton in our district (No. 46), organized Feb. 11, 1905, with 53 members; acres in 1904, 1,333; acres in 1905, 915; fertilizer in 1904, 1,254 sacks; fertilizer in 1905, 855 sacks. This is a reduction of almost one-third in acreage and fertilizer. We are proud to see so many taking part in the organization Boys, in the districts where you haven't organized, don't fail to do so on March 4th, don't be afraid of spending a quarter it won't hurt you; don't you know if we were organized it would be as easy to get 10 cents for cotton as it is to get 7? Our Alliance is getting along fine, and we are fixing to get our guano through the Alliance. That means business.

Success to THE UNION.

J. D. COLLINS.

COUNTY COURT.

A petition of habeas corpus in the case of Thomas Klinner, who was indicted for robbery by the last grand jury and his bail fixed by Judge Sayre at $500, was before Judge L. H. Reynolds on Monday. The petitioner in his prayer for the writ said: "Your petitioner further avers that he is informed that he has been indicted for said offense of robbery, and that one T. Scott Sayre, who claimed to be the circuit judge of this circuit, endorsed upon said indictment that your petitioner's bill was fixed at the sum of $500; that said Sayre was not a circuit judge, and the time the so-called circuit court was held, at which it was attempted to fix said bail, was not a time fixed by law for holding a circuit court for Chilton county, and that the act of said Sayre as to fixing said bail was without authority of law and void; and if said act in fixing said bail was valid, the sum at which the same was fixed was excessive, and a virtual denial of bail to your petitioner." By consent of the prisoner and his counsel, Col. W. A. Collier, Judge Reynolds did not pass upon the validity of the circuit court as held but reduced the bail to $250, the judge considering that to be a sufficient sum to keep the accused within reach of the authorities. The defendant is a poor man and has been in jail over 8 months already.

JEMISON, 2, 20, 05.

Editor Union.

Please give me space to say a few words to the farmers about organization. I think we have made a fine start in that direction, so I'd like to impress every farmer with the necessity of organizing. Think of it. Cotton has gone up over $5.00 on the bale in the last thirty days. Think what this means to a farmer that is holding ten bales of cotton, and then think how little it cost to organize. Now, brethren, don't fail on the 4th of March. If you don't want to join, come out and discuss the question and help those that do join by being present. We have all to gain and nothing to lose. I will close by saying, Agitate, Organize, Educate. With success to The UNION, and its readers, I am, respectfully,

J. W. SORRELL.

HOMER, LA.

February 13, 1905.

Editor Union:

Just a few lines to my old neighbors in Chilton. Here in the northwestern part of Louisiana there has been a sight of sleet and snow ever since Feb 2nd, and it is still at it. Moses Day, a young man who is pretty well known in the upper part of Chilton, is having a high old time with La girls. We farmers haven't done any farm work yet. Success to you all.

R. A. DAY.

ENTERPRISE.

Health of this community is rather poor at present. Charlie Gray's baby is very sick. Mrs. J. W. Neeley is better.

Our school is doing well.

The Methodist Sunday school is progressing nicely. Almot every one is joining the cotton association, and it is going to be a big success.

N. C. C.

COURTING DAYS.

A Mother Tells How to Handle Delicate Situations Tactfully

When one of the boys or young men calls to invite either of my daughters (who are still in their teens) to a ride, or other function, I usually go in to welcome him, writes a mother in Good Housekeeping. A little conversation follows in which I try to make him feel at ease, and let him see what an interest I take in him as well as in my girl, and without saying it in so many words let him realize the honor and trust I put in him. Then I depart, leaving the young folks to talk over their plans unembarrassed. If the young gentleman seems to be satisfactory—and a mother's intuition is seldom at fault in such matters—I usually acquiesce in the plan or invitation, but if the boy or the function appears unsatisfactory, the proposal is turned down with a tact that avoids giving either the boy or the girl the effect of a refusal. Mother's judgment recognizes that the daughter must go out into the world, but to have this done in such a way as to develop character in both the boy and the girl. Above all, avoid having your girls become "common," or too free in their actions. Self-respect and the charm of girlhood make a delightful combination that attracts the best in young men, and paves the way for genuine womanhood. The girl's mother who makes the best boys like her, seldom has the trials and tribulations common to mothers of the other kind.

The State of Alabama, Chilton County.
Probate Court.

To John O. Dunovan, Claud B. Dunovan and Robert Dunovan.

Whereas, Beulah Matthews, an heir at law of the estate of Jeremiah Dunovan, deceased, has filed her application in said court for a sale of the lands described in said application, belonging to the estate of said decedent, for the purpose of division, upon the ground that said land can not be equitably divided, and the 6th day of March, 1905, has been appointed for the hearing of said application, you are, therefore, hereby notified to appear before said court on said 6th day of March, 1905, to contest said application, if they think proper.

Witness my hand, this 31st day of January, 1905.

2-2-05 3 L. H. REYNOLDS,
Judge of Probate.

THE Emperor Francis Joseph is probably as thoroughly beloved by his subjects as any sovereign in history has ever been. His great misfortunes—fearful defeats in the wars with France and Germany, the suicide of his only son, the assassination of his wife and family troubles in more recent times, have thrown about him an atmosphere of romantic sympathy; while liking for his kindly qualities is mingled with respect for his plain common sense.

During his stay in Berlin I met him a second time. At my first presentation at Dresden, two years before, there was little opportunity for extended conversation; but he now spoke at length, and in such a manner that showed him to be observant of the world's affairs even in remote regions. He discussed the recent increase of our army, the progress of our war in the Philippines, and the extension of American enterprise in various parts of the world, in a way which was not at all perfunctory, but evidently the result of large information and careful observation. His empire, which is a seething caldron of hates racial, religious, political and local, is held together by love and respect for him; but when he dies this personal tie which unites all these different races, parties and localities will disappear, and in place of it will come the man who by force of untoward circumstances is to be his successor, and this is anything but a pleasing prospect to an Austro-Hungarian, or indeed to any thoughtful observer of human affairs.—The Century.

PERSONAL.

L. A. M. Thrasher was in Jemison Monday.

J. D. Collins was in Columbiana on business Monday.

A. W. Powell was in Clanton Thursday.

G. P. Wilson was in Blankenship's store, Clanton, Monday.

F. M. Lee was in Clanton Monday.

Elbert Williams was a visitor from Calera to Clanton Friday.

We are sorry to learn that Mrs. Good Luck is quite sick.

A. C. Nelson was in Clanton Friday.

M. O. Hall was in Clanton Saturday.

W. T. Mullins was in Clanton Monday.

J. W. Kelly was in Clanton Saturday.

Dr. Wilson was in Clanton Monday.

Rev. A. L. Foshee was in Clanton Monday.

Archie Motes was in Clanton Monday.

Thos. Grimes was in Clanton Monday.

Hawkins Davis was in Clanton Monday.

Clark and Allen and Ed Wade were in Clanton Monday.

W. I. Mullins was in Clanton Monday.

Gulledge, Carter, Edler went to attend the meeting.

MARRIAGE LICENSES.

Archie Motes; Stella Adams.

Thos. Grimes; Hawkins Davis.

Clark and Allen and Etha Gulledge.

FIRE.

On Saturday night the residence of Phillip Sanders and Mrs. Sanders' personal effects in the Postmaster's office, the Mayor's office and the county statement were destroyed by fire. Special delivery mail in the Postmaster's office was saved, while he did overcoat and some clothing seems to have been destroyed in which he had valuable interesting papers. The origin of the fire is unknown. Mrs. Sanders will be missed at the office by the patrons, as she was very accommodating. Mr. Sanders will be missed in the community as he was a good citizen. Judge Reynolds, Mrs. W. I. Mullins, Mrs. Gilmore and Miss Lucile Gilmore were in Clanton Monday.

HALL'S CATARRH CURE

A bill now before congress has just been introduced by Senator Hale, of Maine, to prohibit the sale of Hall's Catarrh Cure in the United States. The bill was passed by the senate committee on public health and quarantine, and will be reported favorably to the senate. The Archie Motes; Stella Adams.

Thos. Grimes; Hawkins Davis.

Clark and Allen and Etha Gulledge.

s Joseph is probably as thoroughly beloved by
sovereign in history has ever been. His grea
l defeats in the wars with France and Ger
of his only son, the assassination of his wife
s in more recent times, have thrown about
e of romantic sympathy: while liking for
es is mingled with respect for his plain
met him a second time. At my first presenta
re, there was little opportunity for extended
at length, and in such a manner that showed
s affairs even in remote regions. He discussed
the progress of our war in the Philippines, and
prise in various parts of the world, in a way
, but evidently the result of large information
mpire, which is a seething caldron of hates,
cal, is held together by love and respect for
onal tie which unites all these different races,
ear, and in place of it will come the man who
nces is to be his successor, and this is any-
n Austro-Hungarian, or indeed to any thought-

PERSONAL AND LOCAL.

L. A. McGraw was a pleasant visitor Thursday.

J. D. Collins, J. G. Hayes and H. G. Cofer were callers in our office Thursday.

A. W. Abbott was a pleasant visitor Thursday.

G. P. Wilson, Calvin Dennis, J. F. Blankenship and W. M. Pierce were welcome visitors Thursday.

F. M. Littlejohn was in town Thursday.

Elbert Littlejohn was a pleasant visitor Friday. He is thinking about going to Prattville to locate. We'll all be sorry to lose him, but wish him good luck.

A. C. Neely was a welcome caller Friday.

M. O. Cup was a pleasant visitor Saturday.

W. T. Mahan was in Clanton Saturday.

J. W. Kicker was a welcome caller Saturday.

Pres. W. H. Conway and Sec. J. N. Dennis were in Clanton Saturday, and worked all day getting the cotton association reports into shape; they both deserve a deal of credit for the time they give the organization.

Rev. A. C. Swindall filled his third Sunday appointment at the Baptist church, and as usual gave his hearers an earnest message. The weather being bad his congregation was small.

B. E. Collum was in Clanton Saturday.

"Dr. W. F. Middleton, of Clanton, is at the New Mabson hotel."—Monday's Advertiser.

Judge Reynolds spent Saturday at Jemison.

Mrs. Will Glass, near Jemison, was severely burned Wednesday of last week by her clothes catching fire from the grate. Dr. MacNeil is attending her.

John Johnson and wife have a new baby at their house.

Probate Clerk Honeycutt performed the marriage ceremony Saturday, uniting Archie Cleckler and Miss Rosa Motes.

Judge Reynolds united a colored couple Monday morning at his office, Ed. Clark and Mary Miller.

Ed Wagoner was in Clanton Monday.

W. I. Mullins, W. H. Conway, F. A. Gulledge, Judge Reynolds, W. H. Sarter, Dr. N. S. Johnson and W. C. Edler went to Montgomery Tuesday to attend the cotton convention.

MARRIAGE LICENSES.

Archie Cleckler and Miss Rosa Motes; Sterling Sexton and Miss Susie Adams.

Colored.

Thos. Green and Annie Wilson; Wilkins Davis and Fannie Milton; Ed Clark and Mary Miller; Richard Taylor and Alice Lawhorn; Jim Campbell and Etha Calloway.

FIGHT IN CLANTON.

On Saturday night, Postmaster Dudley and Phtographer Lyons had a personal encounter, as a result of which the Postmaster was brought before the Mayor Monday, and fined $3.00 and costs. According to Mr. Lyons' statement the difficulty arose over a "special delivery" letter, and he says the Postmaster struck him in the face, while he (Lyons) had his hands in his overcoat pockets. As the difficulty seems to have arisen over a question in which "Uncle Sam" is supposed to be interested, the postoffice authorities will likely take a hand in the investigation that ought to follow.

HALLS OF CONGRESS.

A bill making it a felony to counterfeit the great seal of the United States was passed by the Senate.

The Agricultural Appropriation bill was considered, the Senate refusing to strike out the provision for free seeds.

There was a bitter personal controversy between Mr. Sullivan, of Massachusetts, and Mr. Hearst, of New York, in the House.

The prolonged wrangling over the Statehood bill in the Senate came to an end February 7, when a final vote was to be taken, by agreement.

Though economy is the watchword in making appropriations at this session, it is well known that the President is very anxious for a liberal naval program.

The Commerce Committee has reported to the House a railroad rate bill which is a composite of a number of bills on the subject proposed by different members.

A bill of great importance to Alaska has just become a law. It provides for the construction and maintenance of roads and schools and the care of insane persons in that district.

The President sent a message to Congress urging that provision be made for the collection of thorough statistics on marriage and divorce in the United States by the Census Bureau.

Secretary of War Taft and Commissary-General Weston told the Senate, in an official report, that meat for the army in the Philippines is bought in Australia because it would cost double the price to get the supply in the United States.

It is not often that the seniors of the Senate will officially postpone a session for a wedding, but recently on the application of Senator Hale the hour of meeting was made 1 o'clock instead of 12, in order to allow Senators to attend the marriage of a daughter of Senator Warren, of Wyoming.

WITH A STOCK COMPANY.

It was a proud and happy day
When Russell Crane Salvini Gray
Joined a flock
Of actor folk, a real stock troupe;
Yes, he was taken in the group
With the stock.

They started west without delay,
And Russell Crane Salvini Gray
Wore a frock—
A lovely coat—with conscious air,
Rejoicing greatly to be there
With the stock.

They busted out near Santa Fe
And Russell Crane Salvini Gray,
Who couldn't hock
His clothes at anything like par,
Came home inside a cattle car
With the stock.
—*Louisville Courier-Journal.*

JUST FOR FUN

He—Has he a college education? She—Oh, yes; he plays football, golf and he's a crackajack at tennis.—Yonkers Statesman.

Gerald.—Mamma, can you change 15 cents for me? Mother.—How do you wish it changed, dear? Gerald.—Into a quarter.—Puck.

Lady—Oh, that big dog isn't the one I advertised for. My dog was a little fox-terrier. Boy—Yes'm. Your dog's inside o' dis one!—Puck.

Suitor—I came to ask your daughter's hand. Father—Can you support her auto in the manner to which it has been accustomed?—New York Sun.

Mayme—What a gossip Mrs. Gadby is! Edith—Yes, indeed. I never tell her anything without finding out that she has already told it herself.—Philadelphia Bulletin.

Giles—So you've got a place in that banking house? I suppose it was because you knew the president? Harris—Partly that, and partly because he did not know me.—Boston Transcript.

Seedy Stranger—Excuse, me, sir, but can you change a dollar for me? Humanitarian—Why, yes. Seedy Stranger—Thanks. And now will you kindly tell me where I can get the dollar?—Cleveland Plain Dealer.

"That Mrs. Snaggs is too much of a aristycrat fur me to mingle wid." "How's that?" "She was knocked down by a pushcart and she had it put into de paper dat she was hit by an autermobile."—Detroit Free Press.

Rimer—"Do you really prefer to have long poems sent in to you rather than short ones?" Editor—"Yes. When they're long, you see, I don't have to think up any other excuse for rejecting them."—Philadelphia Press.

Mamma—"Fighting again, Willie? Didn't I tell you to stop and count one hundred whenever you were angry?" Willie—"But it didn't do any good, ma. Look what the Jones boy did while I counted!"—Harper's Bazar.

"I don't believe the woman who recently moved into the flat across the hall is any better than she should be," remarked Mrs. Naggsby. "Of course not, my dear," rejoined Naggsby, "who ever heard of a woman that was?"—St. Louis Star.

He (reading about the latest society wedding)—"They have a lot to say about what the bride wears, but they have nothing to say about the poor bridegroom." She—"They have no need to, because it is a well-known fact that he usually wears a worried look."—Boston Globe.

Madame (in a busy street in Paris)—"Oh, M. l'Agent, is it true that it is dangerous to stand with the foot on the electric tramline?" M. l'Agent—"No, madame, it is not dangerous so long as you do not stand with one foot on the line and the other on the overhead wire."—Pick Me Up.

Mrs. Tittle—"Wasn't it disgraceful the way those women talked during the play last night?" Mrs. Tattle—"Well, I should say so. Sarah Snookins was trying to tell me the fuss in the Brindles family, and those two women made such a clatter I couldn't hear more than half she said."—Boston Transcript.

Took Their Mother at Her Word.

In every family there are family jokes on some member of the family and often they are better than the professional ones you hear. Here is a time honored one in the family of Mrs. John J. Ingalls.

At the dinner table one day Mrs. Ingalls dropped a little gravy on the front of her dress. One of her daughters called her attention to it. Mrs. Ingalls said: "My dear, I knew the spot was there. You need not have troubled yourself to call the attention of other people at the table to it. If the spot annoys you, you may leave the table." And the next time Mrs. Ingalls dropped something on the front of her dress all her children got up and marched away from the table. The event has passed into the family joke book.—Atchison Globe.

The Governor's Wife.

"Two men in Buffalo," says ex-Lieut. Gov. Woodruff, "recently had a heated argument over the question whether the wife of a governor of a state had an official title. One man contended that she should be addressed as 'Mrs. Governor So-and-So,' while the other man stoutly insisted that she was simply 'Mrs. Blank, wife of Governor Blank.' Finally they agreed to submit the question to the first man they should meet. He proved to be an Irishman. The case was put before him and he was asked for a decision.

"'Nayther of yez is right,' said the Irishman, after a moment's reflection, 'The wife of a governor is a governess.'"—Collier's Weekly.

TO PROTECT NEWSPAPERS.

The following is a synopsis of a ruling of the United States supreme court in important cases regarding newspaper subscription:

1. Subscribers who do not give express notice to the contrary are considered as wishing to renew their subscriptions.

2. If subscribers order the discontinuance of their periodicals, the publishers may continue to send them until arrearages are paid.

3. If subscribers neglect or refuse to take their periodicals from the postoffice to which they are directed they are responsible until they have settled their bills and ordered their papers discontinued.

4. If subscribers move to other places without informing the publisher and the papers are sent to their former address, subscribers are held responsible.

5. The courts have decided that refusing to take periodicals from the office or removing and leaving them uncalled for is prima facie evidence of intentional fraud.

6. If subscribers pay in advance they are bound to give notice at the end of that time if they do not wish to continue taking it, otherwise the publisher is authorized to send it and the subscriber is responsible until an express notice with payment and all arrearages are sent to the publisher.

7. The latest postal laws are such a newspaper publisher can arrest any one for fraud who takes a paper and refuses to pay for it. Under the law the man who allows his subscription to run along for some time unpaid and then orders the postmaster to mark it "refused" and have a postal card sent notifying the publisher, leaves himself liable to arrest and fine, the same as for theft.—Ex.

HATCHING ALLIGATORS.

Hatching alligators is the latest use to which incubators have been put. Beginning with chickens, ducks, geese and turkeys, the use of incubators was extended to ostriches and babies, and now a manager of an alligator farm in Arkansas has adopted the use of incubators there.

An alligator is in its propagating habits between a fish and a hen. It swims in the water like a fish and lays eggs but instead of laying them in the water it goes out and makes a nest on the land like a hen. In this nest it lays twenty-five or thirty eggs, and then trusts to the warm weather to hatch them out. The period of incubation of alligator eggs is not accurately known, but it approximates five weeks, or a fortnight longer than chicken eggs or a week longer than duck eggs.

Most of the alligators hatched at the alligator farms are sold in infancy for $1 a piece to visitors from the North. As many alligators are raised to maturity as the inclosed swamps and streams of the alligator farm will permit. They are valuable for their hides, which are used for bags, belts, purses and like purposes.

The supply of alligators is much less than the demand, as the hide-hunters have killed off all they could find, and there is as yet no close season in the game laws for their protection. Like the terrapin they are becoming extinct in their wild state. At the alligator farms no more old alligators are kept than are needed for breeding purposes. Most of them are sold when a month or six weeks old, and the others are killed at an early age, when the hides are more pliable and easily worked. Alligator farming so far has proved a profitable industry.—An Amateur Naturalist.

A NEW YORK RAT.

A dock rat which had become engaged in a fierce fight with a big gray cat belonging to a grocer at Wythe avenue and Ross street, Williamsburg, attacked Policeman Nicholas Benson of the Clymer street station, the other afternoon, and severely bit his right leg before he succeeded in shooting the animal.

The rat was seen by boys coming out from a sulphur mill on Wallabout Creek at the foot of Ross street. As it ran along the gutter in Ross street the boys stoned it until it ran into a stable adjoining the grocery.

The grocery cat was in the stable and caught the rat, running with its prey back to the street. Then began a battle between the two animals. For several minutes it was nip and tuck. First the cat would have the rat by its throat and the next moment the rat would free itself and spring back at its antagonist.

Finally when the cat was becoming exhausted and fell backward into the gutter with the rat gripping her throat, Policeman Benson, who had been watching the fight, struck at the rat with a snow shovel. The rodent let go its grip on the half dead cat and sprang at the officer, fastening its [illegible] right leg just below the knee. [illegible] tried to shake off the [illegible] held on tightly, and as the [illegible] was becoming intense he drew his revolver and shot it in the head. [illegible] had his wound cauterized. [illegible]—New York Sun.

THE NUMBER SEVEN.

The number 7 has always played an important part in history. It may be interesting for boys and girls to read a few of the traditions in which it figures. It is said in ancient history that on the 7th day of the 7th moon there was a holy observance ordered to the children of Israel. They feasted 7 days and stayed 7 days in their tents. The 7th year was a year of rest. At the end of 7 times 7 years began a year of jubilee. Every 7th year the land lay fallow. Every 7 years there was a grand release from debt and bondsmen were set free.

Perhaps from these old laws, says the Brooklyn Eagle, came the later customs in which the magical 7 plays so important a part. A young man was bound out to service for 7 years. Prisoners were confined for 7 years or 14 or 21, according to their offense. In olden times a child was not named until it was 7 days old, because he was not thought really alive until then. The teeth in a properly constructed child are looked for in the 7th month, and in the 7th year they are expected to leave the gums in favor of set No. 2. A man becomes of age at 21; at 4x7 he is supposed to be in full possession of his physical strength; at 7x5 he is mentally equipped at his best; at 7x6 if he is ever to become grave and full of wisdom then is the proper time for him to begin. At 7x7 he is at the full tide of life, and after that, according to this terrible rule of 7, he is to go down hill at a 7 times rate of speed.—Philadelphia Record.

FAVORITE DISHES OF THE FAMOUS.

Napoleon's favorite dish was a bean salad.

Queen Elizabeth was very fond of roast goose.

Andrew Jackson surrendered to ice cream at first taste.

Stonewall Jackson delighted in buckwheat cakes—in season and out of season.

Henry VIII. was extremely fond of beans and imported a Dutch gardener to raise them.

Charles Sumner's private secretary tells of the statesman's sweet tooth for chocolate creams.

Washington was noted for his fondness for hickory nuts and the amount he could consume.

Louis XV. was extravagantly fond of a dish made of the eggs of various birds, which cost $100.

Ralph Waldo Emerson was fond of pie, especially that made of plums, which he called the fruit of Paradise.

Lincoln in the days when he did his own marketing, often stopped at a certain shop for his favorite—gingerbread. He used to say: "It swells up and makes me feel as if I had something."—What to Eat.

BENNY ON THE PRAIRIE DOG.

The prairie dog is a small animal that lives in little caves in the ground which he makes himself. His food is vegetables and fresh roasted peanuts when he can get them. He can be civilized and is frequently found in parks, but prefers the wild western plains of our country, where there are plenty of rattlesnakes and cactus. In the winter he hyphenates and does not wake up till spring. There was a man away down in Illinois once who had a friend in Kansas that sent him a prairie dog by express. The dog got a long all right till the beginning of winter, and then he hyphenated and went to sleep. The man thought he was dead, and shovelled him into a hot stove and burned him up. When he found out from the prairie dog's friend out in Kansas that he was not dead, but only sleeping, he went out and shed bitter tears of woe and remorse. This should teach us to be kind to animals. The prairie dog lives in villages and spends a great deal of his time standing up on his hind legs and thinking.—Benny in Chicago Tribune.

Indeed No!

"What! you refuse me?"

His face betraying his intense astonishment and chagrin, the young man who faced the beautiful girl who had just blasted all his hopes staggered back in an excess of emotion; then he drew himself up haughtily.

"It is, of course, your privilege," he said; "but do you realize what I have done for you? Six months ago, when we first became acquainted, I began to spend money. Look at the carriages we have had, the flowers I have sent, the elaborate suppers I have given you! Perhaps it is wrong to speak of these things, but did you not permit me to do all this? Indeed, did you not encourage me in my lavishness? How comes it now, in view of these facts, that you reject me? Was I not right in hoping for victory?"

"Certainly not," she replied. "I did the right thing. Why, my dear boy, if I had had the slightest idea of marrying you, do you suppose I would have permitted you to spend all that money?"—Judge.

American Beef Abroad.

The increasing influence of the large American meat firms at Smithfield Market is causing unrest among the salesmen.

Formerly cattle, live or chilled, were sent over to be dealt with by Deptford and Smithfield salesmen, but now a few of the most important American firms—one of which controls as many as 600 businesses in England—have initiated a policy of killing, cutting up and selling their own cattle in this country.

The superintendent at Smithfield stated that the policy of entire control now adopted by the big American firms has caused troublous times for some of the salesmen.

"The American beef sent to England is all surplus produce," he said, "and is exported to keep prices up in the States. The firms which send it do not seem to care much what price it commands, so long as it pays them for sending.—London Express.

Definition of Railway Ticket.

A little schoolgirls definition of a railroad ticket is worth repeating. In a composition written in one of the Boston primaries on "A Railway Journey," the little one says, among other things:

"You have to get a ticket, which is a piece of paper, and you give it to a man, who cuts a hole in it and lets you pass through."—Boston Herald.

AS TO HAIR BRUSHES.

It is a matter of wonder to women that they can't get a good brush, particularly a hair brush. It may be that a good price is paid for the article and it possesses a beautiful silver mounting, but the bristles come out, and even if they stay in they are so soft as to be absolutely useless.

The reason of the frailties of the average brush on the market are curious and interesting. As a matter of fact, a good brush costs money nowadays. Prices have increased enormously in the last five years. A good hair brush cannot be obtained for less than $4.50, and this not with a filigree silver mounting, but a seasoned hardwood backing. To many persons this would seem like the wildest sort of extravagance. But it is quite the reverse.

A man who deals in hair brushes recently told some interesting facts relative to their quality and manufacture. How to know a good brush is, he avers, as difficult for the average customer as to tell of the habits and customs of the North Sea islanders.

"In selecting a brush buy nothing but the real Russian bristles or those coming from the north of Germany," says he, "for the finest quality of bristles come from the wild boar which is found in these localities. Anyone that knows anything about the trade is keenly aware of the rise in price. It has increased from 10 to 20 per cent., and the reason for this is that as the country becomes more thickly settled the boar is driven further and further away, and also is being quickly decimated, as are our buffaloes.

"The bristles of the domestic boar can and are being used, but they lack the quality and stiffness of the wild variety. In the latter case nature has provided a hard coating. One might well wonder how these bristls are secured. The peasants pick them up strand by strand and store them away. It is an interesting custom in Russia for the parents to keep the bristles as a dowry, for their eldest daughter upon her marriage. They gather them in small bundles and tie them. To buy the bristles costs a penny each. Of course, they are much longer than one sees them in the brushes.

"French manufacturers use only the finest bristles in their brushes, a fact which some persons object to. The best brushes are made in England, Americans have not yet begun to compete with the English in this industry, which is yet in its infancy here. As a rule the fancy silver backed brushes are manufactured here and the bristles are exceedingly poor.

"To show you the scarcity of the real Russian bristles an agent of one of the largest English brush manufacturers recently told me that their entire stock of bristles amounted to not more than $10,000. And it was all they could get at the time for love or money.

"It's not fancy what material shall be used as a backing to brushes. For nothing equals in durability a seasoned hardwood. Neither moisture, heat nor cold affects it, and owing to the nature of the material the bristles can be more securely fastened in. Turtleback ebony is perhaps the best of all. It comes from South America and Madagascar also. Is more expensive than ordinary ebony, although the cost of transportation is the same. A big tree, perhaps, will yield only a small quantity; because of the fact that the heart of the wood is very apt to be decayed. Turtle-back ebony shows a faint grain, while the other is dead black—New Haven Register.

JEWELED HATPINS.

The season's great vogue for jeweled ornamentation on every article of feminine attire, from the toe of the dressy slipper to the crown of Directoire hat, has brought forth unusual and innumerable conceits in hatpins, and has changed that woman's sure weapon or defense from an unobstrusive necessity to a brilliant and artistic decoration. Each chapeau has its own set of hatpins, which are never removed from their respective holes. This keeps the hat from being filled with holes and being knocked out of shape by forcing the pins into the stiffening of the frame. Large individual stones imitating sapphire, topaz, ruby, emerald and amethyst, together with the water pearls and cut crystals, all furnish a charming ornamentation in the folds of a soft evening hat or on a severe fur or feather hat.

Lotus flowers, orchids or callas have a long water pearl for their Calyx. For walking hats the athletic girl will find sets of pins showing the miniature brassies, cleeks and drivers of the golf bag, or a tiny ball and bat with the name of her favorite college in enamel. The automobile hatpins resembling a huge safety pin are elaborately bejewelled, and show graceful and grotesque designs in gun metal and gold. These pins are not only a great boon to the fair motorist, but they make a handsome and firm fastening for the chapeau of lace or chiffon.

CHEERFULNESS AT THE TABLE.

An old lady who looked as though she might have belonged to the "Sunshine society" all her life was asked by a friend why her never-failing cheerfulness. Her answer contains a suggestive lesson for parents. "I think," said the clever old lady, "it is because we were taught in our family to be cheerful at the table. My father was a lawyer with a large criminal practice; his mind was harassed with difficult problems all the day long, yet he came to the table with a smile and a pleasant greeting for every one and exerted himself to make the table hour delightful. All his powers to charm were freely given to entertain his family.

"Three times a day we felt this genial influence, and the effect was marvelous. If a child came to the table with cross looks he or she was quietly sent away to find a good boy or girl, for only such were allowed to come within that loving circle. We were taught that all petty grievances must be forgotten when meal time came, and the habit of being cheerful three times a day under all circumstances had its effect on even the most sullen temper. Grateful as I am for all the training received in my childhood home, I look back upon the table influence as as among the best of my life."—American Grange Bulletin and Scientific Farmer.

GIRLS' NAMES.

If your name is "Grace" do not spell it "Gracye." If it is "Mary" do not spell it "Maymie." If it is "Katharine" do not spell it "Kathryn." The time may come when these "y" forms, as one might call them, may cease to seem silly and affected, but it has not yet arrived. If you were christened with a name of this description perhaps your parents will allow you to change it into the more dignified and sensible form. If you have been named "Nellie" or "Lutie" or "Myrtle" you may properly, with your parents' permission, call yourself respectively "Helen" or "Ellen," "Lucy" or "Mercy," or even "Myrtle." Almost anything is better than "Myrtle," and the long list of enfeebled and languishing names of the same sort.

It is true that the names in the catalogues of our colleges for women are, as a rule, suitable and dignified, but in a certain large school for girls in "Maymies" and the "Luties" flourish and abound. Such violations of good taste are not crimes against good morals, and yet we wish that some punishment might be devised which might help to banish them faster than the exasperatingly slow process of "universal education."—Harper.

RAINY DAY ACCESSORIES.

Two rainy-day accessories are worth owning, says the New York Evening Post. One is an umbrella to put in a dress suit case. The handle and the top piece are both hinged and the umbrella folds into a remarkably small space. Every woman knows what a nuisance an umbrella is when traveling. The suit case is heavy, one's skirts or hat often demand the other hand, and the umbrella is usually the last straw that makes a journey a burden to the flesh. The other rainy-day convenience is a new rubber which is so small that it will hardly serve except in damp weather when the mud is not deep. It amply protects the toe of the boot without projecting far over the toe. In the back there is a fraction of a heel which is hardly noticeable. The rubber stays on well and is more comfortable than the old style with a back strap.

NECK FRILLS.

One may readily copy the newest model neck adornments. If you wear a twelve-and-a-half collar buy 14 inches of white double mousselin plisse, from four to five inches wide. A lace edge should finish this. Hold the plaiting in during the making, so that the ruffle will not split apart where it should join in the back. Finish the top with an upstanding narrow pleating on the same order. The art lies in removing from the wide plaiting its factory top finish, and then joining it to the narrow band wthout showing seams. If it is necessary to cut off the machine finish of the narrow plaiting also give to the trimming a firmness by backing up the stiches with a narrow white silk binding-ribbon, single or doubled. These ruffs are to be fastened with at least three fancy jeweled pins.

Mountain Railways.

No less than fourteen electric mountain railways are now under way of construction in Switzerland. Within the course of a few years all the leading Alpine heights can be reached by mountain railways. Switzerland is spending many millions on these enterprises, and it is hoped that, with these increasing facilities, the number of tourists will become greater every year. The Jungfrau and Chamounix railways will be completed and open for passenger traffic in about eighteen months, that is to say, by the summer of 1906.—Philadelphia Record.

WASHINGTON'S REVERENCE.

An Anecdote of the Father of His Country and of His Mother.

Much of George Washington's firm strength of character was due to his splendid ancestry, as the following little anecdote will testify:

While reconnoitering in Westmoreland County, Virginia, one of General Washington's officers chanced upon a fine team of horses driven before a plow by a burly slave. Finer animals he had never seen. When his eyes had feasted on their beauty, he cried to the driver:

"Hello, good fellow! I must have those horses. They are just such animals as I have been looking for."

The black man grinned, rolled up the whites of his eyes, put the lash to the horses' flanks, and turned up another furrow in the rich soil. The officer waited until he had finished the row; then, throwing back his cavalier cloak, the ensign of rank dazzled the slave's eyes.

"Better see missis! Better see missis!" he cried, waving his hand to the south, where above the cedar growth rose the towers of a fine old Virginia mansion. The officer turned up the carriage road and soon was rapping the great brass knocker of the front door. Quickly the door swung on its ponderous hinges, and a grave, majestic-looking woman confronted the visitor with an air of inquiry.

"Madame," said the officer, doffing his cap, and overcome by her dignity, "I have come to claim your horses in the name of the Government."

"My horses?" said she, bending upon him a pair of eyes born to command. "Sir, you cannot have them. My crops are out and I need my horses in the field."

"I am sorry," said the officer, "but I must have them, madame. Such are the orders of my chief."

"Your chief. Who is your chief, pray?" she demanded with restrained wrath.

"The commander of the American army—General George Washington," replied the other, squaring his shoulders and swelling with pride. A smile of triumph softened the sternness of the woman's handsome features. "Tell George Washington," said she, "that his mother says he cannot have her horses."

With a humble apology the officer turned away, convinced that he had found the source of his chief's decision and self-command.

And did Washington order his officer to return and make his mother give up her horses? No; he listened to the report in silence, then, with one of his rare smiles, he bowed his head.—L. R. McCabe, in St. Nicholas.

Disraeli and Gladstone.

That Disraeli wit was too much for Gladstone. The great Liberal had but one adjective for his Tory opponent and that was "devilish." Never during the years of their opposing leadership had the two any social relations; each made light of the other's literary efforts. Some one asked Lord Beaconsfield to define the difference between a misfortune and a calamity, and unhesitatingly it came. "If Mr. Gladstone should fall into the Thames it would be a misfortune. If any one should pull him out it would be a calamity."

The best of all the Gladstone-Disraeli stories tells how once at a London dinner party the ladies at the table were asked which they would marry if they had to marry one or the other—the great Liberal or the great Tory. All declared promptly in favor of Beaconsfield save one, who hastened to explain that she had rather wed Gladstone that she might elope with Disraeli and so break her husband's heart. This happening was of course retold to Disraeli, and so pleased was he over it that he suspended a Cabinet debate on the chances of a Continental war in order to relate it.—Warwick James Price, in the Criterion.

Some Unreasonable Combinations.

A woman lives at one of the Kansas City hotels who has the reputation of being rather finicky and hard to please in the matter of food. A day or so ago at lunch, after looking over the dessert list, she decided on some ice cream pudding. The meal had been one with which she had had considerable difficulty in finding any fault, but when she had about half-finished the dessert, she called the waiter over and said:

"George, what do you mean by calling this ice cream pudding? There isn't any ice cream about it, and you know it."

"Yes'm," said the waiter, "I know dere ain't no ice cream in it. Dat's jes a name they give it. I do' know why."

"Well," she continued, "I think that if they give a dish such a name they ought to make it conform to the name, and if you call this ice cream pudding, you ought to bring some ice cream with it."

"Yes'm," answered the servitor, "but you know we can't allus do it that way. You know we doesn't bring a cottage in with cottage pudding."—Kansas City Journal.

The Lobster's Advantage.

The lobster has been endowed by nature with two gifts which go far to offset the evils attending his lot. One is the ability to fight early, often and all the time, if necessary, and the other is the ability to grow a new member, an eye, a leg or a claw, whenever the original is lost in the fortunes of war or by reason of any domestic unpleasantness.

It is these two gifts which enable him to grow up and become a useful member of society, most of his members being second-hand, so to speak, by the time he is really grown.—Four-Track News.

Thompson's Eye Water

Ancient Deposit of Ice.

Railroad men while digging gravel in Black Butte mountain near Lisson Sisyiyou county, Cal., came recently upon an immense buried mass of ice believed to have been there from time immemorial.

WHAT'S THE USE OF SAYING "GIVE ME A 5-CENT CIGAR," WHEN BY ASKING FOR A : :
"CREMO"
YOU GET THE BEST 5-CENT CIGAR IN AMERICA
"The World's Largest Seller"

To Merry Mardi Gras
VIA
QUEEN & CRESCENT ROUTE
A. G. S. R. R.
RATE—One fare plus twenty-five cents for the round trip to New Orleans and Mobile.
DATES OF SALE—March 1st to 6th.
LIMIT—March 11th, tickets can be extended until March 25th, by depositing before March 11th, and paying fifty cents.
Stop Overs Allowed. Special Sleeping Cars. Double Daily Service. Quickest Time.
For Sleeping Car reservation, and further information, write,
A. B. FREEMAN, Traveling Passenger Agent, 1925 1st Ave., BIRMINGHAM, ALA.

GOOD POTATOES BRING FANCY PRICES
To grow a large crop of good potatoes, the soil must contain plenty of Potash.
Tomatoes, melons, cabbage, turnips, lettuce—in fact, all vegetables remove large quantities of Potash from the soil. Supply
Potash
liberally by the use of fertilizers containing *not less than* 10 per cent. actual Potash. Better and more profitable yields are sure to follow.
Our pamphlets are not advertising circulars booming special fertilizers, but contain valuable information to farmers. Sent free for the asking. Write now.

POPULAR SCIENCE

Late experience in the British navy has suggested that loathsome disease may be spread by tattooing, and those who must decorate in this way are warned that the needles should be sterilized.

Rheumatism seems to be practically unknown in Japan. A French observer attributes this to the sobriety of the people, their vegetarian diet and their great use of water. They not only drink large quantities of pure water, but take two or three baths daily throughout the year.

The appearance of a bark disease among the Para rubber trees in certain districts in Ceylon during 1903 created some alarm among rubber planters, but prompt measures for its treatment were carried out under the advice of the Government mycologist. Mr. J. B. Carruthers, the officer in question, states that the disease was due to a canker fungus; further details regarding its structure and treatment will form the subject of a later paper.

Phosphate rock is of organic origin, largely derived from guano and decaying animal matter which contains phbsphoric acid. In rainless regions such as the Peruvian coast and some of the Pacific islands, the guano may accumulate to great thickness without loss of soluble matter. In moist districts, however, the phosphoric constituents are dissolved out by percolating waters, and the solutions coming in contact with limestone may convert the latter into lime phosphate. The phosphate deposits of Florida are thought to have formed in this manner.
